Below will be found a tabulation which appeared in the New York Times on March 16, 1947, on the number of Communists throughout the world, according to countries. This tabulation was presented at the recent British Communist Party Congress held in London, February 23, 1947. Mr. William Z. Foster, chairman of the Communist Party of the United States, attended, along with the delegates from 30 countries. It was in effect a meeting of the Communist International and was so interpreted by the leading correspondents throughout the world. We must recognize that in dealing with communism we are dealing with a world-wide revolutionary movement which is being directed by a foreign government, whether it be the Communist Party of the United States, Chile, Mexico, Finland, or whatever country.

The committee, therefore, is issuing this report as exhibit A to establish the true character of the enemy within our gates.

How the Communists estimate their strength

At a recent Communist conference in London, a chart showing the Advance of Communism was displayed, giving the Communists' own estimate of their strength. The total world membership claimed was 18,592,300. According to the chart, "All parties in this list base themselves on the teachings of Marx, Engels, Lenin, and Stalin." This is the listing that appeared on the chart:

Country and party	Members	M. P.'s
AMERICA		
Argentina: Communist	30,000	
Brazil: Communist	130,000	17
Canada: Labor-Progressives	23,000	
Chile: Communist	50,000	20
Columbia: Democrat Socialist	10,000	2
Costa Rica: Vanguardia Populist	20,000	6
Cuba: Popular Socialist	152,000	12
Ecuador: Communist	2,500	
Haiti: Popular Socialist	500	1
Martinique: Communist		2
Mexico: Communist	25,000	
Nicaragua: Partido Socialista	500	
Panama: Partido del Pueblo	500	
Paraguay: Communist	8,000	
Peru: Communist	35,000	5
Puerto Rico: Communist	1,200	
United States: Communist	74,000	
Uruguay: Communist	15,000	5
Santo Domingo: Popular Socialist	2,000	
Venezuela: Communist	20,000	2
ASIA		
Burma: Communist	4,000	
Ceylon: Communist		
China: Communist	2,000,000	
Cyprus: Akel	4,000	
India: Communist	53,700	
Indonesia: Communist		
Japan: Communist	6,000	5
Korea: Communist	50,000	
Lebanon: Communist	15,000	
Malaya: Communist	10,000	
Palestine: Communist	1,400	
Philippines: Communist		
Siam: Communist		
Syria: Communist	8,000	
AUSTRALASIA		
Australia: Communist	25,000	1
New Zealand: Communist	2,000	
EUROPE		
USSR: Communist	6,000,000	
Albania: Communist		
Austria: Communist	150,000	4
Belgium: Communist	100,000	23
Britain: Communist	43,000	2
Bulgaria: Workers' Party	450,000	278
Czechoslovakia: Communist	1,000,000	115
Denmark: Communist	60,000	18
Finland: Communist	28,000	41
France: Communist	1,300,000	
Germany (Soviet): Social Unity	1,576,300	
Germany (Western): Communist	350,000	
Greece: Communist	400,000	
Hungary: Communist	650,000	70
Iceland: United Socialist	1,000	10
Ireland (North): Communist	500	
Italy: Communist	2,200,000	108
Luxemburg: Communist	5,000	
Netherlands: Communist	50,000	15
Norway: Communist	33,000	11
Poland: Workers' Party	600,000	
Portugal: Communist		
Rumania: Communist	500,000	68
Slovakia: Communist	250,000	
Spain: Communist		
Sweden: Communist	46,000	
Switzerland: Parti du Travail	21,000	1
AFRICA		
Algeria: Communist		
Eritrea: Communist	200	
Morocco: Communist		
South Africa: Communist		
Tunisia: Communist		

New York Times, Mar. 16, 1947, p. E5.

INTRODUCTION

It is the object of this report to establish from documentary sources the fact that from its inception in September 1919 to the present day the Communist movement of the United States may be properly characterized as—

1. An organization operating under centralized discipline subordinated to the Communist Party of the Soviet Union, the single and ruling party of that country.

2. A section of a World Communist Party, controlled by the Communist Party of the Soviet Union.

3. An organization whose basic aim, whether open or concealed, is the abolition of our present economic system and democratic form of government and the establishment of a Soviet dictatorship in its place.

4. An organization resorting to deception, evasion, illegal methods, violence, and civil war, methods implicit in its revolutionary purpose.

When the Communist organization was an insignificant sect relying for its chief inspiration and support upon the comparatively weak Soviet Government of 15 or 20 years ago it was felt that its activities could be safely ignored, that the free play of our democratic process would ultimately cushion and vitiate its efforts. In 1947, however, we find this totalitarian bridgehead firmly entrenched in the labor movement, the Government, political parties, the press, radio and films, the schools and colleges, the churches and social organizations. Its influence is far out of proportion to its membership, due to its discipline, its control of strategic posts in mass organizations, and its ties with the Soviet Government, which today enjoys unprecedented standing as a world power. In recent times the Soviet Government has repeatedly demonstrated its ability to transform hitherto insignificant Communist minorities into ruling parties (Rumania, Hungary, Yugoslavia, Bulgaria, Poland, Estonia, Latvia, Lithuania). Even in countries not under direct Soviet military occupation, the former Communist minority is making an open bid for power (Belgium, Italy, France, Denmark, China). In view of the expansionist attitude of the Soviet Government clearly demonstrated in its recent history, these countries furnish us with an instructive social laboratory.

Our own country is far from immune to the operations of the subversive and aggressive Communist movement. In the light of our own highly integrated and sensitive society, it is well within the bounds of practical possibility, that if the present potentialities of the American Communist movement were fully mobilized for a supreme subversive effort, if these potentialities were given substantial aid from a strong foreign power, they could seriously dislocate our economic and social life and even the effectiveness of our armed forces.

An elementary regard for our sovereignty as a Nation and the interests of national security, require as a minimum that the nature of the Communist movement be fully analyzed and understood.

I. ORIGIN AND BACKGROUND

The Communist Party of the United States is a section of the international Communist movement founded by Vladimir Ilyich Lenin during the First World War. His motives in launching this organization may be roughly classified as twofold in character:

1. Offensive: He sought to destroy the capitalist system and the governments under which it operates in order to absorb the nations of the world within the Union of Socialist Soviet Republics.

2. Defensive: He sought to safeguard the interest of the then weak Soviet Government, by diverting hostile nations through the promotion of internal disorder.

The Communist movement today remains essentially devoted to these mutually complementary aims.

Lenin held that the First International, founded by Karl Marx (1864–1872) "laid the foundation of the international organization of the workers in order to prepare for their revolutionary onslaught on capital." He believed that the Second or Socialist International (1889–1914) was too moderate, reformistic, and patriotic. As early as November 1, 1914, he already envisaged a split in the Second International and the formation of a Third or Communist International. With the outbreak of World War I, he attacked the democratic Socialists for their support of national defense in an imperialist war, and for their refusal to support a revolution against one's own government. The group which he led met at Zimmerwald, Switzerland, in September 1915 and became known as the Zimmerwald Left. On April 24, 1917, the Russian Social Democratic Party adopted Lenin's proposal to change its name to the Russian Communist Party as more suitable to its revolutionary aims. The Russian Revolution of November 7, 1917, hastened the growth of Communist parties throughout the world.

The flames of proletarian revolution that spread throughout Europe after World War I

gave every evidence of Moscow stimulation and support. Then, as now, there was no publicly acknowledged Communist International.

As far back as 1917 a bureau of international revoluntary propaganda was formed which was officially attached to the Commissariat for Foreign Affairs of the Provisional Workmen's and Peasants' Government of the Russian Republic. Karl Radek conducted this bureau with the assistance of a number of war prisoners. It published three papers: Die Fackel, afterward called Völkerfriede (German, Nemzetkesi Szocializta (Hungarian), and Iainte (Rumanian), which were distributed in the trenches. John Reed, one of the founders of the American Communist movement, worked for Die Fackel.

On December 13, 1917, the Soviet of Peoples Commissars issued the following ordinance assigning 2,000,000 rubles for the needs of the revolutionary internationalist movement:

"Taking into consideration that Soviet authority stands on the ground of the principles of international solidarity of the proletariat and the brotherhood of the toilers of all countries, that the struggle against war and imperialism, only on an international scale, can lead to complete victory, the Soviet of Peoples Commissars considers it necessary to come forth with all aid, including financial aid, to the assistance of the left, international wing of the workers' movement of all countries, entirely regardless whether these countries are at war with Russia, or in an alliance, or whether they retain their neutrality.

"With these aims the Soviet of Peoples Commissars ordains: The assigning of 2,000,000 rubles for the needs of the revolutionary internationalist movement, at the disposition of the foreign representatives of the Commissariat for Foreign Affairs.

"President of the Soviet of Peoples Commissars VI, Oulianoff (Lenin); People's Commissar for Foreign Affairs L. Trotsky; Manager of Affairs of the Soviet of People's Commissar VI, Bonch-Bruevich; Secretary of the Soviet, N. Gorbounov.

"(Gazette of the Provisional Workers and Peasants Government, December 13, 1917.)"

Two outstanding points should be noted in connection with this declaration: (1) From the outset the machinery of international Communist propaganda was initiated and supported by the Soviet Government as auxiliary to the activities of its section on foreign affairs; (2) such activity was directed at all nations, regardless of treaty status. An understanding of the nature of the international Communist movement requires a full appreciation of these two fundamental principles on which it was founded, principles whose validity cannot be legitimately challenged today.

On November 3, 1918, the Communist Party of Austria was formed. Returning war prisoners actively propagandized in Russia played a leading part in the movement in Austria and Hungary. On December 23, 1918, the Russian Government formally recognized the Lithuanian, Latvian, and Estonian Soviet Republics and offered them "all necessary aid and support."

By November 8 practically the entire German Fleet had fallen into the hands of revolutionary sailors, who, in cooperation with workmen's and soldiers' councils on shore, had gained control of Kiel, Wilhelmshaven, Heligoland, Borkum, and Cuxhaven. Berlin found itself in the throes of a general strike on November 10, 1918. Dr. Oskar Cohn, former counselor for the Russian Embassy, admitted the receipt of Russian funds on November 5, 1918, from Adolph Joffe, the Bolshevik Ambassador at Berlin, to further this movement (Current History, May 1919, p. 227).

On February 2, 1919, riots broke out in Glasgow, and widespread strikes occurred in London and Liverpool. On February 22, 1919, a revolt broke out in Budapest against the Hungarian People's Republic. It was led by Bela Kun, former Russian war prisoner and later a member of the executive committee of the Communist International. On March 5 a Soviet Government was proclaimed in Bavaria.

Added proof of Soviet propaganda activities abroad may be found in the radio statement of George Chicherin, Commissar of Foreign Affairs, dated February 4, 1919, to the Allies, in which he declared the Russian Soviet Government's "readiness, if necessary, to include in the general agreement with the Entente Powers a pledge of noninterference in their internal affairs." It is to be found in the message sent by Maxim Litvinoff to President Wilson on March 5, 1919, in which he offered in behalf of the Soviet Government to cease propaganda if the Entente would enter into peace negotiations.

Louis Fischer, long a pro-Soviet observer, with access to original Soviet sources, has described Soviet activity in the Balkans as follows:

"The Bolsheviks planned both moves. Airplanes flew regularly from Hungary to the Ukraine, bringing leaders or reports and taking back suggestions, Soviet legal codes as models, and post. A Bolshevik offensive would establish direct geographical contact with Bela Kun, bring Bessarabia back to Russia, perhaps inspire a revolution in Rumania. (Soviets in World Affairs, p. 195.)"

Lenin's gratification at the widespread revolutionary developments throughout Europe was expressed in a speech before the all-Russian central executive committee, on October 22, 1918, published in the Berner Tagwacht:

"We never before stood so near to the international proletarian revolution as at present: * * * Of course, you know that the revolution has broken out in Bulgaria and that the Bulgarian soldiers are organizing councils, or soviets, after the Russian model. Now comes the news that similar soviets are now in process of being organized also in Serbia. * * * In Austria, too, the revolution of the workers and peasants is knocking at the door everywhere. * * * The German revolution is already a fact. * * * So far as Italy is concerned, the revolutionary sentiment of the proletariat of that country is evident to us. * * * Its (Independent Socialist Labor Party of England) sympathies for us are constantly on the increase. The Socialist labor parties of Scotland have even come out openly for the Bolsheviki. * * * Our allies are millions and millions of proletarians in all the countries of the world."

The estimates of allied statemen corroborated the gravity of the European situation. In his official summary to the Council of Ten, meeting in Paris on January 21, 1919, M. Georges Clemenceau declared:

"Bolshevism was spreading. It had invaded the Baltic provinces and Poland, and that very morning they had received very bad news regarding its spread in Budapest and Vienna. Italy, also, was in danger. The danger was probably greater there than in France. If Bolshevism, after spreading in Germany, were to traverse Austria and Hungary and so reach Italy, Europe would be faced with a great danger."

On the other hand, starvation faced millions in Russia exhausted by the havoc of war and revolution. Premier Clemenceau sought the economic isolation of bolshevism in Russia with a view to provoking its fall. On December 13, 1918, he presented a plan to the Allies intended to interdict to the Bolsheviks access to the Ukraine regions, the Caucasus, and western Siberia, which are economically necessary to them for their endurance.

The encirclement of Russia is described by Louis Fischer in the following terms:

"On the west, Russia was cut off from the outside world by the Baltic buffers, the Germans, the British Fleet, and by Poland; on the north by British, French, American, Italian, and Serbian troops; on the south, by the French in the Ukraine, Denikin in the Kuban, and the British in Caucasia and Transcaspia; on the east, finally by the Japanese and their faithful atamans in eastern Siberia, and by the Czechs and Kolchak in western Siberia (Soviets in World Affairs, p. 155)."

Chicherin pressed desperately for peace. To Rakovsky he wrote on March 13, 1919:

"If we do not reach an understanding, the policy of blockade will be pressed with vigor. They (the Allies) will send tanks, etc., to Denikin, Kolchak, Petlura, Paderewski, etc."

Lenin wrote:

"We are in a beleaguered fortress, so long as no other international Socialist revolution comes to our assistance (A Letter to American Workingmen, Moscow, August 20, 1918)."

He sought to gain a breathing spell.

In this setting the central committee of the Russian Communist Party addressed a proclamation signed by Lenin and Trotzky and a few revolutionary Socialists and Communists then resident in Moscow, to revolutionary elements throughout the world to take part in the First Congress of the Communist International to which specific left-wing Communist and revolutionary Socialist groups were invited from various countries (Izvestia, January 24, 1919). The call was broadcasted throughout the world by George Chicherin, Soviet Commissar of Foreign Affairs.

The first Congress of the Communist International took place on March 2, 1919, in Moscow. Incorporated into its very fiber was the following principle which later became number 14 of the famous 21 points governing admission to the Communist International, adopted by the Second Congress, July 17 to August 7, 1920:

Each party desirous of affiliating with the Communist International should be obliged to render every possible assistance to the Soviet Republics in their struggle against all counterrevolutionary forces. The Communist parties should carry you a precise and definite propaganda to induce the workers to refuse to transport any kind of military equipment intended for fighting against the Soviet Republics, and should also by legal or illegal means carry on a propaganda among the troops sent against the workers' republics, etc.

II. THEORY

Communist theory is based upon the teachings of Karl Marx, founder of the First International; Friedrich Engels, his closest associate; Vladimir Ilyich Lenin, founder of the Third or Communist International and first Premier of the Soviet Government; and Joseph Stalin, his successor. From the time of its foundation in 1919 to the present, the American Communist movement has pledged its loyalty to these teachings, as have the Communist Parties of all countries. These teachings are embodied in the Program of the Communist International adopted in July-August 1928 as a uniform and common program for all sections of the Communist International and never repudiated.

The Communist Party member is thoroughly indoctrinated with the fundamentals of Marxism-Leninism-Stalinism, through the Communist press, pamphlets, books, meetings and schools. The purpose of this indoctrination is manifold.

It serves to mold a uniform, Communist consciousness, thus setting this totalitarian sect definitely apart from all democratically minded Americans. It is the authoritative frame of reference for all Communists.

The Communist movement is primarily a combative organization dedicated to the struggle against those whom it looks upon as

class enemies. It, therefore, operates on strict military lines. Indoctrination serves this army, as it does any other, as a cohesive factor. Its professed idealistic aims tend to glorify the movement and build up the morale of its followers.

Communist theory exalts and perpetuates the authority of its leaders, for it claims to present a body of unassailable scientific principles of which the Communist leader is the sole authorized spokesman and interpreter. Any deviation from the principles of Marxism-Leninism-Stalinism, as most recently interpreted by the leader, is subject to severe penalties all the way from censure and expulsion to physical liquidation.

Contrary to the belief which Communist leaders seek to inculcate among rank-and-file members and followers, that Communist theory is an immutable body of scientific principles, it is subject to the most flexible interpretation solely by the leader as it suits his particular purposes at any time. Thus Marxism-Leninism-Stalinism furnished the justification for support of collective security against the Fascist aggressors prior to the signing of the Stalin-Hitler pact, denunciation of World War II as "imperialist" during the life of this pact, and support of the Allied Nations after Hitler attacked the Soviet Union on June 21, 1941. In moments of frankness, Communists have given revealing evidence of this theoretical jugglery. Speaking in criticism of the line of Earl Browder, which had just been officially repudiated, Gilbert Green, member of the National Board of the Communist Party of the United States, confessed that "unable to make the line fit the theory, I began to reshape the theory to fit the line" (Political Affairs, July 1945, p. 591). Margaret Cowl, a charter member of the American Communist organization, explained that the Browder line had been imposed by selecting "from the Marxian-Leninist classics excerpts out of their content to justify Comrade Browder's revisionist policies" (Daily Worker, July 18, 1945, p. 7). No matter what tortuous turns the party line may take, the suitable quotations from Marx-Lenin and Stalin will always be found to justify the change.

But for the rank and file the sanctity of the Marxian theory remains inviolable. As Lenin put it:

"The Marxian doctrine is omnipotent, because it is true. It is complete and harmonious, and provides men with an integral world conception * * * (The Teachings of Karl Marx by V. I. Lenin, Little Lenin Library, England, 1942, p. 7.)"

Without attempting an exhaustive analysis of Communist theory, we shall try to present a few of its basic tenets, which determine the Communist attitude toward democracy and its institutions.

For nearly a century, from Karl Marx to Joseph Stalin and William Z. Foster, Communists have assailed the evils of the capitalist system and have prophesied its collapse. Their propaganda and activity is therefore based upon a consuming hatred of the system of free enterprise or capitalism as "naked, shameless, direct, brutal exploitation" (Karl Marx) regardless of the fact that this system has produced for Americans the highest standard of living and freedom in the world today.

Capitalism

The following citations are typical of the Communist attitude toward capitalism:

"Along with the constantly diminishing number of the magnates of capital, who usurp and monopolize all advantages of this process of transformation, grows the mass of misery, oppression, slavery, degradation, exploitation * * * The monopoly of capital becomes a fetter upon the mode of production, which has sprung up and flourished along with and under it. Centralization of the means of production and socialization of labor at last reach a point where they become incompatible with their capitalist integument. This integument is burst asunder. The knell of capitalist private property sounds. The expropriators are expropriated." (Karl Marx, Capital, vol. I, Historical Tendency of Capitalist Accumulation, published in 1867.)

"The history of capitalism has entirely confirmed the Marxian theory concerning the laws of development of capitalist society and the contradiction of this development which inevitably lead to the downfall of the whole capitalist system." (Program of the Communist International, adopted September 1, 1928.)

Democracy

From this conception of the nature of capitalism flows the Communist interpretation of the modern state, of American democracy.

"The burgeoisie (capitalists) has at last, since the establishment of modern industry and of the world market, conquered for itself, in the modern representative state, exclusive sway. The executive of the modern state is but a committee for managing the common affairs of the whole burgeoisie." (Communist Manifesto by Karl Marx and Frederich Engels, 1848.)

In his authoritative work, The Origin of the Family, Private Property and the State, published in 1894, Friedrich Engels developed this thought further. He declared that "the modern representative state is the instrument of the exploitation of wage-labor by capital." The state, he added, makes use of a public force, to accomplish its purpose. This public force "consists not merely of armed men, but of material appendages, prisons, and repressive institutions of all kinds." Lenin endorsed this conception in his basic work, The State and the Revolution and claimed that "A standing army and police are the chief instruments of state power."

A hostile attitude toward the American Government based upon this theory, is fundamental with every Communist whether he is in the Federal service, in the armed forces, or in civil life. It holds precedence over all oaths of allegiance to America no matter how solemnly sworn, and over all professions of national unity and patriotism. It is summarized by William Z. Foster, present chairman of the Communist Party of the United States, when he wrote in 1932, "the Communist Party makes it clear to the workers that the capitalist democracy is a sham" (Toward Soviet America, p. 255). On January 20, 1944, he reiterated, "A postwar Roosevelt administration would continue to be as it is now, an imperialist government" (published in Political Affairs, July 1945, p. 645).

Soviet fatherland

Prior to the establishment of the Soviet Union, Karl Marx held that the workingmen have no country (Communist manifesto). After the Russian Revolution, Communists have maintained that the Soviet Union is the only fatherland to which they owe allegiance. In other words, this means that each individual Communist owes prior and superior loyalty to the Soviet government, regardless of his oath of citizenship or other sworn statements to the contrary. The note of Soviet loyalty pervades all Communist literature.

The following excerpt from the proceedings of the fourth world congress of the Communist International held November 5 to December 5, 1922, is merely typical:

"In view of the fact that the Union of Soviet Socialist Republics is the only fatherland of the international proletariat, the principal bulwark of its achievements, and the most important factor for its international emancipation, the international proletariat must, on its part, facilitiate the success of the work of socialist construction in the Union of Soviet Socialist Republics, and defend her against the attacks of the capitalist powers by all the means in its power."

It was in this spirit that Earl Browder read to 2,000 applicants for Communist Party membership in the New York district in 1935, the following solemn pledge:

"I pledge myself to rally the masses to defend the Soviet Union, the land of victorious socialism."

Class struggle

The Communist looks upon society as sharply divided into two mutually antagonistic classes—the capitalist class (bourgeoisie) and the working class (proletariat). In this he follows the teachings of Karl Marx as laid down in the Communist Manifesto:

"Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: It has simplified the class antagonisms. Society as a whole is more and more splitting up into two great hostile camps, into two great classes directly facing each other—bourgeoisie and proletariat."

At all times the Communist considers himself as an active participant in this class struggle. He identifies himself with the proletariat and its class interests, although a large proportion, if not the greater part, of the members and especially of the leaders of the Communist Party of the United States, are intellectuals and professionals. Marx, Lenin, and Stalin belong to the class of intellectuals not workers. The Communist is contemptuous toward the American Federation of Labor, which includes over eight million workers, because of its overwhelming hostility toward the Communists and what they stand for. Similarly he is hostile toward all workers who refuse to subordinate themselves to the Communist Party line.

The Communist includes within the category of the hated ruling class not only the capitalist class but all those who, in his opinion, do its bidding, i. e., business executives, foremen, and government executives. He accepts their orders only under sufferance hoping for the speedy arrival of the day of revolutionary deliverance from "capitalist slavery." The outlook of the Communist Party member on this question is succinctly expressed by Karl Marx in the Communist Manifesto:

"Manifesto: As privates of the industrial army they are placed under the command of a perfect hierarchy of officers and sergeants. Not only are they slaves of the bourgeois class, and of the bourgeois state; they are daily and hourly enslaved by the machine, by the over looker, and, above all, by the individual bourgeois manufacturer himself."

Revolution

According to Communist theory, the incessant clashes between the working class and the capitalists increase in their proportions until they reach a climax—the revolutionary overthrow of the capitalist system by the workers. In the Communist Manifesto by Karl Marx, the picture is drawn as follows:

"The proletarians cannot become masters of the productive forces of society, except by abolishing their own previous mode of appropriation, and thereby also other previous mode of appropriation. They have nothing of their own to secure and to fortify; their mission is to destroy all previous securities for, and insurances of, individual property. * * * In depicting the most general phases of the development of the proletariat, we traced the more or less veiled civil war, ranging within existing society, up to the point where that war breaks out into open revolution, and where the violent overthrow of the bourgeoisie 'lays the foundation for the sway of the proletariat.'"

The central target of the Communist, marked for destruction, is the so-called "capitalist state." While this primary aim is veiled in modern Communist literature, it remains a basic precept of Communist theory. In a

letter to his friend Kugelman, dated April 12, 1871, Karl Marx stated that the task of the proletarian revolution is "No longer, as before, to transfer the bureaucratic and military machinery from one hand to another, but to smash it.

Commenting on this statement, Lenin added:

"Today, both in England and in America, the 'preliminary conditions for every real people's revolution is the smashing, the destruction of the ready-made state machine.'" (Selected Works, vol. II, p. 37.)

"In other words," says Stalin in his Foundations of Leninism, "the law of violent proletarian revolution, the law of the smashing of the bourgeois state machine as a preliminary condition for such a revolution, is an inevitable law of the revolutionary movement in the imperialist countries of the world." (Leninism, George Allen and Unwin, Ltd., London, 1942, p. 35.)

Dictatorship of the proletariat

In place of democracy, the Communist propose to establish the dictatorship of the proletariat which Lenin has defined as "the rule—unrestricted by law and based on force—of the proletariat over the bourgeoisie (The State and Revolution).

"'The dictatorship of the proletariat,' in the opinion of Joseph Stalin, 'cannot arise as the result of the peaceful development of bourgeois society and of bourgeois democracy; it can arise only as the result of the smashing of the bourgeois state machine, the bourgeois army, the bourgeois bureaucratic machine, the bourgeois police. * * * The new form of organization of the proletariat is the Soviets'" (Leninism, George Allen and Unwin, Ltd., London, 1942, pp. 33, 34).

According to Lenin's promise this dictatorship was to be "a state that is democratic in a new way—for the proletarians and the propertyless in general, and dictatorial in a new way—against the bourgeoisie" (Lenin, Selected Works, vol. VII, p. 34). It was to be a "proletarian democracy, the democracy of the exploited majority, based upon the restriction of the rights of the exploiting minority and directed against this minority" (Stalin). It was to be a democracy of the poor against the rich. Reporting for the Communist Political Association at its convention on May 20–23, 1944, Robert Minor approved this theory declaring that, "There is nothing more thoroughly proven by history than the correctness of the Marxian doctrine of the dictatorship of the proletariat." Stalin has explained the real meaning of the dictatorship of the proletariat as it functions in the Soviet Union as follows:

"No important political or organizational problem is ever decided by our soviets and other mass organizations without directives from our party. In this sense we may say that the dictatorship of the proletariat is substantially the dictatorship of the party, as the force which effectively guides it." (Quoted by Edgar Snow, in Pattern of Soviet Power, p. 164.)

For the evidence as to what the dictatorship of the proletariat has meant in terms of actual experience, we shall have to go to those fully familiar with it, men who are wholly sympathetic to the cause of labor and freedom.

"I am quite clear as to the difference in purpose between the dictatorship of Soviet Russia and those of the Fascist countries. But the methods employed are largely the same. All have their secret police, and employ arbitrary arrest and imprisonment. What is the difference in that respect between the Russian OGPU, the Gestapo of Germany, and the Ovra of Italy? They are all endowed with wide powers of arrest and imprisonment. Russia, too, has suppressed all political opposition. Liberty of speech, freedom of the press are denied to all but the Communist Party." (Walter Citrine, general secretary of the British Trade Union Congress, president of the International Federation of Trade Unions, from his book, I Search for Truth in Russia.)

"There are classes in the U. S. S. R.; a privileged class and an exploited class, a ruling class and a ruled class. Between the two there is a wide difference in the standard of living. * * * There is no private ownership in the U. S. S. R. There is only State ownership. * * * A small number enjoy this State property. The greater number of people support it, produce, respect, and are separated from it by a huge police apparatus of repression." (M. Yvon, worker, foreman, factory director, and member of the Communist Party of the Soviet Union, who spent 11 years in that country and wrote What Has Become of the Russian Revolution, from which the above is quoted.)

"The Soviet state * * * has not suppressed the professional police. It has not assimilated the courts in direct jurisdiction by the masses. It has not done away with social hierarchy in production. It has not lessened the total subjection of the local community to the power of the state * * *. It shows a tendency toward the development of a more specialized apparatus of repression than before * * *. In reality, the Soviet state continues to be, as the state of the past, a government apparatus resting in the hands of a minority. (Of another minority, of course.) Little by little, the 'power of the Soviets' is being replaced with the power of a certain party * * *. The 'Soviet regime' becomes the means of bringing into power and maintaining in power a revolutionary minority which claims to defend the interests of a majority."

(J. Martov, Socialist theoretician, member of the Russian Social-Democratic Party, who died in 1923. The above is quoted from his pamphlet, "The State and the Socialist Revolution.")

"But the Soviet trade unions are both formally and actually an organic part of the state machinery, a branch of the Soviet Government and the ruling dictatorial Communist Party. * * * The policy of these unions has been determined by the Communist Party, i. e., by the Government, and the members of the executive committees have been appointed by the same agency, not by the membership. Since there are no free elections of any kind in Soviet Russia and the people have no guaranties of personal liberty and no freedom of expression or of association, the Russian trade unions cannot be regarded as free organizations of workers. They are organs of the state, a department of the Government." (William Green, president of the American Federation of Labor, in the New Leader, August 4, 1945, p. 1.)

In other words, the Communists propose to substitute for the democratic, capitalist system under which ownership and control of industry is diffused among millions of individuals, a system under which industry, banks, newspapers, railroads, radio networks, films, and the government itself, are all controlled by a one-party dictatorship of the Communists. Under the so-called dictatorship of the proletariat, which is actually the rule of a small group at the head of the Communist Party led by an all-powerful dictator, the great mass of the people would be deprived of those freedoms which we have learned to enjoy as naturally as the air we breathe, namely, the right to take a new job; the right to work or not to work; the right to own and operate an automobile; the right to travel freely from place to place without police passport; the right to have a private telephone without interference; the right to criticize freely public officials and remove them, if necessary; the right to hear and read opposing opinions on the radio and in the press; the right to vote an opposition ticket; the right to a fair trial under a system of law emphasizing the innocence of the accused unless proven guilty; freedom from personal surveillance by janitors and other agents in the employ of the police; freedom of speech, press, and assembly; freedom of worship; freedom of research.

The theoretical principles which we outlined constitute the fundamentals of what is known as Marxism-Leninism to which the Communist Party of the United States pledged "adherence" at its last convention on July 26–28, 1945. Its present allegiance to these doctrines is further assured by William Z. Foster in his statement in the Worker of August 5, 1945, page 10:

"Our Communist parties will do well to pattern after the lives of our greatest leaders * * * Marx, the greatest Socialist theoretician, was simultaneously the active, practical leader of the First International. Lenin, the great theoretician of imperialism, also led in the tremendous work of building the Russian Communist Party and of carrying through the Russian revolution, and Stalin, the best Marxist of our times * * *. Our party with such great leaders as its guides, must become a party of active mass organization as well as one of propaganda and agitation."

It should be clear that these principles are neither scientific nor calculated to further the well-being of the broad masses of the people, but that they constitute, in fact, a program which seeks to exploit every problem confronting our present democratic society in order to destroy that society and establish in its place a Communist dictatorship.

III. STAGES IN THE HISTORY OF THE AMERICAN COMMUNIST MOVEMENT

On September 18, 1945, the Communist Party of the United States celebrated its twenty-sixth anniversary at Madison Square Garden in New York City. Despite the varied forms the American Communist movement has taken since its inception in September 1919, the Madison Square Garden meeting has furnished a concrete expression of the unbroken continuity of the movement in both organization and principle.

The Communist Party of America held its first convention from September 1–7, 1919, at the headquarters of the Russian Federation of the Socialist Party in Chicago. The call for the meeting was published in the (Russian) Nory Mir on July 7, 1919, and in the Revolutionary Age of August 23, 1919, both being left-wing Socialist organs. It called upon all those who favored an "international alliance of the Socialist movement of the United States only with the Communist groups of other countries" to answer "the clarion call of the Third International."

On the day the convention opened, Gregory Zinoviev, president of the executive committee of the Communist International, issued an appeal from Moscow to "all those who are for the Soviets and the proletarian dictatorship * * * to unite as soon as possible and form a unified Communist Party."

The temper of the Chicago meeting was well described in his official report by I. E. Ferguson, who was elected to its executive council. He declared:

"For one thing the fact that the federation delegates were largely Slavic emphasized the close union between the organization of the Communist Party here and the parent organization which came into being in Moscow in March of this year—the Communist International. It was the Russian expression of Marxism which predominated this convention, the Marxism of Lenin, and the party traditions of the Bolsheviki."

Zinoviev's appeal urging all American Communists to "unite" went unheeded. A large group of English-speaking delegates headed by Benjamin Gitlow and John Reed, resented the predominance of Russian-speaking elements at the convention and decided to split away. They held their own convention, almost simultaneously, in Chicago and formed the Communist Labor

Party. Both groups were represented as the Second Congress of the Communist International held in the summer of 1920.

Veterans of these two conventions more than a quarter of a century ago, hold key positions in the Communist Party of the United States today. Alexander Bittelman, member of the program committee of the Communist Party of America convention, is today a member of the national board of the Communist Party of the United States, and editor of its official Yiddish organ, the Morning Freiheit. Alfred Wagenknecht, elected executive secretary of the Communist Labor Party, is presently vice president of the Illinois-Indiana district and a member of the review commission of the Communist Party of the United States. Charles Krumbein, another CLP delegate was, until his death in February 1947, national treasurer. Earl Browder and Ella Reeve Bloor, who is now a national board member, were charter members of the Communist Labor Party.

Typical of the close relationship between the budding Communist movement and the Soviet Government was the fact that Dr. Julius Hammer, later a Soviet concessionaire, financed the Communist Labor Party, as well as the establishment of the Soviet "Embassy" under Ludwig C. A. K. Martens in 1919. Gregory Weinstein, editor of the Novy Mir and the (Communist) Class Struggle, became chancellor of the "Embassy." (I Confess by Benjamin Gitlow, pp. 28 and 59.)

On January 12, 1920, Zinoviev addressed a note to both Communist groups calling for "an immediate joint convention" to unite them to "seize power and establish the dictatorship of the proletariat." His letter was based upon the "reports of comrades who have arrived from America." It was clear that failure to comply would have meant nonrecognition by the Communist International. Thereupon a special convention of the United Communist Party was held secretly in May 1921, which constituted itself as the "American section of the Communist International." The raids conducted by Attorney General A. Mitchell Palmer had driven the party underground. All delegates assumed aliases. Israel Amter, alias Ford, was elected as an alternate member of the central executive committee. He is today a member of the National Board of the Communist Party of the United States.

The Communist International was, however, unwilling to allow the American Communists to limit themselves to illegal activity. The Third Congress of the Communist International held in Moscow in June–July 1921 therefore issued the following directive to its American affiliate:

"The Communist International draws the attention of the Communist Party of America (united) to the fact that the illegal organization must not only form the ground for the collection and crystallization of active Communist forces, but that it is their duty to try all ways and means to get out of their illegalized condition out into the open, among the wide masses, that it is their duty to find the means and form to unite these masses politically through public activity into the struggle against American capitalism." (Communist, August 1921.)

Conformance with this edict was immediate. The next issue of the Communist, official organ of the Communist Party of America, carried an article under the alias of Roger B. Nelson, entitled "The Party at the Crossroads," from which we quote in part:

"Our central executive committee, conscious of its duties and the pressing needs of the Communist International and the party, has laid the foundation for unifying and centralizing the open, legal activities of the party * * *. In doing this we are simply accepting the tactics adopted by the Third Congress of the Comintern." (Communist, September 1921.)

In pursuance of the Comintern mandate, the party established the American Labor Alliance, as its open, legal expression. This was reported to the secret convention of the Communist Party of America held at Bridgman, Mich., on August 17–21, 1921, by Jay Lovestone, alias Wheat, its executive secretary. Instructions from the Third International were personally transmitted by Max Bedacht, alias Marshall, American delegate to its third congress. He is now general secretary of the International Workers Order, a wealthy Communist fraternal organization.

This form was not considered satisfactory by the Communist International and hence it was decided to establish the Workers Party of America. A convention was called for this purpose in New York City on December 23–26, 1921. At its second convention held in December 1922, in New York City, the Workers Party of America adopted a program presented by Charles E. Ruthenberg, member of the central executive committee of the Communist Party of America under the alias of Damon. This convention elected him as executive secretary, a position to be held until March 2, 1927, the date of his death.

Both the Communist Party of America and the Workers Party of America sent delegates to the fourth congress of the Communist International held in Moscow, November 7–December 3, 1922. The two organizations were eventually merged into the Workers (Communist) Party of America at a convention held August 21–30, 1925.

At the sixth convention in New York City on March 1–10, 1928, the party assumed the name of the Communist Party of the United States, which was continued until the convention of May 20–22, 1944, at which time the organization transformed itself into the Communist Political Association. During this period the party formally disaffiliated itself from the Communist International on November 16, 1940, for the specific purpose of removing itself from the terms of the so-called Voorhis Act, requiring the registration of foreign agents. The Communist International was itself formally dissolved on May 22, 1943, thus removing from the field of Russian relations with her wartime allies a source of considerable irritation.

These formal severances of international ties did not remove the American Communists from foreign influence and direction. At a convention held on July 26–28, 1945, and in response to a letter of criticism from Jacques Duclos, secretary of the Communist Party of France and former member of the executive committee of the Communist International, the Communist Party of the United States was reconstituted and Earl Browder was replaced by William Z. Foster as its official leader.

As late as May 20–23, 1944, Robert Minor in his official report to the founding convention of the Communist Political Association emphasized the historical ties of his organization with the Communist Party of America, the Communist Labor Party, and the Communist International, when he spoke of "the history of the Communist Party" which "came to life in Chicago in September 1919 and which now passes on its heritage to the Communist Political Association." He added:

"It is doubly important to emphasize that the American Communist Party found a priceless and indispensable source of strength, clarity of principle—and the courage and assurance that can come only from the international outlook and soundness of theory—in its contact with its brother Communist Parties of all countries through the Communist International."

Chronology of conventions

September 1–7, 1919: Communist Party of America.

September 1–7, 1919: Communist Labor Party of America.

May 1921: United Communist Party of America.

December 23–26, 1921: Workers Party of America.

August 17–21, 1922: Communist Party of America.

December 1922: Workers Party of America.

December 23, 1923, to January 1, 1924: Workers Party of America.

August 21–30, 1925: Workers (Communist) Party of America.

October 1927: Workers (Communist) Party of America.

March 1–10, 1929: Workers (Communist) Party of America.

March 31–April 4, 1930: Communist Party of the United States.

April 2–8, 1934: Communist Party of the United States.

June 24–28, 1936: Communist Party of the United States.

May 27–31, 1938: Communist Party of the United States.

May 30 to June 2, 1940: Communist Party of the United States.

May 20–22, 1944: Communist Political Association.

July 26–28, 1945: Communist Party of the United States.

IV. RUSSIAN COMMUNIST PARTY AND THE INTERNATIONAL COMMUNIST MOVEMENT

From its birth in 1917 the international Communist movement, including the Communist Party of the United States, has been merely a foreign extension of the Communist Party of the Soviet Union, which, according to article 126 of the Soviet Constitution published in 1941, "is the leading core of all organizations of the working people, both public and state" (p. 36). The Communist movement has maintained this character since the Russian Revolution on November 7, 1917, before the Communist International was founded in March 1919, during its existence, and after its formal dissolution in May 1943. On the basis of evidence at hand, we are forced to assume that the Communist International still exists and is still functioning, only in a more covert form. A proper estimate of this movement must be based upon an appreciation of its unbroken historical continuity, regardless of outward tactical changes.

Pro-Communist spokesmen have labored arduously to convince the American people that each Communist Party is an independent entity by itself, rooted in its own native soil and history and free from foreign domination of any sort. The May 1938 constitution of the Communist Party of the United States declared, for example:

"The Communist Party of the United States of America is a working class political party carrying forward the traditions of Jefferson, Paine, Jackson, and Lincoln, and of the Declaration of Independence."

Despite these assurances there is ample evidence to the contrary. Walter G. Krivitsky, former Chief of the Soviet Military Intelligence for western Europe, testified on October 11, 1939, before the Special Committee on Un-American Activities. He died mysteriously in a Washington hotel in February 1941. He stated under oath before the special committee:

"The Communist International is not an organization of autonomous parties. The Communist Parties are nothing more than branch offices of the Russian Communist Party. The Communist International that operates in Moscow is nothing more than an administrative body which transmits the decrees reached by the Political Bureau of the Central Committee of the Communist Party of Soviet Russia."

Russian party model

William Z. Foster, who is now chairman of the National Board of the Communist Party of the United States, has long recognized the hegemony of the Russian Communist Party over the movement of which he is a part. In his work, Toward Soviet America, he said:

"The Communist Party of the United States * * * is the American section of the Communist International * * *. The Communist International is a disciplined world party * * *. Its leading party, by virtue of its great revolutionary experience, is the Russian Communist Party" (pp. 258, 259).

So strongly was this view entrenched that we find the Russian Communist Party referred to repeatedly throughout official Communist literature as the model party to be studied and imitated. In the Daily Worker of March 5, 1939, for example, we find a reprint of the following cabled editorial from the Moscow Pravda:

"The Communist Party of the Soviet Union always was and always will be a model, an example for the Communist Parties of all countries."

The Party Organizer, official internal organ of the Communist Party of the United States, intended for the enlightenment of party members only, has carried the following sample articles from time to time:

Outline for Class in Organization on Lines of Russian Model. (December 1927, p. 10.)

How a Unit of the Communist Party of the Soviet Union Works. (February 1931, p. 25.)

How the American Party Modeled Its Constitution on the Russian Party. (May 1931, p. 1.)

Bolshevik Organizational Principles From an Outline Used by the Soviet Party Schools (March 1931, p. 27; April 1931, p. 28.)

Reporting on the meeting of the National Committee of the Communist Party of the United States held on December 3–5, 1938, which dealt with the publication of the History of the Communist Party of the Soviet Union, the Communist of January 1939 announced:

"It will be the task and duty of the membership and organizations of the Communist Party in the coming months to organize and carry through the distribution of the minimum of 100,000 copies of this book" (p. 3).

The party urged followers to acquire it, to have it, to study it.

According to a speech delivered on February 24, 1941, by Earl Browder, general secretary of the Communist Party, "close to 200,000 copies of that book were sold."

At the Tenth Convention of the Communist Party, U. S. A., the following leaders of the Russian Communist Party were elected to the honorary presidium: Stalin, Dimitroff, Manuilsky, and Kuusinen (Daily Worker, May 28, 1938, pp. 1, 5). Appropriately the emblem of the Russian Communist Party, the American Communist Party, and the Communist parties throughout the world has always been the hammer and sickle.

Russian dominance

From the outset the Russian Communist Party actively manipulated the affairs of the Communist International and those of each individual, affiliated party. Angelica Balabanoff, appointed first secretary of the Communist International by the Central Committee of the Russian Party, has described how the delegates to its first congress were chosen:

"Most of the 35 delegates and 15 guests had been hand picked by the Russian Central Committee from so-called Communist parties in those smaller nations which had formerly comprised the Russian Empire, such as Estonia, Latvia, Ukraine, and Finland." (My Life as a Rebel by Angelica Balabanoff, p. 213.)

Although ostensibly representing the Italian party, she was considered a member of the Russian Communist Party by virtue of her residence in that country, and hence subject to its discipline. All Communists, regardless of nationality, residing in the Soviet Union, enjoy a similar status, including American Communists assigned to Moscow and such present-day luminaries as Togliatti (Ercoli) of Italy, Rakosi of Hungary, Fischer of Austria, Thorez of France, Pauker of Rumania, and Dimitroff of Bulgaria.

Angelica Balabanoff has described the operations of Russian Communist Party rule in Comintern matters.

"It was the secret party committee, not the Comintern Executive, that * * * issued statements in my name" (p. 224). "A leader or agent would be summoned to Moscow and ordered to have certain resolutions passed in his own party. * * * Moscow named all leaders" (p. 270). "I was now considered a member of the Russian party, whose delegates were elected by the Russian Central Committee" (p. 272).

So much was the Communist International the creature of the Russian Communist Party that it was made the subject of a report submitted at each convention of that party. At the ninth congress of the Communist Party of the Soviet Union, Karl Radek explained in his official report:

"The III International is the child of the Russian Communist Party. It was created here, in the Kremlin, on the initiative of the Communist Party of Russia. The executive committee of the III International is in our hands." (Izvestia, April 3, 1920.)

This estimate is corroborated by the testimony of Benjamin Gitlow, one of the founders of the American Communist movement, Communist candidate for Vice President in 1924 and 1928, and former member of the executive committee of the Communist International:

"Whereas the American party * * * had to carry our decisions of the Communist International explicitly, the Russian party was given a privileged position. The Russian party was permitted not only to review all decisions of the Communist International, but, if necessary, to take it up in its political committee and to change those decisions * * * and that decision becomes binding upon the parties of the Communist International.

"Another important fact to bear in mind is that * * * the rules governing the Communist International provide that whenever a party sends representatives to the Communist International, or delegates to the congresses of the Communist International, those delegates cannot be instructed * * * but they must go to the Communist International uninstructed. The only party that has the right to instruct its delegates to the Communist International and to make those instructions binding on the delegates is the Russian Communist Party. * * * In other words, they have built the Communist International organization in such a way that the Russians under no circumstances can lose control of the Communist International." (Hearings of the Special Committee on Un-American Activities, September 8, 1939—vol. VII, p. 4583.)

The Communist Party of the United States is so much an organic part of the Communist Party of the Soviet Union that it has invariably reflected the factional struggles for power within its Soviet parent body. In 1926, for example, Zinoviev and Trotsky united in a left-opposition movement against Joseph Stalin. The Political Committee of the Workers (Communist) Party of America adopted a resolution on October 29, 1926, which expressed its support of the central committee of the Communist Party of the Soviet Union in the struggle against the opposition led by Comrades Trotsky and Zinoviev. As the struggle intensified, James P. Cannon and Martin Ahern, both members of the American party's central executive committee, were expelled as Trotskyites on October 27, 1928, together with their followers. Later the Russian party was torn by a struggle against the Right Bukharinites, with the result that Jay Lovestone, executive secretary of the Workers (Communist) Party was expelled on July 8, 1929, because of his suspected sympathies with Bukharin. In his speech delivered before the American commission of the executive committee of the Communist International on May 6, 1929, Stalin described in some detail the race between the American Communist factions for Moscow's favor, as follows:

"I take such a simple fact as the speculation on the divergencies in the CPSU practiced by both the majority as well as the minority leaders. You know that the one as well as the other section of the Communist Party of America in vying with each other, overtaking each other as if at the races, strenuously try to speculate on the existing and nonexisting differences in the CPSU."

A study of the proceedings of the various congresses of the Communist International shows that the proceedings were completely dominated by members of the Russian Communist Party, subject to the discipline of the party's central committee. Those who were not Russians by birth were members of the Russian party by virtue of their residence in the Soviet Union. Some were political exiles from Fascist countries. The first three chairmen of the Communist International were members of the political bureau of the Russian Communist Party: Zinoviev, Bukharin, and Molotov, the latter being simultaneously the Soviet Premier. The last chairman was George Dimitrov, who was released from Soviet citizenship and his duties as a deputy to the Supreme Soviet on August 22, 1945, to participate in the Bulgarian elections.

At Comintern congresses, representatives of the Russian Communist party presented the main reports, resolutions, and manifestos. The manifesto of the first congress held in 1919 was drafted by Lenin, Trotsky, Zinoviev, Rakovsky, and Platten, a Swiss refugee, in Moscow. At the second congress in 1920 the chief reporters were Zinoviev, Lenin, Bukharin, and Radek. The third congress in 1921 heard reports from Zinoviev, Lenin, Radek, and Hintchouk. The chief speakers at the fourth congress in 1922 were Zinoviev, Radek, Trotsky, and Lenin. The following members of the Russian Communist party presented the main reports at the fifth congress in 1924: Zinoviev, Kalinin, Varga (Hungarian), Bukharin, Rykov, and Manuilsky. Reporters at the sixth congress in 1928 were Bukharin, Kuusinen, Varga, Stutschka, and Manuilsky. The seventh congress in 1935 heard the reports of Pieck (German), Dimitrov, Ercoli (Italian), and Manuilsky, all acting under the discipline of the Communst party of the Soviet Union.

Instructions from Moscow

The guiding hand of the leaders of the Russian Communist party is to be seen not only in Comintern matters in general but also in questions dealing specifically with the activities of the American Communist Party. The following are cited by way of example:

1. Communication dated January 12, 1920, signed by Zinoviev, calling for an "immediate joint convention" to unite the Communist party of America and the Communist Labor Party.

2. Referring to the United States, Zinoviev declared at the third congress of the Communist International: "the task of the Communists consists in agitating among the masses to develop the maximum of organizational work, to ruthlessly unmask the opportunists and centrists, to wrest the masses away from them, to destroy illusions, which were brought by social traitors." (Report of meetings held in Moscow, June 22–July 12, 1921, p. 45.)

3. At the fourth congress of the Communist International, Zinoviev reported that the affairs of the American party were discussed five times in the executive committee and nine times in its presidium. He added:

"We were able to send a delegate to America, who remained for some time. The

greatest difficulty with which the American movement has been confronted was the problem of combining together legal and illegal work." (Abridged report of meetings held at Petrograd and Moscow, Nov. 7–Dec. 3, 1922, pp. 9, 11, 25.)

4. In his report to the fifth congress, Zinoviev made the following reference to the affairs of the American Party:

"We must also combat some digressions to the right in the American movement; these digressions made their appearance in connection with the Third Party, the La Follette party." (Abridged Report of Meetings held at Moscow, June 17 to July 8, 1924, p. 16.)

5. The Thesis of Zinoviev presented to a plenary session of the Executive Committee of the Communist International in 1925 contained a section dealing with the Workers Party of America and pointed out that it was necessary "to fuse the national sections of the party into a real united party." (The Party Organization published by the Workers (Communist) Party of America, ch. II.)

6. Speaking at the Sixth Congress of the Comintern on July 19, 1928, Bukharin outlined the duties of the American Communist Party, as follows:

"Events like the United States incursion in Nicaragua have not been sufficiently counteracted, particularly by the American Party."

7. Joseph Stalin presented a statement before the Presidium of the Executive Committee of the Communist International on May 14, 1929 which presented in detail the tasks of the American Party, including The International Red Day Campaign, The Trade Union Unity Convention to be held in Cleveland on August 31, The Gastonia Campaign, Work Among the Miners, The Developing Activities of the All-America Anti-Imperialist League, and the "liquidation of all factions * * * in the Communist Party of America." His proposals on May 6, 1929 before the American Commission of the Communist International called for "An Open Letter * * * in the name of the ECCI (Executive Committee of the Communist International) to the members of the Communist Party of America", demanding that "The Secretariat of the CEC (Central Executive Committee) of the American Party be altered, and the "recall" of Jay Lovestone, then secretary of the American party. (Original documents presented by Jay Lovestone before the Special Committee on Un-American Activities, vol. XI, pp. 7112 to 7124.)

George Dimitrov was similarly explicit in his instructions to the American party at the Seventh Congress in 1935, when he called for the creation of a "mass people's front in America * * * in opposition to the parties of the trusts and the banks, and likewise to growing fascisms. * * * Our comrades in the United States acted rightly in taking the initiative for the creation of such a party." (Abridged Stenographic Report of the VII Congress of the Communist International, p. 151.)

Parallel policies

From about 1935 leaders of the Russian Communist Party have refrained from issuing open instructions to the American Communist Party. A number of simultaneous historical factors offer an explanation of this new procedure. First is the growing threat of Fascist Germany and Stalin's desire to placate public opinion in the democracies. Second is the probable use of instructions by short wave and cable. Third is the fact that pronouncements by leading spokesmen of the international Communist movement in such internationally circulated Communist publications as International Press Correspondence, World News and Views, Communist International, War and the Working Class, New Times, as well as the official Soviet press, served in the nature of instructions to a thoroughly disciplined world party. Indisputable evidence of Russian direction of the international Communist movement, including that of the United States, lies in the unswerving parallelism of policy between the Communist Party of the Soviet Union and the party in the United States, both before and after 1935.

1. Against the League of Nations: (a) In December 1927, at the Fifteenth Congress of the Communist Party of the Soviet Union, Stalin spoke against the League of Nations and charged that all the talk about it "only resulted in fooling the masses, in new outbursts of armament, and in fresh exacerbation of impending conflicts." Russia was not in the League.

(b) William Z. Foster, present leader of the Communist Party, United States of America, voiced a similar opinion in his book, Toward Soviet America (1932), when he declared:

"The League of Nations is not a peace-striving institution * * * it is a grouping of imperialist bandits intent only upon their own schemes of mass exploitation and war making" (p. 42).

2. For the League of Nations: (a) In an interview with Walter Duranty published in the New York Times of December 25, 1933, Stalin declared that "it is not impossible that we should support the League of Nations in spite of its colossal defects." Russia joined the League in September 1934.

(b) The resolution of the central committee of the Communist Party, United States of America, published in the Daily Worker of July 3, 1937, stated that "it is necessary to explain that the present League is not quite the same as it was some years ago, that the present League can and must be used for the cause of peace and democracy."

The November 1934 issue of the Communist official monthly organ of the CPUSA said:

"The outstanding event in the present international situation is the entry of the U. S. S. R. into the League of Nations" (p. 1059).

3. For collective security: (a) Maxim Litvinov, representing the Soviet Union before the Council of the League of Nations meeting in London on March 17, 1936, urged "the collective organization of security" against the Fascist aggressor nations.

(b) The central committee of the Communist Party, United States of America, in its resolution published in the Daily Worker of July 3, 1937, called for "the creation of a united front of democratic states against the Fascist aggressors."

4. For the Soviet-German pact, against imperialist war: (a) The Soviet-German nonaggression pact was signed by Joseph Stalin on August 23, 1939. V. M. Molotov, Soviet People's Commissar for Foreign Affairs, terms World War II "the new foreign adventures of the imperialist powers." (Daily Worker, November 7, 1939.)

(b) On August 26, 1939, Earl Browder, general secretary of the Communist Party, United States of America, broadcasting over the NBC network, declared that "The Soviet-German agreement is thus the best current example of the way to peace." Browder called the war "a family quarrel of rival imperialisms." (Daily Worker, November 6, 1939.)

5. Support of the war against the Fascist powers: (a) Germany attacked the Soviet Union on June 21, 1941. On July 3, Joseph Stalin broadcast an appeal in which he said:

"In this war of liberation we shall not be alone. In this great war we shall have true allies in the peoples of Europe and America."

(b) The official statement of the Communist Party, U. S. A., issued on June 22, 1941, demanded that the American people:

"Support the U. S. S. R. in its fight against Nazi war." (Communist, July 1941, p. 579.)

6. In defense of American capitalism: (a) On November 6, 1941, following Hitler's attack on the Soviet Union, Joseph Stalin declared:

"But in England and the U. S. A. there are elementary democratic liberties, there are trade-unions * * *, there are labor parties, there is a parliament, whereas the Hitler regime abolished all these institutions in Germany * * *. It is enough to compare these two series of facts to understand * * * the full falseness of the German-Fascist chatter about an Anglo-American plutocratic regime."

(b) In a speech delivered at Bridgeport, Conn., Earl Browder went even further in his support of capitalism when he said:

"We must be prepared to give the hand of cooperation and fellowship to everyone who fights for the realization of this coalition. If J. P. Morgan supports this coalition and goes down the line for it, I as a Communist am prepared to clasp his hand on that and join with him to realize it." (Communist, January 1944, p. 8.)

7. Attack on American capitalism: (a) With the end of the war the Soviet press has shown evidence of hostility toward American capitalism, of which the following are typical:

"The impending danger of mass unemployment is indicative of the profound contradictions that are inherent in America's economics." (M. Rubinstein, New Times, July 1, 1945, p. 19.)

"A choice has to be made. Either with the trusts and large banks, which are in the hands of traitors, or with the people." (Andre Marty, Secretary of the Central Committee of the Communist Party of France, Trud, July 3, 1945.)

(b) The draft resolution of the National Board of the Communist Political Association presented to its convention on July 26–28, 1945, was similarly hostile to American capital:

"American capital supported the war against Nazi Germany, not because of hatred of fascism or a desire to liberate suffering Europe from the heel of Nazi despotism, but because it recognized in Hitler Germany a dangerous imperialist rival * * *. They are trying to organize a new cordon sanitaire against the Soviet Union * * *. On the home front the big trusts and monopolies are blocking the development of a satisfactory program to meet the human needs of reconversion with its accompanying economic dislocations and severe unemployment." (Political Affairs, July 1945, pp. 579, 580, 581.)

8. Causes of Soviet victory: (a) The Moscow Bolshevik of July 4, 1945, stated that an important immediate task of propagandists and agitators is to explain fully and clearly the causes of the Soviet Union's victory. Propagandists and agitators must show the causes of victory are the strength of the socialist system, the might of the Red Army, and the leadership in military and state affairs of Generalissimo Stalin.

(b) Robert Thompson, member of the secretariat of the Communist Party of the United States, has written an article entitled "The Red Army's Contributions to Victory," in Political Affairs, of June 1945, in which he says in part:

"The Soviet high command, guided by the military and political genius of Marshal Stalin, opposed the strategy and tactics of Hitler's total war and blitzkrieg with the strategy and tactics of a people's war backed by the unique economic, military, moral, and political resources of the socialist country" (p. 488).

9. The following articles are reprinted in Political Affairs, official American Communist monthly organ, from the War and the Working Class, which is now known as New Times, a semimonthly magazine published in Moscow. Its purpose is obviously to guide the policy of Communist parties throughout the world. The reprinting of these articles

denotes not only their acceptance by the American Communist Party, but also that they are to serve as official directives for the guidance of party members.

Alex Bittelman, a member of the present National Board of the Communist Party, U. S. A., and one of the founders of the movement in this country, has epitomized the role of the Communist Party of the Soviet Union in his authoritative pamphlet entitled, "Milestones in the History of the Communist Party":

"The Communist International and its model party—the Communist Party of the Soviet Union—headed by Comrade Stalin, gave us the guidance that helped the American Communists to find the way to the masses and to the position of vanguard. (p. 8) * * * The leading role of the Communist Party of the Soviet Union in the Comintern needs neither explanation nor apology. A party that has opened up the epoch of the world revolution, and that is successfully building a classless society on one-sixth of the earth, is cheerfully recognized and followed as the leading party of the World Communist movement" (p. 71).

V. HOW THE WORLD COMMUNIST PARTY IS CONTROLLED

Lenin, the founder and chief theoretician of the Communist movement, had no faith in the efficacy of the democratic process. In frequent polemics on party organization, he was most caustic in his contempt for those who believed in following "like a tail" the spontaneity of the masses, branding such tactics as "Khvostism," after the Russian word, "khvost," meaning "tail." He advocated rather a political organization that would concentrate "all secret functions in the hands of as small a number of professional revolutionists as possible."

We have already shown how the leadership of the international Communist movement was concentrated from the outset in the hands of a small group at the head of the Russian Communist Party. In the early stages of the Communist International, however, when the movement was comparatively weak, there was some pretense of democratic methods. As the Soviet Union and the Communist Parties grew in strength, these pseudo-democratic forms were discarded and the dictatorship of the Russian Communist leaders of the international Communist movement became even more complete and absolute. Thus the first six Congresses of the Comintern were held at comparatively frequent intervals in 1919, 1920, 1921, 1922, 1924, and 1928. Delegates from affiliated parties attended these congresses and participated in the discussions of proposals presented by the controlling Russian Communist group. The seventh congress was held in 1935, after a lapse of 7 years. From 1935 to 1943, when the dissolution of the Comintern was announced by Joseph Stalin, no congress was held. At the present time it would seem that Communist Parties have no right to participate in the formulation of decisions affecting their movement, which emanate from Moscow. Thus, the dissolution of the Comintern serves a dual purpose. (1) It removes the basis for the charge of Moscow interference in the internal affairs of nations and lends color to the claim that the various Communist movements are spontaneous and indigenous. (2) It gives the Russian Communist leaders a justification for the abolition of international congresses or other media of international participation in the formulation of the world Communist policy, and thus makes for increased concentration of control in their hands.

Having had no previous experience with a centralized world party of this new type, Americans find it difficult to grasp its essential character. We are prone to judge the Communist Party in terms of other American political parties which are bound by no international ties but are inherently devoted to this country, which are loose in their discipline and tolerate wide differences of opinion, parties which serve as vehicles for the aspirations and demands of multifarious American groups and are wholly indigenous. While publicly encouraging the illusion that their party answers this description, the Communists are fully aware of the falsity of this belief. Speaking at the thirteenth plenum of the executive committee of the Comintern in December 1933, Ossip Piatnitsky, veteran leader of the Russian Communist Party and head of the organization department of the Communist International, declared that—

"The Communist International is united by the executive committee of the Comintern into a single, world, centralized party."

This conception was fully accepted by American Communists. Earl Browder has referred to the Communist Party of the United States as "a party of an entirely new type, never before seen in America, a party of the type first created by Lenin in the Russian Bolshevik Party, and now being brought into existence in every capitalist country, under the leadership of the world party of communism, the Communist International." (Modern Thinker, March 1934.)

The basis of the organization of the international Communist movement as a world Communist Party was envisaged at the time of its foundation as necessitated by "conditions of acute civil warfare," which called for the highest degree of centralization under the aegis of the executive committee of the Communist International. The subordination of the various national Communist Parties to the central control of Moscow was justified in the program of the Communist International on the ground that such parties must subordinate "the temporary, partial, group, and national interests of the proletariat to its lasting, general, international interests." In the final analysis, the interpretation of what constitutes the "lasting, general, international interests" of the proletariat was left to the Russian-dominated executive committee of the Communist International in Moscow. As the "only fatherland of the international proletariat, the principal bulwark of its achievements and the most important factor for its international emancipation," it follows that the interests of the Soviet Union must be paramount over all other interests, whether they be those of the workers in a particular industry or the interests of a nation as a whole.

From 1919 to approximately 1935, the Communist International has repeatedly published detailed statutes governing its affiliated parties. The discontinuance of the publication of these statutes coincides with the adoption by the 1935 Congress of the Comintern of its "Trojan Horse" policy when the Soviet Union began to seek the support of the democracies against the rising threat of Nazi aggression, when the Communists began to minimize and deny their revolutionary aims, and when they proclaimed their devotion of democracy. It is a reflection of the fact that Russian leadership of the Comintern had reached a pinnacle of unchallenged authority over a period of 16 years, an authority based not upon publicized statute books but upon the compulsory power of its farflung apparatus. These statutes have received their binding force through long Communist usage and unreserved acceptance. They have neither lapsed nor have they been publicly rescinded. The practices of the Communist Party of the United States at the present time are fully in line with these statutes and give ample evidence of their continued potency.

To preserve an appearance of democracy the constitution of the Comintern sought to create the impression that its world congress is its supreme authority. Since such congresses have been held every few years or not at all, it has been manifestly impossible for them to handle the everyday affairs of the International. Hence its constitution provided that "The leading body of the Communist International in the period between congresses is the executive committee, which gives instruction to all the sections of the Communist International and controls their activity" (par. 12). This body usually included representatives of the leading Communist Parties. That body is, however, required to meet "not less than once every 6 months" (par. 23). The executive committee therefore "elects a presidium responsible to the ECCI, which acts as the permanent body carrying out all the business of the ECCI in the interval between the meetings of the latter" (par. 19). To carry the centralization still further the presidium elects a political secretariat "which is empowered to make decisions." Joseph Zack, formerly a member of the Central Executive Committee of the Communist Party, United States of America, stationed in Moscow from 1927 to 1930, has described the actual functioning of the International, before the Special Committee on Un-American Activities on September 30, 1939, as follows:

"The ones that control the actual organizational machinery of the Communist International are the so-called small commission, a body of three individuals, and those three individuals (Piatnitzky, Manuilsky, Kuusinen) are all Russians and members of the Russian Communist Party. * * * Stalin has a battery of private secretaries whose function is to watch the foreign situation—China, the Americas, Germany, France, England—and who report to him personally * * * and through them and through * * * these three members of the commission, he commands and controls absolutely everything."

This small commission is in a position to issue orders to at least 65 Communist Parties throughout the world—orders which "must be promptly carried out."

The seat of the Comintern has always been in Moscow, which has given the Russian Communist Party physical control of its apparatus. Mr. Zack has testified that this apparatus consisted of "about four or five hundred employees, and all these employees are paid out of the Russian Treasury."

Statutes

On July 23–August 7, 1920, at the Second Congress of the Communist International, the following statute was adopted with the approval of the American Communist delegates who were present:

"All the parties and organizations comprising the Communist International bear the name of the Communist Party of the given country (section of the Communist International)."

Since that time the American section has been known as either the Communist Party of America, the Workers (Communist) Party of America, or the Communist Party of the United States (section of the Communist In-

ternational) until the party's alleged disaffiliation from the Communist International on November 16, 1940. It will also be remembered that after assuming the name of the Communist Political Association on May 20–23, 1944, for strategic reasons, the party resumed the name of the Communist Party of the United States on July 26–28, 1945, as prescribed by the original statutes. The compulsory adoption of this name emphasizes the subordination of all Communist Parties to their recognized Communist center in Moscow. This is accentuated by the fact that but one Communist Party is officially recognized in any given country, a situation which still prevails after the dissolution of the Comintern.

The Communist International has formulated model statutes (Musterstatut) for all Communist Parties which have been imposed upon these parties oftentimes despite considerable internal resistance. In the report of the organization department of the executive committee of the Communist International between the fifth and sixth world congresses, progress along this line is noted as follows:

"Beginning in the second half of 1925, immediately after the first international organizing conference, the revision of the statutes of the Communist parties in accordance with the requirements of the model statutes was taken in hand under the guidance of the organizing department."

In 1935 the Workers Library Publishers published a Manual on Organization for Communist party members, by J. Peters, which is prefaced by the following introductory note by Jack Stachel, now a member of the national board of the party:

"Much of the material was of late available, as for example, the famous and thoroughgoing resolutions and decisions on the question of organization adopted by the second organizational concerence of the Communist international."

In 1925 a directive from the Communist International brought about the reorganization of the Workers Party of America on a shop nuclei basis. This form of organization, which the Comintern constitution has called the basic unit of the Communist Party organization (par. 4) which had been abandoned for some time in the United States, has been revived at the convention in July 1945.

The statutes also provide for strict supervision of the American party's program. Point 15 of the Conditions of Admission to the Communist International provide that—"the program of each party belonging to the Communist International should be confirmed by the next congress of the Communist International or its executive committee."

The constitution of the Communist International has even prescribed the exact form of membership requirement for its affiliated parties, namely:

"Membership in the Communist Party and in the Communist International is open to all those who accept the program and rules of the respective Communist Party and of the Communist International, who join one of the basic units of the party, actively work in it, abide by all the decisions of the party and of the Communist International, and regularly pay party dues."

Article 3, section 1 of the constitution of the Workers (Communist) Party, dealing with membership, which is typical, repeats this formula almost word for word:

"Every person who accepts the program and statutes of the Communist International and of the Workers (Communist) Party, who becomes a member of a basic suborganization of the party, who is active in this organization, who subordinates himself to all the decisions of the comintern and of the party, and regularly pays his membership dues may be a member of the party."

It should be noted here that each individual member must subordinate himself to the decisions of the Communist International, whose constitution provides that such decisions "must be unreservedly carried out even if a part of the party membership or of the local party organizations are in disagreement with it" (par. 5). The executive committee of the Comintern is in fact empowered" to annul or amend decisions of party congresses and of central committees of parties and also to make decisions which are obligatory for them" (pars. 13 and 14).

Recent developments in the Communist Party of the United States in 1945, 2 years after the announced dissolution of the comintern, offer a striking illustration of the enforcement of these provisions. Jacques Duclos, secretary of the Communist Party of France, and a member of executive committee of the "defunct" Communist International, wrote a letter which appeared in Les Cahiers du Communisme, of April 1945, official theoretical organ of the Communist Party of France, in which he attacked Earl Browder, then president of the Communist Political Association, for revision of Marxism, for promulgating "the concept of a long-term class peace," and for the dissolution of the Communist Party of the United States, which had been approved at a convention held in New York City on May 20–23, 1944. It should be noted at this point that the comintern constitution provides that all relations between its various national sections are subject to the control of the executive committee of the Communist International (pars. 31, 32). They cannot deal with each other as free, autonomous parties. It is significant also that the Communist Party of France officially endorsed Browder's policy in its official organ-in-exile, France Nouvelle of May 1944, indicating that this position had received official international approval at the time. It is therefore difficult to avoid the conclusion that Duclos was selected as a convenient mouthpiece of the submerged executive committee of the Communist International exercising its right to annul or amend decisions of party congresses."

In accordance with the rule laid down in No. 18 of the original 21 points or conditions of admission to the Communist International, it is provided that "all the leading organs of the press of every party are bound to publish all the most important documents of the executive committee of the Communist International." True to this practice, by means of which the Comintern can go over the heads of national party leaders, the Worker of May 27, 1945, section 3, pages 1 and 3, carried a full translation of the Duclos letter severely criticizing the Communist Political Association and its president. In accepting these strictures, Browder expressed his welcome of the initiative of Jacques Duclos in utilizing this channel of international discussion. A resolution approving Duclos' position was adopted by the emergency national convention held on July 26 to 28, 1945, with Browder's single opposition vote. He later pledged his full support of the resolution.

An exact parallel is to be found in the address by the executive committee of the Communist International to all members of the Communist Party of the United States, attacking Jay Lovestone, then executive secretary of the CPUSA, for failing to recognize the crisis of capitalism, and the "necessity of accentuating the struggle against reformism," and removing him "from work in the American Communist Party" (Daily Worker, May 20, 1929, p. 3). A few days later his expulsion was announced by the executive committee of the Comintern and the central executive committee of the American party, this being but one of numerous expulsions of leaders of national parties by the executive committee of the Comintern in line with section III, paragraph 15, of its constitution, providing that "the ECCI has the right to expel from the Communist International, entire sections, groups, and individual members who violate the program and constitution of the Communist International or the decisions of the world congress or of the ECCI."

The extent of Moscow control of the American Communist Party is indicated by the fact that conventions "can be convened only with the consent of the ECCI." (Constitution of the Communist International, par. 34.) Illustrating this procedure the Daily Worker of October 15, 1924, announced among the decisions of Workers' Party central executive committee that "the CEC authorized a request to the Communist International for permission to hold an annual convention of the Workers' Party some time during the month of January." It should be noted at this point that it required a letter from Jacques Duclos, member of the executive committee of the Comintern, to provoke an emergency convention of the American party on July 26–28, 1945.

The constitution of the Comintern has provided a number of safeguards to insure its complete control over affiliated parties. The executive committee of the Communist International is empowered to send its own representatives to member parties who speak in its name.

"Such representatives receive their instructions from the ECCI or from its presidium, and are responsible to them for their activities. Representatives of the ECCI have the right to participate in meetings of the central party bodies as well as the local organizations of the sections to which they are sent * * *. They may * * * speak in opposition to the central committee of the given section, at congresses, and conferences of that section, if the line of the central committee in question diverges from the instructions of the ECCI. Representatives of the ECCI are especially obliged to supervise the carrying out of the decisions of the world congresses and the executive committee of the Communist International" (par. 22).

Communist International representatives

The application of this decision is demonstrated by a significant list of Comintern representatives who have operated in this country under false passports and various aliases. Although these representatives varied in nationality, it must be remembered that they all represented the Communist world party centered in Moscow.

G. Valetski (Valetsky), a Pole, who attended the secret convention at Bridgman, Mich., on August 17–21, 1922, member of the Russian Communist Party.

Josef Pogany, alias John Schwartz, alias John Pepper, alias John Swift, former commander in the Hungarian Red Army in 1919, exile to the Soviet Union, attended the secret convention at Bridgman, Mich., on August 17–21, 1922, elected a member of the Central executive committee of the Workers Party of America at its convention on December 23, 1923, to January 1, 1924, disciplined and recalled by the Comintern in July 1929.

Boris Reinstein, a former member of the American Socialist Labor Party, by whom he was repudiated, present at the first congress of the Communist International and the secret convention of the Communist Party of America at Bridgman, Mich., on August 17–21, 1922.

S. Gussev, alias P. Green, also known as Drabkin, chairman of the Parity Commission of the Workers Party Convention on August 21–30, 1925; general in the Red Army; member of the Control Commission of the Russian Communist Party.

Y. Sirola, alias Miller, representative to the United States in 1926–27; former chairman of the Finnish Communist Party, and one of the founders of the Communist International.

Arthur Ewert, alias Braun, alias Brown, alias Berger, Comintern representative to the United States in 1927, sent to Brazil and arrested in December 1935; former member of the Central Executive Committee of the Communist Party of Germany.

Harry Pollitt, Comintern representative to the convention of the Communist Party, U. S. A., held March 1–10, 1929; secretary of the Communist Party of Great Britain.

Philipp Dengel, Comintern representative to the convention of the Communist Party, U. S. A., held March 1–10, 1929; member of the Central Executive Committee of the Communist Party of Germany.

B. Mikhailov, alias George Williams, Comintern representative to the Communist Party, U. S. A., in 1929, 1930; member of the Anglo-American Commission of the Communist International; prominent member of the Russian Communist Party.

Gerhart Eisler, alias Hans Berger, writer of articles in the American Communist press pertaining to Communist policy in Germany from 1931–32 and from 1940–45; former editor of Under the Banner of Marxism, official theoretical organ of the Communist Party of Austria; former Comintern representative in the Caribbean area.

Benjamin Gitlow, former member of the executive committee of the Communist International, former member of the political committee of the Communist Party, U. S. A., and at one time its candidate for Vice President of the United States, has described the powers of these plenipotentiaries in his testimony before the Special Committee on Un-American Activities, from which we quote:

"A representative of the Communist International to the United States during his stay in the United States was the boss of the party. * * * He automatically became a member of all the leading committees of the party in the United States and participated in its deliberations and enjoyed a vote on matters that were voted upon. * * * All he had to do was to impose his power and mandate as a C. I. representative, and then his view would prevail. Generally American Communists never would take a position in opposition to the representatives of the Communist International" (hearings, vol. 7, p. 4590).

According to paragraph 22 of the Comintern constitution, its executive committee also had "the right to send instructors to the various sections of the Communist International," whose "powers and duties * * * are determined by the ECCI to whom the instructors are responsible." These instructors supervised special phases of Communist activity in the United States. We cite a number out of many more who have visited these shores:

Carl E. Johnson, alias Scott, also known as Jensen or Jenson, a former member of the Lettish Communist Club of Boston who left the United States in 1919 and became a member of the Russian Communist Party. He came to the United States in 1921–22 to supervise Communist trade-union activity as the official representative of the Red International of Labor Unions with headquarters in Moscow.

——— Petersen represented the Communist International in 1925–26 in dealing with Communist activity among the Swedes in the United States, active in editing the Swedish Communist paper, Ny Tid.

——— Marcus, alias M. Jenks, Comintern instructor on organization matters in the United States in 1928, wrote a pamphlet for the American party entitled, "The Party Nucleus."

F. Marini, also known as Maurio Alpi, alias Fred Brown, attended the tenth convention of the Communist Party, U. S. A., in May 1938 as secretary of its commission on organization, press, and literature and chairman of its commission on national groups, writer for the Communist; originally from Trieste from where he went to Russia; active in the United States for about 10 years.

William Rust, Young Communist International representative to the Young Communist League of the United States in 1927 approximately; member of the British Communist Party and Young Communist League.

Willi Muenzenberg, visited the United States in 1934; former Communist deputy to the Reichstag in 1933; international head of the Workers International Relief, a Communist relief organization.

Louis Gibarti, also known as Dobos, in the United States intermittently after 1934 as representative of the Workers International Relief; an ex-officer in the Red Army of Hungary under Bela Kun.

Raissa Irene Browder, wife of Earl Browder, collaborator in writing his standard Communist works for at least 16 years; delegate to the tenth convention of the Communist Party, U. S. A., May 27–31, 1938; identified as an agent of the Soviet Intelligence Service before the Special Committee on Un-American Activities (vol. XI, p. 7026).

Raymond Guyot, leader of the Young Communist International delegation at the World Youth Congress at Vassar, 1938, general secretary of the Young Communist International, and member of the political bureau of the Communist Party of France.

Reports to the Communist International

According to the Guiding Rules for the Construction and Organization of Communist Parties adopted by the Third Congress of the Communist International in 1921, "The party must hand in its quarterly report to the leading body of the Communist International," as well as the minutes of its central committee (constitution, par. 29). In addition, "Special reports must be made on the work of special committees of the party" (Guiding Rules, pars. 17, 18). The extent and detail of these reports is illustrated by the following items included in a report of the executive committee of the Communist International between the Fifth and Sixth World Congresses, published in July 1928: General economic and political situation in the United States, inner situation in the Workers (Communist Party), campaign against the war danger, "Hands off China" campaign against American intervention in Nicaragua "in which for the first time in American labor history the marines were appealed to on the necessity to fight against their own government," work of the All-American Anti-Imperialist League, the Labor Party movement, the Sacco-Vanzetti campaign, the campaign for the protection of the foreign born, the work of the Anti-Fascist Alliance of North America, the Unemployed Councils, the Trade Union Educational League, the anthracite-coal strike, the Passaic textile strike, the furriers' strike, the cloakmakers' strike, the bituminous-coal strike, the Colorado miners' strike, the Haverhill shoe workers' strike, party schools, the party press, work in the cooperatives, work among the farmers, the International Labor Defense, the Workers International Relief, the Workers' Sports Federation, the American Negro Labor Congress, anti-American agitation in the Philippines and in Hawaii, work among women, the Young Workers' League, number of members and units of the Workers (Communist) Party. No congressional committee in the United States was ever able to secure so detailed a report of the activities of the American Communists.

As late as April 1945 Jacques Duclos, member of the Executive Committee of the Communist International, published in the Cahiers Du Communisme, theoretical organ of the Communist Party of France, the following detailed information regarding the American Communist Political Association: A study of various speeches by Earl Browder, a comment on William Z. Foster's unpublished letter of criticism of Browder's position, a comment on the unpublished speech of Samuel Darcy, study of the organization's membership figures. Since it has not been the Comintern practice for one party to report its internal affairs and difficulties to another but rather to the Executive Committee of the Communist International, one is forced to the conclusion that Duclos' familiarity with these matters was the result of information received through official international Communist headquarters in Moscow, for whom he was acting as spokesman.

These reports are thoroughly discussed by various committees of the Comintern. They are subjected to intensive criticism on the basis of which instructions are sent to the party concerned, "(a) through correspondence; (b) through instructors; (c) through workers from the Department." (Report of the organization Department of the ECCI 5th—6th Cong. p. 32.) At the Fourth Congress in 1922, for example, Zinoviev reported that the American Communist Party had been discussed five times by its Executive Committee and nine times by its Presidium, such matters being referred to it, as a rule by the American Commission of the Comintern. Between 1924 and 1928 the Information Department of the Comintern received 38 reports and 14 communications from the American Communist Party. Prior to its Sixth Congress the Report of the Executive Committee declared:

"Since the Fifth Congress the inner-Party situation has been dealt with in special American commissions in the Fifth, Sixth, and Eighth Enlarged ECCI sessions."

Speaking of its work in general, the ECCI report adds:

"During the period covered by the report a large number of general and individual letters have been sent to the Parties, instructions have been given in conversation with Party representatives, criticisms of factory newspapers of the various countries have been published, etc."

In the Communist International of October 15, 1933, there appeared a detailed analysis and criticism of 2 months' issues of the Daily Worker, published in the course of checking up the carrying out of the tasks put before the Communist Party of the United States of America by the executive committee of the Communist International. The article was entitled "Review of the Daily Worker, U. S. A. (June and July)."

The recent detailed criticism of the American party by Jacques Duclos may be properly considered as a criticism by the international executive committee. Appended to this volume will be found a long list of directives issued by the executive committee of the Comintern to the American party in conformance with this procedure.

For those who cherish the illusion that the Communist Party of the Soviet Union has voluntarily liquidated this world-wide apparatus built up in the course of 26 years of laborious effort and struggle, for those who retain even a vestige of doubt regarding the maintenance of this network, let us add these memorable words from Stalin's oration at Lenin's funeral. They were reprinted in the New York Times of August 19, 1945, without the slightest protest from Soviet sources:

"In leaving us Comrade Lenin ordered us to strengthen and expand the union of the republics. We swear to thee, Comrade Lenin, to honor thy command. * * * In leaving us, Comrade Lenin enjoined us to be faithful to the Communist International. We swear to thee, Comrade Lenin, that we shall dedicate our lives to the enlargement

and the reinforcement of the union of the workers of the world, the Communist International."

VI. THE AMERICAN SECTION OF THE WORLD COMMUNIST PARTY

The Communist Party of the United States has functioned at all times and throughout all its forms as an integral part of the Moscow-controlled world-wide Communist apparatus, submitting unreservedly to its decisions, placing its resources and individual members at the full disposal of the Soviet Government or the Comintern for assignment to duty in any part of the globe, and receiving in return certain special, branch-office privileges.

American Communist literature abounds in declarations of complete subservience to the Communist International and its decisions, from which a few examples are cited. In 1929 the Comintern forwarded an address to the United States calling for the repudiation of the leaders of the American party elected at a convention held in March 1929. The Daily Worker of June 1, 1929, page 1, has described the reaction to this document:

"The address of the Comintern to the American party members was received 14 days ago. The political committee immediately, by unanimous vote, accepted, endorsed, and pledged to carry it into effect and fight against any opposition to it, open or concealed. The address was published in the Daily Worker of May 20, the first issue after receipt of the document. * * * By mail and telegraph a constant stream of messages has poured into the party office, from district organizers, district bureaus, language bureaus, and newspaper staffs, and from leading workers, all accepting, endorsing, and pledging to struggle for the line of the address and against all opposition to it."

In an article entitled "Milestones of Comintern Leadership," by Alex Bittelman, now a member of the national board of the Community Party, United States of America, we find the following acknowledgment by an official representative of that party, of the role played by the Comintern in the affairs of the American party:

"A unified and single Communist Party was materialized in the United States in shorter time, less painfully and wastefully, than would have been the case without the advice and assistance of the Comintern * * * Once more the American Communists consulted with the Communist International. That was in 1921–22. And correct advice came, as it was bound to, and with its help, Workers' Party was organized. * * * What was it that proved especially helpful for the American Communist in the Comintern advice on legal and illegal work? It was the world and Russian experience of bolshevism. * * * It was the Comintern advice and guidance that helped American Communists to turn full face to the building of a left wing in the reformist unions beginning with 1920; it was the advice of the Comintern that helped formulate a correct solution to one of the basic problems of the American proletariat—the organization of the unorganized into trade-unions; it was advice of the Comintern on independent leadership of the economic struggles by the revolutionary elements that helped formulate strike policies and tactics. * * * Once more came the outside influence of the Comintern; and what did it say? It said that the struggle against discrimination and for Negro rights is a revolutionary struggle for the national liberation of the Negroes, that we must fight for complete Negro equality, and that in the Black Belt the full realization of this demand requires the fight for the national self-determination of the Negroes including the right of separation from the United States and the organization of an independent state. * * * The Comintern undertook to prepare the proletarian vanguard, the Communist Party, and through it the whole working class for effective struggle against unemployment." (Communist, March 1934.)

On a number of occasions, Earl Browder, as the executive head of the Communist Party of the United States, has expressed his complete acceptance of Comintern decisions. At its eighth convention on April 2–8, 1934, he stated in his official report:

"The task of our party today, the tasks of this convention, have been clearly and systematically set forth in the documents before us for adoption, especially the theses and decisions of the thirteenth plenum of the executive committee of the Communist International. * * * My report has been for the purpose of further elaborating these fundamental directives and discussing some of our central problems concretely in the light of these directives." (Communism in the United States, by Earl Browder, p. 78.)

Even when such decisions involved severest criticism, Mr. Browder's submission to the Comintern was never in doubt. Criticized for certain errors on the question of America's relation toward Japan, he declared in his report to the sixteenth plenum of the central committee of the Communist Party, United States of America, on January 28, 1933:

"With regard to my own errors in this question, I must admit an additional weakness in not yet having written the extended article on this whole question that was suggested in the letter of the Comintern." (Communists, March 1933, p. 237.)

In the same spirit he received the critical letter of Jacques Duclos, which served to remove Browder from the leadership of the American party, with the statement that—

"We can only welcome the initiative of Jacques Duclos." (Worker, May 27, 1945, sec. 3, p. 1.)

In his authoritative Manual on Organization, J. Peters has laid down the principle which guides the American party in its attitude toward the Comintern, as follows:

"We do not question the political correctness of the decisions, resolutions, etc., of the executive committee of CI" (p. 27).

American delegates to Moscow

Since 1917 there has been an endless pilgrimage of American Communists to Moscow, including delegates to Comintern congresses and plenums of the ECCI between congresses, direct representatives of the American Communist Party, workers in special departments, students, information specialists, trade-union delegations, tourists, representatives of Communist-front organizations, couriers, and secret agents. For the most part these individuals traveled under aliases and false passports. Thus, Moscow came to be known in inner party circles as Mecca. The conspiritorial nature of the Communist movement precludes the possibility of presenting anything but a partial list of these to indicate the pattern.

The following representatives of the American Communist movement were delegates to the various congresses of the Communist International in Moscow:

First Congress, March 1–6, 1919: John Reed; Boris Reinstein, alias Davidson; S. K. Rutgers.

Second Congress, July 23–August 7, 1920: Louis C. Fraina (Communist Party of America); Alexander Stocklitsky (Communist Party of America); John Reed (Communist Labor Party); John N. Jorgis (Communist Labor Party); Alexander Bilan (Communist Labor Party); Edward I. Lindgren, alias Flynn (Communist Party of America). Member of the executive committee of the Communist International, John Reed.

Third Congress, June 22–July 12, 1921: Robert Minor, alias Ballester; Max Bedacht, alias Marshall; Bill Haywood for the Industrial Workers of the World; Nicholas Hourwich, alias Andrews; Oscar Tywerousky, alias Baldwin; Ella Reeve Bloor; Jack Crosby. Member of the executive committee of the Communist International, Baldwin.

Fourth Congress, November 7–December 3, 1922: L. E. Katterfeld, alias Carr; Max Bedacht, alias Marshall; ——— ———, alias Pullman; T. R. Sullivan; Arne Swabeck, alias Lansing; Otto Huiswood, alias J. Billings; Claude McKay; ——— Kucher; Alexander Trachtenberg (Workers Party of America); Max Bedacht (Workers Party of America); ——— ———, alias James Cartwright (Workers Party of America). Member of the executive committee of the Communist International, Carr, James P. Cannon. Substitute, Charles E. Ruthenberg, alias Damon.

Fifth Congress, June 17–July 8, 1924: William F. Dunne; Israel Amter; ——— Jackson; Joseph Pogany, alias John Pepper.

Sixth Congress, July 25–Sept. 1, 1928: Lovett Fort-Whiteman; William W. Weinstone; James P. Cannon; James W. Ford; John Pepper; Otto Hall, alias Jones; Harry M. Wicks; Alex Bittelman; Benjamin Gitlow; Earl Browder, alias Dixon; Samuel Darcy; Bertram D. Wolfe; William Z. Foster; Jay Lovestone; Manuel Gomez; William F. Dunne. Member of the executive committee of the Communist International—William Z. Foster, Jay Lovestone (expelled); candidates, Benjamin Gitlow, Otto Huiswood; later Robert Minor, alias Randolph. Gitlow was later expelled.

Seventh Congress, July 25–August 21, 1935: Earl Browder, William Z. Foster, Gilbert Green, James W. Ford, Robert Minor, Samuel Darcy. Members of the executive committee of the Communist International—William Z. Foster, Earl Browder, Gilbert Green; candidate, James W. Ford.

Testifying under oath before the Special Committee on Un-American Activities, Earl Browder enumerated his trips to Moscow as follows:

"My first visit was in 1921. * * * My next visit in 1926. * * * I believe I have visited there almost at least once a year since then. My last visit was in 1938. * * * Since 1930 I visited there because of my position as general secretary of the party, and a desire to confer with Communists in the Soviet Union and other countries." (Hearing, vol. 7, p. 4324.)

William Z. Foster, present leader of the Communist Party, United States of America, testified before the same committee on September 29, 1939, that he had visited the Soviet Union on official Communist business at least 10 times in 1921, 1923 or 1924, 1926, 1928, 1929, 1930, 1934, 1935, and 1937.

Between congresses of the Comintern, the American Communist Party maintained official representatives in Moscow. Among those listed by Benjamin Gitlow, former member of the executive committee of the Comintern, are the following: Israel Amter, Max Bedacht, Robert Minor, Louis J. Engdahl, Earl Browder, Harrison George, H. M. Wicks, William W. Weinstone, and others. (Hearings, Special Committee on Un-American Activities, vol. 7, p. 4590.)

Among those called to Moscow in 1929 to discuss the factional situation in the American party were: William Z. Foster, Alex Bittelman, Max Bedacht, William W. Weinstone, Jay Lovestone, Benjamin Gitlow, William Miller, Tom Myerscough, William White, Edward Welsh, Bertram D. Wolfe, and Alex Noral.

In his autobiographical work, Proletarian Journey, Fred E. Beal, former Communist strike leader, tells of meeting the following members of the central executive committee of the American Communist Party in Moscow during the 1930's: William F. Dunne, Clarence Hathaway, and William W. Weinstone; also John Little, representing the

American Young Communist League; and Michael Gold, Daily Worker columnist.

Andrew Smith, another former member of the American Communist Party, wrote the story of his adventures in the Soviet Union in a book entitled, "I Was a Soviet Worker," in which he told of conferring with John J. Ballam, J. Peters, and Andrew Overgaard, a trade-union specialist, and all representatives of the American party in Moscow. Smith's credientials were signed by J. Peters and reproduced in his book.

American agents of Moscow

As a part of a disciplined world party, members of the American Communist Party are subject to assignment to Moscow or any other part of the world under the orders of the Comintern. It would require an omnipotent intelligence service to list all of these agents and their many varied activities. We can only list some by way of example:

Earl Browder, head of the Pan-Pacific Secretariat, with headquarters in Hankow, China, in 1927; editor of its official organ, the Pan-Pacific Worker; works published in the Soviet Union.

Philip Aronberg, assistant to Browder in China.

Harry M. Wicks, representative to Germany and Latin America (1926).

William F. Dunne, representative to France and Germany.

Joseph Zack, representative to Latin America, especially Venezuela (1932).

Jack Johnstone, representative to India and deported by the British Government (1928).

Harrison George, representative to Montevideo (1926).

Charles Krumbein, representative to Great Britain (1930).

Robert Minor and Earl Browder, acting in behalf of the national committee of the American Communist Party in Spain in 1936–39. Andre Marty, member of the executive committee of the Comintern, was the head of an international secretariat in general charge of operations. Other Comintern representatives in Spain were Generals Emil Kleber, Lukacz, Krieger, Cole Dumont, and Vladimir Copic. Earl Browder has estimated that at least 2,000 members of the American Communist Party were members of the Abraham Lincoln Brigade in Spain at the time. Minor officials of the American party in Spain were John Gates, member of the New York State Committee; William Lawrence, organizational secretary of New York State; Joe Dallet, section organizer in Youngstown, Ohio; Saul Wellman, member of the New York State Committee of the Young Communist League; Steve Nelson, member of the national committee; and Joseph North, editor of the New Masses. (For an extensive list of members of the Abraham Lincoln Brigade, organized by the Communist Party of the United States, see Committee on Un-American Activities, Appendix IX, pp. 274–291.)

Leonard Emil Mins, American Communist research analyst for the Office of Strategic Services, later suspended. Editor for the Marx-Engels-Lenin Institute in Moscow prior to 1936.

Nicholas Dozenberg, business manager of the Voice of Labor, official organ of the Workers Party of America, 1920–23; business manager of the Worker, official organ of the Workers Party of America and manager of the Workers Publishing Society, 1923–27; agent of the Soviet Military Intelligence, 1927–39.

Schachno Epstein, editor of the Morning Freiheit, official Yiddish organ of the Communist Party of the United States; secretary of the Jewish Anti-Fascist Committee in Moscow in 1944; editor of the Emes, Yiddish organ in the Soviet Union, until his decease in 1945.

Williana Burroughs, Communist candidate for Lieutenant Governor of New York State in 1934; English-language announcer for the Anglo-American department of the Moscow radio for nearly 10 years, until October 1945.

Within the year 1934 the following American Communists contributed articles to the International Press Correspondence (Inprecorr), official weekly press organ of the Communist International: Hy Kravif, A. G. Bosse, alias for Alfred J. Brooks, Jack Hardy, alias for Dale Zysman, Earl Reeve, Esther Lowell, Sascha Small, Howard Lindsay, Charles D. Fletcher, Grace Hutchins, Al Steele, M. Morris, Joseph North, I. Amter, A. A. Heller, Robert Julien Kenton, Edwin Seaver, Anna Damon, Louis Coleman, P. Francis, A. B. Magil, Alan Calmer, H. Puro, Samuel Weinman, Rose Crane, Leo Thompson, Simon W. Gerson, Vern Smith, Rose Baron, William L. Patterson, Isidor Schneider, P. Lapinsky, Paul Novick, Harry Dawson, Peter Dorn, Paul Levin.

A. G. Bosse, alias for Alfred J. Brooks, a public-school teacher of the New York public schools, a member of the Communist Party, U. S. A., had absented himself from his position from 1929 to 1932 to serve as a "referent" or information specialist for the Communist International in Moscow. (Report of the Subcommittee of the Joint Legislative Committee To Investigate Procedures and Methods of Allocating State Moneys for Public School Purposes and Subversive Activities, pp. 314–317.)

Joseph Kowalski, editor of the Communist paper, Glos Lodowy; in charge of a Soviet penitentiary between 1920 and 1923, after his deportation from the United States in 1920; now active in the United States. (Special Committee on Un-American Activities, vol. 2, p. 1310.)

Anna Louise Strong, writer for the following Communist magazines in the United States: Liberator, New Masses, Soviet Russia Today, Labor Herald, Workers Monthly, Sunday Worker; editor of the Moscow Daily News.

Speaking of some of the founders of the American Communist Party, Jay Lovestone, its former executive secretary, stated that some of them "are now holding the highest posts in the Communist party of the Soviet Union, in the Russian trade unions, and in the Soviet Government" (pages from Party History by J. Lovestone).

An American Communist, whether he be a member of a trade-union or other organization or employed in private industry or by the Government, is merely a cog in this vast international apparatus.

Among those who received special revolutionary training at the Marx-Lenin Institute and other schools in Moscow were the following leaders of the American Communist Party: Carl Reeve, Charles Krumbein, Joseph Zack, William Odell Nowell, Beatrice Siskind, Clarence Hathaway, Morris Childs, also known as Chilofsky and as Summers, Harry M. Wicks, Marcel Scherer, Otto Hall, Lovett Fort-Whiteman, who in turn sent 10 young Negro students to Moscow, and many others. Mr. Nowell, who has since repudiated the Communist Party, testified before the Special Committee on Un-American Activities as to the character of this training.

He testified that he had been a student at the Lenin University from September 1931 to December 1932; that his traveling expenses from Detroit were paid by the central committee of the American Communist Party; that his living expenses in Moscow were defrayed by the Communist International and the Soviet Government; that there were approximately 30 other American students at the university at the time. Among the subjects he studied were strike strategy, military science, secret service, codes, Communist strategy, street fighting, civil warfare, organization, tactics and methods of the Red army, and sabotage, (Hearings, vol. 11, pp. 7020–7026). A conservative estimate would show at least several hundred such highly trained operatives in the United States at the present time.

Indicative of the reverent attitude of American Communists toward Moscow is the fact that the remains of such leading American Communists as John Reed and Charles E. Ruthenberg are buried at the wall of the Kremlin in that city. When William Z. Foster suffered a serious heart ailment between 1932 and 1936, he went to the Soviet Union for treatment.

Press propaganda

The report of the agitation and propaganda department (Agitprop) of the Comintern, issued between the fifth and sixth congresses, indicated extensive aid to the press of the Communist Parties throughout the world. This report says that—

"The supply of the party press with useful material, which was one of the first and foremost through the "Imprecorr," proved to be the best way of influencing it" (p. 42).

Scattered throughout the American Communist press of this period are reprints of Inprecorr or International Press Correspondence material. Inprecorr was succeeded by World News and Views, later by the War and the Working Classes, and most recently by New Times. Reprints from these two Moscow organs have appeared in the Communist, later known as Political Affairs, on the following dates: March 1944, April 1944, May 1944, July 1944, August 1944, December 1944, June 1945, and October 1945.

The Agitprop also "supported the steps taken for the organization of a telegraph agency which, since March 1927, has been supplying firstly, the biggest Communist newspapers of the capitalist countries * * * and which has now extended its work and is transmitting news between European countries."

Official sources show that in the middle of 1945, Moscow supplied the following publications and news agencies in the United States with such cabled and radio news, the customary practice being that such material is sent prepaid:

Name and address	Number of words
Allied Labor News, 1133 Broadway, New York City	3,500
Azember, 320 East 79th St., New York City	600
Bratsky Vestnik, 3146 South 16th St., Omaha, Nebr	800
California Labor Herald, 150 Golden Gate Ave., San Francisco	400
Glas Narodna, 216 West 18th St., New York City	1,700
Glas Ludowy, 5856 Chenester St., Detroit	6,000
Giviagda Poparna, Stevanapoint, Wis	100
Intercontinent News, 1133 Broadway, New York City	19,000
Karpatska Rus, 556 Yonkers Ave., Yonkers, N. Y	3,500
Lraper, 40 East 12th St., New York City	1,800
Ludovy Dennik, 1916 East St., Pittsburgh	1,000
Magyar Jovo, 413 East 14th St., New York City	1,500
Narodni Glasnik, 1916 East St., Pittsburgh	600
Narodna Volya, 5856 Chenester St., Detroit	100
Nasz Swiah, 5003 Gramme Ave., Detroit	1,400
New Masses, 104 East 9th St., New York City	7,000
New York Listy, 435 East 86th St., New York City	1,400
Nova Doba, 1448 West 18th St., Chicago	600
Pravada, 1916 East St., Pittsburgh	900
Russky, Golos, 130 East 16th St., New York City	2,100
Slobodna Rech, 1916 East St., Pittsburgh	1,400
Sovposol, Washington, D. C	5,200
Sovruday, New York City	3,500
Svornost, 2520 South Pulaski Rd., Chicago	800
Trade Union Service, 220 Fifth Ave., New York City	1,200
Ukranian Daily News, 85 East 4th St., New York City	3,500
Yugoslav Herald, 223 Valencia St., San Francisco	2,500
Yugoslavenski, Obzav National Ave., Milwaukee	700
Pravada, 1732 Brandywine St., Philadelphia	1,400

An examination of the contents and ownership of these publications will disclose their Communist character and control at the time this study was made.

Correspondents from all parts of the world feed material into the Daily Worker and the Worker and constitute a part of the vast international Communist information network, the following being a partial list: Nicholas Bogdanov, Tokyo; Juan Balahap, Philippine Islands; Ruy Faco, Rio de Janeiro; Kostas Karayorghis, Athens; Rupert Lockwood, Sydney; Ivor Montagu, John Ireland, William Rust, London; Sean Nolan, Ireland; Paul Rosas, Indonesia; David Raymond, Allied Labor News; Ionel Stejuru, Rumania; Owen Roche, Mexico City; Susumu Ikano, Yenan; Stanley Ryerson in Toronto; J. B. S. Haldane in London; Derek Kartun, Paris; Florimonds Bonte in Algiers; Humberto Lillo Bernales in Santiago; Rodolfo Ghioldi in Montevideo; Alvaro Sanclements, Venezuela; John Gibbons in Moscow; P. C. Joshi in Bombay; Anival Escalante in Habana, and many others, indicating that the Communist Party, U. S. A., is now as it has always been an integral part of a World Communist Party.

International holidays

The Communist International laid down directives for holidays to be celebrated by the American Communist Party and campaigns to be carried out. The report from the fifth to the sixth congress stated that—

"Since the beginning of 1927, the following campaigns have been carried out with the support of the agitation subdepartment: Lenin Week, 1927; the anniversary of the February Revolution; May Day, 1927; the tenth anniversary of the October Revolution; Lenin Week, 1928; the tenth anniversary of the Red Army; campaigns against white terror and the execution of Sacco and Vanzetti" (p. 40).

The May Day manifestoes of the Communist International giving the agitation slogans for the given period were published over a period of years in the following issues of the Daily Worker: May 1, 1930; April 28, 1931; April 30, 1932; April 30, 1933; April 27, 1935; May 1, 1936; May 1, 1937; April 30, 1938; May 1, 1940.

The Comintern report issued between the fifth and the sixth congresses called attention to the fact that "the British, Czech, and American Parties have also held central schools which were supported by the propaganda subdepartment of the ECCI by the drawing up of syllabuses on various subjects in the sphere of Leninism, and by instructions on organization and method" (p. 45).

So much did the Soviet Union consider American Communists as their own that quite a number fled to the Soviet Union or received shelter there after having been convicted for the violation of the laws of the United States. In his biographical work entitled "Proletarian Journey" Fred E. Beal describes how he and six others convicted in the famous Gastonia case jumped bail and fled to the Soviet Union to be warmly received by the MOPR, Russian section of the International Labor Defense, and later assigned to posts under the Soviet Government. Other fugitives from American justice who received a Soviet welcome were Harry Eisman, William D. Haywood, Louis Bebritz, and many others.

It is clear from the foregoing that the American Communists Party not only accepted instructions from international Communist headquarters in Moscow but willingly and wittingly acted in every sense as the American agent of its Soviet principal an obligation which in turn devolved upon every single member of the American party.

VII. LIST OF TYPICAL DIRECTIVES FROM MOSCOW AFFECTING THE COMMUNIST MOVEMENT IN THE UNITED STATES

Letter to American Workingmen by N. Lenin dated August 20, 1918. (Report of the Joint Legislative Committee of the State of New York Investigating Seditious Activities. Revolutionary Radicalism, pt. I, vol. 1, p. 657.)

Call for a Third International Congress at Moscow (January 1919) and proposed platform. (ROSTA Russian Telegraph Agency, February 24, 1919. Recognition of Russia (1924, p. 228).)

A New Letter to the Workers of Europe and America by N. Lenin, dated January 21, 1919. (Report of the Joint Legislative Committee of the State of New York Investigating Seditious Activities. Revolution Radicalism, pt. 1, vol. 1, p. 668.)

"Manifesto of the Communist International to the Proletarians of the World." (The Communist International No. 1, May 1, 1919. Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 337.)

Letters of Zinoviev to the Central Committee of the American Communist Party and American Communist Labor Party, dated January 12, 1920. (Report of the Joint Legislative Committee of the State of New York Investigating Seditious Activities. Revolutionary Radicalism, pt. 1, vol. 2, p. 1902.)

Letter from Zinoviev, President of the Executive Committee of the Communist International, calling upon the proletariat of every country to celebrate the third anniversary of the Bolshevist Revolution in Russia (1920). (Fish committee, pt. II, vol. No. 3, p. 97. Special Committee To Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 97.)

Theses and resolutions adopted at third world congress of the Communist International, June 22–July 12, 1921, re organization of Communist International, trying to find best method of organizing and standardizing propaganda throughout the various sections. (Contemporary Publishing Association, New York City, 1921. Special Committee To Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 36.)

Third Congress of the Comintern, June–July 1921, instructions to the Communist Party of America to form an open political body which could operate legally. (The Communist, August 1921. Special Committee To Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 206.)

The Comintern, in conformity with its instructions to the Communist Party of America to organize a legal political party, transmitted a program for guidance to the Communist Party, entitled "Concerning the Next Tasks of the C. P. of A. (A Thesis by the Executive Committee of Communist International) Main Aspects of Strategy" (About August 1921). (Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 256.)

Max Bedacht reports carrying instructions from the Comintern to organize a legal political party and made plans to change the various units of the American Labor Alliance into units of a political party to be known as the Workers' Party of America. (Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 255.)

Instructions from Comintern to the minority faction, with the demand that the minority rejoin the Communist Party of America, led by the so-called majority which had organized the Workers Party of America in obedience to instructions received from Moscow. (Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 260.)

Appeal to the minority membership by the Central Executive Committee of the Communist Party of America section of the Communist International, urging them to return to the ranks of the Communist Party of America, section of the Communist International. (The Communist (April 1922, p. 3). Special Committee to Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 615.)

"Decisions of E. C. C. I." Special bulletin on party situation, issued by the central executive committee of the Communist Party, dated New York, May 1922. Comintern rendered another decision under date of March 11, 1922, in which the executive committee of the Comintern reaffirmed its decision of November 21 and January 24. (Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 260.)

Executive committee of the Comintern issued a call for the fourth congress of the Communist International held in Moscow, November 7, 1922. (Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 309.)

Cablegram addressed to C. E. Ruthenburg, signed by Zinoviev, sent on behalf of Third International, informing secretary of Workers Party that the fraternal delegates of Workers Party were received by fourth congress of the Third International and then proceeds to answer a cable sent by Ruthenberg requesting the opinion of the Third International as to the agitation being carried on within the Workers Party of America by the Jewish Federation. (Worker, December 16, 1922, p. 1, cols. 1 and 2. Recognition of Russia. Hearings before a subcommittee of the Committee on Foreigr Relations, U. S. Senate, pt. 1935, p. 304.)

Cablegram from Zinoviev, head of the Communist International, to C. E. Ruthenberg, executive secretary of the Workers Party of America, condemning frivolous breach of discipline against central committee of Workers Party. (The Worker, December 16, 1922, p. 1. Special Committee on Un-American Activities, 1940, app. I, p. 402.)

Comments of J. Louis Engdahl, official of the Workers Party, on the second national convention of the Workers Party and referring to instructions received from the Comintern at Moscow. (The Worker, January 6, 1923. Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 508.)

Statement of the Executive Committee of the Communist International on the American question. (The Worker, New York, February 24, 1923, p. 5. Special Committee on Un-American Activities, 1940, appendix I, p. 404.)

Cablegram from Comintern to the Workers Party, urging unity against persecution of political prisoners. (The Worker, March 17, 1923. Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 509.)

Letter from Executive Committee of Comintern, demanding the Proletarian Party of America to join forces with the Workers Party. (The Worker, April 7, 1923. Recognition of Russia, p. 510. Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 510.)

Zinoviev instructions addressed to the Workers Party of America re the work of the Workers Party of America (August 1923). (Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 376.)

Appeal to the Communist International to the workers of all countries on the third anniversary of the Treaty of Versailles. (The Worker, August 5, 1923. Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 512.)

Cablegram from Zinoviev, head of the Communist International, to C. E. Ruthenberg, executive secretary of the Workers Party of

America, on the establishment of the Worker, New York. (Worker, September 8, 1923, p. 1; Special Committee on Un-American Activities, 1940, appendix I, p. 396.)

Cablegram from Zinoviev, Moscow, to Ruthenberg: "Know no more important task American workers than establishment militant daily. This should be rallying point for concentration all forces present time. Only after foundation daily will Comintern consider we have real mass party America." (The Worker, September 8, 1923; Special Committee to Investigate Communist Activities, 1930, pt. 2, vol. 2, p. 513.)

Zinoviev lauds Workers Party. (The Worker, September 15, 1923; Special Committee to Investigate Communist Activities, 1930, pt. 2, vol. 2, p. 513.)

Greetings from the executive committee of the Communist International to the Workers' Party of America (third convention), and stating they have every confidence that the party will line up the workers of America with the revolutionary workers of the world in the struggle against capitalism and for the establishment of a workers and farmers government (December 7, 1923). (Special Committee to Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 485.)

Text of instructions given by Zinoviev, president of the Communist International and president of the Petrograd Soviet, to the Workers Party of America, commenting on its work and giving instructions for more intensive revolutionary work in the party (1923). (Special Committee to Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 73.)

Article entitled "To the Communist Party from the Executive Committee of Comintern" sets forth instructions which the Communist Party received from the Comintern re the activity of the Workers Party of America as the legal branch of the Communist Party. (Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 282.)

Letter from Moscow, dated December 31, 1923, directing the Workers Party to give their attention particularly to the forming of groups in the shops and to the making of every effort to penetrate the labor unions. (Recognition of Russia. Hearings before a subcommittee of the Committee on Foreign Relations, U. S. Senate, pt. 2, 1924, p. 435.)

The Executive Committee of the Communist International reports that Comrade Cook has been ordered to return home with full instructions from the Communist International re the various problems confronting the American Party. (Special Committee To Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 38.)

Statement in which the Communist International endorses the Workers Party of America. (Daily Worker, May 16, 1924, p. 1. Special Committee on Un-American Activities, 1940, appendix I, p. 415.)

Speech by Zinoviev, June 1924, at the Fifth World Congress of the Communist International, stating that the executive committee (of the Communist International) has implicit trust in the American Central Committee and that both groups must merge and work together without fractionation. (Special Committee To Investigate Communist Activities, 1930, pt. 1, vol. 1, p. 50.)

Letter from organization committee of the Communist International dealing with the beginnings of discussion of shop nuclei in the Workers (Communist) Party. (Special Committee To Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 158.)

Reorganization of the Communist Parties upon the Basis of Factory Nuclei (by Mickievicz-Kapsukas). The chief political work must go through factory nuclei, organize all Communist of a particular factory without distinction of nationality, etc. (International Press Correspondence, vol. 2, No. 9, Jan. 29, 1925. Special Committee To Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 158.)

Report of Comrade Lozovsky entitled "The Struggle for Unity of the World Trade-Union Movement" giving instructions for the United States. (Moscow Pravda, No. 77, April 4, 1925. Special Committee to Investigate Communist Activities, 1930, part 1, vol. 1, p. 90.)

Letter of the Communist International and the Red International of Trade Unions, addressed to the central executive committee of the Workers Party of America, dated April 30, 1925, stressing the following points:

1. Strikes and wage movements.
2. Class collaboration.
3. Organization of the unorganized.
4. Amalgamation.
5. Canadian autonomy.
6. The shop committee movement.
7. The work among the Negroes.
8. Connections with the workers of the colonies.
9. International trade union unity. (Special Committee on Un-American Activities, 1940, vol. 7, p. 4689 ff.)

Decision made by the Commun.st International on the American question. (Daily Worker, May 20, 1925. Special Committee on Un-American Activities, 1940, vol. 7, p. 4645 ff.)

Letter from Communist International to the central committee of the Workers (Communist) Party of America on the reorganization of the party. (Special Committee on Un-American Activities, 1940, vol. 7, p. 4610.)

Letter addressed jointly by the executive committee of the Communist International and the executive committee of the Red International of Labor Unions to the Worker (Communist) Party with instructions to be carried out by the Workers (Communist) Party, which instructions were embodied in resolutions passed by the fourth convention of the Workers (Communist) Party held in Chicago, August 21, 1925. (Daily Worker, August 15, 1925. Special Committee to Investigate Communist Activities, 1930, pt. 1, vol. 1, p. 49.)

Letter addressed jointly by the executive committee of the Communist International and executive committee of the Red International to the Workers (Communist) Party, containing instructions to the Trade-Union Educational League (contained in the resolutions of 1924). (Daily Worker, Aug. 15, 1925. Subheading "Trade union work." Special Committee to Investigate Communist Activities, 1930, pt. 1, vol. 1, p. 58 ff.)

Instructions from Comintern to American Party reorganization of a delegation of trade unionists to visit the Soviet Union. About September 1925. (Special Committee on Un-American Activities, 1940, vol. 7, p. 4699.)

A letter from the Communist International to the Workers (Communist) Party of America dealing with the reorganization of the Workers (Communist) Party, contained in a pamphlet entitled "The Party Organization" by Jay Lovestone and C. E. Ruthenberg. (The Party Organization, published by the Workers Party of America (approx. 1925). Special Committee on Un-American Activities, 1940, appendix I, p. 295.)

Cable signed by Kruse, Moscow, dated October 3, 1926. "Last clause of contract must be acted on immediately. Contract makers say both businesses must go New York and they expect you to act immediately on last clause, after which other business can be accomplished amicably without stockholders' meeting." (Special Committee on Un-American Activities, 1940, vol. 7, p. 4599.)

Cable from Moscow, dated October 3, 1926, to Ruthenberg, secretary, WOPAT, Chicago, Ill., re question of moving the central committee of the party from Chicago to New York. "If unanimity in this question cannot be reached, then the decision in this question should be left to the next party convention." Signed, Kuusinen. (Special Committee on Un-American Activities, 1940, vol. 7, p. 4599.)

Cable from Moscow, signed "Hunky," dated October 4, 1926, "Decision provides full possibilities if energetically handled. Transfer paper at once with three prominent editors. First steps necessary immediately and will lead to accomplish transfer to New York. Cable information quick." (Special Committeee on Un-American Activities, 1940, vol. 7, p. 4600.)

Cable from Moscow, signed "Hunky" dated October 11, 1926. "Your failure to answer on moving causes serious embarassment. If you fail to act promptly it can be due only to misunderstanding of attitude here. Universal opinion here for New York with arguments even stronger than yours. Any immediate transfer of paper and stuff can lead to further steps." (Special Committee on Un-American Activities, 1940, vol. 7, p. 4600.)

Cable sent by the Communist International to the American Party, October 13, 1926, for the presidium of the executive committee of the Communist International, signed by the secretary of the Communist International re the question of removing the national headquarters from Chicago to New York and of removing the Daily Worker from Chicago to New York. (Special Committee on Un-American Activities, 1940, vol. 7, pp. 4596, 4597.)

Report summing up the work, errors, and tasks of the respective Communist parties including the American Communist Party. (Seventh enlarged executive committee of the Communist International. (Meeting November 22–December 16, 1926.) (Special Committee To Investigate Communist Activities, 1930, pt. 1, vol. 1, pp. 56, 57.)

Theses on International situation and tasks of the Communist International—principal summary of the work, errors, and tasks of the respective Communist parties. (International Press Correspondence (Vienna) vol. 7, No. 11, February 3, 1927, pp. 217, 222, 223.) (Special Committee to Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 186.)

Resolution of the presidium of the executive committee of the Communist International on the American question, July 1, 1927, calling attention to the objective difficulties and weaknesses of the Workers Party of America. (Communist International between the fifth and sixth world congresses (1924–1928), p. 336.)

Resolution on American Question.

1. Struggle against Imperialism and the War Danger.
2. Development of the Revolutionary Labor Movement in America.
3. Trade-Union Work.
4. The Inner Party Situation.

Final text endorsed by presidium of executive committee, Communist International, July 1, 1927. (Special Committee on Un-American Activities, 1940, vol. 7, p. 4635 ff.)

Dealings with the factional part situation on the Workers (Communist) Party. Cablegram from the presidium of the executive committee of the Communist International to the national office of the Workers (Communist) Party. (Party Press publication of cablegram, July 7, 1927.) (Special Committee To Investigate Communist Activities, 1930, pt. 1, vol. 1, p. 57.)

Cable received by Max Bedacht, acting secretary of the Workers (Communists) Party, from the presidium of the executive committee of the Communist International. (Daily Workers, New York, July 12, 1927.) (Special Committee To Investigate Communist Activities, 1930, pt. 1, vol. 1, p. 58.)

Cable from Moscow signed by Cannon, Foster, and Weinstone, July 30, 1927, who were in Moscow discussing American affairs with

the Communist International. (Special Committee on Un-American Activities, 1940, vol. 7, p. 4597.)

Declaration of the political committee on the American Question; resolution adopted by the presidium of the executive committee of the Communist International. (Daily Worker, August 3, 1927, p. 3.) (Special Committee on Un-American Activities, 1940, vol. 7, p. 4633.)

Letter from the organization department of the executives of the Communist International instructing the American party as to publishing factory papers in the various plants and factories in the United States. (Party Organizer, December 1927.) (Special Committee on Un-American Activities, 1940, vol. 7, p. 4610.)

Cable sent in 1927 by the Communist International to the American party re "Declaration of the Communist International on the factional situation in the Workers (Communist) Party." (Special Committee on Un-American Activities, 1940, vol. 7, p. 4598.)

Cable sent in 1927 by the Communist International to the American party asking that the following be published: "Our cable of July 7 did not aim at all to support the hegemony of one group in the Workers Party but the merging of all groups. * * * According to the agreement, the opposition shall also have the right to express and defend in a nonfactional, comradely way its opinions in all meetings of the party units." (Special Committee on Un-American Activities, 1940, vol. 7, p. 4598.)

Cable from Moscow sent in 1927 to the American party: "ECCI considers such methods struggle as opposition group uses in statement impermissible factional, such expressions styling majority of Polcom "petty bourgeois intellectuals" as "clique leadership" are opposed resolution of ECCI and agreement of American comrades serving only to poison party life. ECCI most decisively opposes these faction methods. On other hand, ECCI declares against any disciplinary measures against opposition." (Special Committee on Un-American Activities, 1940, vol. 7, p. 4598.)

Cable sent in 1927 by the Communist International to the American party: "Presidium ECCI considers that in view of the urgent necessity for party to conduct as great a fight as possible against intervention and counter-revolutionary war of American imperialists in China and Nicaragua, and also difficult position of the party arising out of the attacks of the Government and trade-union bureaucracy, the presidium cannot accept proposal for delegates to come to Moscow. * * * Dispute re party convention will be decided upon receipt of respective written statements." (Special Committee on Un-American Activities, 1940, vol. 7, pp. 4598, 4599.)

The last (February 1928) meeting of the CE adopted a unanimous thesis on the general situation of the party, stating that while there are lingering remnants of old fractional groupings, it must be recorded that: "Great headway has been made by the party in consolidating its forces and unifying its ranks on the basis of the resolutions of the last party convention." (Decision on the Workers (Communist) Party of America.) (Communist International between the fifth and sixth world congresses, p. 338.)

Report on the situation in all sections of the World Communist Party, including the Workers (Communist) Party of America. (Communist International, July 1928, pp. 333-351.) (Special Committee to Investigate Communist Activities, 1930, pt. 1, vol. 1, p. 32.)

Statement of the CI on the American Party, volume 8, No. 83, Inprecorr, page 1576, indicating the tasks of the party. (Sixth world congress, November 1928.)

Provision for the calling of a convention of the American Communist Party to decide the question of leadership. (Communist International between the fifth and sixth world congresses, p. 337.)

"At the fifth enlarged executive the main question at issue was the continuation of the Labor Party campaign which the then majority of the CEC of the American Party had decided to discard."

"Our slogan itself should now be revised insofar that we no longer agitate for a Farmer-Labor Party, but only for a Labor Party, since in the changed conditions the premises for the formation of a joint party of workers and small farmers are lacking." (Communist International between the fifth and sixth world congresses, pp. 336, 337.)

"The sixth enlarged plenum of the ECCI very emphatically declared that the Comintern demands the complete and unreserved cessation of fractional struggle."

"The opposition groups must cease their fractional methods. They must endeavor by their attitude to facilitate unity with the majority of the political party before and and at the party convention." (Decision regarding the American Communist Party) Communist International between the fifth and sixth world congresses (pp. 336-337).

Open letter dated Moscow, February 1, 1929, from the executive committee of the Communist International to the convention of the Workers (Communist) Party of America. (Daily Worker, Mar. 4, 1929.)

Cablegram from the presidium of the executive committee of the Communist International to the central committee of the party re information received from the political bureau of the new central committee of the Communist Party of the United States of America concerning some attempts to resume factional struggles after the convention by a part of the minority dissatisfied with the results of the convention. (Daily Worker, Mar. 27, 1929.)

Address by the executive committee of the Communist International to all members of the Communist Party of the United States. (Daily Worker, May 20, 1929, p. 3.) (Special Committee on Un-American Activities, 1940, appendix I, p. 898.)

Reports of speeches by Stalin, Kuusinen and Molotov on the American question, submitted in evidence by Jay Lovestone at a hearing before the Special Committee on Un-American Activities. (Stenographic reports on the American question before the Special Committee on Un-American Activities, Dec. 2, 1939, pp. 7111-7133.) (Special Committee on Un-American Activities, 1940, appendix I, p. 875.)

Cablegram from the Young Communist International to the Communist Youth League of the United States of America, and motions adopted by the Communist Youth League. (Daily Worker, May 23, 1929, p. 1.) (Special Committee on Un-American Activities, 1940, appendix I, p. 925.)

Decision on May 17, 1929, of the Political Secretariat of the Communist International to remove Lovestone from membership in the political bureau of the central committee of the American party. (Daily Worker, June 12, 1929.)

The Significance of the Comintern Address. (Communist, June 1929, pp. 291-302.)

Cable from the Young Communist International to the Young Communist League of the United States and the statement of national executive, Young Communist League-USA pm Suspension of Rubenstein and Silvis from NEC Buro. (Daily Worker, July 11, 1929, pp. 1, 2.) (Special Committee on Un-American Activities, 1930, appendix I, p. 919.)

Plans for Red Day in Moscow, including friendly discussions, with representatives of the foreign Communist Parties, the representatives of the MOPR (International Labor Defense) taking part. (Pravda, Moscow (July 14, 1929).) (Special Committee to Investigate Communist Activities, 1930, pt. 2, vol. 3, p. 28.)

Decision of the tenth plenum of the Executive Committee of the Communist International on the appeal of Lovestone, former executive secretary of the Workers (Communist) Party of America. (Daily Worker, July 29, 1929, p. 3.) (Special Committee on Un-American Activities, 1940, appendix I, p. 925.)

The Polit-Secretariat of the ECCI issues instructions to the Workers (Communist) Party of America on the election campaign at its session on September 7, 1928. (The Daily Worker, vol. V, No. 233, October 2, 1929, appendix 10, p. 117.)

The Struggle for the Bolshevisation of the Communist Party of the United States, by I. Mingulin (Moscow), Imprecorr, volume 9, No. 28, dealing with the interference of the Communist International in the American party. 1929.

In May 1929 the American Commission of the Third International had a meeting at Moscow and Stalin addressed the American section, saying that the revolutionary crisis of the Communist Party has not arrived as yet in the United States. * * * American Communist Party must be ready to meet the crisis, fully armed to take over the direction of the future class war in the United States. (Communist International, March 20, 1930.) (Special Committee To Investigate Communist Activities, 1930, pt. 1, vol. 1, p. 16.)

Cable from Ruthenberg, Engdahl, Lovestone, Bedacht dealing with the thesis dated April 13, 1930, enclosing minutes of meetings of the Polburo with instructions to return as soon as read. (Special Committee on Un-American Activities, 1940, vol. 7, p. 4617.)

Directives of the Politsecretariat of the ECCI to the Communist Party of the United States of America, relative to the decisions of the Twelfth Plenum of the CPUSA, dealing Comintern Documents, the Communist, May 1931, volume X, No. 5, pages 402-408. (Special Committee on Un-American Activities, 1940, appendix I, p. 490.)

Directives of the Politsecretariat of the ECCI to the Communist Party of the United States of America, relative to the decisions of the Twelfth Plenum of the CPUSA, dealing with unemployment, the trade-unions, the party leadership, the party press, the 7-hour day, the Negro question, etc. (Communist, May 1931, pp. 402-408.)

Criticism of June-July 1933 issues of the Daily Worker by the Communist International. (Communist International, October 15, 1933.) (Special Committee on Un-American Activities, 1940, vol. 37, pp. 4407 ff.)

Message received from presidium of executive committee of the Communist International on the occasion of the tenth anniversary of the Daily Worker, January 6, 1934. (Daily Worker, January 6, 1934.)

From the "main extract referring to the United States from the report by George Dimitroff on The United Front Against War and Fascism, at the Seventh World Congress of the Communist International in Moscow—calls for the creation of a party which will be neither Socialist nor Communist. But it must be an anti-Fascist party and must not be an anti-Communist party." (Daily Worker, December 9, 1935.)

Article by George Dimitroff, chairman of Communist International, entitled "The War and the Working Class of the Capitalist Countries." (Daily Worker, November 4, 1939.)

Manifesto of the Communist International. (Sunday Worker, November 5, 1939.)

October 1939: Manifesto of the executive committee of the Communist International and an article by Dimitroff, secretary of the Communist International entitled "The War

and the Working Class of the Capitalist Countries." (Both dealt with the imperialist nature of World War II and the responsibility of France and England in prolonging the war and the aid rendered them by the United States.)

December 1939: Anglo-American contradictions in the second imperialist war. By Varga, noted economist of the Communist International.

May 1940: "The Struggle Against the Imperialist War" by Dimitroff, secretary of the Communist International.

June 1943: Dissolution of Communist International approved by its sections. Last issue of the organ the Communist International announced that the parent organization had assisted its sections in establishing their own press organs.

June 8, 1943: Announcement made of establishment of new magazine in Moscow, the War and the Working Classes, issued by the Soviet Trade Unions. Editorial stated that publication affords wide Soviet public circles an opportunity to express their opinion on all vital questions of the international life and foreign policy of the states engaged in the war and of the states occupying a neutral position. Later called New Times and published in five languages, including English, this Soviet organ has become recognized as the successor to the Communist International and its authoritative articles accepted as dogma by all functioning Communist Parties, including that in the United States.

VIII. CORROBORATIVE TESTIMONY

The following excerpts from the testimony of Louis F. Budenz, former managing editor of the Daily Worker, official organ of the Communist Party, U. S. A., and member of the party's national committee, corroborates to date the charges made in this report to the effect that this organization is not a bona fide American political party, but that it is in actual fact an agency subversient in every sense of the term to the ruling party of the Soviet Government, the Communist Party of the Union, which operates through its affiliates in 67 countries as a World Communist Party. We cite first from his testimony of November 22, 1946:

"We must understand then before we get to the meat of the matter that we are dealing with a conspiracy to establish Soviet dictatorship throughout the world. This conspiracy resorts normally to illegal methods. This conspiracy requires the utmost servility on the part of the so-called Communist leaders in various countries throughout the world. It makes puppets of this leadership, as shown in the case of William Z. Foster or Earl Browder.

* * * * *

"Never throughout its history has the Communist Party found one defect of any kind in any leader of the Soviet Union who was endorsed by the Kremlin. You can search the Daily Worker or any other Communist publication from beginning to end for 25 years and you will find that always the Soviet leadership is 100-percent perfect in those pages—they have Godlike qualities that prevent any flaw being found in them. Secondly, this movement follows Moscow in every detail. Examination of the official Communist press will confirm this—that the policies desired by the Kremlin are followed out servilely by this organization and its leadership. That stamps it immediately as something set off from the rest of America, as a quisling organization as much under the heel of the Kremlin, or at the behest of the Kremlin, as the Nazi bund was the agent of Hitler's Germany.

"Mr. Dennis came to me again when acting as political committee representative to the Daily Worker.

* * * * *

"Dennis said to me that I might occasionally receive instructions and communcations from this Hans Berger. Dennis told me further that Berger was strictly underground, and that he was known by Dennis as a responsible comrade who had been in China and Spain and many other places, 'including the United States, as you may know.'

"These were his words, as stated specifically: 'That Berger had functioned previously in China, Spain, and here in America, as you may know.' Dennis then said that Berger was 'equivalent to a representative of the Communist International, and that I was to consider him as such.' To advise me fully, Dennis added that Berger's real name was Gerhart Eisler, and that he functioned, or was to function, among the 'German comrades here' as such (p. 12).

* * * * *

"The main point is that there was this representative of the Communist International in the office, and his name was Edwards; I saw him in action in 1935 and 1936—right along. Then there was Brown, whose real name was Alpi, supposedly an Italian, and many others.

* * * * *

"And, as a matter of fact, I found that there were various rings in this conspiratorial apparatus, and different sections, one of which is the Soviet police system here and another the Communist International apparatus.

"Then there is also the use of certain members of the party who normally are in public life, the use of them illegally and secretly, sending them to Latin America, and to Canada, and other places secretly. And, as a matter of fact, sometimes a person who has been a district organizer will suddenly come to you and say that he is going to Mexico or to some other place and by the questions he asks you know he is on a secret mission (p. 14).

* * * * *

"Returning to Berger specifically: I did receive from time to time notes sent by him when Dennis was away. These stressed in particular that the second front in Europe was important, and hammered at the importance of talking about the Soviet Union to the American people. Those were some of the notes I recall. There were others, of course, from Berger and from others (p. 15).

* * * * *

"But the notes from Berger particularly emphasized the necessity of bringing to the American people the alleged democratic character of the Soviet Union, and the language he used was very emphatic. In addition, once in a while he expressed his opinion very definitely, through the political representative of the political committee, who brought instructions from Berger to the Daily Worker. When the question came up of the United States being the Soviet Union's chief foe, as a result of the Duclos article, Berger-Eisler gave what was almost a decision * * * (p. 16).

"Now, I want to call the attention of this committee to the fact that I have copies of the Communist here in my possession which show the leading position of Gerhart Eisler as Hans Berger. These articles prove his high rank, for they are on vital subjects in the theoretical organ of the Communist Party. These articles range from a signed article by him in November 1942 on Twenty-five Years of Soviet Power—published along with articles by Earl Browder, general secretary of the party, and V. J. Jerome, editor of the Communist—over to a number of very important contributions on foreign policy. They are written by a man of authority, it's clear. Among them, significantly, is an article on the dissolution of the Communist International * * * (p. 20).

"Now, I want to get here to the dissolution of the Communist International and the article on it by Berger-Eisler in the Communist. This is the issue, by the way, the discussion of which I happened to be in on in part, and I know how this issue was framed. It is very interesting. Mr. Berger's name does not appear on the cover, but whose name does appear is Dmitri Z. Manuilsky. * * *

"This issue we were discussing was the one that discussed the Communist International, and the question was how it should be discussed. And it was agreed that Mr. Berger should write this piece which he did write, in order to show to our comrades that internationalism still lives—'internationalism still lives' was the phrase used—even with the dissolution of the Communist International. And in order to drive that home, it was decided to put in a prominent article by Dmitri Manuilsky on The Glorious Victories of the Red Army because every trained Communist knows that Dmitri Manuilsky represents leadership of the Communist International even to this day. That was the understanding which prompted his open threat to the United Nations recently of the power of the Communist Parties throughout the world. That is the speech that is putting every party on its toes and was the signal from the Communist International. Manuilsky should know all about these matters for every trained Communist knows he roughly runs every Communist Party through the continued international channels of communication. Even when George Dimitrov was leader, Foster told me—and he was guilty of a pun about it—that Dimitrov may be the head but Dmitri is the heart of the Communist International. That is a fact; Manuilsky represents what now is the equivalent of the Communist International and let us understand this" (p. 23).

Statehood for Alaska, Hawaii, and Puerto Rico

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. PRICE of Illinois. Mr. Speaker, everybody wants to get into the act—as the famous comedian, Jimmy Durante, might say it—or Senator Claghorn, the radio statesman, might put it thusly, everybody wants to get into the Union, the Union of States, that is.

Last August, as a member of the Military Affairs Committee of the House of Representatives, I visited the Territories of Alaska and Hawaii and a few weeks later, in September, as a representative of our Government designated by the Secretary of the Interior, I attended the inauguration in San Juan of the first native-born Puerto Rican to be appointed Governor of his homeland since the United States took over the island in 1898.

My visits to the last of the possessions of our Government holding territorial status were not for the purpose of making a study of the question of statehood for these three Territories but I quickly discovered that a Member of Congress cannot avoid a discussion of this topic once he comes in contact with the leaders of the political life in these possessions.

I found that Alaska, Hawaii, and Puerto Rico have one thing in common—a burning desire for statehood. It was a

subject that featured every conversation committee members had with local government officials and with leading local citizens from the moment our airplane landed to the take-off several days later. While we had not gone to Alaska, Hawaii, and Puerto Rico to talk about statehood—such being within the province of members of other committees in Congress—we found it a matter of necessity to become greatly interested in the question before we took leave of those places.

And our experiences have not been unlike those of numerous other Members of Congress and high Government officials who in recent months have found occasion to visit our Territories. Most of these people have come back to Washington with almost as much enthusiasm for the granting of statehood to Alaska, Hawaii, and Puerto Rico as the natives themselves hold.

ALASKA A STRATEGIC POINT

While our Military Affairs Committee group was visiting in Alaska, Secretary of the Interior Julius A. Krug was also there and upon his return to the States his recommendations were strongly in favor of statehood for that great Northwest section to which some refer as the back door to the United States. It could just as well be called the front door. Our Military Affairs Committee was greatly interested in Alaska from a wartime strategic point of view but the citizens up there also made certain that we were oriented in their plans for eventual statehood.

Within the past 3 weeks Secretary Krug has returned from a trip to Hawaii. He must have been briefed by the same leaders in that romantic island territory as were the members of our committee, because when he stepped from his plane in Washington his first statement was to the effect that Hawaii was entitled to statehood. I was with Secretary Krug in Puerto Rico last September, and I am confident the arguments the natives advanced in favor of statehood impressed the Secretary, whose Department has the duty of administering for our territories and possessions.

Alaska, Hawaii, and Puerto Rico might have little chance to realize their dream of statehood if the Department of Interior were not favorably disposed. The winning of support of Secretary Krug, therefore, is very helpful. But it by no means grants statehood. Only Congress can do that.

In recent years the number of bills which have been dropped into the hopper in the House of Representatives calling for statehood for our territories have been ever increasing. This may be due greatly to the fact that Members of both the House and Senate in increasing numbers have been visiting our territorial possessions on various committee assignments, mostly to do with the war effort—and lately studying postwar problems that our remaining frontiers pose.

AIR TRAVEL SHORTENS DISTANCE

If statehood ever comes to Alaska, Hawaii, and Puerto Rico, much credit must go to air travel—and particularly to the air transport services of the Army and Navy, which made it so convenient for Members of Congress on official missions to get to these outposts.

Of course, in our visits we found some local people opposed to statehood, but such opposition was rare indeed in comparison to the almost general clamor among the natives to become an actual part of the United States with full State rights—and principally with the right to elect their own governors.

There is a bill in the House of Representatives now asking that Alaskans be permitted to elect their own Governor. They would like to have that right pending consideration of their request for statehood. Puerto Ricans have been bitter in their resentment over appointed Governors. They are pleased with the selection of Jesús T. Piñero, native-born and very popular among the people, as their new Governor but they would have liked it a lot better had they been permitted to elect him themselves. They are frank in stating they hope he will be the last appointed Governor.

Twelve separate bills have been introduced in the Eightieth Congress to provide statehood for Hawaii. There have been several asking statehood for Alaska, but only one, so far, for Puerto Rico. And there is a resolution offered by Representative B. W. GEARHART, Republican, of California, providing for the issuance of a letter of invitation to the Government and people of Iceland to become a State in the Union of the United States of America. There is hardly any likelihood, however, that the latter suggestion will be seriously considered.

Statehood for the present Territories means not only that their citizens will enjoy the privilege of electing their own Governors in the future but it will mean an automatic increase in the size of the Congress of the United States. First of all each new State would be entitled to two Members in the Senate of the United States. Alaska would be entitled to one Member of the House of Representatives and Puerto Rico and Hawaii, under legislation proposed, would be given two Members of the House.

REPRESENTATION WITHOUT VOTE

Of course, the Territories now have representatives in Congress, but they are more or less just good-will ambassadors. Each Territory sends a single Delegate to Washington. The Delegate can attend sessions of the House of Representatives and meetings of House committees. He may introduce legislation and he has the privilege of the floor—meaning he can speak in the interest of the people he represents—but he cannot vote.

This brings us to the realization that there is a difference in the degree of American citizenship which the residents in the Territories hold to that which we as residents of States enjoy. They feel that they are not complete Americans. They cannot vote for President. They have no voting representation in Congress. They are subject to all Federal tax laws, yet have no voice in their making. They often re-echo the old colonists' cry of "taxation without representation" when they speak on this subject.

They fail to share in many Federal acts which confer monetary benefits to States.

They begin to feel that they are Americans, yet they are not Americans.

Those who lead in the fight for statehood point out that when they were organized under Territorial status it was an implied promise that eventually they would be accepted into the Union as a State. They point to the fact that this promise has been carried out in the case of all other sections that first held Territorial status. The last Territory admitted to the Union as a State was Arizona on February 14, 1912.

So it has not been too long ago when Congress met a somewhat similar problem and decided in favor of statehood for the petitioning territory. Just a few days more than a month before the admission of Arizona, Congress on January 6, 1912, had accepted New Mexico as a State. Oklahoma had been admitted on November 16, 1907. All within the memory of most of our citizens of today.

SEPARATION FROM MAINLAND AN OBSTACLE

Arizona, New Mexico, and Oklahoma found their road to statehood a comparatively smooth one, however, because their boundaries were contiguous with other State boundaries. Chief obstacle to statehood for Alaska, Hawaii, and Puerto Rico lies in the fact they are far removed countries, separated from the Union by thousands of miles, and in the case of Hawaii and Puerto Rico all overseas.

Because definite steps are now being taken to consider the proposal of admitting Hawaii to the Union in the form of open public hearings before the Public Lands Committee of the House on the numerous bills introduced in Congress asking statehood for the islands we may soon expect some public reaction. After completion of the hearings the committee unanimously approved legislation to grant statehood to Hawaii.

Nicholas Murray Butler, famed educator, president emeritus of Columbia University, has already publicly expressed emphatic objection to statehood for the three Territories.

Said Dr. Butler in a letter to Secretary of the Interior Krug:

> Under no circumstances should Alaska, Hawaii, or Puerto Rico, or any other outlying island or territory be admitted as a State in our Federal Union. To do so, in my judgment, would mark the beginning of the end for the United States as we have known it and as it has become so familiar and so useful to the world. Our country now consists of a sound and compact area, bounded by Canada, by Mexico, and by the two oceans. To add outlying territory hundreds or thousands of miles away, with what certainly must be different interests from ours and very different background, might easily mark, as I said, the beginning of the end.
>
> Think of what would happen—

Dr. Butler continued—

> were the vote of one Senator from Alaska or Hawaii or Puerto Rico to defeat the ratification of an important treaty affecting the policy and good order of the world. It is

unthinkable that we should allow any such possibility.

WHOSE VOTE WOULD BE DECISIVE?

Anyone disagreeing with Dr. Butler could point out that in a Senate made up of two representatives from each State there would necessarily have to be a good many other Senators with the same view as the Alaskan, Hawaiian, or Puerto Rican Senator to make any one man's vote the deciding one. For instance, if a decision of world significance were to be made in the Senate by a vote of 46 to 45 who could say whether the junior Senator from Hawaii or the junior Senator from Rhode Island had cast the deciding vote if they had both answered in the affirmative. Or who could blame the senior Senator from Alaska for the defeat of a measure considered to be important for the national interest any more than he could blame the senior Senator from Ohio if they both had cast a negative vote.

Former Speaker of the House of Representatives SAM RAYBURN, of Texas, now minority leader, says the question concerning the matter of statehood for Alaska, Hawaii, and Puerto Rico "goes to the fundamentals."

"And the question we have to answer," says RAYBURN, "is whether we are going to begin making States out of possessions that are not contiguous to the United States of America."

The former Speaker concedes it is a question that we will have to meet one day and, he suggests, "we had better put our best thinking on it."

Many of the leading daily newspapers throughout the Nation, and a great many of our leading national figures seem to be doing much thinking on the subject these days. An analysis of their trend of thought would seem to favor admission of the Territories. Few share the views of Dr. Butler.

HAWAII MAY BE FIRST

In the race for statehood, Hawaii is far in front. As a matter of fact, the plea of the islanders has reached the stage of most serious consideration. The Committee on Public Lands having completed its public hearing on the petition of Hawaii and having recommended to the House approval of one of the many bills to grant statehood puts the matter squarely before Congress and calls for a disposition of the question one way or the other in the near future. Once favorably considered by the committee, it passes from the stage of mere discussion and becomes a problem to be solved by the vote of Congress. However, not all bills approved in committee become law, so Hawaii's fight is far from being won.

The movement for statehood seems far stronger in Hawaii than in Alaska and Puerto Rico. At least, the movement is farther advanced and the groups interested seem better organized. They come to Congress quoting the President of the United States, Harry S. Truman, as an advocate for statehood for Hawaii.

"I urge that the Congress promptly accede to the wishes of the people of Hawaii that the Territory be admitted to statehood in our Union," President Truman pleaded in behalf of the cause.

Before the war the people of the Territory of Hawaii voted 2 to 1 in favor of statehood, and in 1941 a Gallup poll showed opinion of the people in the States approximately the same. In March of 1946 Dr. Gallup again polled the mainlanders, and this time they were 3 to 1 for admitting Hawaii as a State.

Incidentally the 1946 Gallup poll showed that the average American—except those who have had military service in the Pacific—does not know a whole lot about the islands.

The Territory of Hawaii consists of a group of eight islands and numerous islets in the Pacific Ocean, situated a little more than 2,000 nautical miles west of the North American Continent. The total land area is 6,438 square miles, an area slightly larger than the combined area of Connecticut and Rhode Island.

The population of the Territory was estimated at 502,122 in 1945, exclusive of military and naval personnel. The capital of the Territory is Honolulu, situated on the island of Oahu. It is a completely modern city with a population estimated in 1945 to be 261,033. The racial origin of this population, in addition to the native Hawaiians and the Caucasians from the mainland, is Japanese, Chinese, Korean, Filipino, and Portuguese. About one-third are Caucasian, one-third Japanese, and the remainder mostly Hawaiians, part Hawaiians, Chinese, Filipinos, Koreans, with a sprinkling of Puerto Ricans and others.

NO SABOTAGE IN HAWAII

Some regarded the fact that Hawaii was one-third Japanese in population as a barrier to favorable consideration for statehood but the facts are the best argument against creating an obstacle on this line. The Federal Bureau of Investigation found not a single act of sabotage or fifth-column activity committed in Hawaii before, during, or after the attack on Pearl Harbor. The islanders proudly boast that the record of their people on the war and home front was unexcelled in performance, loyalty and cooperation.

The citizens' statehood committee point out in their arguments for statehood that Americanization, racial equality, and democratic ideals are far advanced in Hawaii. There is less racial friction and discrimination in Hawaii than in many mainland areas, they say. The different racial groups live together with a minimum of friction and no racial clashes

The outbreak of World War II, as far as active United States participation was concerned, at Pearl Harbor on December 7, 1941, threw more light upon the loyalty and patriotism of the Hawaiian population than the many preceding years since the Republic of Hawaii was annexed as an American Territory on September 9, 1897. The war began with an enemy attack on Hawaii and the Territory remained the only major part of the Nation to be subjected to direct attack.

NISEI TROOPS FOUGHT WITH HONOR

Hawaiians were tested by the fire of battle and the trials of war both at home and abroad. The islands furnished their quota under selective service, but by voluntary enlistment it raised a battalion of infantry among those of Japanese descent which finished the war with an outstanding record and was one of, if not the most, decorated units of the American Army.

Citizens of every race and every color served in all the services and in war work of every kind and description.

"The roll of Hawaii's honored dead throughout the world is proof positive of the loyalty of Hawaii's sons," Hon. Ingram M. Stainback, Governor of Hawaii, asserted in a plea for statehood. "Their patriotism is not measured by the color of their skin."

So much for the patriotism of the Hawaiians—and there will be no Member of Congress who will oppose statehood on such an argument. Opposition to admission of the Territory into the family of States is almost certain to be based on the question whether we are going to make States out of possessions that are not contiguous to the present 48 States—the fundamental question to which the gentleman from Texas [Mr. RAYBURN] has already drawn the attention of the House of Representatives.

Anticipating this as the main obstacle to statehood, the islanders have not evaded the question, and in all their arguments for admission seek to answer it in a manner which they believe should influence Congress in their favor.

Governor Stainback covers the question thusly:

With modern means of transportation and communication, Hawaii's geographic position is no deterrent to statehood. We are closer to Washington today than Boston was at the time of the formation of the Union, and certainly much closer than Texas, California, or other western territories were at the time of their admission as States.

The people of Hawaii are as well informed on national affairs and in as close touch with their fellow citizens as if the Territory were a contiguous area. For example, our papers receive the service of all leading news-gathering agencies, carry the articles of most nationally known columnists, and two well-known news weeklies appear on the stands in Hawaii the same day as on the mainland.

TWELVE HOURS FROM MAINLAND

So we found it last summer when we visited the islands. Twelve hours after we took off from San Francisco we landed in Honolulu. If I travel from East St. Louis to Washington by railroad, it takes me 21 hours. The interests of the people were as Governor Stainback says. We hardly set our bags down in the Moana Hotel before we were besieged by a local committee made up of veterans of World War II, who wanted to discuss with us problems that were identical with the problems we were confronted with by committees that waited on us in our home districts.

By any economic yardstick, the citizens' committee claims, Hawaii deserves statehood. It has a self-sustaining economy and valuable resources. Hawaii's 1940 exports totaled $102,145,130 and imports $127,539,539. It had a prewar visi-

tors' industry of $20,000,000. In 1945 value of real and personal property in Hawaii exceeded that of several States and totaled more than that of any other Territory at time of admission to statehood.

The islands have an experienced and intelligent electorate. In the 1944 general election 85 percent of the registered voters exercised their right of franchise. They have a functioning, orderly government. The Territory has passed through a long period of tutelage and probation, and the islanders feel they have proved their capacity to conduct their affairs as an American commonwealth. Further, they believe admission of Hawaii to statehood would benefit the United States by binding this modern civilian community and strategic military base more closely to the Union, and would intensify pride of the American citizens of Hawaii in being Americans.

Hawaiians also like to point to the fact that the Territory has consistently paid into the United States Treasury a considerably larger amount than the Federal Government, exclusive of military expenditures, has spent upon the Territory. In 1945 Hawaii paid into the Federal Treasury $173,999,227.

ALASKANS EAGER FOR STATEHOOD

We were flying over Alaska about 6 hours out of Great Falls, Mont., traveling in an Army C–54 about 9,000 feet above the roughest stretches of the Alcan Highway when our plane was struck by lightning—an uncomfortable experience, despite the fact that aviation experts say they have never known of a case where lightning had caused a fatal crash. I mention the lightning incident here to cite it as a possible omen—or perhaps a warning directed to a representative group from Congress that lightning might strike at any time in that vast northland.

Alaskans are eager for statehood. Events since Pearl Harbor have increased their efforts to attain admission to the Union. Before Pearl Harbor, Alaska was only a stepchild for whom the parent Nation did very little. By the handful of real Alaskans who gained our ear during a reception at the mayor's home in Fairbanks we were told that the average American considered Alaska as a place to go in quest of quick wealth, and if attained the opportunists would leave the country immediately. Alaskans are disturbed by the get-rich-quickers who take all they can from this frontier country with no thought of giving anything in return to Alaska. Alaskans believe statehood would help to correct this situation and then, they say, you would see real development of the country so that it would be a tremendous asset to the Union.

The Alaskans have no hesitancy in citing their strategic military location as one of their strongest arguments for admission as a State. They assert that the development of Alaska is of "utmost importance from a military standpoint," and they insist that statehood will accelerate that development. Recently the commanding general of the Alaskan Department stated that military defense of Alaska could not be effective unless there is a growth in civilian population and civilian industry.

Statehood would aid materially in bringing that about—

Says the Honorable E. L. BARTLETT, Delegate from Alaska—

because Alaska would then receive automatically the grants in aid and appropriations which go to the States on an allotment basis instead of having to plead, hat in hand, for every Federal dollar.

STATEHOOD WILL BRING DEVELOPMENT

Alaska has many of the same arguments for statehood that have been advanced for Hawaii, namely: First, once a Territory has been formally organized it is assurance statehood is the next political step; second, served its tutelage; third, Alaskans are loyal, law-abiding American citizens; fourth, Alaskans have voted 2 to 1 in favor of statehood.

But the Alaskans stress more strongly than does the Hawaiians that statehood will result in development of their country—and naturally so, because the Hawaiians favored by better climatic conditions have an area almost fully developed at the present time. That the self-government which statehood will bring to Alaska will permit of real development of the vast potentialities of this northern land in fact seems to be the chief argument why it should be brought into the family of States.

If the average American knows little about the islands of Hawaii, he knows even less about Alaska. It is an amazing country.

Alaska was purchased from Czarist Russia in 1867 and there have been some hints of recent date that the Soviet Government does not consider the Czar had the right to sell a possession of the Russian people.

Because of its distance from the United States and the lack of transportation facilities other than air and water, Alaska may be considered an island from the viewpoint of military operations. The wartime Alcan Highway provides the only existing through land communication with the United States, and will require considerable improvement as well as extensive continuing maintenance if it is ever to be used as a supply route.

ONE-FIFTH THE SIZE OF UNITED STATES

The eastern boundary of Alaska is north of a point two-thirds of the way from San Francisco to Hawaii, while the Alaskan Peninsula is north of the Hawaiian Islands. Adak is north of Midway, and Attu is north of Wake Island and New Zealand. Point Barrow is farther north than any other point in North America except the tip of Boothia Peninsula in north-central Canada. On the other hand, Adak is in the same latitude as northern Newfoundland, northern Great Britain, or southeastern Sweden.

The land area of Alaska is about one-fifth the size of the continental United States, but because it is comprised of numerous widely scattered islands it occupies a relatively larger area of the earth's surface. The distance from Juneau to Attu is approximately the same as that from Savannah, Ga., to Los Angeles, and from Juneau to Point Barrow is about as far as from Fort Worth to Duluth.

Alaskans hasten to explain that despite this wide area, they are actually closer to the mainland in terms of travel time than Washington was to Philadelphia in an earlier day. And they further hold that although a population of approximately 80,000 is scattered very thinly over this vast Territory, that this should not be held against their chances for statehood because Alaska today has more people than six out of the last nine Territories admitted to statehood.

Contrary to the prevailing idea held by most Americans who have never been to the far north, Alaska is not entirely a land of ice and snow, and severe subzero cold. True, these conditions exist in the real Arctic or extremely cold climate found north of the Alaskan mountain range in the valley of the Yukon and north to the Arctic. In this section temperatures range from 60 below to 90 above with a temperature range of 150 degrees.

IN LOVE WITH CLIMATE

But there are two other distinct climatic regions. There is a moderately cold area found south of the Alaskan Range and in the Alaskan Peninsula, where the temperatures range from 20 below to 70 above. Then out on the Aleutians chain the temperature ranges from 25 above to 65 above, but the mild temperatures hardly make up for extremely high winds—williwaws—recorded up to 110 miles per hour, and almost constant fog.

Juneau, Anchorage, and the towns south of the Alaska Range, therefore attract most settlers. And like the former Belleville, Ill., man, Michael J. Haas, who went to Juneau about 12 years ago on a temporary job and decided to make it his home, the majority fall in love with the climate and the country.

"It is the greatest place on earth," Haas told me, "and if we could just get statehood you would see rapid development of all the great resources of Alaska."

Air transportation is the lifeblood of Alaska. At the present all other forms of transportation are limited. But with the attaining of statehood, Alaskans look for self-government to lead to the construction of highways and railroads which are so vital to future development.

TRANSPORTATION IS BIGGEST PROBLEM

In all of Alaska the only highways of importance are the Glenn-Richardson Highway connecting Anchorage with Fairbanks and the Alcan Highway running from Fairbanks southeast to Edmonton. The only railroads are the Alaska Railroad running from Seward to Fairbanks, and the Whitepass & Yukon running from Skagway to Whitehorse. Water transportation is limited to the summer season because Arctic ice in the winter extends south around the Alaskan Peninsula through Anchorage and leaves Seward and Whittier, the only year-round ice-free ports serving the mainland of Alaska. For many parts of Alaska no means of transportation are available except the dog team and the airplane.

For the security of the United States, Alaskans argue, this vast Territory should be given status as a State and permitted immediately to develop itself. They say that they can develop the back door to America within a short time to a point where that back door can be quickly shut against attack from the outside. At the time of Pearl Harbor the back door was wide open and we can recall America's frantic efforts to close it to prevent the Japs from getting a foothold on the American Continent.

FEEL THEMSELVES PART OF UNITED STATES

One thing visitors to Hawaii, Puerto Rico, and Alaska quickly learn is that residents in these three Territories do not like to hear anyone say, "I am going to the United States." If you must make the trip be certain you inform a Hawaiian, Puerto Rican, or an Alaskan that you are "going over to the mainland."

A leading citizen of Puerto Rico promptly took one of our committee members to task on this point.

When someone in Ponce plans to visit San Juan, it would sound stupid if he said, "I am going to Puerto Rico," the native explained. If someone in New York wishes to visit California, it would appear as ignorance if he says: "I am going to the United States." The first one would naturally say: "I am going to San Juan," and the second: "I am going to California." Both of them are in the United States.

In Puerto Rico they let you know that it is absolutely wrong and misleading to say: "I am going to the United States." It is wrong, they say, because all we are doing is to go from one place in the United States to another place within the same Nation.

"To say otherwise," according to Mr. Julius L. Pietrantoni, of Ponce, P. R., "would constitute an act of denying, a foolish denial of our own sacred rights and a showing of ignorance with respect to our powerful condition of American citizens."

In other words, the Puerto Ricans feel pretty strongly about their American citizenship. Like the Hawaiians and the Alaskans they would like to have it more all-embracing—a status only statehood can bring.

SIX HUNDRED AND THIRTY PERSONS PER SQUARE MILE

The island of Puerto Rico is approximately 95 by 35 miles or about 3,400 square miles. It has a population of 2,100,000, more than double what it had at the beginning of the century, and this large and increasing population has to live on what is mainly an agricultural economy. In no place in the world can 630 persons per square mile subsist, except at very low levels, on an agricultural economy. It is for this basic reason that the Federal Government has been called upon to give increasing aid to Puerto Rico.

The political leaders of the island recognize the economic difficulties of their people. The present Legislature of Puerto Rico is trying to deal with the economic problem along the following lines: Puerto Rico must increase its production, through improved agriculture and, mainly, through industrialization, fast enough to take up the chronic lag of unemployment; and still faster to keep up with the rapidly increasing population; and still faster looking toward a time in which the fair-minded Federal aid provided shall cease to be essential to its survival.

As in none other of our possessions, the government has found it a necessity to participate completely in the economic development of the island. The Industrial Development Co., a public corporation, helps private investors to establish new industries, or establishes them itself, as a guide, example, and stimulus to private investors.

The Agricultural Development Co. develops new crops as a guide, example, and stimulus to farmers in developing a more diversified agriculture yield.

The Development Bank, which has the approval of private banks of the island—some of the managers of which serve on the Development Bank's board—has been established to make long-term investment loans that the private banks of Puerto Rico do not extend.

SYSTEM ESTABLISHED TO MEET NEED

These institutions, Puerto Ricans point out, have not been established because of an abstract theory, but to meet the pressing specific needs of Puerto Rico. While they realize the socialistic nature of their economic program, they insist that it was the only way through which encouragement could be given to private investment to go into new fields. It required government pioneering to stimulate private enterprise. By 1960, through their program, Puerto Ricans hope to be self-supporting—and even before that time they hope to be self-governed.

Hon. Luis Muñoz Marín, President of the Senate of Puerto Rico, recently wrote me to this effect:

As to my personal opinion, (on statehood), I believe Puerto Ricans would feel honored if Puerto Rico were admitted as a state of the Union, although I have serious doubts as to whether our present economy would be able to sustain the heavy financial drain that Federal taxes would imply. For instance, although we have more than tripled our educational budget during the last 6 years still we have about 40 percent of our children without a chance to go to school; although we have almost tripled our health budget in the same period, and reduced general mortality from 18 per 1,000 to 13 per 1,000, making substantial inroads into tuberculosis, malaria, diarrhea and enteritis, we still have a high figure of mortality from these diseases with the exception of malaria.

Although we are developing agricultural and industrial production to meet the needs of a growing population that should have a higher standard of living, we are still far from the goal that we must set ourselves in order that 3,000,000 Puerto Ricans (expected figure) may support themselves adequately by 1960. And if we had to pay federal taxes now, that would mean that about $40,000,000 a year would leave the economy. If we are having a hard time without that drain, it can be imagined how the problems would be aggravated if we had to do without such an amount.

DIVIDED OPINION IN PUERTO RICO

That is my honest personal opinion, not given in the name of the voters, because of the aforementioned pledge (Marín had prefaced his remarks by informing me that the majority party, Popular Democrat, of which he is chairman, has a pledge before the people of not interpreting their votes cast in favor of the party as votes either for or against statehood, independence or any other form of political status) but only as a result of my own thinking and observation.

I feel confident, however, that were it not for the very tough difficulties pointed out many thousands of Puerto Ricans would be working hard for statehood the same as the Hawaiians, who do not face the same economic reality.

From Mr. Marín's clear statement it is evident that while there is a movement for statehood in Puerto Rico there is not solidarity on the question—and this we found to be true on our visit to the island. As a matter of fact, opinion in Puerto Rico is divided among those who favor independence, in a spirit of friendship with the United States similar to that under which Philippine independence has been established, those who favor statehood, and those who favor full local self-government based on rights and not on special favor.

Marín urges his people to be cautious in their course. While the Puerto Rican people are asking for a chance to vote freely on their own future, Marín wants to be certain that they will be properly advised when they vote on what economic relationship they can expect with the United States, with a view of making themselves fully self-supporting, under the different forms of political status upon which they may be asked to consider in a referendum.

IMPATIENT FOR SELF-GOVERNMENT

One thing, however, the Puerto Ricans hold to be beyond question and that is that no community, and especially no American community, should be longer deprived of full local self-government.

In the same area where lies Puerto Rico there is another island possession of the United States—the Virgin Islands. Last week a congressional committee returned from a visit to that tropical American paradise after giving assurance to the island Governor that they would recommend to the Congress that a resident commissioner of the Virgin Islands be authorized to sit in the House.

In far away Guam, more than 23,000 residents, most of whom have located there since the war, are seeking legislation to protect their rights as American citizens and to allow them to set up local government, courts, and so forth, in keeping with such rights.

These are the territorial and island possession problems the United States will soon be called upon to solve—the people in these distant places who believe themselves to be Americans seem to be growing more and more insistent that their citizenship be strengthened.

Communism in America

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. ROBERTSON. Mr. Speaker, the President of the United States wisely or-

dered some time ago that Communists be driven from the ranks of government. I am deeply concerned as I view this trend of communistic influence in the United States whether or not the great rank and file of American people are thoroughly informed as to just how far-reaching this movement is. It is regrettable indeed that they have invaded so many fields of our American life. The former Senator La Follette contributed a strong editorial some months ago in his Progressive magazine under the heading of "Liberals beware." The Communist element in America has grabbed the word "liberalism" and they are carrying the torch for everything that they call liberal, when in many instances it is like communism itself—the most reactionary of all forms of human existence.

I ask that every Member of Congress read carefully the following statement, which I shall ask unanimous consent to include herewith. This statement was published under the authorization and signed by the Michigan State Committee of the Communist Party, Carl Winter, chairman, 902 Lawyers Building, Detroit, Mich. I ask that you read this document and you will observe the general conduct of Communists in America.

In reading the document, the heading of which is "You face a clear and present danger" one would be led to believe that the Communists are the great sponsors of human rights in America; that they, by their newly conceived philosophies, have produced a better situation than the Bill of Rights. Their constant reference to democracy, and their constant reference to liberal action and thought is sheer hypocrisy. No man who knows the general plan of the Communist Party in Russia and the methods they are pursuing throughout the world can ever agree that they symbolize to any degree, or stand for the word liberalism, as we know it.

The regrettable thing about it all is that such vast numbers of people, including all too often labor groups and others in America, are led astray by this communistic buncombe. The Communists in this document take the position that they are the first line of defense of liberty in this iniquious battle of capitalistic groups and Fascists to subjugate the common people to an unholy existence.

It calls for clear thinking on the part of a lot of American people. I have no disposition to suggest that we should legislate the Communist Party out of existence, but I do suggest that we legislate to deal most vigorously with them when we find them engaged in any activity contrary to the American system, and the President's order to rid the Government of Communists should be fulfilled at the earliest possible date. Here I include the document distributed in the city of Flint, Mich., in the automobile factories on April 1, 1947:

YOU FACE A CLEAR AND PRESENT DANGER

President Truman has called upon Congress and the American people to underwrite the purchase of two reactionary governments abroad—the totalitarian dictatorship of Turkey and the Fascist Monarchy of Greece. He has asked Congress to appropriate $400,000,000, military and governmental personnel as a down payment in this deal. And for what purpose are we to send money and men to Greece and Turkey? We are being asked to subscribe to an adventure in empire building. We are being asked to go out in support of two reactionary and hated governments which have promised American big business the unhampered right to exploit and rob the people of Greece and Turkey of their labor and their natural resources.

Fascist regimes which have sold the national interest of their countries to American imperialists to provide them with a base of operations from which to dominate, rob and plunder the markets of the whole of Europe and Africa, of the Middle and Far East. Aid to the Greek and Turkish Fascist rulers in power is a knife in the backs of the suffering, hungry and democracy-loving peoples of these countries.

President Truman's arrogant insistence upon disregarding the United Nations in this matter exposes the greedy and selfish presence of Wall Street imperialists behind this move. It constitutes a foul blow struck at big three unity within the United Nations—the sole instrument for achieving a lasting peace.

This Truman doctrine of sending American money and troops to the defense of reactionary governments, now everywhere under attack by their own people, threatens the peace of the world and makes of America a hated and feared champion of the remnants of Fascism and enemy of the struggling democracies around the world.

As former Vice President Henry Wallace said in reply to President Truman's appeal for aid to Greece and Turkey:

"That policy of imperialism proved to be so bankrupt that Britain can no longer maintain it. Now President Truman proposes we take over Britain's hopeless task. The world is hungry and insecure, and the people of all lands demand change. American loans for military purposes won't stop them. President Truman cannot prevent change in the world any more than he can prevent the tide from coming in or the sun from setting. But once America stands for opposition to change we are lost. America will become the most hated nation in the world."

A CLEAR AND PRESENT DANGER

Why are the most reactionary men of the trusts using the weapon of Fascism—against the American labor movement?

Why does big business want to deny Americans the right to be Communists?

So it can deny organized workers the right to bargain collectively as they see fit.

So as to prevent trade unions from exercising their right to strike or defend labor's interests through independent political action.

So as to prevent justice-loving Americans from aiding the Negro people in their struggle for their constitutional rights.

So it can silence all progressives and anti-Fascists who speak against reaction's program of unrestrained profiteering, economic disaster and world domination.

Like Hitler and Mussolini, the architects of an American form of Fascism center their attacks first upon the Communists. They know that we are the front-line fighters for the people's welfare and liberties, for a just and lasting peace.

The National Association of Manufacturers and the Chamber of Commerce know that if they can outlaw the Communist Party—every progressive organization can be undermined, and every decent individual who resists the attack of the trusts on the trade unions and the Bill of Rights, can be hunted as a hidden Communist.

Democracy is an underground movement today in Spain, in Greece, in Turkey. Is the American spirit of liberty and justice for all to be driven underground in these United States?

Since the former Roosevelt supporter, Secretary of Labor Lewis B. Schwellenbach, has given aid and comfort to the most reactionary Republicans like Congressman HARTLEY and the poll-tax Democrats like RANKIN—The danger has become more clear and present.

The Red witch-hunt of Governor Kim Sigler and his administration in Lansing, is a part of this brazen assault upon our popular liberties and living standards. State senator Matthew Callahan's little Dies committee is busy slandering civic and labor leaders, intimidating our youth and our teachers, smearing the organizations of the people under the pretext of exposing the Communists.

Governor Sigler is trying to destroy academic freedom in the schools and the political rights of labor with the club of anti-communism. Governor Sigler has replied to every demand of the people for the enactment of State laws to extend democracy and for meeting the housing, health, and job security needs of the citizens by shouting, "Red plot!"

WHAT IS DEMOCRACY WORTH TO YOU?

Such openly Fascist organizations as the Gerald L. K. Smith rabble, the Columbians, and the Ku Klux Klan will be encouraged to new depths of violence against the lives and liberties of us all.

We are certain that the American people will fight back. They learned much in the war against Hitler. They do not love American democracy less for having defended it in battle against fascism.

Already dozens of Americans have spoken out against this outrageous proposal to outlaw the Communists. Among them are Senators like PEPPER, THOMAS, TAYLOR; Congressmen like POWELL and MARCANTONIO; Republicans like council members Genevieve Earle and Stanley Isaacs; writers like Vincent Sheean and Dashiel Hammett. Others will speak out.

The Communist Party knows that this fight in defense of liberty can be won by the American people. But only if the people are given the truth and stirred to action.

We are, therefore, undertaking to break through the iron curtain of a press and radio controlled by the NAM and the chamber of commerce and to reach the people with the truth.

We intend to place advertisements in many of the country's newspapers.

We shall bring this message to the people through the radio.

We must organize meetings, tour speakers, get out pamphlets and leaflets.

But even to begin doing this we need a minimum of $250,000. And we need it in the next 25 days. We count on you, the members and friends of our party.

We count on the support of all non-Communists who know that this attack is aimed at depriving every American anti-Fascist and liberty-loving citizen of the protection pledged him in the Bill of Rights and the Constitution.

We have set up a special committee to direct the campaign to raise this fund. Its cochairmen are Benjamin J. Davis, Jr., and Peter V. Cacchione, and its treasurer, Elizabeth Gurley Flynn. Other members are Ben Gold and John Gates.

We know that you will respond generously to this appeal. We urge that you also respond promptly. Time is of the essence. We have a big job to do—fast.

Send funds to Philip Schatz, treasurer, 902 Lawyers Building, Detroit 26, Mich.

ACT IMMEDIATELY

The people must rally to defeat the "one at a time" strategy of American reaction and fascism. They would outlaw the Communist Party today in order to silence the Roosevelt Democrats and Willkie Republicans tomorrow in order to kill the forces of labor and the progressive forces of the people who are striving to establish their political independence of the dictatorship of big business and the trusts.

The fight of Communist workers for the legal existence of their party is every man's fight for political freedom and the Bill of Rights. The Communists now man the first line of defense of American democracy against the attacks of the Fascist enemy within.

Write or wire your Congressman to vote against any and all proposed legislation that would restrict the rights of labor or the legality of the Communist Party.

Write or wire Governor Kim Sigler and your State senator to oppose and defeat any bill which would deny the right of all labor and people's political parties to a place on the ballot. (People's pressure has already defeated one such bill, House bill 151.)

Demand the abolition of the inquisitorial Callahan committee.

Voice your opposition to this underhanded steal of your basic democratic right of freedom of political choice in letters to the editors of your local newspapers.

Get your local union, club, church, or social organization to take similar action now while there is yet time to safeguard our cherished liberties.

Send a generous contribution today to the Communist Party, 902 Lawyers Building, Detroit 26, Mich.

Give liberally toward raising the $250,000 fund needed immediately to defend the Bill of Rights.

It's either all out in defense of our cherished freedom now against the attack of reaction, or it's all over for democracy here in our America.

MICHIGAN STATE COMMITTEE,
COMMUNIST PARTY,
CARL WINTER, *Chairman.*
DETROIT, MICH.

Amadeo Obici

EXTENSION OF REMARKS
OF
HON. MITCHELL JENKINS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. JENKINS of Pennsylvania. Mr. Speaker, tonight at 8 o'clock, on the National Broadcasting Co.'s program, Cavalcade of America, there will be presented the story of Amadeo Obici, the president and founder of the Planters Peanut Co., whose home office is in the city of Wilkes-Barre, Pa., in my district.

It is the story of the rise of a penniless young Italian immigrant from poverty and obscurity to the control and direction of a vast corporation whose operations extend over the whole of the United States. It is a story of courage and imagination, the kind of story with which our national history is replete. In miniature, this is the story of America itself, for it exemplifies those qualities which have made America great.

To the people of my district in Pennsylvania the story is not new, for we have watched its unfolding as the years have passed by. We have seen the expansion of Mr. Obici's interests from year to year and have recognized those qualities in him which have made that possible. To us it seems but fitting and proper that they should receive recognition on a larger scale.

As it will appear on tonight's program, that story is as follows:

Amadeo Obici, one of Wyoming Valley's principal citizens, arrived in America from Italy in 1889 and went to northeastern Pennsylvania, where a kind stationmaster at a dreary railroad station introduced him to the American delicacy, peanuts.

Sometime later, Amadeo's uncle moved to Wilkes-Barre and here young Obici's Americanization really began. There young Obici got a job as a clean-up boy in the grocery store of John Hance, working extra hard in order to return to his uncle the money given to him for his passage to this country from his native Italy, and in order to save sufficient funds to bring the rest of his family over here: His mother, his brother, and his two sisters.

Soon Obici decided to go into business for himself, not with a store but with a peanut stand because he figured that peanuts, unlike fruit, did not spoil and would be more profitable and less troublesome. During the day, Amadeo had his peanut stand outside Hance's store; in the evenings he took his stand outside the opera and the prize fights. In between times Amadeo read Shakespeare in order to perfect his knowledge of the English language.

One night, outside the prize fight, Amadeo encountered competition from an Italian girl, Louise Musante, whose brother was one of the fight contestants. When they discovered, to their mutual joy, that they were both from the same city in Italy—Oderzo—they married, and the first thing they did was buy a horse and wagon from which to sell their roasted peanuts.

Obici's next step was to rent a second floor in an empty building and begin roasting peanuts on a larger scale so that they could sell them to storekeepers. Obici bought a new wagon and had printed on it: "The Peanut Specialist." He also fulfilled his dream and brought his family over from Italy. Soon enough his family was working with him in his business, roasting and salting peanuts.

He also acquired a business partner, Mario Peruzzi, who married Elizabeth Obici, Amadeo's sister. The firm then took the name of Planters' Peanut Co., getting the name from the peanut planters in Virginia.

Orders began pouring in for Planters' products. They enlarged their building. They made a profit. The firm enlarged. They built their own peanut-cleaning plant in Virginia, where they shelled and cleaned the peanuts they got direct from the growers. Finally, they expanded their plant so that it made its own bags and boxes and tins as well as cleaned and salted the peanuts.

After the plant in Suffolk was completed they built another in San Francisco. Today Planters' Peanut Co. is the biggest, having gone from the time when Obici sold 20 bags a day to the present when it sells 100,000,000 pounds a year. Obici is no longer the peanut specialist; he is the peanut king.

Obici believes that his story exemplifies the freedom of opportunity in America.

Aid to Greece

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose another editorial by Mr. John S. Knight, editor and publisher of the Chicago Daily News, of Saturday, April 12, 1947. I, for one, am not ready to vote for the perilous Truman plan. We know no more now than we did when the President made his speech before this House. We are asked to step in alone on a plan that the most ardent proponents indicate may lead to war. They admit that the President's proposal may not even be a solution. Some Members are going along because they do not care to oppose the President. If the President is opposed on this measure, it will not be the first time that a Congress has disagreed and disapproved a Presidential action. If the President is committed to this program, he has done so without recognizing the legislative branch of the Government.

The editorial follows:

CONGRESS READY TO VOTE FOR PERILOUS TRUMAN PLAN

Now that the Senate Foreign Relations Committee has voted 13 to 0 for the President's $400,000,000 gift to Greece and Turkey, the administration's stop-Russia program will be approved by Congress with only token opposition.

Senator VANDENBERG's amendments, which obligate the President to withdraw American aid to these two countries if either the General Assembly or the Security Council of the United Nations, by majority vote so determine, have placated the Peppers and lulled the public conscience.

Actually, the amendments are meaningless because they are in conflict with established United Nations rules and procedures. The veto power, for instance, cannot be set aside by congressional action whenever it suits our purpose so to do.

The Vandenberg amendments attempt to do by subterfuge what the administration fears never could be accomplished within the United Nations because of Russia's veto power. Senator HARRY F. BYRD, of Virginia, is far more realistic in urging reorganization of the United Nations if "such action is necessary to permit it to function."

Russia has been justly blamed for her obstructive tactics within the UN, but it is well to remember that the United States is also smugly relying upon the veto power to protect our interests in case Russia, Great Britain, France, and China ever decide to graze in the same pasture.

Need we add that stranger things have happened?

REASONS FOR OPPOSITION

We have opposed the revolutionary Truman doctrine as it has been called by his glorifiers because it:

1. Destroys the original and fundamental concept of the United Nations.
2. Commits the United States to the role of world policeman.
3. Stems from the idea that you can buy good will and fight communism with dollars.
4. Misleads the American people into believing that this is another glorious triumph for democracy.
5. Issues an open invitation to war.

THE CAUSE IS LOST

It is now apparent that our fight has been lost. In a few days, the Congress of the United States will vote $400,000,000 to Greece and Turkey, which will be small change in comparison to the billions that must follow.

For the Truman doctrine, if sincerely conceived, cannot stop with our intervention in Greece and Turkey. To be effective, it must be carried to China, Korea, India, and the Near East.

World Report, a well-documented publication on global affairs, reveals in its current issue that implementation of the Truman doctrine will mean "United States financing of other countries at the rate of $7,000,000,000 a year for the next 3 years if Washington follows through on the new policy as set for Greece and Turkey. That policy is designed to preserve the economic and political integrity of many nations, prevent the spread of communism and restore stability throughout the world."

To get the full import of our new foreign policy, read that last sentence once again.

It means that we shall spend $21,000,000,000 in the next 3 years in public loans and grants to England, Germany, Italy, Austria, Greece, Turkey, China, Japan, the Philippines, Korea, and other countries.

It means that little, if any, of the money will ever be recovered.

It means that we are headed on the road to bankruptcy, for, as Louis Bromfield said in a recent article: "We have not enough money, raw materials, or machinery to rehabilitate the whole of the world. If we attempt to do so, we shall only bleed ourselves white and reduce our natural real wealth and living standards to the level of the more desperate European nations."

It means that, as in two previous world wars, the youth of America will once again be sacrificed in vain.

FADED IDEALS

Critics of our opposition to the Truman doctrine point out that the United Nations is simply an adventure in sentimental futility. "The way to stop Russia," they say, "is to get tough now."

How different from the idealistic spirit in which the people of the United States embraced the United Nations as the means of preserving world peace.

Can they excuse President Truman's failure to consult the United Nations when Great Britain, in hysterical haste, decided to pull out of Greece?

Can they forget that article 1 of the UN Charter states that the purposes of the United Nations are "to maintain international peace and security, and to that end to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace."

If such an excellent statement of principle is now adjudged by the United States Government to be meaningless, less than 2 years after it was signed by 51 nations, what rightful claim can we make to the moral leadership of the world?

BETTER USE FOR BILLIONS

Employment of a new foreign policy designed solely for the purpose of containing Russia will have tragic results because it discards practical idealism for mailed-fist power politics which have been responsible for the scourge of war throughout the centuries.

If Russia is flexing her muscles for world conquest, we might better spend some of the billions we are shipping abroad on the largest and technologically best developed air force that can be assembled.

The retaliatory striking power of such an air armada probably would cause the Russians to do some reflective thinking before emulating the late unlamented Mr. Hitler.

Since virtually everyone concedes that the next war, if it comes, will be fought with atomic weapons and rockets, perhaps some apologist for the Truman program will now step forward and explain how the expenditure of $400,000,000 in Greece and Turkey will contain Russia when she has learned how to manufacture atomic bombs and decides to use them on us?

Or shouldn't I have asked that one?

JOHN S. KNIGHT.

Can an Economic Depression Be Avoided?

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times magazine of April 13, 1947:

CAN AN ECONOMIC DEPRESSION BE AVOIDED?

Whether the American economy is moving soundly forward or is headed toward another 1929 is a matter of much discussion. There are some who feel that the inflationary process has reached a point of imminent danger; there are others who maintain that no serious dislocation is in sight.

Therefore five of the Nation's leading economists were asked to give their answers to the question: Can a depression be avoided?

The economists are: Sumner H. Slichter, Lamont University professor, Harvard University; Alvin H. Hansen, littauer professor of political economy, Harvard; Ludwig von Mises, visiting professor, Graduate School of Business Administration, New York University; Alan H. Temple, vice president of the National City Bank of New York; and John D. Black, professor of economics, Harvard.

In their answers there is a certain measure of agreement; they see dangers in the present situation but are generally optimistic. They agree that the situation should be watched and that precautions should be taken; they disagree, however, as to just what those precautions should be.

Among the factors making for danger these are cited: (1) The recent sharp rise in living costs, with only a moderate rise in per capita income; (2) disparity in price levels, with farm produce relative higher than manufactured goods; (3) high profit margins; (4) swollen inventories; (5) the great expansion of the Nation's money supply; (6) possible resumption of New Deal fiscal policies; (7) failure to develop full and effective machinery to prevent a slight recession from becoming a collapse.

On the optimistic side of the ledger these are cited: (1) A general awareness among Government, business, labor, and the public that dangers exist; (2) a continuing enormous demand for goods; (3) the basic strength and resilience of the economy; (4) the will to balance the Federal budget; (5) moves by a few large producers to reduce prices; (6) the beginnings that have been made in Washington toward planning for a stable economy.

Here are the views of the five economists:

"PRICES MUST COME DOWN

"(By Sumner H. Slichter, Lamont University professor, Harvard)

"The most dangerous aspect of the business situation is the rapid rise in wholesale prices. Today the general level of wholesale prices is up 6 percent since the end of January. Farm prices have risen over 10 percent. Any tendency to bid up prices rapidly is bound sooner or later to come to an end. Certainly prices cannot be expected to rise indefinitely at the rate of 2 percent a month. The present price level is especially unstable because the supply of finished goods is still abnormally low relative to incomes.

"There are several reasons for this. Part of the output of industry has been going into inventories, exports have been abnormally high in relation to imports, and the productive processes of industry are not yet fully in balance—the intermediate processes have been operating at a higher rate than the final processes.

"As supplies rise relative to incomes, prices may be expected to turn down. Many people fear that the correction in prices will be large and sharp, that it will induce widespread postponement of commitments and that it will produce large-scale unemployment. Any early readjustment in business is likely, in my judgment, to be mild and to affect prices far more than production or unemployment. One reason for this belief is that the prices which are most badly out of line are mainly agricultural prices. These prices could fall substantially without producing a large-scale postponement of business commitments. Indeed, a drop in the price of food would help sustain the demand for a large proportion of manufactured products.

"Another reason for expecting that any correction in business will be mild is that the demand for consumer durable goods, industrial equipment, and construction is unprecedented. The country has about 2,000,000 fewer automobiles than at the time of Pearl Harbor—although population has increased by about 6,000,000 since that time. Never has the average age of cars in use been so high. It is safe to predict that every automobile which can be built will be made in 1947.

"The need for industrial equipment is urgent and the demand will be little affected by momentary disturbances in the business situation. The country has fewer freight cars today than it had on VJ-day. Electric light and power companies are desperately short of generating equipment. Output of freight cars and electric generators during 1947 will be limited only by physical conditions. This holds true for many other kinds of equipment.

"Especially pressing is the demand for construction of all sorts. Consider housing, for example. More than one-fourth of the 6,000,000 married veterans discharged since June 1945 are living doubled up with their families, and an additional 5 percent are living in rented rooms. The increase in the number of families, which was 700,000 in 1946, will be substantially greater in 1947. In 1946 construction was limited by the supplies of materials, but at the end of the year the output of building materials was 60 percent above 1946. Construction costs are high and uncertain and only the most urgent work will be done. Nevertheless, the volume of construction this year will be determined more by physical conditions than economic conditions.

"With a large and insistent demand for durable consumer goods, industrial equipment, and construction, readjustments in prices are likely to have little unfavorable effect upon the general level of production and employment. The earlier that readjustments in the price level occur, the better for the community as a whole. It would be far preferable to have readjustments in prices this year than in 1948, when part of the most urgent demand for durable consumer goods, industrial equipment, and construction will have been met.

"Four principal steps would be useful in making business less susceptible to recession:

"1. Encourage a skeptical and cautious attitude toward prices. One of the most favorable elements in the present business

situation is the general lack of confidence in the level of prices.

"2. Discourage the expansion of credit, particularly credit used to finance the accumulation of inventories, speculation in land, or the purchase of durable consumer goods. If there were ever a time, for example, when the use of credit in buying automobiles should be discouraged, that time is the present.

"3. Reduce the Federal debt held by the commercial banks and encourage the purchase of war savings bonds by individuals.

"4. Avoid lasting increases in construction costs, particularly substantial increases of wages in building construction. Sooner or later the stability of business will depend upon the maintenance of a high level of construction. When that time arrives, the most urgent demand for construction will have been satisfied. A high rate of construction will then depend upon the ability of the construction industry to offer houses and other structures at attractive prices. Once wages in the construction industry go up, it is very difficult to get them down. Hence, now is the time to move cautiously in raising construction wages.

"In the last few weeks several important price reductions have been announced by large manufacturers. These announcements are to be welcomed, despite the fact that they do not apply to the goods which have risen most in price. These reductions have a symbolic value. They remind people that sooner or later there will be price adjustments and thus they help discourage the development of an inflationary psychology. More such announcements would be helpful."

"A PROGRAM IS NEEDED

"(By Alvin H. Hansen, Littauer professor of political economy, Harvard)

"The question we are asked to discuss is not, I take it, whether or not we could develop a program (political difficulties assumed away) which would effectively prevent or check a depression; the question is rather: Are we now in the United States prepared to stop the next depression?

"The answer is, I believe, a qualified "no." If a slump should cumulate with the speed and force of that which hit us in 1929–32 or 1937–38, we have neither the program nor the machinery necessary to check it effectively. Timing and flexibility are essential to a successful and effective compensatory cycle policy.

"We should distinguish at once between structural and cyclical adjustment programs. To make our society function well, structural adjustments are essential, involving labor-management relations, wage-price-productivity relations, tax structure, social security and agricultural programs, enforcement of antitrust laws, etc. All these are important. But they will not prevent depressions. In addition to all these, it is also necessary to develop an effective and quick-acting antidepression program. This we have not done, and there is little evidence that we have as yet any serious intention to do so.

"But we have made a little progress. We are somewhat better prepared to cope with a slump now than we were in 1929 or 1937. We are far more aware of the importance of acting before a slump has gathered sufficient momentum to produce a deep impression. While far from general agreement, there is nevertheless much greater support now for vigorous and quick action. The President voiced this in his recent economic report to the Congress when (referring to the maladjustments and unfavorable possibilites which could cause a recession in 1947) he said: 'The Government will watch this situation and be prepared for action if needed.'

"That declaration is heartening and the President is not altogether whistling in the dark. Within limits he can act. But his power to act is far from adequate. Effective timing and adequate scope for quick, flexible adjustment of public expenditures is not possible without a long-range minimum program of public construction; from such a minimum base it would be possible to expand outlays rapidly to meet emergency needs and thus provide a part of the needed compensatory action.

"Quick timing is also required with respect to tax change, for example, the first-bracket income-tax rate. Until the President is empowered to act quickly (a) by congressional authorization to step up outlays already approved in terms of a long-run expenditure program, and (b) by congressional authorization to vary, say, the first-bracket personal income-tax rate, he is, in fact, not equipped to deal with a fast-moving recession in business activity. Long-range plans and machinery for flexible adjustment are the two things most lacking currently to meet effectively a head-on recession.

"We do have now, in some measure, an automatic compensatory mechanism. With respect to unemployment insurance, payroll taxes exceed benefit payments in boom years, while payments exceed taxes in deep depressions. Our steeply progressive income-tax structure raises tax yields in boom years and reduces tax collections in depression. This helps, but it is not enough.

"Finally, I fully agree with the President's statement (economic report) that we shall not again permit so drastic a collapse in income and employment as started in 1929. We have, I think, discarded sufficient prejudices and obsolete dogmas to prevent that. We shall, I believe, act soon enough to prevent another such disaster. But the action will be tardy, ineffective, and wasteful. We have neither the long-range programs nor the machinery for an effective anticyclical policy."

"WE MUST CONTROL CREDIT

"(By Ludwig von Mises, visiting professor, Graduate School of Business Administration, New York University)

"The recurrence of economic depressions is not a phenomenon inherent in the unhampered operation of the market economy. Neither is it, as the Marxians contend, an offshoot of contradictions allegedly present in the capitalist mode of production.

"The emergence of a depression is the necessary outcome of endeavors to expand credit in order to lower the rate of interest, to make prices and wage rates rise and to finance Government expenditure. Credit expansion temporarily engenders an artificial prosperity. But such a boom cannot last. It must invariably lead to a slump, and the depression is the more disastrous the further credit expansion goes in the preceding period. There is but one means to avert depressions, namely, to abstain from credit expansion.

"It is a sad fact that the country's money supply, consisting of currency outside the banks and demand deposits subject to check, has more than tripled since the beginning of the war. But the significance of these figures must not be overrated. They must be weighed against the Nation's whole potential of production. The American economic system has such an enormous buoyance and recuperative power that it was able to stand even this tremendous shock. Private enterprise and initiative, although deliberately sabotaged by Government and union policies, have given proof of their adaptability and efficiency.

"Business has succeeded by and large in compensating for the worst effects of those policies. There is no reason to assume that the recession will go farther than it has already gone in some branches and that those branches in which production is continuing at a high level will be affected by a serious decline.

"The danger does not arise from what has already happened but from the havoc which a resumption of the New Deal's financial methods could create. And here we are confronted with the comforting fact that the trend of the Nation's financial and economic policy has been reversed. The vicious doctrines of unbalanced budgets, reckless Government spending and borrowing from the commercial banks no longer appeal to public opinion.

"People realize that strikes hurt the interests of the wage earners even more than those of the other strata of society. The workers are beginning to comprehend that technological improvement, the necessary condition of raising their wages and standard of living, requires the accumulation of additional capital and that taxes preventing the formation of new capital amount to the most pernicious antilabor policy.

"Recent events in Great Britain and France and the spread of realistic information about the lot of the masses in Soviet Russia and its satellites are at last depreciating the prestige of all-round planning. The Americans are on the way toward a better appreciation of the achievements of economic freedom, the ultimate foundation of all other freedoms.

"As the international situation makes huge expenditures indispensable, it may be rather difficult for Congress to balance the Federal budget. But if this is done and if no new armed conflict arises, there will be no depression."

"RESTRAINT IS NEEDED

"(By Alan H. Temple, vice president, National City Bank, New York)

"As long as booms occur, reactions will follow. Whether the reaction from the present boom takes the form of a minor recession, a major recession, or a depression will depend largely upon the extent to which the weaknesses created during the boom are recognized and the readiness with which people move to correct them.

"Like every other inflation in history, the present spiral is creating maladjustments which in time will bring it to a halt. The chief of these maladjustments is the widened spread between prices of various goods and services. If all prices and all incomes rose together, purchasing power would be maintained at the higher-price level. But all prices and all incomes do not move together. They rise unevenly, and people whose incomes lag lose buying power.

"In recent months living costs have had an extreme rise, against a modest increase in per capita incomes. This leaves city people especially with less purchasing power for non-cost-of-living items. A second case where prices are out-running purchasing power is in the cost of building, which menaces the outlook for both housing and industrial construction despite the tremendous latent demand.

"Apart from unbalanced price and income relationships, booms bring business mistakes and miscalculations, such as overexpansion of plant and inventory and extremes of speculation and debt-making.

"To state the chief weaknesses is to suggest the nature of the corrections wanted. A better alignment all around, among prices in relation to each other and between prices and incomes, is needed. While wage and price increases are desirable in exceptional cases, the only practical hope of regaining balance and stability is through a drop in prices that are too high—the sooner the better. Proposals for industrial wage increases are defective on two counts:

"1. Factory wages and prices even now are high relative to the compensation of most

other groups of the population, and new increases would widen existing disparities;

"2. The prices that are relatively higher than manufactured goods consist mainly of certain farm products. Authorities agree that in due time farm prices will drop. If wage rates should be raised to increase the buying power of factory workers for farm products, the time will soon come when manufactured goods prices will be high relative to farm incomes.

"Exorbitant profits contribute to instability equally with exorbitant wages. In the industries the need is to improve efficiency of output, reduce unit costs of products, and pass the saving along not in higher wages or higher profits exclusively but also in lower prices in which everyone can share.

"Policies of management and labor should emphasize lower costs of production, lower prices, and the long-run interest in balance and stability. Economy in government and tax cuts are needed, both to increase disposable incomes and to encourage investment and enterprise. Obviously, industrial peace is necessary. Given these requisites, other conditions are highly favorable, including enormous unsatisfied needs for goods here and abroad, and the financial strength and liquidity of the economy.

"The answer to the question asked by the Times therefore is a conditional one. A depression can be avoided, but not through panaceas or white rabbits. Only restraint rather than excesses, and devotion to the general welfare rather than to special interests, will ease our way from the inflationary road to a sounder course.

"There is a maxim that 'hard times make hard work.' Some people are amending this to read that 'only hard times make hard work.' It is within our power to prove that, on the contrary, 'hard work averts hard times.'"

"GOVERNMENT MUST ACT

"(By John D. Black, professor of economics, Harvard)

"At this late date, some measure of a business recession can scarcely be avoided. Or at least the means by which it could have been done are no longer practically available. Present levels of prices are higher than can be sustained with currently earned incomes plus remaining reserves of savings, and buying consumer durables on credit needs in most lines to slacken rather than to expand. The price recessions resulting from this situation, if history repeats itself, will overreach, because customers will not respond to the declining prices promptly enough. This will cause some unemployment, and further reduction of buying power. What is most important in the situation is taking vigorous steps now to check the recession in its early stages and prevent continued spiraling downward.

"The measures required for this include such as the following:

"1. The prompt lowering of prices in manufactured lines to levels that will be sustained by the purchasing power normally to be expected. This is particularly important for prices of basic materials like steel. (The International Harvester Co. has just moved in this direction. Whether far enough, I do not know. With lower steel prices, it could move further.)

"2. Uninterrupted operation of all plants, so that they can supply one another with needed materials and parts, and output per worker can be increased, and costs brought to reasonable levels below the reduced prices required if they are not already there.

"3. A prompt raising of wages in plants, if, or as soon as, output per worker produces costs that are reasonably under the lower prices to be announced.

"4. Adoption by firms of programs and policies aimed at moderate but more certain levels of profits, and dividing more readily their increases in earnings with consumers in lower prices and with employees in higher wages.

"5. Prompt conversion of the present high profits in most merchandising to reduced margins and lower consumer prices. If this is not done promptly, they will soon be absorbed in uneconomical duplication of facilities and wasteful services.

"These measures will, of course, be dubbed by many as utopian or as a counsel of perfection. Nevertheless, in large measure only to the extent that these measures are taken in the next decade or two will we avoid either (1) serious business recession at some periods, or (2) supplementary measures by government. At most, such measures will be carried through only partly in the near future.

"Hence some supplementary measures by government will be required at critical periods such as in the next year. These had better take the form of setting up a detailed manpower budget to discover exactly where unemployment and reduced incomes are likely to appear; collaborating with industry and trade in providing public works if industry and trade will not collaborate enough. Housing will be the most important and most difficult field in which to work out such arrangements. Additional supplementary food distribution may be needed to maintain agricultural income."

Problems Confronting the Eightieth Congress

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include the following radio interview reported yesterday over Station WINS, New York City, and Station WLW, Cincinnati, regarding some of the problems which have faced and will face the Eightieth Congress:

QUESTIONER. Congressman, what do you think are the high spots in the accomplishments of Congress up to this point?

Representative KEATING. Well, I'm delighted that you asked that question, because I think there are a lot of people who are not fully aware of what has been done to date. Although legislation is necessarily, and probably fortunately, a deliberate process, which requires subcommittee and committee action after a bill has been introduced, sometimes with extensive hearings before the matter is in shape to be brought to the floor of the House for action, the public generally may not realize the extent and importance of the legislation which has actually passed the House already.

The House has passed 112 bills dealing with all kinds of subjects. Outstanding among these are measures to effect the following results:

1. To reduce governmental expenditures by cutting $6,000,000,000 from the budget submitted to us by the President.

2. To increase the take-home pay of the overburdened and harassed taxpayers of this country by reducing their income taxes by percentages ranging from 30 percent in the lowest income brackets to 10½ percent in the highest brackets.

3. To curb the portal-to-portal pay-suit racket by outlawing illegitimate claims, while retaining intact those legitimate claims which are based on an agreement between the parties or the established custom in the plant.

4. To submit to the various States for ratification, if they so elect, a constitutional amendment to limit Presidential tenure of office.

5. To extend the control of sugar temporarily and provide for orderly decontrol.

6. To make a frontal attack on communism in this country by citing for contempt the defiant Gerhard Eisler, who has assumed the unenviable position of perhaps the No. 1 Communist and to provide for thorough investigation of communism, fascism, and all other subversive ideologies throughout the country in industry, labor unions, and above all, in governmental service.

These are some of the more important things which the House has already done, and time does not permit me to go into more details.

QUESTIONER. Let's look at this tax bill, Congressman. I believe you were one of the first in Congress to suggest a greater break for those in the low-income backet—legislation to give them a greater tax reduction. What is your opinion, then, of the bill which recently passed the House and is now before the Senate for action?

Representative KEATING. Well, I supported this bill, even though it did not go as far as mine in the principle of a graduated tax reduction. The way I looked at it is that legislation is a give-and-take matter and that all the knowledge in the world is not reposed in the mind of any one man, least of all in mine. The position of 31,000,000 taxpayers was improved by the raise from 20 to 30 percent in the reduction which they would enjoy under this bill. That represents two-thirds of all the taxpayers in the country.

Just because this bill did not approach the tax-reduction problem in precisely the manner I might have wished, did not seem to me sufficient reason to deny the deserving and hard-pressed taxpayers any relief at all. Therefore, I concluded I was serving the best interests of the greatest number by voting for the bill.

QUESTIONER. Many—here in Washington—are still debating the question of tax reduction against debt reduction. Would you give us your views on that problem.

Representative KEATING. The way I look at it is that we can do both. When the President submitted his $37,500,000,000 budget he still left a leeway of $1,500,000,000 between prospective income and outgo. If we cut the budget $6,000,000,000 as the House has voted, that gives you $7,500,000,000. If $4,000,000,000 of this is used for tax reduction, it leaves $3,500,000,000 to apply on the national debt, plus the substantial surplus which the President now tells us will result for fiscal 1947. That sounds to me like a pretty substantial reduction.

QUESTIONER. Let's clear up a little confusion on this question, too. Where does a tax-reduction bill now stand—on the legislative road? And what—in your opinion, Congressman, will be the outcome?

Representative KEATING. The Senate, it is true, has not yet acted on this important matter, but I am perfectly convinced that they will pass a tax-reduction bill before we adjourn. Just what form that will take, it is, of course, impossible, and in fact would be quite presumptuous for me to predict, but I am sure if it differs from the bill we have passed, the conferees will iron the matter out and come up with some mutually agreeable legislation.

QUESTIONER. Now, Congressman, tell us what's on the fire in the immediate future.

Representative KEATING. Well, next week we take up a labor bill. Then, I understand, a rent-control bill. I guess perhaps those are the most controversial issues on the calendar at the moment.

QUESTIONER. What about this labor bill you mention?

Representative KEATING. I am not on the Labor Committee, so that I do not yet have the comprehensive and detailed knowledge about this bill which I want, and expect to have, before I vote. I intend to study it over this next week-end and also to read carefully the committee report and much of the testimony which was taken in the extensive hearings held by this committee. There is no doubt in my mind that the American people, including the working men and women and, perhaps above all, union members, are looking to this Congress to enact labor legislation which will furnish more adequate protection to the public from the results of labor-management conflicts, and greater protection to union members from the acts and policies of unscrupulous and dictatorial leaders without, at the same time, being punitive in character so as to destroy or weaken the labor-union movement generally, or strike a blow at those union leaders who are striving to represent their members sincerely and conscientiously.

Probably if 435 Congressmen sat down to write a labor bill you would have 435 different answers. It is my hope and my confident expectation that the bill which finally emerges from debate will be one which will merit and receive the overwhelming support of Congressmen of both parties who recognize the need for some corrective and constructive legislation along these lines.

QUESTIONER. This problem of rent control is one of the issues which must be decided within the next few weeks. Right now there is a little confusion; I wonder would you tell us what is the position of rent control at this time?

Representative KEATING. As I understand it, the House Committee on Banking and Currency, which handles this legislation, has completed its public hearings and has held three executive sessions, which are to be continued next week in an effort to arrive at a definite recommendation for submission to the House.

The corresponding Senate committee has reported out a bill providing for the temporary continuation of rent control until February 29, 1948, transferring this control to the Housing Expediter, and providing for the creation of local advisory boards in the various communities to pass on maximum rents and housing accommodations, and to assist in the administration of the law.

QUESTIONER. Now, getting closer to home on the rent-control problem, what is your attitude on it? And, especially on the question of an increase?

Representative KEATING. Here again, like the labor question, one always wants to get all the information and data he can, arising from the hearings and the detailed knowledge of the committee members, but my inclination at the moment is to feel that the housing shortage is still so great in this country that it presents something of a national emergency justifying and, in fact, requiring the continuance of some form of control for the time being.

I don't like the interference of Government with our everyday life, but I realize that this principle must yield at times to the exigencies of the occasion. I would be fearful of the results if we were to remove controls completely at the present moment. When it comes to the question of an increase, although I am open-minded to be convinced otherwise, I have thought that it was preferable to deal with each case on its merits rather than to attempt to apply any over-all increase.

I know specifically of cases where landlords, in my opinion, are entitled to substantial increases, but I know of other cases where they have refused to keep the properties in repair or do anything at all for their tenants, and where, in my judgment, they are not entitled to any increase.

For that reason, I have thought that to apply an across-the-board increase which they talk about, might result in the creation of at least as many inequities as it would cure.

QUESTIONER. Mr. KEATING, I suppose a question close to your interest as a veteran of the past war is this proposed unification of the Armed Services. Would you give us your position on that?

Representative KEATING. My experience in the Army convinced me of the absolute necessity for better coordination of effort between the three arms of the service. I am a staunch advocate of unification. My only criticism at the moment about the pending bill is that it does not go far enough, but I believe it is undoubtedly a step in the right direction. It probably will be improved in detail as the result of discussion and hearings, as usually happens in the legislative process, but certainly the principle involved I strongly favor.

QUESTIONER. Some critics of unification, Congressman KEATING, insist that one man in charge of the combined services would come into too much authority and power. Do you share that view?

Representative KEATING. No, I do not. That power is now vested in the President as Commander in Chief, but the difficulty is that, with the many crucially important matters engaging his attention, he naturally is not able to give our national defense the time and study which it deserves and which one charged with no other responsibilites would be able to give it.

There is another point about that—under this proposed bill, if the Secretary of the Army, Navy, or Air Force disagrees with the Secretary of National Defense on any important issue, he has the right to take his report or recommendation direct to the President, after first informing the Secretary of National Defense that he has done so. I think that completely answers any such charge as you mention.

QUESTIONER. Many Navy veterans—both in and out of service—fear that the Navy will be relegated to the background under this proposed merger. What do you think about that?

Representative KEATING. I really don't feel there is any just ground for such apprehension. The same might just as well be said about the Army and Air Force. If, for instance, the civilian Secretary of National Defense who was appointed happened to be an ex-Navy man it might be argued that the Army or the Air Force would be scuttled, but I am satisfied that anyone named to such a position of great responsibility would recognize fully the contribution which all the armed services have made and must continue to make.

QUESTIONER. One final question, Congressman KEATING. What's the outlook for appropriations for the Army and Navy? There are some fears that the economy-minded Congress will slice too deeply into the military budget. Do you have any reports on that situation?

Representative KEATING. The detailed appropriation bill for the Army and Navy has not yet been presented to us, but I have been told it is likely to be coming along in a matter of 2 or 3 weeks. My guess is that it will provide appropriations somewhat lower than the figures set forth in the President's budget. I have no doubt that there are points at which economies can be effected. I am sure, however, that Congress will not adopt a military and naval budget which is so drastically cut that national security becomes imperiled or essential operations of the services are curtailed to the point of ineffectiveness.

You must remember that almost half of the Members of Congress are veterans of World War I or II, or both. I am most sympathetic with the attitude of those who urge international disarmament. It would be an unmixed blessing if all nations could be brought to the realization of the utter futility of settling their differences by the sword, but the trouble is that we must realistically face the fact that this millenium has not arrived. May God speed the day when it does arrive. Until that time, however, I conceive it to be the duty of the Congress of the United States, the guardian in peacetime of this Nation's safety, to insure that our national security be not imperiled and that we maintain a sufficient strength in arms and men and alertness and advanced awareness in scientific research that we may not furnish an open invitation to attack by possible aggressor nations.

Government Expenditures

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I submit an editorial from the Courier Freeman of Wednesday, April 9, 1947. The publisher of this paper is the Honorable Bertrand H. Snell, of Potsdam, N. Y., the distinguished former minority leader of the House of Representatives. The editorial reflects his sound judgment and long experience in fighting needless Government expense. It is refreshing to find men of his caliber realizing what the present Republican majority in this House is up against in trying to cut down the expensive, overgrown Government bureaus established by the New Deal.

The editorial follows:

GOVERNMENT EXPENDITURES

There is considerable discussion at present over what Congress is trying to do in decreasing Government expenditures and bringing them back nearer to a peacetime normal level. The regular Federal activities in all lines increased enormously during the war. People expected that, but they did not expect these extraordinary activities and expenses would become fixed charges for all time—years after the war was over.

It is just beyond the comprehension of the average citizen why it is necessary to have nearly as many men on the Government pay roll in peacetime as it was when we were fighting a global war with around 12,000,000 men under arms.

If there was one mandate from the last general election, it was that it wanted decreased Government expenditures and less waste of the taxpayers' money. As far as we are able to learn there is not a single group, or man, in Congress that wants to decrease the efficiency of any needed Federal activity. What they do want is a careful going over of every Federal bureau and a weeding out of the useless and nonproductive employees and to put it on a reasonably sound business basis.

The House Appropriations Committee tried to honestly carry out the wishes of the people. Increases that could not be justified were pared, and activities no longer needed in peacetime were dropped. Only a short time ago President Truman himself told the Federal bureau chiefs that they must begin at once to decrease expenditures, yet at present he is putting the full force of the Executive back of the bureaus in demanding the full amount of his budget estimates. The result is that nearly every bureau chief in Washington, and his satellites, are spending all their time and the people's money in spreading propaganda to the people advising them that such and such a service will be destroyed by

any decreased appropriation, and the ultimate result will be a great financial loss to the Government. This propaganda went to each section of the country where there was a special service that was of importance to the welfare of its people. We had it up here and naturally our people were aroused. The word came from Washington before they really knew what was in the House bill, and even before consideration in the Senate, that practically the entire border patrol and customs service would be wiped out and our whole northern border left entirely open. Of course, everyone knows that the customs service is one of the very important branches of the Government, and must be maintained. Bureau chiefs well knew this, and knew this was an easy way to arouse the people against cuts in appropriations.

To emphasize this Commissioner Johnson at once sent out notices to his field offices to fire upward of 1,500 customs inspectors and assistants, all but wiping out the border and port controls. No wonder the people along this northern border were up in arms, and rightly so. As a matter of fact, we are informed that the most of the men that were fired were rehired the next day or will be very soon.

Later Mr. Johnson told the Senate committee that no more than 800 in the entire service would be dropped. And if he says that now, probably not one of the really essential men will eventually be taken from the pay roll. Congress just wants him to weed out the men who are not essential to the service, and if he is not willing to do that and work to save the taxpayers' money, we should have a new Commissioner.

There never was a bureau chief who did not want more and more money, and want to extend his bureau's activities. But when he finds out that he cannot get all he asks for, be will generally go ahead and do the job with what Congress gives him.

Just a word about the House appropriation for the whole customs service; of course, no one yet knows what the Senate will do, but today the bill carries almost exactly the amount that was appropriated for this service last year. No complaint was made about the service last year, and yet the Bureau has enough money and sufficient clerical force to propagandize the whole country for additional funds to save the destruction of the customs service. It is just plain bunk. Besides it is strictly against the law for a department to use money appropriated for a special service for another service that has no appropriation. Certainly there is no appropriation of Federal funds for propaganda against the acts of Congress.

Furthermore, if we are correctly informed, the border patrol itself has about three million more than last year.

We believe Congress is trying its level best to carry out the mandate of the 1946 election, and give the country decreased Government expenditures. Therefore Congress deserves the united supoprt of all thoughtful citizens who are truly interested in honest Federal economy.

Senator H. Byrd Has Answer

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the following editorial taken from the Fort Lauderdale (Fla.) Daily News which is published in my home town and one of the leading papers in south Florida, this editorial being written by Gov. R. H. Gore, the owner and publisher of the paper:

SENATOR H. BYRD HAS ANSWER

It has been obvious for some time that there is something rotten—not in Denmark—in the Greco-Turkish political football, which has been kicked from Europe to the United States.

Apparently, the problem is too hot for the United Nations to handle, therefore, as usual, we are supposed to pick-up the $400,000,000 "ball" and run with it—that is what our present national leadership would like for us to do without asking too many questions.

And as, per usual, these one-worlders run into perfect tackling on the part of the gentleman from Virginia, Senator HARRY FLOOD BYRD, who would have been President of the United States today had it not been that these same one-worlders sold the American public back in 1944 that we shouldn't change horses in midstream if we hoped to win the peace as well as the war.

After 19 months of this so-called peace, we ask you what have we won? Nothing!

It's a shame that we haven't more intelligent leadership of the HARRY BYRD caliber in our National Capital today. When the one-worlders, without thought of security or economy, threaten to toss the American dollar across the Atlantic we always hear from Senator BYRD, the watchdog of the American Treasury.

This time the Virginia Senator is in there fighting to prevent our leaders from going off half-cocked and wrecking the United Nations set-up before affording that group the opportunity of trying to solve the Greco-Turkish crisis.

We agree with the Senator that if the United Nations is not capable of handling the situation by demanding an immediate show-down on the issue with Russia, then it's time to scrap the present UN and reorganize even if it should mean the withdrawal of the Soviets from around the world peace table.

As it stands today, it appears our national leaders have very little faith in the strength of the United Nations to stop aggressors, else why would we take the initiative in what appears to be the beginning of world war III?

Neck Deep in Politics

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herewith an editorial from the New Orleans Times-Picayune of April 7, 1947:

NECK DEEP IN POLITICS?

This congressional session has entered its fourth month with its accomplishments still painfully few. The Republicans in control have had ample time to prove their capacity. At the session's start they promised prompt obedience to the mandates given them by American voters in the November election. Remedial labor legislation was the first and clearest of these; here the need of celeritous action was obvious and it has been emphasized by developments since the session opened.

Three months later the country still waits for the promised labor enactments. The Republican majority still talks of doing something about it, but the prospect of definite enactment grows hazier. Not even the immediate threat of a Nation-wide tie-up of telephone communication—an essential public utility—stirred them to action.

Some weeks ago the crisis in Greece forced President Truman to seek prompt congressional action to enable this country to meet its obligation to peace and world-wide democracy. The Nation's response was strongly favorable. Eminent Republicans in and out of Congress supported the appeal, but a Republican Congress still stays its haste and makes delays.

Inaction likewise leaves the Nation's postwar defense program undefined and uncertain, though the need for its adoption grows more urgent by the minute by reason of sinister developments abroad and the expiration of the draft.

The vital questions of Federal revenues and expenditures go unanswered by enactments, too, despite need for their settlement. Republicans still are divided among themselves on these issues and the method of dealing with them.

In brief it appears that too many Republicans in Congress are thinking primarily of next year's political campaign—trying to decide whether labor legislation, the grant of emergency aid to Greece, the adoption of a n tional defense program—would help or hurt their own and their party's election chances. While they debate and hesitate and vacillate and mark time, Congress gets little or nothing done.

Meanwhile unofficial canvasses and surveys agree that President Truman's political stock is rising and his personal popularity growing the country over. Republican politicians in and out of Congress should be able to trace that result to its cause: The ineptitudes and delays of the Congress which apparently is forgetful of the national mandates to which it pledged prompt obedience—and neck deep in the kind of politics which usually obstructs and sometimes betrays the public interest.

Are the New Rent-Control Bills a Step Toward Socialized Housing or Worse?

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am just in receipt of a letter from one of my constituents. So far as I know this man does not own any rental property whatever. At most he does not own more than one or two smaller houses which are rental property. There are many people thinking along the same lines that my constituent has written me. They are wondering and asking the question, "Are the new rent-control bills a step toward socialized housing or worse?" For that reason I am quoting his letter in its entirety as follows:

It seems very obvious that the authors of the proposed rent-control legislation are not serious in their claims of protecting the veteran from so-called greedy landlords.

As I understand the proposed bill all new construction and conversions would be decontrolled from rent control except that veterans would have a priority on the rental of these units. That such property as had been previously rented would remain under rent control thereby freezing the present tenant

in at the low rate. Most of these tenants are of long standing and nonveterans. The veteran is still frozen out due to the fact housing was never rationed but only the rate controlled which allowed these present to buy and hoard more housing than they would normally consume and it is still in hoard. The veteran is still frozen out but he has a priority on the new units which will rent for twice the price of the controlled ones.

Now, it seems to me that if the authors of this bill were serious, they would have at least provided the veteran with a priority on the controlled housing instead of the noncontrolled housing.

I can only come to one conclusion and that is, that either the authors of the bill are incapable of their job, or it is a move toward socialized housing or worse. I am thoroughly convinced the proper thing to do is to decontrol all housing before further damage is done.

Resolutions From the Iowa General Assembly

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include House Concurrent Resolution 14, Senate Concurrent Resolution 22, and Senate Concurrent Resolution 23 of the General Assembly of the State of Iowa:

"House Concurrent Resolution 14

"Whereas the use of alcoholic beverages is rapidly increasing in Iowa; and

"Whereas the habit-forming practice of the use of alcoholic beverages in many cases results in lowered physical and mental efficiency, broken homes, juvenile delinquency, increased crime, and general disregard for law and order, all detrimental to the general public welfare; and

"Whereas the General Assembly of Iowa does recognize the inherent right and duty of government to protect and safeguard the general public welfare of its people by all proper means; and

"Whereas the above habit-forming practice is constantly being stimulated and encouraged by the use of advertising and propaganda, much of which comes from out of the State and which has for its purpose financial profit rather than the general public interest and welfare; and

"Whereas there has been introduced in Congress a bill by Senator ARTHUR CAPPER known as S. 265, to prohibit the transportation in interstate commerce of advertisements of alcoholic beverages, which bill is now in the hands of the Senate Committee on Interstate and Foreign Commerce, of which Senator WALLACE H. WHITE, Jr., of Maine, is the chairman: Now, therefore, be it

"Resolved by the house (the senate concurring), That the General Assembly of Iowa hereby urges its Senators and Representatives in Congress to use their influence and support in behalf of S. 265 to the end that the general welfare of the people, and especially the youth of Iowa, and the United States, be safeguarded and protected.

"Furthermore, that a copy of said Resolution be sent to the United States Senators from Iowa and the United States Representatives from Iowa, to the Honorable WALLACE H. WHITE, Jr., Senator from Maine, and to the Honorable ARTHUR CAPPER, Senator from Kansas."

I hereby certify that the foregoing House Concurrent Resolution 14 was duly adopted by the Fifty-second General Assembly of Iowa.

Done at Des Moines, Iowa., this 9th day of April 1947.

A. G. GUSTAFSON,
Chief Clerk, House of Representatives.

"Senate Concurrent Resolution 22

"Whereas the Internal Revenue Code of the United States, as construed and administered by the Internal Revenue Bureau, permits married residents of eight States to split their income for income-tax purposes because of the existence of the community-property concept in such States; and

"Whereas married residents in all other States are not so permitted to split their income; and

"Whereas the use of this legal fiction or rule of law, known as the community-property law, results in discrimination against the married residents of Iowa and all other similar non-community-property States, and requires such residents to bear an unjust proportion of the Federal tax burden; and

"Whereas, in connection with the adoption of the Revenue Act of 1947, the Congress of the United States is now considering various proposals to eliminate this unjust and unfair discrimination; and

"Whereas it is the consensus of opinion of this general assembly and of the people of Iowa that the Internal Revenue Code of the United States should be amended so as to permit a husband and wife residing in non-community-property States, including Iowa, to split their income for income-tax purposes upon the same basis as is employed in community-property States, irrespective of the sources of the income: Now, therefore, be it

"Resolved by the senate (the house concurring), That the Fifty-second General Assembly of the State of Iowa respectfully represents to the Congress of the United States that it is the opinion of the people of Iowa, as well as the opinion of this assembly, that the Internal Revenue Code of the United States should be revised and amended so as to permit a husband and wife, residents of Iowa or of any of the other non-community-property States, to split their income, and thereby eliminate the unfair and unjust discrimination now existing in favor of the married residents of States having the community-property concept;

"That our Senators and Representatives in Congress are requested to exert their efforts to secure such a revision of the Internal Revenue Code;

"That the Congress of the United States is respectfully requested to so revise the Internal Revenue Code of the United States;

"That copies of this concurrent resolution be forwarded by the secretary of state to the President of the United States, to the President pro tempore of the United States Senate, to the Speaker of the House of Representatives of Congress, and to the Iowa Members of the United States Senate and the Iowa Members of the House of Representatives of Congress.

"JAY C. COLBURN."

We, Kenneth A. Evans, Lieutenant Governor of Iowa, and W. J. Scarborough, secretary of the senate, hereby certify that the above and foregoing resolution was adopted by the Senate and House of the Fifty-second General Assembly of Iowa.

KENNETH A. EVANS,
Lieutenant Governor of Iowa.
W. J. SCARBOROUGH,
Secretary of the Senate.

I, Rollo H. Bergeson, secretary of state of the State of Iowa, hereby certify that a copy of this resolution has been forwarded to the Honorable Harry S. Truman, President of the United States, the Honorable ARTHUR H. VANDENBERG, President pro tempore of the United States Senate, the Honorable JOSEPH W. MARTIN, Jr., Speaker of the House of Representatives of Congress, and to the Iowa Members of the United States Senate and the Iowa Members of the House of Representatives of Congress.

[SEAL] ROLLO H. BERGESON,
Secretary of State.

"Senate Concurrent Resolution 23

"Whereas there is now pending before Congress a plan calling for the unification of the armed forces of the United States; and

"Whereas the said plan in one form does not make adequate specific provision for the recognition of the United States Marine Corps as a distinct unit of the armed forces of the United States; and

"Whereas the Marine Corps has established itself over a period of more than a century as one of the greatest fighting organizations in the world and should be continued in its traditional status; and

"Whereas the security of the United States requires the continuation of a unit versed through experience and training in the art of amphibious warfare; and

"Whereas the United States Marine Corps has, since its organization in 1775, distinguished itself as the greatest and best versed amphibious force in the world: Therefore, be it

"Resolved by the Senate of the State of Iowa (the house of representatives concurring):

"1. That the Congress of the United States be memorialized and urged to take immediate favorable action toward specifically establishing the United States Marine Corps and making adequate provision for its continuation in any plan for unification of the armed forces of the United States.

"2. That a copy of this resolution be forwarded to the President of the United States, the President pro tempore of the United States Senate, the Speaker of the House of Representatives, and to each Iowa Senator and Member of the House of Representatives in the Congress of the United States.

"GEORGE FAUL.
"JOHN P. BERG.
"CARL A. BURKMAN."

We, Kenneth A. Evans, Lieutenant Governor of Iowa, and W. J. Scarborough, secretary of the senate, hereby certify that the above and foregoing resolution was adopted by the Senate and House of the Fifty-second General Assembly of Iowa.

KENNETH A. EVANS,
Lieutenant Governor of Iowa.
W. J. SCARBOROUGH,
Secretary of the Senate.

I, W. J. Scarborough, secretary of the senate, further certify that a copy of this resolution has been forwarded to the Honorable Harry S. Truman, President of the United States, the Honorable Arthur H. Vandenberg, President pro tempore of the United States Senate, the Honorable Joseph W. Martin, Jr., Speaker of the House of Representatives, and to each Iowa Senator and Member of the House of Representatives in the Congress of the United States.

[SEAL] W. J. SCARBOROUGH,
Secretary of the Senate.

The Hatchet Men Are Out Again

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following article appearing in the Marine Bulletin of Albany, N. Y., dated April 1947:

THE HATCHET MEN ARE OUT AGAIN

Last year the hatchet men of the War Department had their axes poised to destroy the Marine Corps. Their efforts were forestalled by a fighting speech delivered by General Vandegrift and the all-out fight by the Marine Corps League. Now they are out again; this time armed with what purports to be an agreement between the Army and the Navy on a plan to merge the armed forces. The fact that elements within the two larger services have reached some form of agreement we are forced to accept, but nowhere—nowhere in all of the maze of press reports emanating from Washington is there any evidence that the Marine Corps has participated in any agreement—or that it has even been consulted.

This gave us our first inkling that all might not be well, and a quick examination of the merger bill which developed from the alleged agreement made it apparent at once that our suspicions were justified. The very same ills and pitfalls that characterized the merger "gold brick" of 1946 are all back again seeking legislative blessing in 1947. Just as the 1946 effort that failed, the new bill calls for one powerful Cabinet member to take the place of the two we now have and need, as well as a great all-powerful General Staff on Hitler's German pattern to control all of the armed might of the country. And the Marine Corps? The Marine Corps is scarcely mentioned—given only such slight and humiliating recognition as could adequately be met by one marine standing guard over one coal pile in one navy yard. For all the merger bill is concerned the Corps can be legally destroyed, eradicated in everything but name, by a simple stroke of the pen.

And such action is by no means improbable if the merger bill is passed. For as soon as they can get legislative sanction the War Department hatchetmen intend to wipe out the Fleet Marine Force, destroy completely the useful character of that highly trained specialist organization that led the victorious march across the Pacific.

This is no hasty or ill-advised flight of imagination; they have announced their intent to do so both publicly and privately, and, if challenged, they will not deny it now. And these same Pentagon patriots intend to try to replace the Fleet Marine Force with Army units—Army units working under a War Department that couldn't even spell "amphibious" until that same Fleet Marine Force taught them the meaning of the word in 1941.

All of these apprehensions for the safety and perpetuity of the corps may seem groundless to the casual reader of the maze of carefully planned War Department propaganda on the merger subject, for it would seem at the outset that the Marines' traditional amphibious function is clearly set down in the "agreement." But on second glance it becomes obvious that the apparent security is no security at all, since it is proposed that the Marine Corps' mission be expressed not as a part of the law but as a simple Executive order—an Executive order that can be changed overnight. For the Army, the Navy, and the Air Force this procedure may be acceptable, since their existence is adequately protected in the proposed law itself, but not so for the Marine Corps. The Marines alone are not legally taken care of, and if this ambitious design for power receives the sanction of Congress, the disciples of militarism in the Pentagon will lose no time in taking full advantage of that fact. Before the people have time to protest the proud Marine Corps that has stood as the country's primary force in readiness since 1776 will be weakened, maimed, and destroyed. And the War Department hatchetmen will have the law on their side while they do it.

But this brutal injustice doesn't have to happen. Marines have come promptly and willingly to the aid of their country in its every hour of need. And it behooves every loyal marine to do his traditional part in this crisis too—bending every effort to alert the people that they stand in imminent danger of falling victim to a militaristic Frankenstein on the Nazi pattern—and losing their most valuable armed force in the bargain.

In short this is what the Marine Corps League believes, in the interest of the United States and the United States Marine Corps:

1. The present merger bill is unsatisfactory and dangerous because:

a. It cuts down the amount of civilian control over the military forces.

b. It authorizes the establishment of a powerful politico military national general staff.

c. It permits the summary destruction of all that is valuable in the Marine Corps.

2. No law relating to the armed services is suitable unless it prescribes what each one shall do. In the case of the Marine Corps it should clearly provide for a vigorous Fleet Marine Force with its included air arm—as the element of the armed forces primarily responsible for development of landing force tactics and equipment.

These thoughts are not selfish conclusions born of ignorance or hypocrisy. They are the common sense convictions that every loyal American will hold once he is made aware of the truth. But to make him aware—that is your job.

Hon. D. Emmert Brumbaugh, of Pennsylvania, Acquires New Laurels

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. VAN ZANDT. Mr. Speaker, when I resigned my seat in Congress to enter naval service during the first session of the Seventy-eighth Congress, the voters of the Twenty-second Congressional District of Pennsylvania elected Hon. D. Emmert Brumbaugh as my successor by an overwhelming majority.

That the confidence of the voters was not misplaced is evidenced by the fact that Representative Brumbaugh gave honorable service during the second session of the Seventy-eighth Congress and was reelected to the Seventy-ninth Congress by an imposing majority.

During Representative Brumbaugh's service in the Seventy-eighth and Seventy-ninth Congresses his genial disposition and fine personality won him many friends among his colleagues, the great majority of whom are still serving in Congress.

It is pleasing to Emmert Brumbaugh's large circle of admiring friends to learn that Gov. James H. Duff, of Pennsylvania, recognizing his many sterling qualities and his successful business experience of over 36 years in the field of banking, appointed him secretary of banking for the Commonwealth of Pennsylvania.

The appointment has met with Statewide approval with many newspapers lauding the Governor for his choice of such an outstanding citizen for one of the most important positions in his cabinet.

The avalanche of congratulatory messages from persons in all walks of life is not only indicative of the popularity of the new secretary of banking of the Commonwealth of Pennsylvania but reveals the respect and esteem in which he is held by those privileged to have made his acquaintance.

Those of us who know Emmert Brumbaugh intimately are proud of his achievements, which are an added guaranty that he can be depended upon to give a good account of his stewardship in his new position in public life.

The following article, by John R. Deitrick, appeared in many Pennsylvania newspapers and is a brief sketch of the new secretary of banking of the Commonwealth of Pennsylvania. It is a tribute to the high qualities of citizenship that have been characteristic of D. Emmert Brumbaugh and which have aided him immeasurably during an honorable and busy career that reflects to a marked degree inherent qualities of honesty, courage, and sincerity of purpose.

The article is as follows:

NEW SECRETARY OF BANKING IS MAN OF MANY ACCOMPLISHMENTS

(By John R. Deitrick)

HARRISBURG, February 17.—D. Emmert Brumbaugh, Pennsylvania's new secretary of banking, has some definite ideas on banks and banking and well he might—he's been in the business for 36 years.

But in spite of his long experience, Brumbaugh, at 53, is still one of the younger members of Governor Duff's cabinet.

Brumbaugh, a stocky man with a thatch of brown hair, a pleasant smile and a boundless energy, has been climbing from one accomplishment to another all his life.

Born on a farm near Martinsburg, W. Va., he advanced successively from bank clerk to bank president and then to United States Representative and now to secretary of banking for the Commonwealth.

A serviceman during World War I with overseas service, Brumbaugh says he is definitely interested in aiding the former GI's of World War II.

The banking department is backing a bill which will permit State banks to grant broader loan privileges to the Commonwealth's veterans.

The new banking secretary won't commit himself to a trend in the pending movement in the legislature to make Saturday closing of banks during the summer months and optional the rest of the year.

Smiling and shaking his head, he said easily, "We'll take no part in that matter. It is an issue for the banks themselves and related groups to decide."

Commenting in general on the banking situation in the Commonwealth, Brumbaugh expressed the view that "We should keep our banking conditions such as to be prepared for all emergencies."

"We're in an easy period now," he added, "but the individual banks should keep their assest invested in such a manner that funds will be immediately convertible in case of depression."

Asked if he meant by the remark that a depression was imminent, he replied:

"I am not alarmed about a depression in the near future; naturally we'll have a recession."

Noting the current wave of inflated prices, Brumbaugh said he believes "a price reduction is necessary if we are to maintain mass production."

Brumbaugh brings to his post a background heavily studded with banking and financial experience. Aside from serving as president of the bank at his home at Claysburg, Blair County, he has served on several State banking committees and during his term as Representative to Congress served on the Banking and Currency Committee.

He was elected to Congress in 1943 in a special election and was returned again in 1944 for a full 2-year term. He was not a candidate in the 1946 elections.

Brumbaugh is married and the father of four children—two sons and twin daughters.

Gentlemen of the Congress

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pike County Republican, of Pittsfield, Ill.:

GENTLEMEN OF THE CONGRESS

"As far as the eye can reach, a vast expanse of level land, clothed with tall prairie grass, seemingly as fertile as the most fertile lands in America, a great empire that some day may help feed a nation. Out here in the West they call these great bottom prairies 'God's Acres,' and well they may be. They are beautiful to behold and some day the rising tide of immigration will sweep to this fertile valley and pitch its habitations therein. Some day the ingenuity of man will here build an empire."

So wrote Maj. Charles J. Sellon, Pittsfield editor, 1859, in Historic Notes, quoting an early-day traveler in western Illinois.

The empire which the early-day traveler envisioned came to pass. It is the great Sny Valley, whose fate today is in the lap of the Congress of the United States.

The ingenuity of man turned this fertile miasma-breeding lowland into an empire of homes, schools, and churches. This empire embraces 110,000 rich acres. This empire is slowly drowning, due to a changed water table. Already 22,000 of these fertile acres have been lost to agriculture by the changed water level.

The change in water level is attributed by valley inhabitants to new dams in the Mississippi River incident to Government's deep navigation channel project. Because of the risen water level seep water is interfering with valley farming and causing huge losses.

The great crops that carpet this valley in the maturing season are more wonderful to behold than the tall prairie grass that clothed it of old. Last year the valley produced its greatest crops of corn and soy beans. Then, after the crops were matured, floods and seep water invaded the crop lands. Grounds were softened. Farm machines mired. They could not harvest the crops. All winter the farmers sought to save their record crops, taking advantage of short periods when the ground was frozen sufficiently to hold up the machines. Huge losses resulted from the delayed harvest.

The Sny Valley is a drowning valley, As we write this editorial the Sny Valley is going under water. This doubtless would not be happening were the plans of the Army engineers now in effect. For the fifth season in succession there is flood threat to the farmers of the Sny Valley. The Army Engineers' report estimates the average annual flood damage in the valley at $450,200. The engineers find that their proposed improvement for which appropriation is lacking would reduce the frequency of flood damage to about once in 50 years instead of the present average intervals of about 2 years.

Congress can save this drowning valley. Former editorials in this newspaper have put the facts before the Congress. Congress has the official report of a thorough investigation of the situation by the War Department engineers, showing how desperate is the plight of this western Illinois agricultural empire, and how it can be saved. The findings of the engineers were approved by the Seventy-ninth Congress, which included the proposed Sny improvement in the flood control bill, H. R. 6597, on July 24, 1946 (Public Law No. 526, 79th Cong.). President Truman signed this bill. The proposed improvement had the approval of Gov. Dwight Green and the Army engineers in Illinois.

The Board of Engineers for Rivers and Harbors concurred generally with the plans of the reporting engineers, who found the estimated cost of the proposed improvement to be economically justified.

Engineers of the War Department advise that they are ready to proceed with the proposed improvement as soon as money for the work is made available.

All that stands in the way of saving this drowning empire is an appropriation, which is within the discretion of this Eightieth Congress and which the Army engineers find to be economically justified.

The Pike County (Ill.) Republican is published and circulates on the 742 square miles of the Sny watershed, with its population of 22,780 persons. It sits where it can see what is happening to this great food-producing empire, dotted with its fine farmsteads and happy homes.

Millions of dollars have been expended locally to build this empire since the first levee construction work began back in 1870. The United States has spent more than $1,000,000. Local interests have spent approximately $3,733,000—report of Chief of Engineers Gen. R. A. Wheeler to the Secretary of War, April 17, 1946.

Are these large costs—local and Government—to be lost for want of an appropriation to save the investment?

For this Sny Valley is today a drowning valley. It is drowning as it reaches out for this engineering plan to save it and which only the necessary appropriation by the Congress can bring within its reach.

We urge this appropriation in the name of economy—human and material. Is it not economy to save a present investment that is grievously distressed rather than start or increase some other investment in a project not so desperately put to it for survival?

We submit the facts. We submit the economy of the situation. Great material and human values are at stake.

Gentlemen of the Congress, we plead the record.

(NOTE.—This is the third in a series of three editorials designed to acquaint Congress with factual issues involved in the Sny Basin proposal.)

Railroad Accidents

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. PRICE of Illinois. Mr. Speaker, once again we are witnessing a wave of railroad accidents. Many of these disasters can and should be avoided. I have called the attention of the House on many occasions to the dangerous operation of our railroad systems. In this connection, I desire to include in the RECORD an editorial taken from the April 11, issue of the St. Louis (Mo.) Post-Dispatch. The editorial follows:

RECKLESS RAILROADING

An inexcusable act of negligence caused the deaths of 24 persons and the injury of 138 in the wreck of the Pennsylvania Railroad's Red Arrow near Altoona, Pa., February 18. This accident has been followed by an epidemic of railroad wrecks totaling seven in as many days. The Interstate Commerce Commission finds that the train was speeding at more than 65 miles an hour downgrade and round a curve where the speed limit was 30 to 35 miles an hour. Only 2 miles ahead, furthermore, was another curve round which the speed limit was 19 miles an hour.

Was it the negligence of the two engineers (one of whom is dead) or of the policy-making officials of the company? Did the engineers, running an hour late, feel that they must make up the time, regardless of speed limits, to avoid the company's displeasure? Or did they simply not know, as the surviving engineer says, that they were exceeding the speed limit? Neither of the two locomotives was equipped with a speedometer, which is a plain case of negligence on the part of the company. If an engineer is to be held responsible for staying within the speed limit, he has got to have the instrument that will tell him the speed at which he is going.

Whatever the reason for it, the amount of fast and reckless railroading, and its toll in lives, are shocking. In the past 5 years alone, 97 persons have lost their lives and 586 have been injured in accidents involving excessive speed.

There was the wreck of the Southern Pacific's Challenger November 8, 1944, near Colfax, Calif. It was traveling at excessive speed, more than 55 miles an hour, round a curve where the speed limit was 35 miles an hour. The resulting wreck killed 9 and injured 206.

On July 3, 1944, an Atchison, Topeka & Santa Fe train which, the ICC found later, was running at high speed, wrecked near Maine, Ariz., killing 4 and injuring 126. Barely a month later, on the Chicago, Burlington & Quincy, near Shelbina, Mo., a train going 50 miles an hour failed to reduce its speed to the 10-mile-an-hour limit as it entered a siding, and derailed, killing 1 and injuring 8.

The accident at the Etzel Avenue grade crossing of the Wabash Railroad in St. Louis on January 23, 1944, was another horror story of excessive speed. The passenger train that was in collision with a Public Service Co. bus was running 30 miles an hour, although the speed limit was 10. Fifteen persons were killed and 8 were injured.

The wreck of the Burlington's Exposition Flyer and Advance Flyer in Naperville, Ill., in April of last year involved a number of causes, of which the speed of the two trains was, under the circumstances, one of the least defensible.

Here were two trains traveling, one behind the other on a single track, at a speed of 85 miles an hour, yet spaced only 3 minutes apart. If the first train should stop unexpectedly, the second train would have only 3 minutes to come to a standstill, and at that speed it takes a mile or a mile and a half to bring a train to a stop. It did stop unexpectedly, and the second train plowed into it, killing 44 and injuring more than 100.

The painful fact is that the railroads are trying to compete in twentieth century speed, but with nineteenth century equipment for doing so safely. Such railroads as want to continue to operate without speedometers, without two-way radio, without automatic train control, and other modern safety safe-

guards for modern speeds, should resign themselves to jogging along at the leisurely pace to which their equipment entitles them. If they want to compete with the air lines in speed, they should be required to equip themselves with the devices that will make high speed safe. In addition, speed limits should be rigorously enforced, regardless of schedules, for no amount of safety equipment can make recklessness safe.

Franklin Delano Roosevelt

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. WILLIAMS. Mr. Speaker, Saturday marked the second anniversary of the passing of one of the greatest Democrats in the history of our Nation.

Under leave to extend my remarks in the Appendix of the RECORD, I wish to include herewith the text of a memorial address which I made in the Raymond Mississippi Baptist Church on April 15, 1945, 3 days after the passing of Franklin D. Roosevelt:

Franklin Delano Roosevelt is dead; he has crossed the river, and rests in the shade of the trees. The Commander in Chief has joined his men, who, as he did, gave their lives that we might live.

Four times President of the United States, Commander in Chief of our Army and Navy, international statesman, humanitarian, Christian gentleman, and devout father and husband—Franklin Roosevelt overcame seemingly insurmountable physical and psychological handicaps to become the most adored and revered man of his day, and the most signally honored man in the turbulent history of his native land.

The story of Franklin D. Roosevelt does not find a parallel in the phenomenal rise of Abraham Lincoln—or even of Roosevelt's successor, President Truman. On the contrary, President Roosevelt was brought into the world in the lap of luxury—he never knew a material want—and the friends and associates of his youth were those, who as he, were far removed from the poverty, hunger, and privation with which every nation and people are ever conscious and beset. But he grew—as did our Saviour—in wisdom as in stature, and the rich and wealthy background of his early days only seemed to enhance and deepen his sympathy for his less fortunate brothers.

As a young man he suffered the ravages of deadly paralysis—the crippler that fears no man but makes visitations on the homes of the rich as well as the poor. This was to leave a mark on the physical being of Franklin Roosevelt that he was to carry to the grave. At this point in his life, Franklin D. Roosevelt made a decision that was to play a leading role in shaping the future of the entire world. He could have lived comfortably in the pleasant security of his Hyde Park home, but he chose rather to serve his people, and to devote his life to their welfare and to the struggle for a better world.

In 1933, after more than two decades of honorable public service to his people in various capacities, he became the thirty-first President of the United States. Into his unfaltering hands were placed the reins of a ship of state sorely obsessed of chaos and depression and internal strife and starvation. But his mighty hands were capable, and with the divine help of a gracious and merciful God, our President led this Nation out of depression and want into plenty. It was then that he carved his first niche into the hall of eternal fame.

But when he had completed this task, and was preparing himself for his return to the quiet and peace of private life, another obstacle even greater and more ominous suddenly appeared, which was to compel a weary Franklin D. Roosevelt to remain at the helm; his people demanded that he continue to lead them—for he had now become a living symbol of unity among men.

And now, as did Moses of old, he has led his children to within sight of the Promised Land; and, like Moses, he has been denied entrance, but his spirit shall be watching from its place in the ethereal land of God as his followers march on to the victory that he was to share. And his spirit shall be free.

But Franklin D. Roosevelt left more than victory in this war. By his unerring hands was molded the greatest singleness of purpose and action ever achieved in any nation. He sympathized with the weak and the poor, and he supplanted oppression with tolerance and understanding. Publicly, through the medium of radio, he led his people in humble and reverent prayers for the well-being of a stricken humanity. It was he who proved to us that we had nothing to fear but fear itself.

Heartfelt grief at the loss of Franklin D. Roosevelt is not confined to the mere bounds of his own country—but its scope is international—for he was the shining symbol of freedom, liberty, and hope to countless millions of war-ravaged souls throughout the entire world.

Just as every other human, he had enemies. But his enemies were political—not personal, and even his political enemies join his personal and political friends in mourning his untimely passing.

What mistakes he might have made in the discharge of his duties were the natural result of human weaknesses and the human inability to foresee the inevitable; not as a result of any diversion of the man from his conscience, for sincerity, the love of righteousness, and the love of God was the basis in which he found root for his every move.

Gone is the exuberant smile of F. D. R.; gone his fighting and determined chin, and the familiar comforting voice that stilled the aches in the hearts of millions. These characteristics, which are already a part of world history, will be seen and heard no more. But they shall live among us forever, and shall present themselves in our memories as a ray of hope to give light to our darkest hours. Franklin D. Roosevelt was a great man in every construction of the word, and his memory is an inspiration, for indeed, he left footprints on the sands of time:

"Footprints, that perhaps another,
Sailing o'er life's solemn main,
A forlorn and shipwrecked brother,
Seeing, shall take heart again."
—*Longfellow: A Psalm of Life.*

Roosevelt was not indispensable; but he was irreplaceable. Long after his body has returned to its original dust, and we, who knew him and loved him have joined him in the Great Beyond, he shall live—for he is an immortal, and has joined their exclusive company.

Thus cracks a noble heart. We shall not see his like on earth again. The soil has claimed its own.

To the people at home, Franklin D. Roosevelt was President; to the soldiers at home and on far-flung battlefronts, he was Commander in Chief. To me he has been both President and Commander in Chief, and:

"Tho' from out our bourne of Time and Place
The Flood may bear me far,
I hope to see my Pilot face to face
When I have crossed the Bar."
—*Tennyson: Crossing the Bar.*

General Bradley and the Veterans' Administration

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

VETERANS' AFFAIRS
(By Tyrrell Krum)

There's no denying that of all the postwar governmental activities the most difficult has been the job performed by Gen. Omar N. Bradley in bringing the Veterans' Administration from a small obscure peacetime agency to the biggest single business activity in this Nation today.

The moment the guns of war stopped sounding and the men began marching home, most wartime Government bureaus—in theory at least—began cutting back the tremendous load of pay rollers built up during the stress of wartime conditions.

Take for instance—War Manpower Commission, War Production Board, Office of Price Control, Office of War Information, Office of Censorship, Federal Housing Agency to name but a few. And, of course, there was the Army and Navy.

Even the War Assets Corporation, which was set up to dispose of some $30,000,000,000 worth of goods, materials, and real estate left over from the war, was a diminishing operation in the final analysis, although for months it hit the jackpot in placing men and women aboard its pay rolls.

But the Veterans' Administration was entirely different. Just as the Government pay rolls of the Nation invariably swell during a depression in which employment tapers off elsewhere, so is it only natural that the Veterans' Administration should thrive in a period of postwar readjustment.

However, it was not until General Bradley assumed command of the Veterans' Administration in August 1945, at the specific urgings of President Truman, that any progress was made in setting up a postwar operation despite the fact that the entire Second World War, in which some 16,000,000 men and women served, had been fought and won.

The finest exposition of the difficulties experienced by the Veterans' Administration in gearing itself for all-out handling of benefits for veterans costing in excess of one-fifth of the national budget, was given by General Bradley himself, in his official report to the Congress which we discussed at length last week and which will be continued for a few days more.

The famous fighting man of the European liberation said:

"Whenever we have been confronted by tremendous increases in the number of veterans seeking benefits, we have also been faced with the need for enlargement of our operating staff. During periods of acute emergency we have often been forced into overtime work.

"And to accommodate the vast new business that has crowded us throughout the country, we had no alternative but to establish branch offices and to open additional regional, subregional, and contact offices wherever they were most desperately needed."

There you have the general's own estimate of the acute problem which faced him when he took over in 1945 to begin the task of decentralizing the VA from a tight control

here in Washington to hundreds of "hometown" sites where "they were most desperately needed."

But the job was not without its obstacles, as General Bradley pointed out:

"Rentals for many of these new offices reflect the expensive condition of today's crowded real estate market. The materials and labor required for essential alterations were costly and considerably higher than comparable expenditures 2 years ago. The millions of dollars worth of supplies needed in our hospitals went up in price from day to day.

"During our period of reorganization and decentralization, we suffered from an understandably low rate of worker production. Many of our employes were engaged in the actual processes of reorganization. Others were busy devising up-to-date procedures. The great majority of our workers were new and therefore untrained in their tasks.

"Because most of them have been on the job for 6 months or more, their rate of production should markedly increase. And we should actually be able to accomplish more with fewer people."

In fact, as the general pointed out, steps were taken in February to "freeze" personnel on VA rolls at the then existing levels. The General also ordered his deputies throughout the country to suspend promotions, to eliminate all but critical travel and to curtail as far as possible the use of fee-basis medical examination and treatment.

This order, the general explained, had the effect of arresting our expansion and may be relaxed later on to permit hiring to replace separations. But General Bradley was firm in his declaration:

"It will compel managers to scrutinize their operations and reduce costs to the rock-bottom minimums required for good service."

General Bradley then pointed out, in actual figures, the tremendous strides taken by the Veterans' Administration in handling veterans' problems before and after the war. He pointed out:

"In 1939 the ratio of employees to veterans was one employee to each 106 veterans. It now stands at one to each 82 veterans. In themselves, however, these figures do not tell the story. They do not take into account the fact that today we are handling more than twice as many separate benefits.

"They do not take into account the fact that as we move farther away from the war our need for services will diminish.

"In 1939 there was no education and training under the Readjustment Act, there was no program for loan guarantees, there were no readjustment allowances, no cars for amputees.

"And in 1939 the great bulk of claims for veterans of World War I had long ago been adjudicated. In contrast to this, we adjudicated a total of 607,000 compensation claims during the first 7 months of this fiscal year. And we provided a grand total of 6,850,000 out-patient treatments and examinations."

We'll continue General Bradley's interesting and enlightening documentation of his administration of veteran affairs tomorrow.

Floodwaters Rising in Sny Valley—Thousands of Acres Are Under Water

EXTENSION OF REMARKS

OF

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing on the first page of the Pike County Republican, Pittsfield, Ill., of April 9, 1947:

Heavy rains and thunderstorms Friday night sent west Pike creeks out of their banks, sent the Sny out of bounds, and put fear of a repetition of former floods into the hearts of west-bottom farmers.

The Mississippi River yesterday was cresting at approximately 19 feet at Hannibal and 18 feet at Louisiana. These readings are about 5 feet above flood stage. The points named are opposite the great Sny Valley, which Saturday and Sunday was threatened with inundation.

Hadley and McCraney Creeks were dumping big floods into the Sny Valley Friday night and Saturday morning. United States Route 36 near Kinderhook was under water. Supervisor Roy Orr, of Cincinnati Township, told the Republican Saturday forenoon that the water was coming out over the Sny lowlands, and it looked like the valley was going to be drowned out again.

In a trip to the Sny bottoms Sunday forenoon we observed a large area of farmland under water. The water was spreading out through breaks in the Sny levees that had not been repaired since the disastrous flood of last August. Out from New Canton one could see expanses of water almost everywhere.

In the vicinity of the old "Hump" bridge out in the Sny bottoms, the flood seemed to be rising rather rapidly.

The creeks heading on the Pike County uplands had run down following cessation of the rains, but the Sny was rising and pouring out onto farmlands through the broken levees. A high river was backing up the Sny.

Farmers in the valley had been hoping for plow weather to prepare for planting. No ground had yet been plowed and no oats had yet been seeded in the bottoms.

Joe McFarland, of New Canton, manager of the Loyd Hardware Store here, told the Republican Monday morning that lots of water could be seen looking out across the Sny bottoms west of New Canton.

The Best Years of Our Lives

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. HÉBERT. Mr. Speaker, in the past Hollywood and the motion-picture industry has come in for its share of comment and criticism on the floor of this House. So I think it very fitting that when a film deserves special commendation for good citizenship it should also be made a matter of record in Congress. I am speaking of Samuel Goldwyn's production, The Best Years of Our Lives, which was recently honored with nine academy awards.

This film deals so honestly and so uncompromisingly with the problems we are all facing today, especially those of the returning servicemen, that I think it should be required seeing for every American.

It has already received singular acclaim from many public officials, the press, the veterans' organizations, and our military leaders. I would like to take this opportunity to add the congratulations of a Member of this House for a job well done.

Those of you who have seen the picture know that it is the story of three Americans who come home from the war to meet—and solve in their own different ways—the perplexing problems of rehabilitation to civilian life. One of these men is a banker, one is a soda fountain attendant, and the third—played on the screen by Harold Russell—is a boy who has lost both hands in the war.

Russell's performance in the picture is itself one of the most inspiring sights I have ever seen, and will certainly give courage and hope to the thousands of other veterans who were maimed in the war. If for no other reason than this, The Best Years of Our Lives deserves a niche in our national archives.

But it is also a testament, in film, to the spirit and strength of the American people and, as such, will serve to represent us faithfully and well overseas. Like many other citizens, I have in the past occasionally regretted the false picture of our country that has been presented abroad by our Hollywood films. In London where the picture is now playing, the press has already commented repeatedly that it brings to the English people a new understanding of us Americans, our problems, and our spirit. So there is all the more reason for rejoicing now that at least we can send across the seas a film in which every American can take such honest pride. The Best Years of Our Lives is a credit to the United States, and it is the consensus of opinion of all those who have seen it that it will do more to promote understanding and good will toward this country than any film we have ever exported.

What Has the Eightieth Congress Accomplished?

EXTENSION OF REMARKS

OF

HON. HUGH A. MEADE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. MEADE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on April 11, 1947:

REPORT TO THE PEOPLE

Ladies and gentlemen, a few days ago I was asked this question, "What has the Eightieth Congress accomplished?" In order to answer that question, I think I should take you back to January 3, the day on which the Eightieth Congress convened.

Immediately after the House was organized by the Republican majority, the first act of the Eightieth Congress was to adopt the rules promulgated by the Seventy-ninth Congress under the Congressional Reorganization Act. These rules provided for the streamlining of congressional committees and procedure. The 43 committees on the House side were consolidated into 19 efficient, up-

to-the-minute committees, staffed with experts to handle the legislation before them. Then came the difficult job of assigning the Members of the new Congress to the various committees. After 3 weeks of wrangling, this was finally completed and to all intents and purposes Congress was ready to go to work, but laws are not written in a day and most of this important job is done in the committees. Some of them have been working day and night to get legislation before the House for a vote. This is not an easy job at best, and certainly the absence of any legislative program on the part of the Republican majority at the beginning of the session did not help the situation any. Shaping their campaign promises into an intelligent legislative program, in view of the dissension in their own ranks, has delayed the legislative program in the House from day to day and from week to week.

Up to April 1 Congress had been in session 12 weeks, out of which the House had been in session 47 days and the Senate 43 days, covering 202 hours in the Senate and 163½ hours in the House. Four thousand four hundred and ninety-three pages of the CONGRESSIONAL RECORD were covered with the debate and the speeches in the RECORD, but in all of that time just 30 bills were enacted into law. Many of these were inconsequential amendments to existing laws, which required very little time before the committees and little or no debate in the House. They were bills such as:

Providing for compensation for certain employees of the House and Senate under the Reorganization Act.

Relating to the payment of salaries to certain Senate employees.

To amend the National Service Life Insurance Act of 1940.

To continue the authority of the Maritime Commission to operate vessels until July 1, 1947.

For the control and eradication of foot-and-mouth disease in cattle.

Extending the time in which the Philadelphia National Shrines Park Commission shall make its report to Congress.

One hundred and sixty-four bills have been passed by the House and 106 by the Senate out of a total of 1,081 bills introduced in the Senate and 3,014 in the House, and the only ones of any real importance to which the Republicans may point with pride aside from those enumerated are the following:

1. Liquidation of the OPA and Temporary Controls Administration, which has passed the House only.

2. Federal aid in recruiting farm labor, passed by the House only.

3. Bill limiting portal-to-portal suits, now in conference between the House and Senate.

4. The legislative budget, slicing $6,000,000,000 from the President's budget, also in conference.

5. Copper tariff suspension, passed by the House only.

6. The 20- to 30-percent income-tax reduction, passed by the House only.

7. The Treasury and Post Office appropriation bill, passed by the House only.

That, ladies and gentlemen, gives you an idea of the snail's pace with which we are passing the legislative program in the Congress, and at that rate we should be able to adjourn the present session of Congress about December 24, 1947, although the legislative reorganization bill calls for adjournment not later than July 31, 1947.

After 9 weeks of hearings before the House Committee on Education and Labor, an omnibus labor bill has finally been prepared and will be reported to the House within the next day or so. Some of its provisions are:

1. Outlaws strikes affecting public health, safety, or welfare. Permits the Attorney General to obtain court orders to head off or stop them, with the injunctions remaining in force indefinitely if the court sees fit.

2. Forbids strikes of a general nature unless the majority of the employees in a collective-bargaining group vote to reject the final terms offered by the employer.

3. Outlaws the closed shop.

4. Outlaws industry-wide bargaining.

5. Outlaws secondary boycotts in which employees refuse to handle products and supplies for some other than their employer. Outlaws jurisdictional strikes—usually caused by disputes between two unions over the right to do a certain job, with the employer not a party of the dispute.

6. Forbids mass picketing and use of violence in picketing.

7. Guarantees free speech of the employer.

8. Bans all political contributions by a union.

9. Permits any union to be sued for violation of a contract.

10. Takes the Conciliation Service away from the Department of Labor and makes it an independent Government agency.

11. Lists unfair labor practices by unions as well as employers.

The Senate bill differs materially from the House bill and is generally regarded as much less drastic.

And so now after almost 14 weeks of the Eightieth Congress has passed, the Republicans have finally gotten a labor bill ready for House action.

What, may I ask, has become of the promises made by the Republican Party last fall? I am particularly reminded of a speech made by the Honorable JOSEPH W. MARTIN, JR., the new Republican Speaker of the House, on last election night in which he said:

"We Republicans intend to work for a real increase in the income of everybody by encouraging more production and lower prices without impairing wages or working conditions." I grant that is a big order, but what has Mr. MARTIN's party leadership done to fulfill that promise? We are today paying the highest prices of history for the necessities of life, the high-sounding speeches of Senators TAFT and WHERRY to the contrary notwithstanding. The New York Tribune, a Republican newspaper, has pleaded with the Republicans to stop and ask themselves just what the party proposes to do with its new power? Senator WAYNE MORSE, another Republican, continues to charge that the Republican Party is dominated by big business. * * * Senator AIKEN, of Vermont, has been generous in his condemnation of the Old Guard * * * he has repeatedly reminded them that they received no mandate from the people last November to exempt the railroads from the antitrust laws; to turn atomic energy over to greedy exploitation of private business; to cut taxes for the rich and soak the poor under the Knutson plan; to take milk away from hungry children by destroying the school-lunch program; to destroy labor's fundamental rights; to cripple or weaken public power developments; to create a further artificial scarcity of food in order to maintain exorbitant prices; or to wreck the soil-building and conservation programs. The continual wrangling between Republican Senators VANDENBERG and TAFT, between Senator BALL and Presidential candidate Harold Stassen, does not make for the smooth-running organization which the Republicans held themselves out to be in the last election. Maybe we expect too much of them, but surely we have a right to expect more than we have received out of 14 weeks of the legislative bungling and delay such as we have witnessed in the Eightieth Congress.

Doubtless the Republicans are asking themselves why a recent Gallup poll has shown President Truman's stock has gone up from 35 percent in January to 60 percent today in public opinion. There must be a reason for that increase in popularity and certainly the showing made by the Republican-dominated Congress has not improved the Republican side of the survey.

Mr. TABER, chairman of the Appropriations Committee, is bragging that his committee is cutting almost every appropriation bill at least 20 percent. That is hardly a record of which to be proud. Everyone knows that the governmental agencies expected substantial cuts in their appropriations and padded their estimates to take care of at least that much of a cut * * * leaving them where they might have been had not the Republicans made such a point of cutting the appropriations to the bone. It seems particularly appropriate at this point to call to your attention the 40-percent cut in the Department of Labor appropriation bill, the cut almost in half of the amount recommended for the National Labor Relations Board created by the Wagner Act to protect labor's right of collective bargaining. The wholesale economies in this particular appropriation bill are astounding, especially when we realize that the Department of Labor as a separate department was a brainchild of the Republican Party, having been created during the Taft Administration. Prior to that we had the Department of Commerce and Labor but apparently the Republicans thought labor in this country was of sufficient importance to merit the creation of an independent department with a Secretary of Labor in the Cabinet.

Also, in their zeal for economy, the Republicans have struck out of the bill the appropriation for industrial safety and sanitation service on the theory that this is a matter for the States to handle. Another victim of the Republican ax-wielding is the United States Employment Service. Under the curtailed appropriations for Labor, the programs for veterans and physically handicapped persons must be substantially curtailed; 12 USES field offices will have to be closed.

I am in favor of governmental economy and heaven knows there is plenty of room for it, but I want that economy program to be based upon the sound recommendations of a committee such as the Byrd Committee on Nonessential Governmental Expenditures and not on the whim of the Republican chairman of the Appropriations Committee in an effort to make good on some Republican campaign promise.

With half of the first session of the Eightieth Congress over, are we unreasonable in expecting some comprehensive legislative program in the House? Are we to continue to waste time with little or no important legislation on the calendar ready for action in the House—with the House in session only a part of the time and then, in the final weeks of the session, be called upon to pass the program recommended by the majority without sufficient time for debate in the House—as was done on the Knutson tax bill? Laws governing the lives of 140,000,000 people are important matters and should not be jammed through Congress in a few hours of debate in the House. The country has a right to expect that legislation shall be given due consideration and that a handful of leaders in the House shall not be allowed to write the legislation, report it to the House with insufficient consideration by the committee and then steam-roller it through the House by a majority vote without sufficient time in the House for careful consideration and debate.

This is not a campaign speech. Were the Democrats in control of the House today and the absence of a legislative program so flagrant, I would criticize my own party just as strongly. We are not in Congress to play politics, we are elected by the people to pass legislation and I think it is high time we got about the job of doing so.

Kirsten Flagstad

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

THESE DAYS

(By George E. Sokolsky)

Kirsten Flagstad is a Norwegian soprano especially skilled in Wagnerian roles. Among those competent to judge such things, Flagstad is currently the greatest of all such singers, being possessed of voice and dramatic capacity suitable for this particular form of art.

Richard Wagner was not only a composer, poet, and dramatist, he was an intense nationalist, deeply influenced by those who insisted upon the leadership in European culture of Teutonic concepts of life.

His operas revived the spirit of Teutonic tradition, and although written before Hitler was born, influenced the whole Nordic trend in Europe of which Hitlerism was a manifestation. Of all who composed for opera, Wagner alone represents not only a musical essay, but also a political and philosophic movement.

A person devoted to Wagnerian roles is likely to be influenced by Wagnerian philosophy, for whereas it is possible to sing lieder written by composers from Schubert to Irving Berlin without the need for profound study of motive and mood, it is not possible to be devoted to Wagner without being affected by him.

Lauritz Melchior will be given as an example of the error of my statement, for he, unlike Kirsten Flagstad, remained impervious to Germanic blandishments in spite of his competence as a Wagnerian tenor.

The answer to that is that some are affected one way and some another, but nobody can be in association with Wagner, alive or dead, without being influenced or repelled by him. To many, Wagner is the greatest of all composers of opera.

So when war came Kirsten Flagstad was in the dilemma of association and she chose to return to Norway via Germany. In Norway her husband was apparently one of the quisling group of pro-Nazi businessmen and was eventually indicted for it.

The war is now some two years gone. Hitler is dead and Germany has become the ward of the United States, which is laboring for her survival as a nation at the Moscow conference.

It is not probable that Kirsten Flagstad understands the economics and politics of the current American policy better than she did of the Roosevelt policy and the Morgenthau plan. Musicians are notoriously one-tracked personalities, devoted to their specialty

Nevertheless, each human being is responsible for his own choice and Kirsten Flagstad is responsible for hers. But does such responsibility justify a lifelong, venomous, vindictive persecution by private individuals bent on receiving their pound of flesh? Actually that is what is happening.

A camarilla of private persecutors, ignoring the legal fact that the Norwegian Government provided her with a passport to come to this country and that the Government of the United States permitted her to enter and to live here, devote themselves to vilification, attack, and boycott.

They arrogate to themselves a routine function of government.

Most of those who engage in this campaign of hate call themselves liberals. They ask for tolerance. They demand the right of difference of opinion. They ask for justice for themselves but reject it for others.

They denounce as persecution every manifestation of dislike for and discrimination against themselves, but insist upon their right to dislike anyone and to discriminate against anyone.

They protest persecution and boycott, but they persecute and boycott. They are totally without pity, mercy, charity, or understanding of human vagaries. They make hate their standard and brazen it before the world.

So they try to spoil Flagstad's concerts by frightening audiences away. They create the impression that they will send rowdies to her concerts who will embarrass the audiences. They live in a frenzy of sadism, tortured lest approving listeners applaud Flagstad's Isolde, because they oppose what they assume is her politics.

Of course they will fail. As long as Flagstad's voice holds, those who thrill to the music of Wagner will want to hear her in Die Walkuere or in Lohengrin or in The Ring.

It is possible to enjoy the art of Jo Davidson, for instance, while despising his politics, just as it is possible to listen to Prokofieff without remembering that he is a Communist. Art is a gift from God unspoiled by the political stupidities of its angels.

Successful Labor-Management Relations

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. JENISON. Mr. Speaker, in view of the fact that this Chamber is now considering certain legislation affecting the entire field of labor-management relations, it is my desire to call the attention of the House membership to a program long in successful operation in an important industry in my home community of Paris, Ill. So successful has the program been that it has won the favorable attention of national commentators. In that connection, under permission previously obtained, I desire to include in the RECORD the text of an article carried recently in the Paris (Ill.) Daily Beacon-News and other daily newspapers from coast to coast serviced by the United Press. Author of the article is Frederick C. Othman, Washington columnist for the United Press.

The article discusses a plan in operation in the plant of the U. O. Colson Co., one of the world's largest makers of calendars, lithographing art, and advertising specialties. I should like to observe in passing that the program has worked to the great advantage of the employees, who regard themselves as coworkers, as well as to the advantage of the company management and the community.

As an indication of successful growth it might be noted that the company, within the past week, formally opened to public view a plant addition more than doubling its former floor space.

Because of its unique nature the company has properly been considered one of the most unusual industrial organizations in America, and was so designated by the famous radio star, Kate Smith, who used it as an excellent example of the American way of life in one of her regular national broadcasts.

The article, entitled "Paradise in Paris, Ill.," as it appeared in the press, follows:

J. P. Gramling, assistant sales manager of the U. O. Colson Co., says he has noticed that everybody mentioned in my pieces lately has been sore at somebody else.

Why not, he asks, break the monotony with a story about some folks who aren't mad at anyone? He means the 400 employees of the Colson Co. in Paris, Ill.

The happy ones in the Paris paradise manufacture fans and fly swatters for advertising purposes in the summer and a line of calendars with pretty pictures on same for year-round use. These include the usual babies, puppies, snowstorms, and bathing girls.

There are no labor problems in Paris, says Gramling, because of a few strictly enforced rules around the plant. No worker is allowed to have a baby, for instance, unless he accepts a war bond from the company to help out with junior's education.

All hands must take 2-week vacations. The company prefers that they have their rest at Twin Lakes Park, because here it maintains cottages furnished completely (dishes and calendars included) for their free use. With the cottages go 35 free boats for fishing purposes. The fellow who catches the biggest fish of the season must accept a prize.

Most of the 400 fortunate ones drive to work in their own autos. The company maintains a parking lot with the name of each motorist on his private stall. His windshield is washed daily in summer; the ice is removed in winter. If one of his tires goes flat while he's at work, he must not protest if the company has it repaired gratis.

Anybody who thinks up a good idea to improve the calendar business is forced to accept a free auto. Any worker who tries to work all the time is nudged gently toward one of several recreation rooms. These are equipped with pianos, soda pop, candy, books, magazines, and easy chairs.

If an employee wants to build a house, the company insists on advancing half the down payment. If he needs a new refrigerator, furnace, or sofa, the boss demands the right to lend him the full price without interest. Anyone getting married must accept a wedding gift.

Nobody has to go to the company's parties, but it insists on tossing them regularly. It also insists on paying half the workers' insurance premiums and slipping them a share of the profits annually.

"We think it pays," says Gramling. "If more concerns would try it, there might be a better understanding between management and labor."

That does it. Breaks the monotony. Tomorrow, back to the battling lawgivers.

Public Education

EXTENSION OF REMARKS

OF

HON. ELLSWORTH B. FOOTE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a letter received on April 9, 1947, from P.

Roy Brammell, dean of the school of education at the University of Connecticut, concerning educational measures now pending before the Congress.

The letter reads as follows:

THE UNIVERSITY OF CONNECTICUT,
Storrs, Conn., April 7, 1947.

The Honorable ELLSWORTH B. FOOTE,
Representative from Connecticut,
Congress of the United States,
Washington, D. C.

DEAR SIR: I believe that conditions concerning education in this country have been made clear enough during the last few months to convince an overwhelming majority of American people that public education must be better supported. I believe the people are looking to their representatives in State and Federal legislatures to speak and vote in those bodies in favor of providing money adequate to assure every boy and girl in the Nation a decent educational opportunity. Certainly we are all aware of a few fundamentals. First, educated citizens schooled and skilled in responsibilities of citizenship are basic to our way of life. Second, our sense of justice will not permit that accident of place of birth determine for a child his educational opportunity. Third, the wealth concentrated in certain cities and States is basically not their own. It arises from many sources and often from distant points. The simple example of Connecticut's importation of high-school children from Florida to work in the tobacco fields is a case in point. Fourth, it is good economics to up-grade the education of our people. The educational up-grading of backward sections of our Nation will raise the standard of living and increase the demand for goods produced in the more forward sections.

I urge your endorsement and support of S. 472 and its equivalent in the House of Representatives. I urge that you strive for its passage without delay knowing that back home your constituents have come to realize that because of its importance to the Nation, public education should receive first claim on public funds.

Yours sincerely,

P. ROY BRAMMELL,
Dean, School of Education.

World Federation of Trade Unions Hostile to the United States

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. DONDERO. Mr. Speaker, from time to time I have addressed the House in an effort to expose the machinations of the World Federation of Trade Unions—an international Communist organization.

I am placing in the RECORD today the correspondence between Secretary of War Patterson and Mr. Matthew Woll, an able leader of the American Federation of Labor.

It is of more than passing interest that Mr. Woll, whose knowledge and experience in labor matters is beyond question, corroborates to the fullest extent my opinion of the WFTU as a Communist instrument hostile and dangerous to the United States.

Under leave to extend my remarks, I include the correspondence above referred to:

WAR DEPARTMENT,
Washington, March 25, 1947.

Mr. MATTHEW WOLL,
Chairman, International Labor Relations Committee, American Federation of Labor, New York, N. Y.

DEAR MR. WOLL: I have your telegram of March 13, 1947, in which you protest on behalf of the American Federation of Labor the decision authorizing a visit of the World Federation of Trade Unions mission to Japan and Korea.

In this connection, all aspects of the problem were considered, including the international character of the WFTU and the undesirable position our Government would be placed in as a result of international criticism and criticism within the United States should the request be refused.

Inasmuch as the mission had already toured Europe, it was considered unwise to refuse the group the privileges of studying the problems in Japan and Korea which might be related to any complete consideration of world problems. Further, all the members of the WFTU mission are representatives of governments which have representation on the Far Eastern Commission, the international organization which formulates policy for the occupation of Japan, and the WFTU has been recognized by the United Nations.

This trip had been proposed to General MacArthur at an earlier date and he had agreed to the trip. Accordingly, at that time an invitation in good faith was extended to the WFTU. Subsequently, General MacArthur decided against the trip, but the commitment to the WFTU had already been made.

I assure you that this action was taken in the best interest of the War Department and of the United States Government and that very careful consideration was given to all the facts that were available prior to the time General MacArthur's objection to such a trip was overruled.

Since this mission is small in size and the length of its stay short in duration, as well as the fact that it will be investigatory in nature and under the direct control of General MacArthur while in the occupied areas, any undue influence on Japanese trade unions is most unlikely. The printing in the Japanese press of the text of your telegram with a view to offsetting such a situation, is therefore, not considered necessary.

However, I am forwarding a copy of it to General MacArthur in order that he may be advised of your views.

Sincerely yours,

ROBERT P. PATTERSON,
Secretary of War.

COPY OF LETTER TO SECRETARY OF WAR PATTERSON BY MATTHEW WOLL, CHAIRMAN, INTERNATIONAL LABOR RELATIONS DEPARTMENT, A. F. OF L.

APRIL 2, 1947.

DEAR MR. PATTERSON: I herewith acknowledge receipt of your letter of March 25 in reply to my telegram of March 13.

Your letter has failed to answer any of the objections raised by the A. F. of L. against the WFTU mission to Japan. Nor have you given any valid reason for overruling General MacArthur, who is on the scene and who has dealt with Japanese problems in an admirable manner—conducive to the best interests of the American people, the development of democracy in Japan, and the cause of lasting world peace.

It is entirely incomprehensible to us why our War Department should hasten to grant special privileges to the WFTU which has continuously waged an unwarranted campaign against the United States and has assiduously spread every calumny emanating from the Kremlin against our Nation's domestic and foreign policies. Your decision is all the more indefensible in view of the fact that your Department has done nothing to assure the right of an A. F. of L. delegation to visit the French zone in Germany last November when these rights were denied them by the same WFTU. The size of the WFTU mission and the length of its stay, upon which you lay so much stress, Mr. Secretary, are matters of small consequence. It is its obnoxious antidemocratic and anti-American spirit and purpose that are decisive and which you entirely overlook.

You further state that all members of the WFTU mission are representatives of governments which have representatives on the Far Eastern Commission. The WFTU is not an intergovernmental organization. It claims to be an international labor organization. According to your statement, the American member of the WFTU delegation is a representative of the United States Government. We deny that this is so. Who chooses him? The A. F. of L., which has at least twice as many members as the American affiliate of the WFTU, was never consulted about this. We cannot believe that any subdivision of our Government would lend such authority as you indicate to the Saillant mission to Japan. Surely, Mr. Secretary, you do not base your conclusion on the fact that the WFTU has been recognized by the United Nations. The A. F. of L. has exactly the same status and recognition in the United Nations as does the WFTU.

We must register our most vigorous protest against your arbitrary decision that the publication of the A. F. of L. position as distinct from that of the WFTU is not considered necessary. We wonder why you object to the Japanese workers being given the opportunity of learning both positions—the position of the free trade unionist A. F. of L. as well as the platform of the Communist-dominated WFTU. Your refusal to permit even the publication of an A. F. of L. cable in the Japanese press at the very moment that you permit and facilitate the visit of a WFTU delegation to Japan strikes us as distinctly unfair to the dominant trade union organization of American labor.

Sincerely yours,

MATTHEW WOLL.

Make Drastic Cuts and Eliminate Unreal Idealistic Service

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, a constituent of mine, who has been operating an independent business of his own for many years, has just written me his views on what the public is expecting of this Congress. I am quoting his letter in order that my colleagues and the public may know how some real American independent businessmen in my section are thinking, and what they are expecting of Congress.

I am pleased to quote the letter in its entirety, as follows:

As you no doubt are aware, the Nation this morning is faced with a Nation-wide telephone strike and a Nation-wide coal strike

in addition to all the minor strikes, one of which affects bus transportation in the nine-State area surrounding Tulsa.

Don't you feel that it is time for Congress to quit haggling over details and to do something about this continuous industrial turmoil? I think you will agree that the present majority in Congress is the result of the dissatisfaction of the folks back home with just that sort of thing. Furthermore, I feel that it is time to quit haggling about the budget and drastically trim the appropriations for the tremendous number of governmental bureaus and departments that have grown up during the war. If we are honest with ourselves, we can readily see that this Nation is broke and what sensible business would do in an effort to correct such a situation would be to make drastic cuts and eliminate unreal idealistic service. I do not know whether you folks in Washington are aware of the temperament and restlessness of the sensible people in this Nation with reference to all these things and whether you are aware of the fact that they are looking to you for action.

The root of all of these evils is just plain communism and as long as these folks are fed by the Government we are going to have to put up with this situation and they will eventually take over. All the demands which bring about these Nation-wide strikes are without any foundation and are fantastic and ridiculous and something has to be done to put the settlement of these matters back in the hands of the people who pay the pay rolls and not left in the hands of Government conciliators who do not have to pay the bill and who do not have to operate their business under the idealistic conditions that these settlements bring about. Believe me, I am telling you that the sensible people, and that includes a lot of the labor-union members, are looking to you folks to do something about it.

"Meddle in Greece? No!" Declared Randolph, of Virginia, More Than 100 Years Ago

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. BUFFETT. Mr. Speaker, in 1824 the House of Representatives discussed a resolution to appoint an American Commissioner to Greece. Greece was then fighting against Turkey for independence. The resolution was considered as a friendly gesture to the Greeks. But the Congress of that day was not easily maneuvered into foreign entanglements of any kind. The resolution was not passed.

The resolution read as follows:

Resolved, That provision ought to be made by law for defraying the expense incident to the appointment of an Agent or Commissioner to Greece whenever the President shall deem it expedient to make such appropriation.

The congressional debate centered around the fact that this would be at least de facto recognition of a Greek Government, would bring war with Turkey, and would be, in fact, a declaration of war. The Greek-Turkish War was not finally settled for 6 years after this date. In 1827 Britain with funds and troops entered the fray.

JOHN RANDOLPH'S PLEA

The following selection is from John Randolph's speech in opposition on January 24, 1824:

It is with serious concern and alarm that I have heard doctrines broached in this debate fraught with consequences more disastrous to the best interests of this people than any that I have ever heard advanced during the five and 20 years since I have been honored with a seat on this floor.

They imply, to my apprehension, a total and fundamental change of the policy pursued by this Government from the foundation of the Republic to the present day. Are we, sir, to go on a crusade in another hemisphere for the propagation of two objects as dear and delightful to my heart as to that of any gentleman in this or any other assembly—liberty and religion?

And in the name of these holy words, by this powerful spell, is this Nation to be conjured and beguiled out of the highway of heaven—out of its present comparatively happy state into all the disastrous conflicts arising from the policy of European powers, with all the consequences which flow from them? Liberty and religion, sir—things that are yet dear, in spite of all the mischief that has been perpetrated in their name. I believe that nothing similar to this proposition is to be found in modern history, unless in the famous decree of the French National Assembly which brought combined Europe against them with its united strength, and after repeated struggles finally effected the downfall of the French power. * * *

Sir, I am afraid that along with some most excellent attributes and qualities—the love of liberty, jury trials, the writ of habeas corpus, and all the blessings of free government we have derived from our Anglo-Saxon ancestors—we have got not a little of their John Bull, or rather John Bulldog, spirit, their readiness to fight for anybody and on any occasion.

Sir, England has been for centuries the gamecock of Europe. It is impossible to specify the wars in which she has been engaged for contrary purposes, and she will with great pleasure see us take off her shoulders the labor of preserving the balance of power. We find her fighting, now for the Queen of Hungary, then for her inveterate foe, the King of Prussia; now at war for the restoration of the Bourbons, and now on the eve of war with them, for the liberties of Spain.

These lines on the subject were never more applicable than they have now become:

"Now Europe's balanced; neither side prevails,
For nothing's left in either of the scales."

If we pursue the same policy, we must travel the same road and endure the same burdens under which England now groans. But, glorious as such a design might be, a President of the United States would, in my apprehension, occupy a prouder place in history who when he retires from office can say to the people who elected him, "I leave you without a debt," than if he had fought as many pitched battles as Caesar or achieved as many naval victories as Nelson.

And what, sir, is debt? In an individual it is slavery. It is slavery of the worst sort, surpassing that of the West India islands, for it enslaves the mind as well as it enslaves the body; and the creature who can be abject enough to incur and submit to it receives, in that condition of his being, perhaps an adequate punishment. Of course, I speak of debt with the exception of unavoidable misfortune. I speak of debt caused by mismanagement, by unwarrantable generosity, by being generous before being just. I am aware that this sentiment was ridiculed by Sheridan, whose lamentable end was the best commentary upon its truth.

No, sir. Let us abandon these projects, let us say to those 7,000,000 Greeks, "We defended ourselves; we were but 3,000,000 against a power in comparison with which the Turk is but a lamb. Go and do thou likewise." And so with the governments of South America.

If, after having achieved their independence, they have not valor enough to maintain it, I would not commit the safety and independence of this country in such a cause. I will in both these pursue the same line of conduct which I have ever pursued from the day I took a seat in this House, in 1799, from which, without boasting, I can challenge any gentleman to fix upon me any colorable change of departure.

Let us adhere to the policy laid down by the second as well as the first founder of our Republic, by him who was the Camillus as well as the Romulus of the infant state—to the policy of peace, commerce, and honest friendship with all nations, entangling alliances with none—for to entangling alliances we must come if you once embark in such a policy as this.

And, with all my British predilections, I suspect I shall, whenever that question shall present itself, resist as strongly an alliance with Great Britain as with other powers. We are sent here to attend to the preservation of the peace of this country, and not to be ready on all occasions to go to war whenever anything like what in common parlance is termed a turn-up takes place in Europe.

Excerpt from a letter by the Secretary of State, John Q. Adams, to the Congress. The letter was read into the debate on January 20, 1824:

The United States could give assistance to the Greeks only by the application of some portion of their public force, or of their public revenue, in their favor, and it would constitute them in a state of war with the Ottoman Porte, and perhaps with the Barbary Powers. To make this disposal either of force or of treasure, you are aware, is, by our Constitution, not within the competency of the Executive.

The Great Game of Politics

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. REED of New York. Mr. Speaker, I am glad that the able columnist, Frank R. Kent, has not been deceived by the vicious and malicious lies that have been spawned by the New Deal and their fellow travelers ever since they were repudiated by the patriotic citizens of our country in November 1946.

I am inserting, under leave to extend my remarks, the following article by Frank R. Kent, which appeared in the Washington Evening Star of April 11, 1947:

THE GREAT GAME OF POLITICS—GOP CONGRESS LEADERS CHAGRINED BY MISCALCULATION ON PRESS SUPPORT

(By Frank R. Kent)

The thing that more than any other has surprised as well as chagrined Republican leaders since they took over control of Congress is the extremely bad press that has attended their efforts to formulate a pro-

gram. They did expect something better, which shows that they made a basic miscalculation as to the general publicity situation.

For example, they had the not unnatural feeling that the voters, long restrained by the war, having, in the last election, belatedly turned against the New Deal policies, the press (also the radio) generally would commend and support the Republican effort to go in the other direction—by correcting the lopsided labor situation; by slashing governmental expenses, reducing waste and taxes. They had every right to that expectation. When it turned out to be largely unfounded, it came with something of a shock to complacent Republicans who felt thay had a clear mandate from the people.

So they had. They were entirely right about that. Their mistake was in totally underestimating the hold which, in 14 years of concentration, the left-wing elements, which constituted and attached themselves to the New Deal, had acquired on the channels of communication. This is one of the phenomena of the period. It is made more interesting, so far as the press is concerned, because it was obtained almost simultaneously with a campaign of denunciation. The New Deal CIO allies, for example, were enabled regularly to get extraordinary newspaper space day after day for their repetitious, verbose, and wholly synthetic statements in the very newspapers which they consistently accused of suppressing the news.

TURNED OUT ALL WRONG

Apparently the Republican idea was that when the New Dealers were repudiated at the polls, automatically their propaganda facilities would disappear and their publicity effectiveness be curtailed. But that notion turned out all wrong. There are today more New Deal left-wingers astride the channels of communication than before. The polls were hardly closed before there was a rush toward the press, the magazines, and the radio. Some of them have become publishers, some assistants to the publishers, some are editorial writers, quite a few have become columnists, and several are radio commentators. The ease with which they have penetrated into those fields can be accounted for in several ways but it is none the less remarkable.

The net of all this is that the left-wing spokesmen today are more articulate than before the election. When they lined up and let go at the Republicans soon after Congress convened it was something of a shock to the latter and they have been under pretty hot attack ever since. This is not to say that the Republicans have not done things for which they should be criticized. It would be amazing if they had not. It is to say that they are nothing like as black as they are being painted and that a good deal of the criticism is the same old left-wing, labor, New Deal misrepresentation and propaganda—largely by the same people.

At the moment their fire is concentrated on the Republican effort to reduce appropriations. It is normal, of course, to hear the bureaucrats squeal when their estimates are cut. But the present squealing goes far beyond the ordinary. It appears not only well organized but to have a professional touch. A really violent blast has accompanied the two appropriation bills thus far acted upon by the House—the Treasury and labor-security bills. A similar blast is obviously planned for every such bill as it comes up.

BASIS OF CURRENT ATTACK

The current attack is based on stories which insist that because of Republican "meat-ax surgery" various dreadful things are about to happen. We are told that the Secret Service is being undermined so as to flood the country with counterfeiters; that the Wagner Act is being scuttled through reduction in appropriations; that the Republicans are going to return the children to sweatshop conditions by denying the Children's Department proper funds; that the customs service is being forced to lay off men, thus throwing our ports open to smugglers; that Republican stinginess is going to permit tax evaders to go free.

Investigation proves there is scarcely a trace of truth in any of these stories. Yet they continue to be circulated. Telegrams pour in to Senators protesting the dismissal of customs employees, but the fact, as brought out by Representative WIGGLESWORTH, of Massachusetts, that customs asked for $6,500,000 more than it got last year; that it was given $3,165,000 more and that its appropriation provides for 400 additional employees—those facts get little, if any, attention. Neither is the fact publicized that the 8,000 revenue agents costing $30,000,000 a year, whose lopping off has been so vehemently denounced, were the not wholly occupied agents that ex-Secretary Henry Morgenthau excitedly added a couple of years ago in the 1944 agitation about tax dodgers.

These are the sort of things that induce Chairman TABER, of the House Appropriations Committee, to charge that "an insidious campaign of deceit and falsehood is being conducted to the effect that we are scuttling essential public services." Apparently the Republicans, while shocked and sore, are not going to weaken. They take comfort in the obvious fact that their record will be judged after they have made it and not by what is said about it before they have had their chance.

United States Resources Insufficient To Save the World

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. Louis Bromfield has written a timely article calling attention to the fact that as we consider the so-called Greek crisis we should bear in mind the physical resources with which we are endowed as a nation. Under leave to extend my remarks, I am including this article by Mr. Bromfield:

TO SAVE ENTIRE WORLD UNITED STATES LACKS RESOURCES

(By Louis Bromfield)

The more rapidly crises develop around the world, clearer it becomes that we have had no foreign policy in the past and that we have none now. The Greek crises, seen from the proper prospective, is no more than an incident in a world filled with similar disasters, but it may lead not only to confusion but to disaster for us, as well as for the peoples of the Balkans and the Near East.

There is no reason whatever to suppose that by pouring money into Greece or Turkey we shall solve their respective problems or stave off the spread of Russian aggression and expansion.

President Truman in his sensational speech—and it was one of the most sensational ever made by an American President—politely referred again and again to the spread of communism. All the world, including Soviet Russia, knows that he meant the expansion and aggression of Russian ambitions.

COMMUNISM IS TOOL

It has long since become clear that communism is merely a tool, a modern political method by which the small group of men in control of Russia are seeking to expand their power. The circumstances and the methods being used are almost indistinguishable from those of the Nazi government of Germany.

The error in the proposal of President Truman and his advisers to aid Greece has at least two facets. First, the old American error based upon the belief that you can buy anything you want, including good will, with money. Second, the whole program will be successful without the use and backing of strong armed force.

The writer has spent a great deal of his life in Europe. He knows its nations and peoples a great deal better than most newspaper correspondents, and he is prepared to state that you do not and cannot buy good will with money alone. Actually the fact is that much of the American food and machinery sent into Poland, Yugoslavia, and the other Balkan states under UNRRA was used by selective distribution to create ill will toward capitalistic America and good will for communism and Soviet Russia.

THREAT OF NATION

Also he is convinced that we have not enough money, raw materials, or machinery to rehabilitate the whole of the world and that, if we attempt to do so, we shall only bleed ourselves white and reduce our natural real wealth and living standards to the level of the more desperate European nations.

The citadel of western civilization has moved across the Atlantic from Europe to America. A superficial, unwise, headlong policy of trying to buy off or rehabilitate the whole world could easily crack the walls of this last citadel.

I doubt President Truman or the State Department is prepared to ask for troops and ships to back up the proposed Greek and Turkish policy, and I am certain the American people are not prepared or willing to grant such a request. The proposals made so hastily following the trigger decision of Great Britain to pull out of Greece seem to be superficial, hasty, and almost hysterical.

MORE THAN INCIDENT

Intervention in Greece is not simply a single incident, quickly and decisively closed. Of necessity it institutes a policy of intervention which, to be effective, must be extended around the whole circumference of the globe—in China, in India, in Korea, in Germany, in the Near East.

We cannot go half way without wasting the money, material, and lives involved in any hastily prepared program. The question is whether we are prepared for the colossal, probably insoluble, problem posed for the moment in Greece alone.

The fact is that in the long run the world is on the crest of a colossal surge of history and that even the superhuman efforts of the greatest and richest nation in the world cannot stem or alter its course. Two great nations are involved—Soviet Russia and the United States—for Great Britain or the other western empire states do not count any longer unless they achieve some strong form of federated union.

In the wake of such a wave history moves rapidly and time becomes the most important element. Already countless Americans have transferred their enmity directly from Nazi Germany to Communist Russia.

NEED MORE THAN HIT-MISS

No accidental, hit-and-miss plans of intervention hastily prepared and ill-contrived are of any use. Unless we are prepared to back the millions of dollars to be poured into Turkey and Greece with military force, the whole amount plus some lives is certain to be lost.

The shape of the world is being determined not by what we want or by what Soviet

Russia wants but by much greater forces of economics, of ideologies, of weariness and despair, of famine, of death and rebirth. Both Russia and this Nation are faced by challenges.

If these are met and solved, preferably by common action, our civilization will survive; if they are not, we are headed for another dark age. Even the atomic bomb is only incidental to the process.

The decisions which will determine the future of the world lie with Russia and the United States. All the rest merely clutters up the scene and serves to complicate and cripple the actions of these great powers and cause enmity between them. This fact lies at the root of the futility of the United Nations.

The Greek issue has clarified one thing, that when cause for action arises, history in these times cannot wait upon a UN cluttered by flotsam and jetsam left behind in the great wave of history upon which Soviet Russia and the United States are riding. The decisions in the end, as history will show, happily or tragically, can be made only by these two nations.

It would be well for all the world if they got together on a friendly basis and worked out what is to be done with that same stricken, decaying world. The rest is weakness and sentimentality and essentially tragic nonsense which can only prolong the agony.

Federal Judge Rules OPA Is Dead in Rent Suit

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, it has always been a serious question in my mind whether or not the President now has or has had all of the power that the incumbents of that office have assumed for the past 14 years, when it comes to issuing some of their Executive orders and directives. It has been indulged in to such an extent that in my humble opinion at least the practice is in danger of resulting in rule by men, rather than by law.

I have just received through the mails a newspaper clipping containing a United Press report of an instance where Federal Judge Claude McColloch in January held that he was not bound to follow the rental provisions of the Price Control Act. The newspaper account follows:

JUDGE RULES OPA IS DEAD IN RENT SUIT

PORTLAND, OREG., January 25.—Federal Judge Claude McColloch Saturday announced that his court "will not longer deem itself bound to follow the rental provisions of the Price Control Act."

McColloch's decision, in a case wherein a tenant sued a landlord for requiring the tenant to buy furniture, stated that, "The courts should not be expected longer to uphold the fiction that a war is being conducted, when, in fact, there is no war.

"The Congress and the State legislatures have it in their power to deal with the Nation's rental problems on the present facts, and this court will not longer deem itself bound to follow the rental provisions of the Price Control Act, enacted in 1942, when sought to be enforced by one not named or authorized in the act," the judge wrote in a memorandum on the OPA's suit against a landlord.

McColloch contended that the President did not have authority to set up the new agency, Office of Temporary Controls, and appoint Maj. Gen. Philip Fleming as the head of it.

His statement, "by one not named or authorized in the (war powers)" referred to Fleming.

Labor Should Live Within the Law

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. SCHWABE of Missouri. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Donald R. Richberg as published in the Reader's Digest of March 1947, with additional material by the author:

LABOR SHOULD LIVE WITHIN THE LAW

(By Donald R. Richberg)

I met a man walking down Main Street, brandishing a large battle-ax. I said to him: "What are you going to do with that dreadful weapon?"

He said: "I am going to engage in collective bargaining; and, believe me, I'm going to collect."

"But," I said, "you surely wouldn't actually swing that ax on anybody, would you?"

"Not," he said, "if the other fellow pays me what is coming to me. But I can threaten him and do anything I want to do to him with this ax; because"—get it!—"he's an employer and this is a labor dispute."

Now what is that battle-ax? It is not a physical weapon at all, but an economic weapon—the crushing power of monopoly. It is the power—through concerted control of the labor supply—to stop the production and distribution of the necessities of life until the labor monopolists are paid their price: a price which, over and over again, is more pay for less work and more authority with less responsibility.

Why do we permit labor to have such power? We deny it to business. Sixty years ago we decided that no private-business monopoly control over our American economic life would be tolerated. This decision is expressed in two doctrines of law.

1. If a monopoly of a necessity of life is desirable or inevitable, as, for example, a telephone or a telegraph, or a water- or an electric-power, or a railroad monopoly, then it must be regulated by the authorities to protect the public welfare. This doctrine was written into the Interstate Commerce Act of 1887, when Government regulation of railroad rates, services and profits began. It has since been extended over other public utilities.

2. Side by side with public regulation of public utilities, we have developed a program of preventing or destroying all other monopolies. The Sherman Antitrust Act of 1890 prohibited all contracts, combinations and conspiracies in restraint of trade and all attempts to monopolize any part of interstate commerce. This enactment has been supported and expanded by many statutes and decisions which Federal and State legislators and judges have been writing ever since, outlawing any form of unregulated private monopoly.

Our national policy is perfectly clear. A private monopoly must be regulated or destroyed. How then does it happen that labor monopolies are not regulated and not destroyed? How does it happen that although coal operators cannot combine to choke off our supply of coal till they get the price they want, mine workers can combine to stop production till they get the wage they want? How does it happen that the owners of an electric-light company are obligated by law to give continuous service, even though losing money, but that the employees of such a company, through a union, are allowed to shut that service down and plunge a whole community into darkness and danger?

Are not such actions by unions exactly what was—and is—forbidden by the Sherman Antitrust Act? Of course they are. Why, then, are they permitted? Let us thoroughly learn the answer: Labor unions have been given a special license to violate the law.

This was first accomplished by the Clayton Act in 1914. That law expressly laid down the plausible but extraordinarily wrong doctrine that the antitrust laws should not be enforced against labor organizations when lawfully carrying out the legitimate objects thereof. (Businessmen are not allowed to carry out their legitimate objects by creating and operating a monopoly!) But subsequent laws and court decisions have extended this special privilege for labor until there is practically no conspiracy by organized labor to operate monopolies that is not officially stamped as lawful and legitimate.

The time has come when we should review and revise the wholesale exemption of labor unions from the rules of law that govern and control all the rest of us.

Let us divide our problem into five parts. First, consider the internal organization of unions. By law every union should be obligated to have stated elections and conventions for the free and democratic adoption of constitutions and operating procedures. Those procedures should require the rendering of financial reports and a full opportunity for the members to criticize the officers and to regulate their activities, without being punished—as now happens all too often—by suspension or expulsion from the union. Such requirements cannot be honestly described as putting any strait-jacket on unions. Their purpose is only to free union members from the despotic control of labor bosses.

Parallel to that purpose all workers should be set free by law to join or not to join a union, as they please. Union discipline today includes a strict regulation of a member's economic life as a wage earner and frequently of his political life as a citizen. No American should be forced to adopt his economic philosophy or his political program at the dictation of a union. A closed shop or a union shop, compelling all workers to be members of a union, enables the union—by means of suspension or expulsion of a member for any or no cause—to compel the employer to fire that member from his job. This is arbitrary coercion, both of the employer and of the unwilling member. This is monopoly in one of its most extreme and hateful forms.

The closed-shop or union-shop contract is already outlawed on our railroads by the Railway Labor Act. It should be outlawed in all our industries.

To sum up the first part of our problem, which deals with the internal management and membership of unions: The management should be democratic and the members should be free men.

The second part of our problem is to determine how far collective bargaining can

be extended under one organization without becoming an instrument of monopoly.

It should be evident that industry-wide bargaining creates a monopoly control of industry. Collective-bargaining agreements between all the employers of an industry on the one hand and a union of all the industry's workers on the other are plain conspiracies in restraint of trade. Standardized wages and working conditions throughout an industry are monopoly wages, resulting in monopoly prices and monopoly-controlled production. The overcharging and exploitation of all the industry's customers are inevitable. Competition, the guardian of fair prices, is as quickly destroyed by labor dictation of wages and production as by business dictation of prices and production.

Large numbers of the customers of most industries are themselves union members. When wages and prices are raised by industry-wide collective-bargaining agreements the members of one union are simply trying to exploit the members of other unions. For organized labor itself such agreements are largely negative and self-defeating. But they are positively detrimental to the country at large and destructive of our economic institutions and ideals.

We believe in a free competitive economy. Industry-wide collective-bargaining agreements represent the beginning of a controlled economy regulated by an industrial or political dictatorship. First, all the employers and all the employees in an industry agree on wages, irrespective of local conditions and irrespective of the circumstances of individual firms. The next step is logical and has followed in many instances. Brought together for wage purposes and delivered from competition as to wage costs, the employers will naturally try to deliver themselves from other competitive restraints and so move on toward monopolistic prices fixed by concerted action.

This development has happened on a great scale in Europe, including Great Britain. It means a controlled economy in private hands. And what happens next? The public is outraged by private monopoly, and it demands the nationalization of the industries concerned. In other words, industry-wide collective-bargaining agreements lead toward private monopolistic tyranny; and private monopolistic tyranny leads toward public totalitarian tyranny. If we want to keep economic freedom in America, we must stop the spread of industry-wide collective-bargaining agreements before they make a socialized, planned economy inevitable. One way to do this would be by an amendment to the present National Labor Relations Act.

The fundamental bargaining unit authorized by law should be an organization of the employees of one employer. This local labor union and the employer should have full power to make a mutually satisfactory contract, free from any control by any national union or employer association.

But local unions and employers in a single producing or distributing region—such as a metropolitan area—should be permitted to form a regional federation—this is, a voluntary association of independent, self-governing units—to work out regional agreements, provided that these are not made the instrument of standardized wages and working conditions.

The object of the law should be, first, to prevent any monopolistic fixing of wages, production, or prices, and, second, to preserve the freedom of contract of employees and their employer. The benefits of the statistical services of a national association of workers or businessmen can be preserved, but such an association should be legally prevented from dictating uniform policies and programs to labor or management throughout an industry and from thus depriving the public of the protections of competitions within an industry.

For the protection of both public and private interests in a free economy, a Federal law should be enacted that would make industry-wide bargaining illegal and make all contracts and combinations of labor or management that substantially restrict competition preventable and punishable under the antitrust laws.

We come now to the third part of our problem: strikes.

Some strikes are of national concern. The way to prevent them is to make them unnecessary and unjustifiable by establishing a legal machinery for the peaceful settlement of labor disputes and by making it the legal duty of employers and employees to attempt in good faith to settle disagreements peacefully. The administration of such a law should be given to a new Federal Industrial Relations Board. In a dispute of real public importance, the Board should be authorized to appoint a special Commission of Inquiry to investigate the facts and make recommendations for a just settlement.

It should be one duty of the Commission to ascertain the effect upon the public of a stoppage of production. If it finds that no great public hardship would result, then the parties to the dispute should be left free to accept or reject the Commission's recommendations. But if a stoppage would deprive the public of a necessity of life and imperil the public health and safety, further Government action would be necessary. Upon the President's approval of the Commission's report, its recommendations should become a legal settlement of the dispute, effective for 1 year.

If the employer declined to accept this settlement, the Government would appoint a temporary receiver for the properties in order to keep them operating. The legal obligations of a public utility are well established. It must continue to operate, regardless of losses to the owners, the stockholders. The legal obligations of other businesses upon which public health and safety depend should extend at least to the requirement that they shall not be shut down because of disagreements between employers and employees.

These principles should be as binding on employees as on employers. Accordingly, the new terms of employment should be submitted to a vote of all the employees. If they vote to accept them, they will go on working and their union will continue to represent them. If they vote to reject them, each worker will be free to quit his employment as an individual. But any strike by the union, or other concerted action to prevent the continued operation of the plant, would be a violation of law. If the welfare of the community depends on keeping a business in operation, any concerted effort to stop it is plainly a conspiracy against the people which should be prevented and punished.

This means that the union as a body, or the workers quitting employment permanently, cannot be permitted to exercise the privileges or exemptions conferred by the Clayton Act, the Norris-LaGuardia Act, the National Labor Relations Act, and other laws which give special protections to organized labor. It is through such laws that our labor movement has gained its present strength. Deprive a union and its members of the shelter of such laws and they will become again subject to the competitive forces that are destructive of monopoly power—that power so viciously exerted in strikes against the public welfare.

The courts should be set free again to enjoin conspiracies against the people and their government. The employer should be set free to hire new workers to replace the workers who have individually quit their employment. This does not mean condemning any individual to involuntary servitude. All it means is that, when urgent public need demands the cooperation of all good citizens, labor unions and their members shall not enjoy a special exemption from legal obligations enforced against all others. Stripped of special privileges, opposing a public opinion united in support of an impartial judgment backed by the President, no union would be able to carry on a successful strike against the production of public necessities.

The fourth part of our problem is picketing.

What would we think if all the manufacturers of a given commodity should gather themselves into a union and throw long lines of massed pickets around the places of business of their customers and refuse to allow anybody to enter or leave until those customers consented to buy that given commodity at a given price? We do not allow violence to set prices. We must stop allowing violence to set wages.

Since VJ-day thousands of picket lines in America have engaged in violence with no effective rebuke and repression. This violence is sometimes by individuals using fists or weapons. It is sometimes by groups of strikers so thickly massed that noncombatants are unable to exercise their clear legal right to enter the struck plant. Our States must police the picket lines into lawfulness and orderliness. If they do not, they will eventually lose some of their proper authority and we shall see our picket lines policed by agents of Federal administrators and of the Federal courts. Somehow, by somebody, the picket lines in America must be made law abiding.

The fifth part of our problem concerns the contract between the union and the employer. Contracts among employers in restraint of trade are unlawful. Yet, many contracts between employers and unions, containing provisions flagrantly in restraint of trade, are tolerated. An instance is the familiar provision through which local employers and local unions agree that they will not handle materials brought in from other localities.

All management-union contracts substantially affecting interstate commerce should be open to public inspection. They should be scrutinized by the Antitrust Division of the Department of Justice. If they violate our antimonopoly laws, the Department of Justice should be as much obliged to proceed against them as it is now obliged to proceed against monopolistic conspiracies of managements. Unions should not be allowed to do, and unions and managements together should not be allowed to do, what managements by themselves cannot lawfully do.

These suggestions cannot rightfully be regarded as antilabor. They are only applications to labor of the traditional and current American proposition that we shall have no favored class and no class-government.

Little by little, in the course of several generations, we have taught railroads and electric-light and power companies and insurance companies and banks and stock exchanges and many other types of business enterprise that they cannot rule or ruin our economic life to enhance their own profits. The measures we took against them they called antibusiness. We nevertheless took those measures; and those enterprises are still in prosperous existence.

We must take corresponding measures against abuses of power by unions; and, when we have taken them, our unions, also, will still flourish. They have a great part to play in American life, and they will play it—but within the framework of public law.

It took legislation in Washington to persuade capital that it was not bigger than the Capitol. It will take legislation in Washington to persuade labor that no trade-union is bigger than the American Union.

Restore Competition

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. SCHWABE of Missouri. Mr. Speaker, from hearings of the House Committee on Education and Labor I am forced to conclude that Old Man Competition is badly battered, rather weak, and just about a wreck. Although he is the primary reliance of the individualistic system of the United States of America he is groggy because of the pincers strategy of the New Dealers.

On the one hand, we had the kitchen Cabinet and the President building the top of a labor government at the White House. On the other, we had the pressure of war for use in forcing centralization in Washington. These two prongs of the pincers certainly did pinch. They pinched us into the highest pyramid of hocus pocus ever built on the idea of statism.

Mr. Speaker, the United States was far up the road toward a Mussolini corporate state when the voters yanked the rug from under the feet of the New Dealers last November. Collective bargaining at the White House had taken us a long way away from what the American people want, what made us great, and what is implicit in the Bill of Rights. And what you should remember is that it built up a bureaucracy of special privilege that likes what they have squeezed out of the American people. They like their position. They have been made unresponsible by law and especially by maladministration. So you are getting numerous and loud squawks that are just the same as the country has heard before.

Once in a while some person or group accumulates too much power. They convince themselves that "I am the law" and that they can ignore the public interest. When that happens we just have to chop them down to the right size. If we let any group wax too fat on monopoly power they become as strong as the Government. When any one group gets as much power as the Government it is the Government. So, Mr. Speaker, the work of the House Committee on Labor and Education must now serve to reestablish a balance between the primary forces in American life and to do so in harmony with the principles which made the Nation great. And when one says that he means we must restore competition.

Mr. Speaker, there just is no substitute for competition. Why? Because we do not grow men big enough or ideas big enough to operate a system that will sustain and maintain 140,000,000 people otherwise. It must be a self-balancing and checking system that is sparked by competition. There is no substitute for competition. There is no alternative to competition. Anything and everything we have tried either as a substitute or alternative has ultimately turned out to reduce our freedom or deprive us of it by putting the heel of some bureaucrat, board, or commission on our neck.

To have competition suppressed in the guise of regulating something or other has happened time after time. But recently we supplemented the political bureaucrats with labor bureaucrats. Our masters are now chiefly in the House of Labor. They are ably supported and assisted by political bureaucrats. So poor Old Man Competition is as anemic as the Old Harry. He suffers from all kinds of deficiencies—beef, iron, vitamins, enzymes—not to mention solid food. Mr. Speaker, we not only have the political bureaucrats suppressing, undermining, and destroying competition, but they now conspire with the top dogs of the great labor combines built up from the White House. So it will take all the king's horses and all the king's men to put Old Man Competition together again.

Now let us look at what has happened from the standpoint of those of us on the receiving end—those who get the heel on our neck because of this combining of political and labor bureaucrats to sabotage Old Man Competition. About every way we turn we find we can take it or leave it. Things are nicely frozen. Prices have gone up. Prices are still going up.

Mr. Speaker, we recently had to swallow a few hundred thousand words designed to kid us into the notion that costs have little or nothing to do with prices. Just hold prices down and put up costs. It is a neat trick—if you can do it. But it somehow seems to have something to do with supply. We cannot get things. We cannot get enough. And if we can get them we do not find Old Man Competition around to help us with the price. Moreover, if we detect any signs of his presence he seems but a shadow of his former self. Looks like a case of low blood pressure at least. So we have prices going up, supply not going up, costs going up, and Old Man Competition going crazy or on vacation.

Well, Mr. Speaker, the largest single item of costs generally must be wages and salaries. Everything shakes down to work as the creative or productive factor. So we have manual work, brain work, and the work of tools to be marketed. Is the work of over 57,000,000 persons employed in the United States to be sold at a flat price—a price arbitrarily decreed by a few labor barons who conspire with a few political bureaucrats to hand out a ukase that the price is so much—take it or leave it?

Now, Mr. Speaker, this question of competition does not stop with the price of things we buy as consumers, or with the supply. It reaches down into wages and how much workers earn. It may be an unpopular idea in some places but it still is true that to earn we have to have a job and do some work. We cannot eliminate competition even in fixing wages and expect to be better off. In the first place, a combination to fix wages is a combination to fix prices. When this is done in the name of any other kind of organization except labor, it is considered in restraint of trade and therefore unlawful. When it is done in the name of labor it is now quite all right, but Old Man Competition has not heard about that. He has not read the statutes, apparently. Not even the revised statutes. So the arbitrary fiating of wages by industry-wide, union-wide, or too-wide bargaining sets up extraordinary pressures to eliminate jobs, to restrict working time, to reduce weekly and annual earnings and to put the whole employee-employer relation on an armed truce basis.

Now one thing I want to emphasize, Mr. Speaker, is that we cannot get along without competition even to set wages. Allowing competition to operate serves to adjust supply to demand and vice versa. If competition can operate, those periodic cycles of adjustment called depression, recession, or whatever you please, should not be as deep or last so long.

Life is a continuous process of adjustment. We cannot nail everything down either by collective bargaining or by law. The American idea is to keep opportunity open. That is where Old Man Competition gets in his work. If he has half a chance he will keep opportunity open. Just get the road blocks, bottlenecks, and iron curtains out of the way.

Mr. Speaker, the idea of collective bargaining has been carried much too far. It has been used to build up monopoly power and thereby to eliminate competition as a regulating and balancing factor in American life. It has pushed us so far that we are now on the threshold of great domestic cartels. Cartels such as those which played a leading role in the decline and fall of the British Empire, of Germany, of France, and many other nations.

Now I hope you will not think that the labor barons are the only ones who would like to continue the present sweet set-up with competition behind the eight ball. There are many employers who join them in that desire. You will hear them yelling that this or that is too drastic, too severe, goes too far, and is just too awful. But remember when that chorus wells up, that what is behind it is the same desire to get Old Man Competition off their back, that most human beings fall heir to now and then. Once you put together a nice monopoly position and get Old Man Competition well shackled, you really hate to give it up.

Mr. Speaker, the issue presented by labor legislation is not just correction of excesses perpetrated in the name of labor. It is the restoration of competition in American life after 15 years of partially covered up efforts by the New Dealers who have tried to get rid of it.

Military Government: Administration of Occupied Territory

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday April 14, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in

the RECORD, I include the following article which appeared in the Journal of the American Bar Association:

MILITARY GOVERNMENT: ADMINISTRATION OF OCCUPIED TERRITORY

(By Eberhard P. Deutsch, of the Louisiana bar)

(The picture and pattern of military government in Germany and Austria (American zone) have changed somewhat, but Colonel Deutsch depicts its legal phases. Before entering military service in August of 1942, he was the head of a law firm in New Orleans. He is a veteran of both World Wars. Assigned overseas in May of 1943, he served in combat with the Forth-fifth Division during the Sicilian invasion, and also with the Eighty-second Airbone Division at the time of the Normandy landings. He has been awarded the Bronze Star and Purple Heart medals, and holds a Presidential Distinguished Unit Citation. He has performed general administrative and legal duties in civil affairs and military government in and following combat, in various countries of Europe, and acted as principal legal adviser to Gen. Mark W. Clark in the quadri-partite military administration of Austria. He received his law degree from the University of Tulane in 1925, and holds the honorary degree of doctor of jurisprudence from the University of Messina, Italy, conferred on him in 1943.)

Little has as yet appeared in legal literature, though much is unquestionably destined to be written, on military government. This function of command has in the past been merely incidental to other phases of military conquest. In World War II, however, recognition was at last given by the War Department to the military importance of the maintenance of order in, and immediate reconstruction of, occupied enemy territory, in the close wake of tactical units.

This recognition was evidenced by the creation, in the European theater, of a fifth general staff section, G–5, at each tactical command down to and including corps; with a new special (military government) staff section at divisions. Military government representation was even accorded at the regimental level. In each instance this staff was an integral part of the combat unit involved; for military necessity is always the primary underlying principle for the conduct of military government.

It should be noted at the outset that the following discussion relates principally to military government, which deals with the administration of occupied enemy territory (e. g., Germany, Austria), as distinguished from civil affairs which refers to friendly of liberated countries (e. g., France, Belgium).

It is impossible, within the limited scope of such an article as the present one, even to outline the various functions within the broad scope of military government. They range literally from the cabbages to kings of Alice-in-Wonderland fame. "The object of civil affairs control through military government," says the Manual,[1] "is to assist military operations, to further national policies, and to fulfill the obligation of the occupying forces under international law."

Suffice it to indicate that among the most important functions of military government are those performed by legal staffs. These legal functions form the subject of the present discussion.

FUNCTIONS OF MILITARY GOVERNMENT

Military government does not itself ordinarily carry on governmental functions. It directs such functions by an indigenous government which it finds or sets up in occupied territory. It is carried out, however, by operational teams or detachments, called carpet personnel, as part of the forces of the commander of the tactical unit of the area involved, guided and supervised in turn for that commander, by his G–5 or military government staff. At Army levels and above, each such staff, and each detachment except the smallest, contains legal officers.

It may be well to recall at this point, that the law of occupied enemy territory, in the words of the Duke of Wellington[2] "is neither more nor less than the will of the general who commands" the occupying army. This is subject, of course, to the limitations imposed by modern international agreements,[3] as well as by the control exercised over the military commander by his own government.

To all practical intents and purposes, however, the commander of the occupying forces embodies, within his official military person, the constitution, as well as the legislative, executive, and judicial branches of the government of the territory occupied by his forces.

IMPORTANCE OF THE LEGAL PHASES

The importance of the legal phases of military government should at once become apparent from the brief outline given above. The broad scope of the work of military government legal officers may, for present purposes, conveniently be divided into the following categories: (1) legislation; (2) reestablishment of a national ministry of justice; (3) reorganization of indigenous courts; (4) reorganization of bar and notaries; (5) establishment, operation, and supervision of military government courts; (6) advice and opinions.

LEGISLATION IN OCCUPIED TERRITORY

Legislation in the occupied territory consists of enactments of the military government, and such legislation of the indigenous government as is not suspended by the occupational commander, or as he requires or permits to be enacted by that government and its subdivisions or agencies.

Military government enactments vary in form, and cover a wide range of subjects. They include proclamations issued in the name of, and signed by, the theater commander, announcing the fact of occupation, the establishment of military government and instructing the civilian population as to their status and conduct in general.

Next, there are ordinances or laws, usually issued simply by order of military government, on many fundamental subjects, such as crimes and offenses, suspension of certain local legislation, currency and foreign exchange, frontier control, censorship and communications, and so on.

Finally, there are notices or directions, covering limited areas or addressed to specific classes of persons, establishing curfew, regulating circulation of persons or vehicles, requiring the surrender of weapons, etc.

Each such enactment, by its very nature as a legalistic document, is drafted, revised, or at least required to be approved, by legal officers. And so, too, legal officers must render assistance in the suspension of such indigenous laws of the occupied country as may affect the security of the occupying forces, or are contrary to their avowed war aims. In the latter category, by way of example, in Germany, were those laws providing wide executive and judicial latitude to protect the so-called sound instincts of the people.

LEGISLATION DURING AND AFTER COMBAT

During combat the drafting of military government legislation and the supervision of the enactment and suspension of indigenous legislation were performed by the legal officers of each commander for his own zone of operations. In the case of Allied commanders the work was frequently done jointly by legal officers of both British and United States forces.

Following the cessation of hostilities and the establishment of quadripartite military government, new systems were devised. The Allied Councils of both Germany and Austria consist of the commanders in chief of the four occupying powers. Each council has a legal directorate composed of the chiefs of the four legal divisions.

The legal functions of the military government of each country as a whole are accordingly performed by a quadripartite legal directorate composed of United States, French, Soviet, and British officials. In Germany no central government has been established. Accordingly national legislation in that country, other than the indigenous legislation existing at the time of occupation, and permitted to remain in force, consists of enactments prepared by the quadripartite legal directorate and issued by the Allied Control Council. Indigenous local legislation is issued or suspended under the unilateral supervision of the legal officers of the zone command.

MILITARY LEGISLATION IN AUSTRIA

In Austria a national government was set up at once with the approval of the occupational authorities, followed a few months later by national elections, and the establishment of a central government, duly recognized by the governments of the occupying powers, but subject to continuing supervision and control by the Allied Council.

Accordingly, no military government legislation as such has been issued for application throughout the whole of Austria. Instead, the national legislative process has been carried on, at first by cabinet decree, and thereafter by parliamentary enactment. But this legislation has been permitted to be promulgated and put into effect only after affirmative approval by the Allied Council.

All Austrian legislation has therefore been submitted, following enactment, to the quadripartite legal directorate. This directorate has recommended to the Allied Council approval, amendment, or disapproval, of Austrian national legislation; and directions of the Council to the Austrian Government have been issued accordingly.[4]

MINISTRY OF JUSTICE UNDER OCCUPATION

Reestablishment of a National Ministry of Justice is obviously a vast task. In Germany, as stated above, no national government exists as yet, and there is accordingly no such ministry. In Austria it was established at an early date, and it functions under the supervision of the quadripartite legal directorate, with unilateral supervision of its functions within each zone of occupation.

The task has consisted primarily of purging the ministry of its Nazi personnel, and substituting officials whose political records, and whose standing and ability, permit their forming parts of the important executive

[1] United States Army and Navy Manual of Military Government and Civil Affairs, TM 27–5, OPNAV 50 E–3, sec. 4, p. 3.

[2] Hansard's Debates, 3d. Ser., cxv, 881.

[3] See, for example, Hague Convention No. IV and Annex (Hague Regulations) of October 18, 1907, respecting the laws and customs of war on land, 36 Stat. at L. 2277 and 2295.

[4] The action of the Council and legal directorate were at first required to be unanimous, and ultimate disagreements were rare. More recently, a new control agreement provided in effect that, in the absence of unanimous approval, legislation (other than constitutional provisions) was to become effective, on a presumption of approval, 31 days after submission to the Council. Strangely enough, disagreements have since become more frequent.

machinery to control and guide a national administration of justice without danger, from that source at least, of a recurrence of totalitarian upheaval. At the end of the first year of occupation, the ministry had reached approximately one-third of its normal strength, based on standards existing prior to the annexation of Austria by Germany in March 1938.

INDIGENOUS COURTS UNDER MILITARY GOVERNMENT

The indigenous courts of a strictly political nature in occupied enemy territory, such as the German Sonderand Volksgerichte, have been abolished. All other indigenous courts were suspended pending reorganization, purging of personnel and functions, and reestablishment on sound bases.

When reestablished and permitted to reopen, priority was given to certain classes of litigation. Criminal cases take precedence over civil matters. First among criminal cases come those instituted since the occupation. Among civil cases, priority is required to be given to cases involving domestic relations.

The courts of the occupied country are prohibited from exercising jurisdiction over cases involving members of the armed forces or nationals of the countries of the occupying powers, cases arising under any law suspended by military government, money demands against the indigenous government or any agency thereof, and other categories of litigation specifically enumerated in military government legislation on that subject.

FUNCTIONS OF THE INDIGENOUS COURTS

If the foregoing outline of the status of indigenous courts in occupied enemy territory does not suffice to show the extensive supervisory duties and responsibilities of military government legal officers in that regard, one needs glance only briefly at the sweeping powers exercised by such officers over those courts. Among those powers are the following: (1) To dismiss or suspend any judge, prosecutor, or court official; (2) to attend the hearing of any case, even in closed session, and to have unrestricted access to all files and records; (3) to review all decisions of all trial and appellate courts, and to nullify, suspend, reverse, or modify to any extent any finding of any such court; (4) to transfer any case or class of cases to the jurisdiction of military government courts; and (5) to supervise and control the administration and budgets of all such courts.

Supervision and control of the indigenous courts was originally performed unilaterally, by legal officers in each zone. Control has gradually been relinquished to the National Ministry of Justice, with supervision continuing zonally, on a unilateral basis.

In addition, complete control over the bar and notaries [5] is vested in the military government, exercised locally through its legal officers. No person is permitted to practice as lawyer or notary (nor as judge or prosecutor) without the consent of the military government, and until having taken an oath in the following form (United States zone):

"I swear that I will at all times apply and administer the law without fear or favor, and with justice and equity to all persons of whatever creed, race, or political opinion they may be; that I will obey the law in spirit as well as in letter, and that I will constantly endeavor to establish equal justice under the law for all persons." [6]

[5] Notaries in continental Europe, as the Louisiana colleagues of the author will understand, occupy a quasi-judicial position of great importance in the commercial and professional life of their communities.

[6] This is the oath prescribed for use in Austria. That being used in Germany, while not identical, is of substantially similar tenor.

The military government is empowered specifically, "to disbar from practice any lawyer or notary." And because these officials were, under the Nazi regime, formed into Nazi-controlled organizations, the latter were dissolved, and new local regional and national voluntary associations have been formed under the supervision of legal officers of the military government.

MILITARY COURTS OF OCCUPYING FORCES

The law-enforcement machinery of the occupying forces, beyond direct military sanctions, consists of a system of military government courts. These are established by decree in the form of law or ordinance. Their proceedings are governed by promulgated rules of procedure, and these are supplemented by a guide to procedure prepared to assist officers conducting such tribunals.

These courts have jurisdiction over violations of the laws and usages of war, of military government enactments and of laws of the occupied country itself. As to persons, they have jurisdiction as to all except members of the allied forces, prisoners of war and diplomatic agents.

The occupational commander may provide for such types of courts, and give them such jurisdiction, as he deems advisable. In the United States, French, and British zones of the European theater, there are three kinds of these courts, summary, intermediate, and general. Summary courts are composed of one officer and may impose fines up to $1,000 or imprisonment up to 1 year. Intermediate courts are composed of one or more officers, and may fine up to $10,000 or imprison up to 10 years. General courts are composed of three or more officers, and may impose any punishment including death.[7]

ADDITIONAL FUNCTIONS OF MILITARY GOVERNMENT COURTS

In addition to the foregoing powers, all military government courts may enter orders prohibiting an accused from entering or leaving a designated area, or ordering him to enter or leave it; for the forfeiture, restitution, or disposal of property, premises, or businesses; impounding money or other objects; requiring and forfeiting bail; punishing for contempt; and they have all "such other powers as may be necessary and appropriate for the due administration of justice."

Summary courts act as committing magistrates. They may themselves try cases, or refer them for trial to such higher court as, under the circumstances disclosed, seems to have adequate punishing power in the event of a finding of guilty. Or, the appointing authority may refer a case directly to an intermediate or general court for trial.

Courts may be appointed by commanders of certain units, with the appointing power largely decentralized in nonoperational areas. Courts are composed of Allied officers,[8] but prosecutors and defense counsel may be of any rank, or even civilians. There is no right of appeal, but decisions are subject to review, and the reviewing authority may set aside a finding of guilty; affirm, suspend, reduce, commute, or modify any sentence; order a new trial; and "make such other order as may be appropriate," except that the reviewing authority may not set aside a finding of not guilty.

At first, in Sicily and Italy, it was attempted to follow largely Anglo-Saxon procedure, in order to implant the germ of that wholesome system on the Continent. This was found, however, to be insufficiently effective for use against enemy subjects, who took advantage of its seeming technicalities, relays, and presumptions in favor of the accused. A quick, decisive process was found necessary to meet the paramount demands of military necessity, and a summary continental system has now been adopted in the European theater.

The court has studied the record of the case before it is brought on for trial. It commences by stating to the accused a résumé of the case to be presented against him, and by interrogating him with regard thereto; it then proceeds with proof of only such matters as are controverted.

The only real rule of evidence in military government courts is that of relevancy. Hearsay, by way of example, is expressly admissible, but is to be given only such weight as circumstances justify. Evidence of bad character is admissible only after the accused has put his own character in issue. Neither husband, nor wife, nor parent, nor child may be compelled to testify against the other, and the privileges of attorney and client, and priest and confessor, are recognized.

Military-government courts may adopt a flexible procedure for the trial of juvenile offenders "based on the accepted practices of local juvenile courts" and those of England and the United States.

Finally, it is provided in the Rules of Procedure:

"The proceedings shall not be invalidated, nor any findings nor the sentence disapproved, for any error or omission, technical or otherwise, occurring in such proceedings, unless in the opinion of the reviewing authority, after an examination of the entire record, it shall appear that the error or omission has resulted in injustice to the accused."

Military-government legal officers are responsible for the establishment, staffing, operation, and supervision of military-government courts. They prepare cases, prosecute them, sit as members of such courts, act as defense counsel in the most serious cases, and prepare recommendation for the reviewing and confirming authorities.

LEGAL ADVICE TO MILITARY GOVERNMENT

Of course, legal officers are chargeable with responsibility, in the last analysis, for all legal phases of military government. Legal questions are involved, directly or indirectly, in practically every detail of military-government activity. These questions vary from such relative trivialities as to whether an Allied officer need return the salute of a prisoner of war, to such vast problems as the legality, under international law, of the Moscow Declaration of November 1, 1943, providing for separation of Austria from Germany and her re-creation as a free and independent nation.[9]

One of the most interesting of such questions involved the title to captured or abandoned enemy property. The point has frequently arisen. The French, for example, contended that any such property of French origin must be considered to revert to French ownership, regardless of the means by which the enemy had acquired it, or the nationality of the capturing forces.

A somewhat similar question, one involving extensive repercussions in any number of directions, has more recently arisen in the

[7] Death sentences must be confirmed by the commander of the occupying forces or by such officer as he may designate.

[8] Demobilization following cessation of hostilities has gradually necessitated the use of civilians as members of military government courts.

[9] See for instance, "A Study of the Legality of the Annexation of Austria by Germany under International Law and Austrian Constitutional Law, and the Policy of the United States Toward Anexation," by Herbert Wright, professor of international law, the Catholic University of America. The study was reprinted as H. Doc. No. 477, 78 Cong., 2d sess., 1944. A similar study by Prof. Hans Velsen, of the department of political science of the University of California, at Berkeley, reaches diametrically opposite conclusions.

Soviet zone of Austria. Under the Potsdam declaration, Russia was permitted to apply to its reparations claims, German property found in eastern Austria. It has treated as German, property which the Germans had confiscated, frequently from Allied interests, following annexation of Austria to Germany.

COMPLICATED QUESTIONS AS TO PROPERTY

Following capture by United States forces of an extensive cache of fine wines in the German arsenal at Cherbourg, a contention was made in behalf of another nation, that all such captures become property of the Allies, to be divided among them as determined on diplomatic or other high levels. The point arose again, with various claims by various governments, on all conceivable grounds, being asserted to all or parts of a vast hoard of gold captured by United States troops in a German salt mine.

The disentanglement of Austrian from German economic interests, attendant on the reestablishment of Austria as an independent nation, raises legal questions of corporate reorganization and finance, as nice as any ever discussed in the lawbooks.

The solution of problems of restitution of property and property rights, wrongfully taken or transferred during the Nazi regime, frequently under color of law, will unquestionably ultimately result in the establishment of new principles of equity jurisprudence.

Similar examples of literally fascinating legal questions arising in the course of military government, both before and after combat, might be multiplied indefinitely. Many of them, of course, cannot be settled with the writing of mere legal opinions.

Some require diplomatic negotiations, and even international conventions. Legal personnel must play the leading roles in such presentations. On the character of their performance, the success of military government operations and, to a great measure, of the future ability of the nations of the world to live among each other in peace, may largely depend.

Army Day Address

EXTENSION OF REMARKS
OF

HON. J. LINDSAY ALMOND, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. ALMOND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the ceremonies observing Army Day in the city of Roanoke, Va., on April 7, 1947:

It is consonant with the fundamental concepts of a nation dedicated to the cause of peace, it is consistent with our cherished traditions, it is in furtherance of constructive service to our sacred and inescapable responsibilities to our own enlightened self interest, as well as our moral and spiritual obligation to build and secure the future peace of the world, that we, on this occasion, celebrate Army Day.

It is with pride in their fortitude, tribute to their valor, praise for their genius, gratitude for their accomplishments, appreciation of their sacrificial service on the field of battle, that, in humility and reverence, we thank divine providence for, as we salute, the armies of America, the valiant soldiers of democracy, the preservers of the Republic, the guardians of the present, and the defenders of the future.

May a grateful people ever proclaim, with the fervor of undiluted patriotism and sincerity of abiding devotion to the ideals of the founding fathers, that the soldiers of democracy will ever deserve to be "First in war; first in peace and first in the hearts of their countrymen."

Like his gallant brother in arms of the Navy and Marine Corps, the American soldier is the symbol of our traditions, the shield of our hope for survival in a grasping and contracted world whose existence is rendered indescribably precarious by the unfathomed potentialities of atomic mass destruction.

Our Army has written many glorious chapters in the Nation's history. Travail and suffering, sweat, blood, and tears have beset the hard road of its accomplishments. It has triumphed over the forces of nature and it has triumphed over the forces of evil. It sprang from the loins of a free people, ennobled and inspired by the cause of liberty and justice which it served. It found no worthy foe in the regimented robots of the beastial dictators and their enslaving tyranny which it so signally crushed.

Its story of magnificence and achievement has been written in every corner of the globe.

It has indelibly inscribed its heroic record not only in the affections of the American people, but of peoples of other lands who cherish liberty and justice, and whose faith in the dawn of a new era had all but been shattered on the racks and pillories of mental and physical anguish born of the hideous ideologies which have sought, and continue to seek, the destruction of the citadel of democracy.

Let us never forget those who fell or fail to hold high and sacred the immeasurable price of their sacrifice.

No eulogy, no epitaph, no monument, however beautiful and imposing, can do more than remind us of their valor and devotion.

In service to our country in the discharge of her obligations at home and abroad, let us resolve that the hallowed dead shall not have died in vain. May we never forget the bitter tears, the broken homes, the mangled bodies, the aching hearts, and the shattered hopes.

We are not, thank God, a Nation of warriors. Impartial history records that we have never engaged in a war of aggression. We have never sought nor do we now seek anything of any nation anywhere in the world which we do not freely accord to every other nation everywhere in the world.

Ours has never been a spirit of international selfishness or national aggrandizement. We seek no new territory, nor do we seek to inject our philosophy of government into the systems of other nations against the free and untrammeled will of any people. Ours has never been nor is it now a policy of imperialism. We have never sought to sabotage the economy and internal security of a friendly nation by fomenting strife, dissension and disruption among its nationals, nor have we ever, in violation of the common amenities of international honor and decency, maintained an elaborate espionage system within the borders of an ally and endeavored to breed an army of desperate traitors among her citizenry. We have never sought, through the cowardly and treacherous process of insidious infiltration, to pollute and contaminate the ideological concepts of any people, thereby to sap the vitality, undermine and overthrow the structure of any government. To the shame and degrading guilt of Soviet Russia, we are constantly, through Kremlin collusion, being subjected to all of this and more. The patience of the American people is long suffering but that virtue has its limitations. We crave peace but we crave it with honor.

No nation which will, with candor, honesty, and intelligence, analyze the recorded history of American social evolution and policy, or the demonstrated motives and purposes enunciated by America today, can find any basis to justify, either to its own people or to the world, any semblance of reason or fact, express or implied, upon which to predicate false and pernicious propaganda ascribing any ulterior motive in policy or purpose.

The world knows—even Red Russia knows—that it is the intense and relentless desire of our people and their Government to bask in the sunlight of a sane and durable peace, whose beneficent rays of hope, and freedom from fear of totalitarian aggression, will illumine the darkest corners of the earth and embrace the entire world.

The world knows—even Red Russia knows—that in view of the ominous clouds of threatening disaster which loom on the international horizon, the locked secrets of atomic energy, and with them the very life of civilization itself, are safe only in the keeping of the strong hands and moral conscience of America.

"I know not what course others may take, but as for me," I will never agree to surrender to any nation, or combination of nations, the secret of atomic energy, until a practical, sound, safe, and enforceable system of control has been established and adopted.

I mean a system of control buttressed by rigid sanctions for its threatened violation and sanctions which cannot be thwarted or defeated by the veto power of any nation.

Let us keep America strong so that she may speak forthrightly and with unwavering decision in the councils of the world. May hers not be the voice of appeasement symbolizing the umbrella of Munich but the clear and positive voice of democracy backed by the will, the determination, and the unquestioned power of her righteous might, to the end that the blighting scourge, the unspeakable horror, and the devastating carnage of global conflict shall never again drench the world with innocent blood.

Together, a united people, we shall face the future with faith and courage. Our energy and our talents we must dedicate to strengthening and perfecting the processes of democracy.

Let us see to it that the virtue, the power, the force, the efficacy, the moral, and spiritual attributes, and the very content of democracy itself gains and holds mastery over the minds of men. We must make it work and demonstrate that its essence is overwhelmingly superior to communism or any other antithetical force or ideology.

I loathe communism with a vehemence circumscribed only by anathema, but I am convinced that it cannot be dissolved by legislative fiat any more than democracy or religion can be legislated out of existence.

Any form of tyranny over the minds of men is as dangerous as it is despicable.

We must avoid the hysterical and tempting urge to outlaw the Communist Party and thereby drive it under cover. Such a course would bolster it with a complex of martyrdom and tend to furnish fuel for its insidious and abominable flames. We must keep it in the open so that we can know who, where, and what, and bring to bear upon it and its disciples the merciless light of uncompromising publicity.

We must see to it that neither communism, democracy, nor any other ideology, religion, or philosophy is by force fostered upon any nation anywhere in the world.

The untrammeled and unfettered inherent right of self-determination, under conditions of uncoerced freedom of choice, must obtain everywhere in the world. For such is the creed and such is the essence of democracy—the last best hope for the future peace of the world.

Greco-Turkish Loan Proposal

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Chicago Daily Tribune of yesterday, April 14, on President Truman's Greco-Turkish loan proposal. I have spoken on this proposal before the House and I have supplied constructive reading material on this subject. Nothing that I have heard or read so far has changed my position. We can best serve the world by conserving our strength in order to use direct methods rather than backing into a situation which Great Britain admits to be untenable.

The editorial follows:

HABIT-FORMING LOANS

A number of the Senators who spoke on Mr. Truman's Greco-Turkish loan proposal seemed to feel that they had been shanghaied into supporting it, even though they doubted its wisdom. Some of them said they would go along this time, but insisted they were not establishing a precedent for future outpourings of American billions.

When the reluctant Senators say, "Thus far, but no farther," they are either fooling themselves or trying to fool their constituents. If the Truman-Vandenberg policy makes sense at all, it makes sense only as a declaration that we are willing to spend unlimited American billions and risk war to stop Russian aggression anywhere in the world.

Next time it will be harder, not easier, to refuse. If, as Mr. VANDENBERG pretends, the Nation's prestige will be destroyed by refusing to grant Mr. Truman's request now, it will be destroyed even more surely by turning him down the next time he wants to give a half billion dollars away or send a military mission to bolster a weak government. Or at least, so Senator VANDENBERG will assert, citing the present instance as precedent.

Mr. Truman is bluffing, and bluffing on a poor hand, for Greece and Turkey can never be made strong and self-reliant as against a Russian threat. If he wants to bluff, why doesn't he use his ace, the atomic bomb? An ultimatum to Stalin to get out of the countries he has taken by force or trickery, and to liquidate the minority governments that Russian bayonets have established, might not work, but it obviously would have a better chance of working than the present program. The overpowering objection to this course is one that Mr. Truman and Senator VANDENBERG are debarred from offering. That is that if it did not work, we would have a war. Their program also gives Stalin the excuse to make war whenever he pleases, and at a time that suits him, not us.

We do not believe that a war with Russia is necessary. It is true that our political ideal of individual freedom and the Communist political ideal of slavery to the state are in conflict. But Americans oppose communism not only because they find its methods repugnant, but also on the ground that it won't work.

If the Communist idea won't work, we have only one thing to fear from it. That is the activity of its adherents in this country, who are trying to keep our system of free enterprise from working by internal sabotage. In his new crusade against communism, Mr. Truman is strangely tender toward the only Communists who can hurt us, those within his own governmental family. His overadvertised purge of them actually was a gag order against disclosing official Government papers. This might keep some fellow traveler from betraying a military secret to Russia. It would be equally useful, however, in preventing an honest Government employee from exposing one of Chairman Hannegan's Missouri burglars.

If communism won't work in Russia—and all the evidence is that it hasn't—it won't work in Europe. Stalin may seize that continent, but his methods, if we are right in our judgment, won't enable him to make Europe a military threat to America. If we aren't right and communism will work while our system won't, we can't change that by war. We might as well go down to New York Harbor and welcome the commissars.

It may be suggested that this policy of letting Stalin do his worst, in the belief that he can't harm us, will be rough on the western Europeans whom he would surely try to subjugate. If so, it is up to them to get together and defend themselves. Individually they are weak. Collectively they are stronger than Russia.

There is only one certain thing about the Russian problem. That is that if we persuade the governments of western Europe that we are at their service on call, they will do nothing to help themselves, but will weaken us by incessant demands for more loans. If by refusing the Greek loan we tell them now that they are on their own, they may do something to save their skins. The formation of a European federation for mutual protection against Communist aggression would be wholesome, but no such arrangement is to be expected as long as the nations are satisfied that America's wealth and fighting power are to be had for the asking.

"Bring 'Mac' Back"

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. VAN ZANDT. Mr. Speaker, since introducing House Concurrent Resolution 38 on March 25, requesting the President in the name of the American people to invite General of the Army Douglas A. MacArthur, United States commander in chief, Far East, to return to the United States for a period of at least 30 days, the chorus of voices chanting "Bring 'Mac' back" has reached mountainous proportions.

Newspapers, through their editorial columns, have widely acclaimed the idea, which includes the invitation to General MacArthur to address a joint meeting of the Senate and House of Representatives and to make Nation-wide radio addresses embodying his views on many vital issues of concern to the American people because of their effect on the national security of the United States.

I have received a letter from Louis E. Starr, commander in chief, Veterans of Foreign Wars of the United States, endorsing the objectives of House Concurrent Resolution 38.

I am pleased to have Commander Starr's views, and for the information of my colleagues, his letter of April 2 reads as follows:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Washington, D. C., April 2, 1947.

The Honorable JAMES VAN ZANDT,
Member of Congress, Washington, D. C.

DEAR CONGRESSMAN VAN ZANDT: I have noted with interest and satisfaction the resolution which you introduced into the Congress to bring General of the Army Douglas MacArthur to the United States for a period of some 30 days.

The Veterans of Foreign Wars of the United States is deeply concerned with a number of the problems which confront the American people. I am convinced that it would be most helpful if General MacArthur were to address the Congress and the American people. We need his views on national security, our position in the Orient, the unification of the services, universal military training, the handling of the atomic energy, and other subjects related to our national well-being.

You doubtless recall that Lt. Gen. Arthur MacArthur, father of Douglas MacArthur, was one of the founders of the Veterans of Foreign Wars. Our organization which has now grown to a strength of between two and three million combat veterans, most of whom served overseas, would welcome the opportunity to pay tribute to this great American leader. I trust your resolution will bring about this most valuable visit.

Very sincerely yours,
LOUIS E. STARR,
Commander in Chief, Veterans of Foreign Wars of the United States.

Guam

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. GRANT of Indiana. Mr. Speaker, I am today introducing a revised copy of the bills which I have previously introduced looking toward the enactment of an organic law for the government of the citizens of Guam.

In that connection, I submit herewith a copy of Joint Resolution 1, adopted January 4, 1947, by the Eighth Guam Congress. A careful reading of this resolution should remind all of us of our obligations to the people of Guam. Further than that, it will, I hope, prompt us to give early attention to the pending resolutions on Guam.

The Guamanian resolution follows:

Joint Resolution 1, Eighth Guam Congress

Whereas the United States of America acquired the Island of Guam as a result of the Spanish-American War under the terms of the treaty signed at Paris on December 10, 1898; and

Whereas article IX, paragraph 2, of the said treaty provides that the Congress of the United States of America shall determine the civil rights and political status of the native inhabitants of the territories thereby ceded

by Spain to the United States of America; and

Whereas the United States of America has created a tradition for its respect and adherence to the sanctity of treaties, said tradition having been consistently maintained upon numerous occasions, including that of determination by the Congress of the United States of the civil rights and political status of the native inhabitants of Puerto Rico and the Philippine Islands, the other territories ceded with the Island of Guam by Spain to the United States of America under the terms of the said Treaty signed at Paris on December 10, 1898; and

Whereas the people of Guam have consistently proven their love for and loyalty to the United States of America during times of peace and throughout the horrors of a terrible war wherein faith in God and country upheld the said love for and loyalty to the United States by a helpless people; and

Whereas the people of Guam, owing permanent allegiance to the United States, have always aspired to be recognized as citizens of their own and beloved Nation, the United States of America, and having honorably served said Nation in war and peace; and

Whereas in the service to God and country, to which the people of Guam have uncomplainingly contributed their all, many families have been honored by having a member or members thereof becoming unsung hero or heroes, having made the supreme sacrifice: Now, therefore, be it

Resolved, That this joint resolution be adopted by the Eighth Guam Congress, in joint session, for presentation to the Congress of the United States of America for appropriate action in the determination of the civil rights and political status of the citizens of Guam to the effect that a law be passed by the said Congress of the United States granting full citizenship of the United States to the aforesaid citizens of Guam, together with the enactment of an organic law for the government thereof; and be it further

Resolved, That one copy of this joint resolution, signed by the Honorable B. J. Bordallo, Chairman of the House of Council, and the Honorable E. T. Calvo, Chairman of the House of Assembly, be forwarded by the way of the Honorable Governor of Guam and other official channels to the Eightieth Congress of the United States of America; and be it further

Resolved, That one copy each of this joint resolution be furnished the Civil Administrator, Naval Government of Guam; the Honorable Governor of Guam; the Honorable Secretary of the Navy; the Honorable Secretary of State; the Honorable Secretary of War; the Honorable Secretary of Interior; His Excellency, the President of the United States; the Honorable Speaker, United States House of Representatives; the Honorable President, United States Senate; the honorable chairman and members, Committee on Territories and Insular Affairs, United States Senate; the honorable chairman and members, Insular Affairs Committee, United States House of Representatives; and any other person deemed to be friendly to Guam and people.

Done at Agana, Guam, this 4th day of January 1947.

Councilman J. Guerrero, Chairman; Councilman F. B. Leon Guerrero, Secretary; Councilman V. C. Reyes, Member; Councilman S. A. Sanchez, Member; Assemblyman F. T. Flores, Member; Assemblyman F. D. Perez, Member; Assemblyman F. Carbullido, Member; Assemblyman A. S. N. Duenas, Member.

Unanimously adopted by the Eighth Guam Congress in joint session January 4, 1947.

B. J. BORDALLO,
Chairman, House of Council.
E. T. CALVO,
Chairman, House of Assembly.

Margarine and the Farmer

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15 (legislative day of Monday, March 24), 1947

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article entitled "Margarine and the Farmer," written by Mrs. Corrie T. Plyler, of Columbia, S. C., and published in the South Carolina Farmer, the official organ of the South Carolina Farm Bureau.

Mrs. Plyler is secretary to the Honorable J. Roy Jones, commissioner of agriculture for the State of South Carolina. She has long been active in several womens' clubs and devotes a great amount of her time to public service. She has made an exhaustive study of the question of prohibitive taxes on the manufacture and sale of margarine as a substitute for butter.

There is at present pending before the House a bill which would eliminate the Federal taxes on oleomargarine. Furthermore, I propose to offer an amendment to the first revenue bill which comes before the Senate to effect the repeal of such taxes.

I commend this article by Mrs. Plyler to the attention of the Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARGARINE AND THE FARMER

(By Corrie T. Plyler, Columbia, S. C.)

The contribution which the oil farmer makes to the Nation's economy has become markedly manifest during the late war. All our vast resources of oil-bearing crops were insufficient to meet the demand at home and the desperate needs of nations abroad. When it is remembered that to these fats and oils were added the immense resources of the dairy industry, and still we were unable to satisfy the clamor for energy-giving fats, it does not require figures to show how tremendously important are both these groups of farmers to the well-being and security of the Nation.

To many farming districts of the North Central States dairying means a livelihood. To the farmlands of the Middle West soybean farming has rapidly become in the last 10 years a principal source of income. In the South it is cottonseed which represents a large part of the farmers' income. The cotton crop is no infant in American agriculture, but not so many years ago the cottonseed was piling up in towering heaps of waste or floating down our rivers to the sea. We have made remarkable strides in discovering the potentialities of this once despised portion of the cotton plant and putting it to use. No Southern farmer has to be told the many varied uses of cottonseed—in feed for cattle, in upholstery, absorbent cotton and gauze, in motion-picture film, paint, cellophane, and in food products.

Foods are produced mainly from the oil which is extracted from the seed. From 1932 to 1938 the amount of cottonseed oil used in shortening increased from 834,000,000 pounds to over 1,000,000,000 pounds but decreased in 1941 to about 889,000,000 pounds; then, under war allocations it decreased in 1945 to about 487,000,000 pounds. The amount of cottonseed oil used in margarine rose from just over 15,000,000 pounds in 1932 to nearly 254,000,000 pounds in 1945, representing 50.9 percent of all fats and oils used in margarine in that year. In addition, in 1945 there were used in margarine 10,214,911 pounds of peanut oil, also an important product of the South, to say nothing of 105,001,070 pounds of milk. From 1933 onward the amount of foreign oils used in margarine steadily declined until in 1943 no foreign oils were used, and since that date margarine has been wholly a domestic product.

Next to shortening, margarine provides by far the largest market outlet for cottonseed oil and could provide a much larger market were it not for the burdensome restrictions imposed on the distribution and sale of margarine. During periods when the buying power of the public is reduced—and it must be remembered that the present level of the national income is abnormally high—the consumption of fats will undoubtedly decrease to some extent; but if the sale of margarine were not curtailed by taxes, the consumption of fats as a group would not decline nearly as much. The advantage of retaining this large outlet in margarine for cottonseed oil at a time when there would be a strong tendency for oil prices to decline is self-evident.

There is no longer any doubt that margarine is a nutritious, wholesome, and pure food product. The prejudice of earlier years is crumbling like the walls of a building with no foundation; for the best scientific knowledge has shown that there is absolutely no basis in fact for such prejudice. We could quote from many authorities, but perhaps the best brief statement comes from the National Research Council, whose thoroughness and integrity cannot be suspected:

"The present available scientific evidence indicates that when fortified margarine is used in place of butter as a source of fat in a mixed diet, no nutritional differences can be observed."

It is part of the glory of this Nation that it has learned to make, entirely from the produce of American farms, and at low cost to the consumer, food products such as margarine which can augment our food supply, never yet entirely adequate. Many consumers have never been able to afford butter; margarine provides for them a low-cost, nutritious item for their diets. During the war—and it is conceivable that such a situation of shortages might occur again without the impetus of a war—we needed all the butter and margarine that we could get. The combined supply was not enough. During this period many new consumers of margarine came into being, and just as many wondered why they had questioned the value of the product these many years. A large proportion of these new consumers will continue to use margarine as a highly desirable food. If we put it on a price basis, we have never been without a fat shortage, since many who were not buying butter because of its high cost, were not able to buy margarine because of the tax restrictions.

Margarine is the only pure food which has been singled out by the United States Government and State governments for special taxes. South Carolina, or any of the Cotton South, does not tax margarine. But certain other States impose taxes from 5 to 15 cents a pound on the sale of margarine, as well as license fees for manufacturers, wholesalers, and retailers of the product, from $1 to $1,000 a year. The Federal margarine law imposes a tax of one-fourth cent a pound on the white product, 10 cents a pound on the yellow product, license fees of $600 a year for manufacturers, $480 a year for wholesale distributors of the yellow margarine, $200 a year for distributors of the white margarine, $48 a year for retailers of the yellow margarine,

and $6 a year for retailers of white margarine. In addition, there are many nuisance requirements, such as posting of signs in restaurants, special labeling, prohibition in State institutions, etc.

Most of these laws have been enacted for the avowed purpose of preventing fraud or of protecting the dairy industry. On both scores they are superfluous: the Federal food, drug, and cosmetic law, to say nothing of comparable laws in most of the States, strictly controls the ingredients and labeling of the product, while the Federal margarine regulations rigidly control its sale. As for protection of the dairy industry, it has been demonstrated time and again that any such benefit is fictitious; there is sufficient room for both butter and margarine in the American market basket.

It is difficult to avoid the conclusion that the underlying reason for the continuance of such antiquated legislation is not to prevent fraud but to penalize one group of American producers for the supposed benefit of another group of American producers. The dairy farmer and the cotton-oil farmer can advantageously exist side by side, the product of each supplementing that of the other, just as do exist, for example, the coal producer and the fuel-oil producer, the metal industry and the plastics industry. The American Farm Bureau Federation stands for a fair balance between the great economic groups in our Nation—agriculture, labor, and industry. If agriculture desires equality of opportunity with other industries, it must not deny a fair balance to the various elements within agriculture itself. As Mr. W. R. Ogg, director of the Washington office of the federation, recently told the convention of the South Carolina Farm Bureau: "We cannot afford to let any group obtain a position of monopolistic advantage over other groups in our economy."

South Carolina farmers will never divorce their interest from that of the consumer; and in asking for fair play for their farm products which go into the manufacture of margarine, they are at the same time sustaining the freedom of choice, which belongs to the public, in selecting foods for their table.

Break With Communist Russia

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. RANKIN. Mr. Speaker, it is useless to try to promote peace throughout the world with a soup-kitchen diplomacy.

President Truman has asked us for an appropriation of $400,000,000, to be followed up with American arms, to check the spread of communism through Greece and Turkey into the Near East.

I agree with the President as to the evils of communism. It is the most dangerous movement that has ever threatened the civilization of mankind.

Communist Russia has violated every promise made when we recognized her 15 years ago. The Russian Government is not a system of government, if you please. It is a system of slavery, crime, persecution, duplicity, and oppression. It is attempting to extend its vicious system all over the world, and especially throughout the United States.

Today millions of dollars are being spent for just such advertisements as you see in the Washington Post this morning, to undermine and destroy this Government. Today, while we have the atomic bomb, while America is standing out as the leading Nation of the earth, and the last hope of the Christian way of life, let us say to them that these international crimes must be stopped, this undermining of our civilization, these attempts to overthrow this government and destroy the American way of life must come to an end.

I believe it would be only a matter of time until the decent people of Russia would rise up and overthrow the regime under which they now suffer, and establish a government in which we could have confidence.

Today no sensible man would believe a word a Communist says, and anything they would sign would not be worth the paper it was written on. Shall we "piddle" along until they grow stronger and get our secrets of the atomic bomb and until we are so weakened that we will not have the power that we have today?

In the name of America, in the name of our Christian civilization, in the name of the western way of life, I say we should break relations with Communist Russia today.

When the Honorable William C. Bullitt, our former Ambassador to Russia, appeared before the Committee on Un-American Activities a few days ago, he said that if Russia had the atomic bomb and we did not have it, she would have dropped it on us before now.

I quote from the record:

Mr. BONNER. What do you think Russia would do with the atomic bomb?

Mr. BULLITT. If she had it and we did not, it would already have been dropped on the United States.

Mr. RANKIN. If she had and we didn't?

Mr. BULLITT. If she had it and we didn't.

Mr. BONNER. Your testimony frightens me. I am glad to have heard you, and I think you have told the American people something—if the newspapers would carry it—that would open up their eyes and maybe make them realize what a dangerous threat we have now before us, notwithstanding all that certain papers say about this committee and those who are interested in the preservation of this country.

Mr. Speaker, if you want to know something about the way the people in Russia are treated, read the following questions and answers copied from these hearings. I cannot imagine anything more horrible than the facts developed by this testimony:

Mr. RANKIN. A statement was made before this committee that there was no more democracy in a Communist country than there was in the penitentiary of the State of New Jersey or Mississippi or Texas. Is that statement correct?

Mr. BULLITT. Well, I wouldn't put it in that form. The fact is that there is no democracy of any kind without political democracy.

Mr. RANKIN. In other words, the masses are the slaves of the state or the commissars?

Mr. BULLITT. That is correct. Completely the slaves of the state; and furthermore, the doctrine which is taught is the doctrine of the omnipotence of the state—that a man is good insofar as he serves the state; a man is bad insofar as he doesn't serve the state.

Mr. RANKIN. Now, were you in Moscow in the late thirties?

Mr. BULLITT. I was in Moscow, Ambassador in Moscow, from the autumn of 1933 until the autumn of 1936.

Mr. RANKIN. Did you see a large streamer across the gates of Moscow with this inscription on it: "Religion Is the Opiate of the People"?

Mr. BULLITT. That streamer I saw in Moscow in 1919, and in 1932, when I was there, but it is my impression that it had been removed in 1933. I am not certain of that, but that is my impression.

Mr. RANKIN. I give you my impression. My recollection is that former President Hoover went to Moscow in 1936; is that about right?

Mr. BULLITT. I don't know. He wasn't there when I was there.

Mr. RANKIN. He made a radio speech when he returned to America, and told about seeing that streamer.

Mr. BULLITT. That is a statement which you may find all through Moscow and Leningrad, and the country, "Religion Is the Opiate of the People."

Mr. RANKIN. In other words, communism is atheistic?

Mr. BULLITT. Completely.

Mr. RANKIN. Completely?

Mr. BULLITT. Yes, sir.

Mr. RANKIN. They believe in outlawing all religion?

Mr. BULLITT. You have to qualify that now to this extent: they have an ideal, which is the state. It is a form of state worship. They did their utmost to destroy Christianity in Russia; they conducted campaign after campaign against Christianity in Russia. When the last war, the war of 1939, came on, they found that they needed the support of a lot of religious people. Therefore, they stopped the persecution of the church in violent form; they permitted more churches to open, and they took the other course, which was of getting the leaders of the Orthodox church under their thumb, so that today they control the Orthodox church as one of the apparatuses by which they control the peoples of the Soviet Union. But they do permit it to function.

Mr. RANKIN. Also they propose to take over all property, all land, all factories, all methods of production and distribution; that is correct, is it not?

Mr. BULLITT. Well, when the revolution came there they took everything over.

Mr. RANKIN. In other words, a man cannot own his home or land in Russia?

Mr. BULLITT. That is true, basically; but now they allow, for example, the peasants on the collective farm, they allow a peasant to get the product of an acre or a half acre that he has back of his place where he lives.

Mr. RANKIN. In other words, they permit him to have what we call a garden in the South?

Mr. BULLITT. That is right.

Mr. RANKIN. But the land that he tills, to make his living, is owned by the Russian Government?

Mr. BULLITT. Owned by the state.

Mr. RANKIN. And it is dominated by commissars?

Mr. BULLITT. Completely.

Mr. RANKIN. And instead of imposing the usual amount of rental, as we impose, a certain percentage of the crop, they demand that they deliver a certain amount of production, do they not?

Mr. BULLITT. That is right.

Mr. RANKIN. In 1933, I think it was, they had a crop failure in the Ukraine. Do you remember that?

Mr. BULLITT. I do; very well.

Mr. RANKIN. And the people of the Ukraine are among the best people in Russia?

Mr. BULLITT. Yes.

Mr. RANKIN. And they went down and took everything away from them and starved five or six million of the best people in Russia to death, in their own homes; that is correct, isn't it?

Mr. BULLITT. Mr. Congressman, it was, in one way, even worse than that. They set the grain quotas higher than the total grain crop.

They then took the entire grain crop, but because there wasn't more, to come up to quota, the man was a criminal, and, therefore, he was treated as a criminal, in addition to being starved, and his wife and children as well.

Mr. RANKIN. Yes.

Mr. BULLITT. They managed to dispose, by systematically organized starvation, they managed to dispose of some three to five million Ukrainians.

Mr. RANKIN. Now, the people in the Ukraine are the white people of Russia, the Nordics, are they not?

Mr. BULLITT. No; that you can't say. The Ukrainians are an extremely fine people. Russians are a very fine people. Both the Russians and the Ukrainians are extremely Nordic.

Mr. RANKIN. Well, what I mean by that is that these people were Nordic people; they were not orientals?

Mr. BULLITT. Certainly not.

Mr. RANKIN. The people in the Ukraine are among the best people in Europe.

Mr. BULLITT. That is right.

Mr. RANKIN. Yet they went in there and took everything they made and starved, you say, five or six million of them to death?

Mr. BULLIT Three to five million.

Mr. RANKIN. Men, women, and children starved to death, eating, in their frantic misery, the bodies of their own children, of their own families; that is correct, isn't it?

Mr. BULLITT. I am extremely sorry to say that I actually have two photographs of a father and mother and the skeleton of the child they had eaten, which were taken down there in the Ukraine.

Mr. RANKIN. Yes; that is what I am trying to bring out.

Mr. BULLITT. I still have two photographs of that. There is nothing more horrible.

Mr. RANKIN. You spoke a while ago of there being 10,000,000 people in concentration camps.

Mr. BULLITT. I should say, at least.

Mr. RANKIN. You said that they were infinitely worse off than the slaves were in the Southern States.

Mr. BULLITT. What I said was this, sir: That there were more slaves today in the Soviet Union than there ever were at the height of slavery, not merely in the Southern States but in the world.

Mr. RANKIN. Yes. Well, in the Southern States I don't think it ever got higher than 4,000,000, and never were the slaves in the Southern States treated as brutally as the people are now treated in those concentration camps in Russia.

Mr. BULLITT. I think——

Mr. RANKIN. According to the information we get.

Now, you spoke a while ago about outlawing the Communist Party. The bill before us simply proposes to prevent men from being elected to office on the Communist ticket, to put a stop to the sending of Communist literature through the mail, and to put a stop to certain professors teaching communism in the schools and colleges of this country. Is there anything wrong in preventing those encroachments?

Mr. BULLITT. Personally, I think the more people in the United States know about communism the better.

Mr. RANKIN. Yes; but——

On the question of slavery in Russia, I quote again from the hearings:

Mr. MCDOWELL. Mr. Ambassador, for the first time, I think, in the Nation's history, America is becoming, rapidly becoming, acutely conscious of the Communist situation here and around the world.

Mr. BULLITT. Yes.

Mr. MCDOWELL. I feel that all of the eyes of America are on this hearing today. Most certainly those things that you have said today are going to have a profound effect upon the people of America. I have attended many Communist meetings—not as a member. One of the frequent occurrences at the meetings was a comparison between living here in America and in Russia. The comparison, of course, was bad, so far as America was concerned. Would you care to make any observations on the things that occur in Russia?

Mr. BULLITT. Well, of course, statements of that kind are so fantastically distorted that it is very difficult to answer them.

In the first place, life in Russia is lived under the constant fear of the knock of the secret police on the door in the middle of the night. No man when he goes to bed, and no woman, knows that in the middle of the night the secret police aren't going to arrive—and then comes disappearance. Then comes either death in a cellar with a shot in the neck or deportation to one of the forced labor camps. We do not know exactly how many men and women are in those forced labor camps today, but there is extremely reliable testimony that there are more than 10,000,000 human slaves today in those forced labor camps working under the NKVD in the Soviet Union at this time.

It is worse than at the worst moment of Negro slavery. There were never so many slaves as there are today in the Soviet Union actually working in slavery.

As a further evidence of the slavery and cruelty to which the Russian people are subjected, I am inserting at this point an article entitled "The Truth About Soviet Russia's 14,000,000 Slaves," by Max Eastman, which was published in the April issue of the Reader's Digest.

It reads as follows:

THE TRUTH ABOUT SOVIET RUSSIA'S 14,000,000 SLAVES

One of the most stupendous and shocking events of modern times is the revival of human slavery in Soviet Russia. Hitler attempted this on the ancient Roman plan, enslaving aliens or supposedly inferior races. Stalin, however, who does not believe in racial inequality, has enslaved his own fellow citizens, as well as people from other nations, on a scale not seen before in all history.

There are today at least 14,000,000[1] slaves in the forced-labor empire of the Soviet Union. They live in corrals surrounded by stockades topped with barbed wire, watched day and night by riflemen in turrets with powerful searchlights and packs of dogs to pursue runaways. They do the heaviest, roughest, most grueling labor: mining; lumbering; forest clearing; constructing roads, railroads, canals, airdromes, and factories.

Their labor power is cheap, constant, controllable, "indifferent" to climate. They can be transported in freight cars in unresisting droves like cattle, and can be used up without worry over capital invested. For these Soviet slaves cost nothing to their owner, the MVD[2], whose agents simply pick them up on the street or drag them out of their beds at night. The labor of the 14,000,000 slaves is an essential factor in the economy of the "first socialist state." When the number runs low the MVD has been known to issue to each of its local branches a quota of so-called new offenders to be arrested.

This slave system makes a mock of the pretense that totalitarian ownership has solved unemployment. There are more permanently enslaved workers in the Soviet Union than there were temporarily unemployed workers in the United States in the most desperate year of the depression. In some of the camps the slaves live in conditions worse than those endured by men of the Stone Age. Here, for example, is part of the testimony of one Polish prisoner, who had formerly been a judge:

"Half-naked, barefooted, half-alive, we arrived in the icy and deserted tundra where there was but a stick with a board nailed to it bearing the words: 'Camp Point No. 228.' We ate rye flour mixed with water, uncooked. At night we slept in dugouts, lying close to each other for warmth, on wet branches spread on the mud.

"At 4 a. m. the timekeeper would strike a steel saw with an ax, sounding reveille. No one had to dress, for no one had undressed. Just get up and eat the second part of the flour received the night before. At 5 o'clock came the second signal: 'Get out to work.' Slowly one after another, the terribly dirty creatures in tatters crawled out of their mudholes, shivering with cold to begin the day's labors. The stench was unbearable.

"Sometimes a man stayed where he was, claiming he was sick. If the doctor's assistant, after feeling the man's pulse, decided that the prisoner was lying, the unfortunate was beaten and kicked out.

"Many died each night in the camp, and orderlies would tear the clothes off the bodies and then drag them to the 'morgue,' a primitive barn made of sticks and branches where piles of corpses lay."

From another slave's testimony: "We lived in tents without floors. When we returned from work at night, chilled and soaked to the bone, we sank up to our knees in mud inside the tents. We lay in all our clothing, in a sort of feverish sleep, and succeeded by morning in drying out a portion of it before the guards with their dogs came to drive us out to another day's work. When one of us died in the night, we concealed the body beneath the bunks as long as we could endure the stench, so as to receive the dead man's ration of bread."

These examples are from the "death camps" of Russia's Far East and North. Many similar descriptions of existence in them could be cited from the mass of evidence available. A report on life in an average camp, by a distinguished Polish woman now in the United States, is corroborated in detail by written testimony from hundreds of other former inmates.

The slaves sleep in long wooden barracks on rows of shelves as wide as a man is long. The prisoners go in head first and lie side by side on the bare boards, close-packed, with their feet toward the aisle. They have no mattresses, bedclothes, or blankets. They sleep in the same rags they work in. The slaves are infested with lice and bedbugs, and run over by rats. They have no water to wash in, and are permitted but one bath a month out of a single pail of hot water. There is one stove in each barrack, which warms those in a radius of 5 or 6 yards; the rest must depend upon animal heat.

At 4:40 a. m. the slaves are roused by armed guards. If they loiter they are dragged off the shelves with blows. They take a small wooden bowl and spoon (which are never washed) to a cauldron and receive a ladleful of weak soup[3] and a chunk of black bread. After that breakfast they are lined up,

[1] Kiril M. Alexeiev agrees with this figure. Victor Kravchenko, author of I Chose Freedom, stated that when he was a Moscow official the estimate was 20,000,000. Colonel Cazalet, a British Member of Parliament who accompanied Polish Premier Sikorski on a trip through the camps, reported that a Russian general said to him: "I don't know why you complain so bitterly about the Poles. There are 20,000,000 of our own people living under the same conditions."

[2] MVD, meaning "Ministry of Interior Affairs," is the new name for the State Police (formerly the NKVD and before that the GPU).

[3] For 1 month the soup is made of fish, with the heads and eyes floating in it. Another month it is of oats, unhusked as the horse eats them. Another month, of the dregs of soybeans after the oil has been removed. Another month it is cabbage and water.

counted, and marched to labor in groups of about 25, marshaled by guards with rifles. Every morning before they start marching to work a guard announces: "I warn you, one step to the left or the right, and I will shoot without further warning." The guards do shoot, and the slave who strays or stumbles is left dead beside the road.

The prisoners work 10 to 12 consecutive hours, receiving at noon two heaping tablespoonfuls of kasha (mush). At night they are lined up and counted again, the guard makes the same announcement, and they march back. Their evening meal is another ladle of soup and two more tablespoonfuls of mush. They then crawl onto their shelves for the night.

This is their life, provided they have fulfilled what is set as the norm of productive labor. If they fail to fulfill the norm, their infinitesimal rations are reduced still further. Those who refuse to work—and fulfilling less than 30 percent of the norm is counted as a refusal—are locked in the isolator—a guardhouse with solitary confinement cells. For repeated refusals the usual penalty is death.

"Nevertheless," says another report, "there are many refusers, especially in winter. The usual type is a totally exhausted man who has become indifferent to everything. He has but one wish—to lie quietly on his bunk so as to feel as little as possible the gradual ebbing of energy and life. In camp jargon this is called dying away."

Each group of camps has a hospital—a building exactly like the others and with the same hard shelves to lie on. But there is a little extra food, each patient has a blanket, and some hospitals are transformed into a kind of paradise by the presence of a devoted doctor, who is usually also a slave. He is limited by lack of supplies and by rules designed to kill rather than cure his patients. For example, a "quota of sickness" will be established, and those who fall sick in excess of the quota must be turned away.

The most heart-rending thing in the Nazis' slave trade was the breaking up of families. In thousands of cases, however, the Germans did keep prisoners in family groups. But in Russia it is a general rule, even in mass deportation, that husbands and wives shall be torn apart and scattered beyond the possibility of communicating with each other. The same rule is often applied to parents and children.

The degree of cruelty fluctuates at different times and places, but similar regulations prevail everywhere in the camps. For the principal purpose of the whole institution is to punish and exterminate, with incidental profit, the enemies of the dictatorship. There is a constant dread of kindly feelings creeping in, and every guard knows that if he does not live up to the Soviet standard of cruelty he is in danger of being condemned to slavery himself.

On what basis are Soviet citizens chosen for this doom of slavery? They are people who obstruct, oppose, criticize, or are suspected of secretly disliking the totalitarian Communist regime.

The most privileged among them, strangely enough, are those who obstruct through moral delinquency—criminals such as thieves, burglars, murderers. The least privileged are those who simply oppose the regime because of moral, religious, or political conviction; these are called "enemies of the people." Actual criminals constitute only about 15 percent of the inmates. The rest may be divided into seven groups:

1. Bytoviks. This is a new Soviet word for the crime of "degeneration" from the Socialist "way of life." It includes what we call "malfeasance in office." Since, under state ownership, even the man who sells lemonade at a soft-drink stand is in office, there is an inexhaustible source of recruits for the slave camps. For instance:

A woman cook on a collective farm forgot to salt the dinner. She was prosecuted for "failure to perform official duties."

A man sent to town by a collective farm to sell rye sold it at 23 rubles instead of 26 or 27. He was arrested for poor salesmanship.

2. Kulaks. These are the enterprising and successful farmers—peasants who had honestly acquired a little more land and cattle than their neighbors, and believed in their right to keep them. This is the largest group of slaves—and, because of their husky frames and habits of hard labor, the most valuable. They were deported by millions (whole villages were deported) when the peasants were driven into the collective farms in the early thirties. As the kulaks die off their ranks are filled by those members of collective farms who, in spite of police and propaganda, go right on hankering for farms of their own.

3. Industrial workers condemned for lack of discipline or obstructing discipline—a heavy crime in the Soviet code, which includes repeated absenteeism or tardiness; or, worst of all, protesting against hours, wages, or conditions of labor.

4. Workers and Communists from foreign countries, lured to Russia by the promise of a millennium. Having come as pilgrims to the fatherland of international socialism, many remain as convicts in a country which regards all foreigners with suspicion. Also, Russians who have been abroad and are considered contaminated by the bourgeois culture of the western world and those who maintain relations with foreign visitors.

For example, a girl named Aniechka attended a ball where she won the prize offered for the best waltz. The wife of the Italian consul was present, congratulated the winner, and talked pleasantly with her for 2 or 3 minutes. The next day the girl was arrested and sent to forced labor.

5. Recalcitrant priests, people sentenced to hard labor for their religious beliefs, and intellectuals condemned for their opinions.

6. Several million citizens of Poland, Bulgaria, and other satellite states. These have formed a new category of slaves since the war ended. They are selected and treated the same as the Russian slaves.

7. Repatriated Russian prisoners of war. It is a rule in the Soviet army that no individual soldier shall surrender; he must die fighting. Therefore, all liberated Soviet army soldiers are brought before a commission which decides whether they are innocent. Hordes of them have been shipped into the slave camps; many have wounds testifying how well they fought for their country. It is this doom of slavery hanging over them that has caused thousands of Russian soldiers to resist with violence the proposal to send them home to their native land.

Legally, any commitment to the camps is for a limited period of time, but the MVD knows no law. Its sentences can be extended, just as they can be imposed by administrative order, and they usually are. It is estimated that only 5 percent of those who have been condemned to the camps are ever released.

Why this monstrous practice has been almost unnoticed in the world press is a mystery. In 1930 the Treasury Department of the United States put an embargo on Soviet pulpwood and matches as products of forced labor. But Molotov—who had just been appointed Premier—quieted the rumors with a prodigious lie:

"Many an unemployed worker of the capitalist countries will envy the living and working conditions of the prisoners in our northern regions." The embargo was lifted by the State Department. Any rumors escaping since then have been scotched by fellow travelers, who still maintain that the camps are little more than pleasant summer homes for Boy Scouts.

Henry Wallace, on his visit to Russia and Siberia in 1944, apparently failed to see a single one of what Wendell Willkie called the usual concentration camps. Wallace had his picture taken in happy company with Ivan Nikishov, the brutal head of Dalstroi, the hugest and most dreaded group of death camps in Siberia. Here, in a territory several times the size of France wholly ruled by the MVD, slaves are dying by the thousand in the frenzied effort of the Soviet Union to surpass other nations in the production of gold. In the title of his picture Wallace calls this captain of human extermination a big industrial boss.

Such ineptitudes would be impossible were it not for the deceptive way in which slavery got started in the Soviet Union. It crept in under the glamour of a utopian ideal. Criminals, Lenin taught, are not enemies but victims of society—of capitalist society. Under socialism, he proclaimed, they need only be reeducated through labor, and crime would disappear from the world.

A genuinely humanitarian penal reform was initiated in Russia, and traces of it endured until 1928 when the gigantic effort of the 5-year plan extinguished all ideals except that of getting work done. The benign notion of reeducating convicts then disappeared in the frantic search for brute labor power. All that remains today of Lenin's ideal is the privileged position of actual criminals in the slave camps.

The MVD and the Ministry of Justice have insisted again and again that class enemies be treated more severely than nonpolitical criminals. Semion Firin, a high MVD official, announced, "We say to you common criminals: we do not consider you as enemies because in your midst there are no sons of landowners and manufacturers."

There are thousands of children in these camps, for the decree of 1935 extending the full penalties of the criminal law to minors above the age of 12 has never been revoked. Babies are born, too, in this empire of starvation. Sexual intercourse is forbidden to the slaves, but many women resort to it coldbloodedly in the hope that pregnancy will get them a breathing spell and an extra ration. In the seventh or eighth month they are removed to a special maternity camp, where for a year they have lighter labor. At the end of the year the baby is removed to be brought up (the mother never knows where) by the state.

In adopting the institution of slavery, Soviet leaders had to solve a difficult economic problem. In 1932–33 the average wage of hired labor in the Soviet Union was 1,496 rubbles a year, and the cost of upkeep per prisoner in the slave camps was estimated at 500 rubles. This seems a big saving, but is not enough, under normal conditions, to compensate for the well-known inefficiency of slave labor.

Soviet Marxists, well aware of this difficulty, have solved it under socialism in a way that capitalist society could not even attempt. They compel interest in the work by keeping the mass of the slaves hungry and by rationing food to them in proportion to the work they do. Those who cannot or will not work enough to cover their subsistence—the weak, the sick, the refusers—are fed so little that they die before their subsistence cost has become a serious item.

Another eyewitness report says: "Nobody who has not studied the records of life in these hells can come within miles of understanding to what abysses of moral stupor and animal need a human being is reduced by all this. Everything which is capable of sustaining individual and human dignity is remorselessly ground out of existence. All privacy, decency, and gentleness are liquidated. The animalizing effect of prolonged hunger and the accompanying stupefying of mental and moral powers is always at work. The human being within the carcass dies progressively; and a suffering, stupefied animal takes its place."

It is to hide these facts that the iron curtain was pulled down. It will stay down so long as there are eyes of freemen left to see

what monstrous thing has befallen mankind in the name of socialism.

Mr. Speaker, how any man can read this testimony and then refer to Russia, or any other communistic country, as a democracy is more than I can understand.

If President Truman will break relations with Soviet Russia and refuse to recognize that horrible regime until freedom and liberty and justice have been restored throughout the now communistic-dominated areas of this world, the people will rally to his support, and America will take her place as the great leader in the onward march of our Christian civilization.

This is the time to act. The hour for decision has arrived.

Justice for the Italians

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the April 1947 issue of the magazine Trade With Italy:

JUSTICE FOR THE ITALIANS

(By Representative EMANUEL CELLER, of New York)

Speaking at a dinner in his honor in New York last January 13, His Excellency Alcide de Gasperi, Prime Minister of Italy, concluded his remarks as follows: "I * * * tell you that Italy has the utmost faith in your collaboration, in your understanding of Italy. Italy's interests are similar to the interests of the American world. I ask you to have faith in us. Do not think that our country will lose its bearings, even though hesitations and oscillations prevail at present. Our country is aware of the grave situation it faces, but it also feels the responsibility of saving its people, and also of saving democracy in Italy, which is more than national responsibility. It is the responsibility of a country which feels it is a part of humanity and knows that tomorrow no innovation will take place in the world without the collaboration of a people like the Italian, and knows it will be capable of contributing to this new world order with all its strength and with all the tradition of its radiant civilization." This is a very eloquent statement and one which undoubtedly touched the hearts of many Americans.

However, in Paris, on February 10, 1947, the Italian Government reluctantly signed a peace treaty with the Allies whereby she lost Trieste and the area around it; ceded part of Venezia Giulia to Yugoslavia; transferred land in the Tenda Briga regions to France; agreed to return the Dodecanese Islands to Greece; yielded control of her African possessions, including all her special rights in Ethiopia; submitted to cutting her navy to the bone; will reduce her army to 135,000 and limit the police to 65,000; practically abolished her air forces; agreed to remove or destroy her frontier fortifications; agreed to pay $100,000,000 indemnity to Russia. Furthermore, Italy had to accept economic and financial terms which took into account her late entry into the war on the Allied side and which were written by and for major victorious powers.

To say that these provisions are, in many ways, Draconian, may be considered to be an understatement by the Italians. To the Italians, it seems that very little has been left to them.

Sad to relate, treaties are the inevitable aftermath of every conflict and history is replete with evidence that they do more to keep open the old wounds and prevent the healing of new sores than any other procedure that man has so far devised. The victors, abandoning the dictates of logic and justice, impose their will on the vanquished. In the superheated atmosphere which such conferences usually generate, many important factors are overlooked or laid aside. Neither Italy's problems nor the problems facing the world have been solved by the Italian peace treaty—on the contrary, they are aggravated.

We constantly refer to the fact that two world wars were fought within the life span of one generation and unhesitatingly recognize that such strife has caused deep disturbances which have induced profound and fundamental changes in the economic, social, cultural, and psychological relationships of nation with nation, man with man. Through treaties of peace, we solemnly reassure each other that we will create a salubrious climate, as it were, wherein peace and prosperity for all may flourish and endure. Yet in this particular instance, we Americans failed in our responsibility toward Italy. We failed to recall that the cordial friendship existing between Americans and Italians has had a long and solid history. Until the arrival of the Fascist regime under Mussolini, Italy and America enjoyed the fullest exchange of cultural and commercial relations in amity and accord. We failed to remember the constant stream of immigrants from Italy to our shores, enriching our endurance and vitality, becoming loyal and devoted citizens, respecting our traditions and institutions. Italians in Italy and in America shared our dream and completely subscribed to the American principles of freedom and democracy. Italians in Italy proved their devotion to these ideals when, upon the express invitation of the United States, they overthrew Mussolini and his cohorts who had, against the deep-seated, well-known sentiments of the Italian people, entered into a despised alliance with Hitler and his hangmen. In 1943 Italy declared war on Germany and set up a democratic form of government. That important fact is much too easily forgotten.

She threw herself into the military struggle on behalf of the Allies with commendable zeal. Italian regular troops in the liberated areas and the patriots in the German occupied territory wrote page after page of military heroism. Thousands of Italian workers assisted our armed forces in the distribution and transportation of supplies. The army of Partisans daily risked their lives, proving itself one of the most effective resistance movements in Europe. They saved countless American lives. They were the torch bearers of Italian freedom. Resistance in Italy during the German occupation was practiced by all classes of the population, peasants, farmers, industrial workers, intellectuals, and priests. There were industrialists in the north who paid their workers to go on anti-Fascist strikes or commit acts of sabotage, and two great commercial banks financed the resistance. When the underground movements emerged after liberation, the emphasis shifted from resistance to administration, from disciplined unity among men of good will to partisanship and politics. The anti-Fascist leaders in whom formerly quickness of decision and fearlessness were the chief requisites now had to prove that they could bring food to starving people and do thousands of other tasks for which there was little material available.

Millions of loyal Americans of Italian lineage made every sacrifice on our home front, contributed hundreds of thousands of men and women to the armed forces of the United States, fought and died on the battlefields of the world for the American ideals of freedom, tolerance, and equality.

But, above and beyond her participation in the military effort, Italy's claim to equitable treatment is based on humanitarian grounds. Friends of Italian democracy everywhere realize that the Italian people were duped and inveigled into participation in one of the great crimes of history. Released from the thrall of Fascist propaganda, Italians view the invasions of Ethiopia, Albania, and France in a true, clear light and bewail the black marks on their proud escutcheon. But Italy has paid dearly for such violence in the desolation and death which was subsequently visited upon her and has proved to the world that she is fully contrite and anxious and willing to redeem herself.

The treaty foisted upon Italy is not, in all respects, what former Secretary of State Byrnes would have liked to bring back. Indeed, it is not the treaty that the Americans, the British, and the French would have made with Italy. It is a treaty forced upon all by Russia. Yugoslavia had no moral claim to Trieste, yet Russia fought like a demon to get Trieste for the Yugoslavs. It was only due to the insistence of the other three powers that a compromise was effected and Trieste was internationalized. Russia was so adamant that, were not this compromise agreed upon, there would have been no treaty. It was a case of bending—rather than breaking. Furthermore, the Americans felt that if a treaty could be made with Italy, the way would be cleared for similar treaties with other Balkan countries and finally a treaty with Austria. The result would be that Russia would withdraw from southeastern Europe. We now know how vain were those hopes. Russia remains in southeastern Europe and seeks to extend her sphere of influence by political infiltration and otherwise through Greece and Turkey and even beyond. President Truman, in his speech to the assembled Members of both Houses of Congress on March 12, 1947, rightfully promulgated a new Monroe Doctrine for the Mediterranean Basin. He said, in effect, to Russia, "Thus far shall you go—and no further." His pronouncements received the plaudits not only of our Nation but of the nations of the Western World.

One can say, without fear of contradiction, that the Italian peace treaty does not conform to the Atlantic Charter, disregards Italy's status as a cobelligerent, and neglects the promises repeatedly made by the Allies before the Italian surrender. The Italians are of the opinion that practically all their requests of an economic nature have been rejected. It is emphasized that the peace treaty imposes upon Italy a financial burden of more than $13,000,000,000, not including reparations payable to any country except Russia or the value of the territories to be ceded.

The Italians have been deeply resentful of the fact that demand is made of them that they give up all but a small number of war vessels to their former allies, considering that such a proviso treats their navy as war booty.

Let us not forget that nations of the Western World ardently desire to keep Italy democratic. One of the most effective ways to assist the spread of communism is to keep a people hungry. Empty stomachs make desperate minds. We must supply Italy with at least her minimum needs of grain and cereals. If Italy's national economy is not made more self-sustaining, she will undoubtedly turn more and more to the left. While Italy has not been recognized as a full-fledged cobelligerent as was Greece, nevertheless the reasons for our aid to Greece and Turkey run parallel with the need to aid Italy.

Every effort must be made to revive and stimulate trade between the United States

and Italy. We need each other. The Fascist regime did everything in its power to destroy this commercial relationship. Plans are afoot to eliminate discriminatory trade barriers and the coming conference at Geneva will set-up the International Trade Organization, the results of which should be of great benefit to Italy as well as the United States. Italy has much to sell us and we have much to sell in return. She can buy our capital and consumer goods with the dollars she secures through the sale of her olive oils and wines. No stone should be left unturned to build a great bridge of trade between our two countries. We might well set-up a trade commission to which both countries might send delegates, initiating steps to develop trade. In this connection, Italy should be permitted, even at the expense of amending the treaty, to rebuild her merchant marine.

But, above all, every effort should be made to admit Italy as a member of the United Nations. Such world-wide recognition of her national sovereignty would certainly bolster the morale of her people and the prestige and distinction thus bestowed would do much to assist her people in their progress toward a glorious future.

Radio Address, Station WMEX, Boston, Mass., Thursday, April 3, 1947

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered on Station WMEX, Boston, Mass., Thursday, April 3, 1947:

Ladies and gentlemen of the radio audience, your business, and that of every adult living between the Atlantic and Pacific Oceans in that great country stretching from Canada to the Gulf of Mexico, is the Government of the United States.

All of us are partners in that enterprise, sharing its gains and its obligations.

Today, many of our people are thinking only of what they can get from the Government, forgetful of what they must give to it in terms of alert and intelligent citizenship.

This Government of ours is what we make it. It is idle to complain about its doings, unless we carry over our criticism into positive action. Public opinion is the dynamic spirit of a democracy. It must be ever vigilant in the expression of its will, so that we may have better laws for a better country.

The United States is the only free country on earth.

You and I are concerned about the spread of communism throughout the world, and the challenge it hurls at our way of life. That is the danger from without, and I do not propose to minimize it. But tonight I want to speak to you about the danger from within.

Slowly but surely it is extending its influence over every phase of your life, during your hours of work and your hours of relaxation.

Ever since the days of Abraham Lincoln our leaders have warned us of this encroaching evil, but even at this late day the people are not aroused to their peril. It is stealing upon us so softly that we are not aware of its coming. It does not employ the naked force of firing squads or concentration camps or any of the outward measures of tyranny. Nevertheless, day by day, we are becoming more helpless before its increasing power.

Why do so many Americans feel a vague uneasiness about the future? We have emerged victorious from a war which threatened our national security. More people have jobs today than ever before. The standard of living is certain to improve, as measured by the comforts of life and the extension of educational and cultural opportunities to more and more of our people. With the tremendous backlog of needs which must be met industry and labor should be looking forward to new production records. And there is more money in circulation with which to buy the things which are produced. In the light of these facts we should be confident, but we are not.

What is it, then, that we fear?

I say that it is the growing concentration of economic power in the hands of a few. Before this trend the average man feels dependent, and helpless, and unhappy. For a new form of tyranny is bearing down upon him.

All of our tragic experience of the last 20 years may be traced to the growth of arbitrary power. In facing this fact let us realize that totalitarianism comes in many forms and disguises. Oftentimes one monopoly has been fighting another monopoly, and we have been led to believe that one is virtuous and the other is vicious. We have been blind to the danger that, in this contest of the giants, if only one monopoly comes out on top, then all will be enslaved.

Fascism came first. Next there was nazism. And now communism. The threat of two of them has been eliminated. The last one poses a threat and the answer to that is still locked in the not-too-distant future.

In these terms, we have seen the danger of uncontrolled bigness. Meanwhile, the growth of the irresponsible power has been going on here at home. The temporary collapse of monopoly, in 1929, largely as a result of its own excesses, brought suffering to tens of millions of Americans. It was then that we began to realize that our ability to work and our willingness to work were not enough. The opportunity to work had passed out of our hands and into the control of a small number of men. Economically, we were at their mercy. They milked the Nation and then told us to go hang. The depression which followed should have taught us that we must be unremitting in our efforts to see that this does not happen again. For the war just ended was caused in part by the sins of monopoly in America.

This must not happen again. Neither we nor the world can pay again for such folly.

In an effort to combat this, we have seen two other forms of monopoly develop in America, one in Government and the other in labor.

We in New England have been fortunate in escaping industrial strife. Our labor leaders have been responsible men who have not given in to the lust for power. They have truly recognized that through organization they can win bargaining rights for the workers they represent.

This has not been so in other sections of the Nation. Not long ago, we witnessed the sorry spectacle of one labor leader who tried to browbeat the Government and put himself above the sovereign interests of the people. For some time the issue remained in doubt, and while it did we suffered from an artificial shortage of fuel and light and the electric power that we must have to meet the everyday needs of life.

The menace of monopoly has also reared its head in Government. The vast growth of bureaucratic agencies, with department heads issuing directives which have the force of law, though not passed upon and established as law by the representatives of the people, is an extension of personal power which must be curbed.

But while we take necessary steps to regulate these two monopolies, we must not overlook the essential fact that the dominant force in America today is ownership and control over the means of production. Big business is absorbing little business and is building up private economic states with far more power over your lives than you realize.

Sometimes, a leader of big business squarely faces the issue. In 1925 the board chairman of one of our largest motorcar manufacturers said, and I quote: "Sometimes I am almost forced to the conclusion that our company is so large, its inertia so great, that it is impossible for us to be real leaders."

At that time, the assets of this company amounted to a mere $700,000,000. At the end of 1943, they had climbed to over $2,000,000,000.

In 1941, this corporation's car and truck sales amounted to 45 percent of the total United States motor-vehicle industry. More than 300,000 people were directly attached to the pay roll. These, in turn, influenced the jobs of millions of others. When you add this company's army of stockholders and those dependent upon this organization for purchases and products, you realize that it is an economic state bigger than most political States of the Union.

This is but one example of the trend toward concentrated power. There are many others. The danger to you is in the fact that with size, come controls, the political and social controls that strangle liberty.

Out of $175,000,000,000 worth of contract awards made by the Government between June 1940 and September 1944, $107,000,000,000, or 67 percent, went to only 100 of the more than 18,000 corporations receiving such awards.

In 1941 the Temporary National Economic Committee warned us that, and I quote: "It is quite conceivable that the democracies might obtain a military victory over the aggressors only to find themselves under the domination of economic authority far more concentrated and influential than that which existed prior to the war."

Since 1940, 1,800 independent manufacturing and mining concerns have been swallowed up by big business. One of the reasons why we have big Government and big Labor, is the effort being made to regulate this colossus for the public good.

Even now, I regret to say, there are a few industrialists who are itching to get their fingers on the control of atomic energy, for that would give them the last and supreme monopoly.

Back in 1917, President Wilson believed that criminal laws had to be enacted to prevent the existence of trusts and monopolies. "What we must really fear," he said, "is the combination of combinations which are becoming so powerful as to be entirely out of the bounds of human conception * * * and entirely beyond the power of democratic controls."

It was at Grand Coulee Dam on October 2, 1937, that President Roosevelt hit the nail on the head when he said, and I quote: "In place of the independent businessman, we have the managing clerk of the chain store who cannot even make a credit sale, and a superintendent has taken the place of the factory owner. Big business has found it to its advantage to rotate even these men, so that no one of them is left in the community long enough to get his roots established or to really become a part of the life about him. Thus, big business has devoured its own young, destroyed its own defense. The small businessman has been crushed, merged, consolidated, or otherwise retired. Local independence and responsibility has been sacrificed to balance sheet values."

In this year of 1947, President Truman in his message to Congress pointed out that fewer men now control more economic power, so that whole industries are dominated by one or a few large organizations which can restrict production and thus reduce employment and purchasing power.

Faced with these facts and solemn warnings, what are we, the public, going to do in order to protect ourselves from the dangers of this super-government?

Far back in 1914, the Congress passed the Clayton Act, designed to curb monopolies. This could be done, it was thought, by prohibiting one corporation from purchasing the capital stock of another. Since then, however, corporations have by-passed the plain intent of the act by purchasing the physical assets of their competitors, instead of the capital stock.

This loophole must be plugged to hold monopolies in check.

Hearings are now being held by the House Judiciary Committee on H. R. 515, sponsored by Congressman KEFAUVER, of Tennessee. The purpose of this bill is to stop the alarming increase in mergers and acquisitions.

The forces of monopoly are out to kill this proposed legislation, but you, the public, are yet to be heard from, demanding that it be made law.

The rapid growth of private supergovernment in industry must be halted before it leads, as it surely will, to political supergovernment and all the evils of tyranny.

The civil liberties which we now enjoy, will disappear if free enterprise is smothered. And by free enterprise I do not mean the special privilege of corporate giants to seize complete control of our economy. Instead, I give it the American interpretation, which means the chance for you, the average citizen, to start up in business on your own, or to have the opportunity of a job.

Monopoly or freedom—which is going to prevail?

The issue depends on you.

Rev. Geoffrey C. Stone

EXTENSION OF REMARKS
OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. ROONEY. Mr. Speaker, under the permission granted me by the House today to extend my remarks in the RECORD, it is my privilege to include the following address made by Rev. Geoffrey C. Stone, C. SS. R., of Our Lady of Perpetual Help Church, Brooklyn, who served with great distinction overseas during the late war as a chaplain in the United States Army, at the annual communion breakfast of the Shipbuilding Branch of the Supreme Anchor Club, held at the Columbus Club, Brooklyn, on Sunday morning, April 13, 1947:

Mr. Chairman, distinguished guests, members of the Shipbuilding Anchor Club, when my good friend, Joe Martino, chairman of the speakers' committee, asked me to address you on the occasion of your annual communion breakfast, I accepted gladly, for I have always found it a pleasure to talk to a group of Catholic men. My words this morning will lay stress upon both your manliness and your Catholicism.

As Catholic men, there are three things that are of the utmost importance to you in this life—your home, your country, and your religion. This trinity of interests fundamentally underlies every other thought or concern, even though, as fundamentals, they may seem pushed into the background of daily affairs.

Home: Most of you are family men. The rest hope sooner or later to become such. Your status is that of a very important vocation in life—to some quite evident, to others dimly recognized, by still others altogether too often neglected or completely ignored. Your daily labor is both arduous and hazardous, but it's man's work, and there is something not only exhilarating but elevating in a tough task attempted and a successful job achieved. There's nothing ignoble about hard work. It takes plenty of stamina, endurance, perseverance, vigor, energy, with a combination of brain and brawn, to put through the job. Pride in achievement is some reward, but not sufficient to override the natural desire for comfort and ease. One must eat; one must clothe oneself; one must have a place to rest one's weary bones. Man likewise has the innate urge to reproduce his kind, to take pride in the "chip off the old block"—or the many chips—to provide some few tokens of love for the life's companion who is his helpmate in the glorious task of rearing children as children of God and heirs to the Kingdom of Heaven. That's what keeps most of you going day after day, year after year—the necessity of providing to the best of your ability for the loved ones at home. Without that incentive, you would soon falter, grow discouraged, and quit. Those of you who are activated by love of wife and kids, and are concerned with the nobleness of your vocation under God, are vitally interested in the present well-being, and the future development of those choice souls which God has entrusted to your care. Anything that will benefit them now, and afterward in adult age, is a matter of importance; anything that is of detriment to them now, or which may harm them in future, is to be combated with all the ardor and earnestness that love for kids and hope for their happiness can demand. Many a man dies happily, despite a life of constant toil, in the assurance that he has fulfilled the obligations of his vocation in leaving children well reared, decent living, God-loving, and a joy in his old age. He has a right to expect the reward of an eternal happiness.

Now, at the present time particularly and fanatically, there is a powerful surge of blatant materialism, which seeks to break asunder the bonds of love and religion cementing family life. A philosophy of life, at great variance to the stated views of the God who created us, would stage man in the role of barnyard rooster, with his prolific progeny gobbled up by an omnipotent state, for indoctrination in diabolical dogma and devilish theories, and eventual freedom—good God—as slave laborers in concentration camps. The pattern set by the Mother of God as the virtuous model of Christian womanhood, the imitation of which has ennobled a man's wife and a child's mother to a status worthy of veneration and greatest respect—that pattern would give way to the very dubious dignity of a highly productive hen or a prize sow. Love, pure, decent, honorable love, descends to the slimy depths of an abominable, dishonorable lust. Home, family life, give way to the stalls of a brooding farm.

Men, your kids face just such intolerable degradation, unless you do something about it. Your own flesh and blood, the little boys and girls who were this very morning nourished by the flesh and blood of Jesus Christ; that cute little trick who causes you to swell with pride as he serves at the altar of God; that sweet little image of her mother who kissed you good-by before you came here this morning; that tiny tyke in the crib who squeezes your heart with its tiny hands; those precious charges are destined for abject misery and perversion if you ignore the inroads of materialism which would supplant the religion which makes them so dear to you and has made you devote your life's energy to them.

COUNTRY

The conduct of the shipbuilding men during the war needs little comment. The glorious record of achievement in the face of tremendous odds is very well known, and highly appreciated. Your patriotism is beyond reproach; it stands shoulder to shoulder with every trade, and with every GI on every combat front. We were as one in considering our country as God's country, for He favored us beyond our fondest and most ardent prayer. We are far from blind to the faults and blunderings of our leaders; we recognize the need of many improvements in our political set-up; we clearly see the necessity for a better and more equable distribution of material wealth, a greater reward for the product of our brains and brawn; we know that our beloved country is far from perfect in many respects, but it is still our beloved country, it is still far superior to any other of the past or the present, and it will still be ours to run as we please, to condemn as we desire, to praise as we think fit—only as long as we fight manfully to keep it our country, and God's country, and not the plaything of any foreign demagogue who would usurp the place of God.

Our country guarantees right to life, liberty, and the pursuit of happiness. It guarantees us freedom of speech, freedom of worship, freedom from fear, and is trying to free us from all material want. We have a right to be born and to live as liberty-loving and liberty-living citizens. We have access to an education to fit us for this life's burdens and eternity's reward. Our home is our castle, and no man dare violate its sacred precincts. We can strive to make it a paradise on earth, and in so striving find comfort in arduous labor that otherwise would be too onerous. All this they want to take away from us, promising us in its stead a nebulous heaven that is farcical when viewed by the pattern they have provided elsewhere. We love our country despite its faults, but we should love it enough to be ready to do something—anything—to preserve it from the danger that threatens it.

RELIGION

Without religion there is no meaning to life. The Creator of our existence tells us what it's all about, in unmistakable terms. Assured of His existence, we are assured of the truth of His words. Calvary proves His love for us; history proves His provident care for His children. The nobility of our soul as the image and likeness of the eternal God ennobles our bodies that otherwise would be but magnificent animals. With understanding of the eternal home as the goal of our existence, we are enabled to suffer the many difficulties of this life, with patience, in the eventual relief we expect to receive from the sweet yoke and light burden placed upon us here, that we may not seek an earthly heaven, but look beyond to the future. "We have not here a permanent dwelling place, but we seek that which is beyond." Evil and sin must be punished by the justice of God. This may be a vale of tears, where we eke out our existence in the sweat of our brow, but we know that the comparatively little we are called upon to suffer here is but a trivial punishment compared with what we richly deserve. Then, too, that reward offered us is a powerful inducement to a worthy life.

Now, along comes the preaching of a new religion, which offers release from all the dictates of a God. It denies the existence of a God, it derides the notion of a soul, it scorns credence in a hereafter. We are but animals owing our existence to a superstate, thoroughly and absolutely dependent upon it for our slightest need, destined to serve it slavishly for the whole span of our existence, and to end that existence on a dung heap. There will be no country to cherish, no home or loved ones to enhearten us, no future life to encourage and strengthen us. Just a pitiful endurance, as long as we are the profitable slaves of a self-established superman called Joe.

Today there is much talk of war, but the next war will not be between nations. It

will be between the adherents of Christ and those of anti-Christ, between the votaries of good and those of evil, between those who look to heaven for guidance and those who follow the behest of Moscow. I cannot bring myself to believe that all the Russian people have been contaminated by the vicious teaching of the Kremlin, though millions have been slaughtered for their refusal. No more can I imagine a total lack of decency in Poland, or Czechoslovakia or Yugoslavia, or the other benighted countries in the control of communism. But there is control, and there is a diabolical power pushing constantly for more and more power—to extend its tentacles about the entire earth. Neither can I imagine how an American could wish to exchange the rights and liberties here enjoyed for the slavery offered the fellow travelers, but I know it is so—though I cannot understand it. That the fatherhood of God and the brotherhood of man should be scrapped so as to accept the unclehood of Stalin is beyond my mental concept. Uncle Sammy may have his bad moments, but he's not a bad uncle by and large. Uncle Joe looms large as anti-Christ, and Simon Legree, and No. 1 man among the devil's advocates. That there should be freemen who wish to become slaves is impossible—though it is so. That there should be Americans who prefer communistic domination is just as impossible—yet just as much a fact. That there should be those who call themselves Christians and yet worship at the shrine of Joe Stalin is still an impossibility—but we have them all about us. For years the Catholic Church was almost alone in warning us of the danger—like a voice crying in the wilderness. Her words fell upon deaf ears, for only religion—only religion—was at stake. When we awoke to the threat to our country's safety, the cry became more articulate. Must it be that our home and family be desecrated and dissolved before we are fully aware of what is going on in our midst?

Just what are we going to do about it? As long as we picture the next war as an engagement between a backward and besodden country on the other side of the world, and our own modern and progressive America with its atom bombs stocked away, just so long will we stifle a yawn and turn over for another nap. But if we once realize that a fanatical fifth column is already at work amongst us, with fellow travelers seeking control in every organization and club, every office and business, every society and union, and are found even in high and powerful places, then it is time for us to wake up and become aroused from our lethargy. We can fight and conquer, subdue and annihilate this monster in our midst, by first of all recognizing its presence wherever it raises its ugly head; by calling attention to its presence that others may be warned and protected; by avoiding contamination from its poisonous breath; by staying beyond its clammy and filthy touch; by arming ourselves against the treason of its proferred rewards by a renewed love for our country; against the atheism of its doctrine by renewed faith in Almighty God and acknowledgment of His providence; against the viciousness of its lust by remembrance of the loved ones at home.

Do not permit yourselves to be enticed to the chopping block by a few kernels of corn thrown to you. Fight for your rights as freemen, but not at the cost of your liberty. Use the brains that God gave you, and figure out the meaning of every move—don't be as sheep led to the slaughter. Above all, live as Catholic men should live, so that the example of your lives may be a powerful deterrent to those who wish to imagine that Christianity is dead, and a powerful incentive in leading the doubting to a study of your way of life, in the hope that they may see that God still reigns in the heavens and lives in the hearts of men.

Doing All Right

EXTENSION OF REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. ELLIS. Mr. Speaker, it is gratifying to note that more and more of the newspapers throughout the country are coming to the realization that this Republican Congress is doing a good job. They are expressing the confidence that we will do, in a large measure, what the public expects of us. I submit, for your consideration, an editorial from the Times-Record, Spencer, W. Va., one of the great weekly newspapers of this country, edited by Mr. Norman Laughlin, wherein he directs attention to the tremendous handicap under which we have been laboring, and agrees that the Congress is doing all right.

The editorial follows:

DOING ALL RIGHT

There has been considerable complaining in the press that the Republican Congress has not acted on tax reductions, new labor laws, etc. Most of this comes from the Democratic Members themselves, and from the Democratic press. For our money, we feel that the Congress is conducting themselves in the proper manner, by giving careful study to the matters that they will act upon.

The new Congress took office in January, the Republicans in control for the first time since 1933. Since that time America has never witnessed the equal of class legislation, and hundreds of laws enacted for the sole purpose of getting votes regardless of how they affected the bulk of the taxpayers.

Now, Democrats are clamoring for speed, haste, and what have you? And President Truman, who has not been one of the howlers, has nevertheless created at least two grave emergencies which have put Congress back considerably with their regular work. Of course, there is nothing to prevent him from creating more emergencies, a means successfully used by his predecessor to attempt to arouse public opinion to his side of a question.

The Republican Congress will cut taxes, and they will put the budget in the black—but this is not going to be an easy task. They have President Truman, the administration Democrats, the Army and Navy, and the "pork barrel" politicians against them—but even against these odds, it can be accomplished providing the President doesn't recommend loans to nations across the waters faster than Congress can trim his inflated budget.

Labor legislation will be enacted—or better yet, kill off some now on the books, like the Wagner Act. But this must be done with caution, certainly this cannot be done after a few days' hearing before a committee. Give them an opportunity to do what they feel is best for all Americans, not just a few powerful labor outfits.

The Times-Record has faith in the present Congress. And so do the vast majority of the people. We do not feel that the mess that it inherited can be straightened out in 90 days—it will more probably take 90 years—but this Congress will start the ball rolling, you can be sure of that, and you can likewise be sure that it will be rolling in the right direction.

A Decisive Week

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. KELLEY. Mr. Speaker, with permission to extend my remarks, I include an editorial from the Boston Post. It is interesting because it calls attention of management to the shortcomings in the pending labor bill, H. R. 3020.

The editorial follows:

A DECISIVE WEEK

A decisive week for industrial peace and harmony in the United States will open next Tuesday, when the Fair Labor Standards Act, setting forth changes in the Federal wage-hour law, will be reported out of the House committee in Congress.

In its present form, as it is about to be reported out of committee, it provides for setting up a labor-management relations board of three, with no more than two from a major party, to act in a judicial capacity over all labor-management disputes, and provides for an administrator paid $12,000 a year who would serve as investigator and prosecutor of violations.

It also provides for a conciliation service outside of the Department of Labor to serve under the executive branch of the Government as an independent agency.

The inherent weakness of this kind of a set-up to administer fair labor-management practices and to curb excesses of both management and labor is the virtual impossibility of finding men capable of wielding such enormous power, or of securing from either management or labor four men who would have the support, approval or respect of both management and labor.

This would be a quadrumvirate with unprecedented power over both management and labor, if, indeed, an administrator could be found willing to take the kind of a brutal beating which will surely be meted out by the opposed factions, for the sum of $12,000 a year.

Both management and labor would do well to scrutinize the Fair Labor Standards Act, and make certain before final enactment that this product of the high temper of the times does not conceal the seeds of a greater disunity.

While there are provisions in the bill in its present form to halt industry-wide bargaining, the safeguards against the use of a multitude of minor local strikes are too intangible to be of any real service to the Nation.

The Congress must consider that a key union or a key local can wield as much power in bringing an industry to a stop as an industry-wide union. In the textile industry, for example, a strike of loom fixers can bring a whole plant to a stop.

To take militant action against a whole industry, labor leaders need have control only of the key operation without which an industry cannot run. Such a key operation pulls the switch on all the rest.

Similarly, management might take a closer look at some of the clauses in the proposed act which appear to be most favorable to the cause of management. There is a provision that management's last offer to employees shall be printed on a secret strike ballot to determine whether the employees reject the offer and prefer to strike. It does

not require any intensive cerebration to detect the peril in that. What both management and labor want and will approve is a formula for reaching a fair and equitable understanding long before a dispute reaches the stage of a strike vote. For, if a strike is imminent, very few employees are going to stop to read the fine print on their secret ballots.

If the Fair Labor Standards Act is only an attempt on the part of the majority party in the Congress to demonstrate a desire to put an end to management-labor warfare, with the foreknowledge that President Truman would exercise his veto, it is dangerous and mischievous. If it is seriously proposed as a means of ending management-labor struggles it falls far short of being constructive legislation.

Concurrent Resolution of the Legislature of the State of New Jersey

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the House of Assembly of the State of New Jersey:

Concurrent resolution calling upon New Jersey's representatives in the National Congress and the Legislatures of the sister States and all good citizens to restore the American Republic and the forty-eight States to the foundations built by our fathers

PREAMBLE

New Jersey needs no guardian and intends to have none. We Garden Staters, like the people of our sister States, were fooled for quite a spell with the magician's trick that a dollar taxed out of our pockets and sent to Washington will be bigger when it comes back to us. We have taken a good look at said dollar. We find that it lost weight in its journey to Washington and back. The political brokerage of the bureaucrats has been deducted. We have decided that there is no such thing as Federal aid. We know that there is no wealth to tax that is not already within the boundaries of the forty-eight States.

So we propose henceforward to tax ourselves and take care of ourselves. We are fed up with subsidies, doles and paternalism. We are no one's stepchild. We have grown up. We serve notice that we will resist Washington, D. C., adopting us.

Be it resolved by the General Assembly of the State of New Jersey (the senate concurring):

1. We respectfully petition and urge New Jersey's Congressmen and Senators to vote to fetch our county court house and city halls back from Pennsylvania avenue. We want government to come home.

2. *Resolved, further,* That we call upon the legislatures of our sister States and on good citizens everywhere who believe in the basic principles of Lincoln and Jefferson to join with us and we with them to restore the American Republic and our forty-eight States to the foundations built by our fathers.

Address by Hon. Arthur H. Vandenberg, of Michigan, Before Pan American Union

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15 (legislative day of Monday, March 24), 1947

Mr. WHERRY. Mr. President, on April 14 the distinguished senior Senator from Michigan [Mr. VANDENBERG] addressed the Pan American Union. I ask that this very forceful speech be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to join this morning with the representatives of 21 American Republics in commemorating the founding of the greatest continental community of nations which has ever blessed the peace and progress of the world.

I am deeply grateful to the "good neighbors" who form this international fraternity for the privilege of speaking upon this significant occasion which symbolizes our common bonds, our common hopes, our common aspirations, our common heritage, and our mutual good will.

Just so long as we keep our Western World in tune, we shall here preserve the healthiest and most useful regional society of sovereign peoples on this earth.

Looking back to its creation on April 14, 1890, the Pan American Union is 57 years young today. But looking back to the heroic Simon Bolivar and his first Congress of American States in 1826, the roots of our Union stem back nearly a century and a quarter. Those were rugged, pioneering times. Indeed, such were their uncertainties that our own United States delegates to that initial gathering in Panama were unable to participate. One died and the other was a week late. But a glorious idea was born in that first hopeful adventure. The acorn is an oak today.

In those early intervenig years there were numerous significant conferences which market steady progress toward hemispheric peace and solidarity. But it was a particularly important and prophetic day when the present Pan American Union was formally created in 1890; and every succeeding anniversary, from that hour to this, has confronted us with new incentives and new needs to keep our 21 Republics inseverably linked in the friendly unity which is our mutual protection and our incalculably precious benediction. Any threat to this unity betrays the welfare of every one of these 21 sovereign Republics. I am proud to confidently say that this is the firm sentiment of the people of the United States.

Two years ago this month we all went to San Francisco to help build the United Nations in order to knit the peace-loving peoples of the world in one common bond of peace-living fellowship, to serve human rights and fundamental freedoms. It was a tremendous event in the evolution of international morality. But there came a dubious moment when it looked as though the larger, untried project was to swallow up our regional institutions and end their lives for keeps. I shall never forget the thrilling and tenacious zeal with which the American Republics—all of them—sprang to the defense of our pan-American ideal. They were ready to look forward to the larger vision of a coordinated world; but they declined to turn their backs upon the blessed record of a united hemisphere. They were ready to embrace the new fraternity, but not at the expense of abandoning the old. The vitality of pan-Americanism will never have a greater demonstration of affectionate devotion than in those critical days when San Francisco was deadlocked on this problem.

It was my honor and responsibility to serve as chairman of the subcommittee which struggled for many long days and nights to find an acceptable formula which could preserve the overriding authority of the United Nations and yet leave the cooperation of pan-America unimpaired. I joined wholeheartedly with my friends in the other 20 American Republics—as did the solid, sympathetic delegation from the United States—in unyielding insistance upon a satisfactory answer to this challenge. When we finally succeeded with our task, the glad rejoicing was unrestrained. I shall never forget that historic night when each Republic, in turn, spoke from its heart in deepest satisfaction that the problem had been solved. Such relationships are beyond price in the affairs of humankind.

In my opinion it is possible that there might never have been a San Francisco Charter if we had not been able to agree upon chapter VIII on "Regional Arrangements." Equally, in my opinion, the United Nations is infinitely stronger as a result of this regional recognition that the cooperative unity of the Americas shall persist in all its mutual good wills.

None of us would for an instant subtract from the supreme mandate of the United Nations in respect to international peace and security. All of us will seek to build it from strength to strength so that it may grow in functions and facilities. None of us will withhold our willing and unequivocal allegiance to the Security Council and the General Assembly, the Town Meeting of the World, within the framework of the Charter. It was not in conflict with this indispensable objective that we insisted also upon our continuing and historic right to cooperate as friendly neighbors on continents peculiarly set apart and self-contained. On the contrary, the United Nations Charter wisely acknowledges that these two great, basic objectives are not incompatible. Indeed, it expressly enjoins our 21 Republics to maintain our New World unity and to use it to strengthen independent freedom for each and all through regional solidarity and peace. The more successfully we maintain these ties the less burdensome will be the tasks which the United Nations will confront.

To that blessed objective, we, the 21 sovereign Republics of the Western Hemisphere, once more pledge our hearts and hands on Pan-American Day, 1947; and I dare to assert that none among us does so with greater fidelity or stronger faith than the United States.

If and when there are any unfortunate lapses in our close and friendly relationships, it is a necessity of the first magnitude that such situations shall be swiftly and equitably cured; and this is the common concern of all of us because all of us are equals in both the responsibilities and the privileges of this great heritage.

I want to underscore that point. Pan-Americanism is a partnership affair. It must always operate as a partnership affair. More and more, in the last decade, we have been spelling this out at our various conferences. I go back to Buenos Aires in 1936 where, while emphasizing the inadmissability of intervention in the affairs of any Pan-American country, we pledged intimate and mutual consultations (1) if the peace of the American Republics is menaced; (2) in the event of

war or a virtual state of war between American States; (3) in the event of international war outside America which might threaten the American Republics. At Lima in 1938 we improved the procedure of consultation and extended it to economic, cultural, and other aspects of continental solidarity. At Panama in 1939 we called for consultations in case of any geographical region of America subject to the jurisdiction of any non-American state should be obliged to change its sovereignty and there should result therefrom a danger to the security of the American Continent. At Habana in 1940 we improved the process of consultation—again calling for reciprocal assistance and cooperation for the defense of the nations of the Americas. At Rio de Janeiro in 1942 we reaffirmed our solidarity; took note of World War II; recommended the breaking of diplomatic relations with Japan, Germany, and Italy; and called for consultations prior to the reestablishment of these relations in order that this action may have a solidarity character. We also called for consultations in the event of inter-American violations of agreements or treaties. At Mexico City in 1945, we said:

"In case acts of aggression occur or there are reasons to believe that an aggression is being prepared by any other state against the integrity or the inviolability of the territory, or against the sovereignty or political independence of an American state, the states signatory to this act will consult among themselves in order to agree upon the measures it may be advisable to take."

Cooperation is the keynote of the Americas. Consultation, not dictation, is the indispensable means to this end. Partnership is the genius of this relationship. Consultation is its lifeblood. The Ninth International Conference of American States will meet in Bogotá in December to further strengthen this inter-American system and to put our consultations on even firmer foundations. The problems of the postwar world call upon all of us to draw even closer together in our consultations for the sake of our mutual, intelligent self-interest. The Bogotá Conference should be the most important, the most constructive, the most fruitful we have ever held. It should more effectively integrate our consultation system. Furthermore, the Rio conference, originally scheduled for October 1945, should soon implement the Act of Chapultepec and give the inter-American system its permanent status as an integral part of the United Nations peace machinery.

I believe so deeply in this partnership concept of our pan-American relationships and in the process of consultation respecting our interlocking problems that I think it would be wise if our regular International Conferences of American States were held oftener than once in 5 years, and if the regular meetings of the Ministers of Foreign Affairs were annual events. We must not drift apart. Too much is at stake in this restless and uncertain world. We cannot consult and confer too often in the conservation of our heritage.

Then I take the liberty of adding another suggestion on this auspicious day when we again exchange our pan-American fidelities. I express the wish that the time may soon come when our continental fellowship will be geographically and spiritually complete through the association with us, on some appropriate basis, of the great and splendid Dominion of Canada. This is not a new idea. At the Inter-American Conference in Mexico City in 1945, our resolutions expressed the "wish that collaboration of Canada with the pan-American system shall become ever closer." Nor is that all. When the pan-American building here in Washington was erected in 1910, the room for the Governing Board and the great council table were built with a prophetic eye to that happy day when Canada should be among those present. A twenty-second chair was made. It has been empty long enough. Nor is that all. Around the inner courtyard of this Pan American Union building are the coats of arms of the countries which here make common cause for peace and progress in this hemisphere—and the coat of arms of Canada is already there with all the rest. By every rule of righteousness she is eligible to this association. By every rule of reason we should wish her here. I would welcome the final and total New World unity which will be nobly dramatized when the twenty-second chair is filled and our continental brotherhood is complete from the Arctic Circle to Cape Horn.

One thing more I should like to say. During the past year the Pan American Union suffered the sad and untimely loss of its Director General, Dr. L. S. Rowe. For a quarter century he gave his skilled and devoted service to the "clearing house of inter-American good will." With tireless zeal he labored for our common cause. He never failed a rendezvous with duty. He was inter-America's first friend. His successor as Director General of the Pan American Union is a distinguished Latin-American for the first time in 57 years. I should like to say, in behalf of my country, that we think it is a particularly happy augury that this is so. In no more significant fashion could it be demonstrated that pan-America belongs to all of us alike. May I add that it is a matter of great personal satisfaction to me to welcome the able and brilliant Dr. Alberto Lleras Camargo, former President of Colombia, to Washington to fill this important post. I came to know him intimately at the San Francisco Conference. He was one of the sturdy leaders in working out the Charter's recognition of regional arrangements. He powerfully demonstrated his firm loyalty to this inter-American fraternity of which he now becomes the directing head. Young in years but ripe in wisdom and experience, I know our "oak" will thrive under his husbandry.

And now I conclude as I began. In the name of the United States and pursuant to the proclamation of the President, I greet our sister Republics upon this significant day which has been set aside for special recognition by 21 New World governments in honor of the greatest and most fruitful continental community of nations the world has ever known. We greet you with friendship and affection. With unadulterated allegiance to the United Nations may we pursue its mandate to us to carry on in faithful loyalty to the historic attachments and consultations and cooperations which have made the Pan American Union one of the greatest beneficial institutions of all time.

We Should Not Cut Loans by Farmers Home Administration to Veterans Who Want to Farm

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. O'KONSKI. Mr. Speaker, I am becoming increasingly disturbed about the lack of funds in the Farmers Home Administration for loans to veterans who want to farm.

Here is one agency that in my judgment has accomplished much for veterans and their families. In my files right now I have more than a hundred letters from veterans pleading for more funds for the Farmers Home Administration. These veterans today are unable to get the advantage of a loan that was given to civilians while they were out bleeding and dying for their country.

The situation is desperate. Where are our promises to those veterans? The funds for the Farmers Home Administration are depleted.

In honesty and business the record of the Farmers Home Administration is beyond criticism. Just look at their record in my district. Here it is:

County	(1) Applications received, loans made, and amount loaned, July 1, 1946 to Feb. 1, 1947			(2) Applications received, loans made, and amount loaned, July 1, 1945 to Feb. 1, 1946			(3) Estimated applications and funds needed, Feb. 1 to June 30, 1947		(4) Veteran loans made and amount loaned to Feb. 1, 1947		(5) Estimated veteran loans and amount, Feb. 1 to June 30, 1947		(6) Number of families receiving loans since start and to Feb. 1, 1947, and amount		(7) Repaid	(8) Amount repaid, principal and interest	(9) Farm ownership loans and amount advanced		(10) Farm ownership loans paid up
Ashland, Iron, and Bayfield	64	42	$50,023	32	19	$24,775	40	$100,000	28	$47,160	15	$35,000	1,910	$498,328	734	$447,146	36	$701,300	13
Burnett	44	29	59,120	36	10	10,980	40	50,000	16	26,250	25	30,000	1,337	640,471	290	463,788	34	104,041	11
Douglas	30	18	15,790	19	10	6,560	21	61,500	17	32,785	5	32,500	925	371,446	452	323,373	26	61,007	10
Lincoln	73	37	40,435	41	28	18,480	25	80,000	21	47,340	18	65,000	1,263	594,526	494	497,956	51	96,810	17

We freely give billions to every foreigner who brings a suitcase to Washington. We do not even have the guts to ask them to pay the interest or the principal back. We just give, give, and give.

But when it comes to advancing money for legitimate loans with interest to our veterans we skimp and save.

Economy, yes. But it is foolish and blind economy to refuse to advance money to Farmers Home Administration for farm loans to veterans. Let us act now to provide funds to this agency. The veterans have a right to expect this. To refuse them would prove us unworthy of their confidence.

Election of President by Popular Vote

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Tuesday, April 15 (legislative day of Monday, March 24), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Majority Rule," published in the Woonsocket (R. I.) Call of April 1, 1947, and an editorial entitled "Why Not?" published in the Worcester (Mass.) Labor News of April 4, 1947. These editorials deal with the amendment which I have proposed for the election of the President by direct popular vote.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Woonsocket (R. I.) Call of April 1, 1947]

MAJORITY RULE

If Senator LODGE of Massachusetts has his way, the United States will never again have a President who represents a minority of the voters, as has happened three times in history. He proposes abolition of the electoral college in favor of electing the President by popular vote.

This would appear to be a constitutional change that has long been neglected. The dangers imminent in the electoral college system are well known and, in fact, we have escaped them only because of the apparent high character of the men who have been its victims.

Most noted of all examples, perhaps, is the historic Hayes-Tilden contest of 1876. In this election Rutherford B. Hayes was declared elected by a margin of only one electoral vote, although he received 250,000 fewer popular votes than did Samuel J. Tilden. And in 1876 the voting population of the United States was far less than it is today.

As Senator LODGE points out in his argument against the electoral college, the Nation could well have been embroiled in a civil uprising had Tilden taken a belligerent attitude at losing the election. The fact that a majority of the citizens approved him indicated the support he could have called upon.

"The passions and hatreds that a bitter elective struggle engenders could well lead to violent and bloody conditions under such circumstances," the Bay State Senator contends.

He also points to the election of William Henry Harrison in 1888, even though Harrison's popular vote was only 5,444,337 compared to Grover Cleveland's 5,540,050. Earlier, in 1824, Andrew Jackson secured a popular plurality of 50,000 votes over John Quincy Adams, although Adams was chosen President when the election was decided by the House of Representatives.

If the United States is to continue under the policy of the majority rule, the proposal of Senator LODGE for popular Presidential elections should be adopted, even though such adoption may take years under our present method of amending the Constitution.

[From the Worcester (Mass.) Labor News of April 4, 1947]

WHY NOT?

HENRY CABOT LODGE recently introduced an amendment to that controversial President-tenure bill. It calls for direct election of President by votes of the people, doing away with the electoral college. Now, that's a piece of up-to-date legislation, and though the question has been brought up in Congress a number of times, there never was a time when it was so apropos as now. Granted, the people vote for presidential candidates, and those votes have to be counted, but when the will of the people can be submerged and their decision nullified something is decidedly wrong. This, Senator LODGE aims at correcting, yet how far he will get at this session of Congress remains to be seen.

While he is about it, and while the question of tenure has not been wholly settled, he might add to his thought that limiting the tenure of Senators and Representatives would be keeping step with the general trend. We have a sample of a man being too long in Washington when Senator MCKELLAR opposes the confirmation of David Lilienthal for personal reasons * * * admittedly loss of patronage. That sort of thing is what belittles the National Legislature, so get them all down to a stated term in office, then back to private life. They then won't be so dependent on how the people back home feel over their actions.

Jefferson Day Address by Gael Sullivan

EXTENSION OF REMARKS
OF
HON. J. HOWARD McGRATH
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Tuesday, April 15 (legislative day of Monday, March 24), 1947

Mr. McGRATH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Jefferson Day address delivered by the Honorable Gael Sullivan, vice chairman and executive director of the Democratic National Committee, at Providence, R. I., April 13, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and friends, tonight the first hundred days of a Republican Congress have ended.

One hundred days have passed and only one major piece of legislation has been passed by the Republican Congress.

That's the box score of the Republican bungle band—100 days, 1 major enactment for the welfare of the people.

In those 100 days the Nation's Government has been throttled by a tyranny of inaction.

One hundred days of political puttering, 100 days of legislative paralysis, 100 days of back-fence bickering by men who were asked to lead a forward march to peace and plenty.

And instead, they answered a roll call of retreat, the retreat to a Harding normalcy, the retreat to a normalcy that meant profits for the few and poverty for the many.

What happened to the promise of lower prices?

The housewife's dollar bill today will buy less than a half-dollar could before the war.

She has been waiting for 100 days for an answer, while her pocketbook gets thinner and her market basket gets smaller.

What happened to the promise of housing for the veterans?

They have been waiting 100 days for the answer.

Their housing dollar today will buy what 35 cents would have bought in 1939.

What happened to the four-ply promise of the GOP to balance the budget, continue essential Government services, reduce the debt, and cut income taxes by 20 to 30 percent?

The people have been waiting a hundred days for the magic Republican formula, and now they have the answer.

The people know the difference now between the stump speeches of last October and the statesmanship that is required today—but the Republican Party doesn't.

The people know that a surplus of promises can never offset a deficit in performance—but the Republican Party doesn't.

The people know that a $20 saving in taxes and a $200 increase in the cost of living does not add up to a solvent America.

The people do not want to pay that kind of price for what they know will lead to a Republican recession.

The Republican cry is "Cut taxes and unloose incentive."

Release incentive for whom? For those in the higher brackets who have their financial cake and thousands of profit dollars, or for those in the lower brackets who have only the financial crumbs and a few orphan dollars?

That is why the whole Nation has taken notice of the finger pointing of Republican Senator HARLAN BUSHFIELD, of South Dakota, at his own party with these words:

"We have failed in everything we have promised to do for the voters."

Another Republican speaks his mind, Senator WAYNE MORSE, of Oregon, dismayed by the old guard leadership, accuses certain Republican congressional leaders of fostering an economic patch-quilt program, based on a false boom for a few years and then a terrific bust.

Still another Republican, Senator GEORGE AIKEN, of Vermont, is fearful that the Eightieth Congress will revert to the isolationism of the past and give the country back to Wall Street.

He warned his own party that the voters "gave no mandate in the last election to destroy labor, to take milk away from school children, to turn over development of atomic energy to ruthless and greedy men, anxious to control all the sources of power in the United States and the whole world, to create artificial scarcity of food in order that high prices might be artificially maintained while millions of people go hungry in America."

That is why the first hundred days of the Republican control of Congress has brought a Nation-wide slough-off in support for the party whose hands are 10 thumbs, whose eyes are looking down, and whose feet are stumbling backward into the future.

In those same hundred days, the people have heard another voice—and they have seen another vision.

They have seen a man—to quote his own words—who would "do in all cases, from day to day, without regard to narrow political considerations, what seems to me best for the welfare of all our poeple. Our search for that welfare must always be based upon a progressive concept of government."

They have seen a man who knows what to do about safeguarding the Nation's health.

They have seen a man who wants to keep us strong in our whole economic body, in our whole social body, and in our individual bodies.

They have seen a man who understands the process of working out a peace and making that peace work.

They have seen a man who would stem the threat of totalitarian aggression wherever it creates a partnership with hunger and human misery.

President Truman has been the source of their comfort and conviction in these trying days, and President Truman has become the symbol of their deliverance from the Republican bungle bund.

His patience and wisdom, his courage and practical vision have their seed and their sustenance in the principles of Thomas Jefferson.

The Truman faith is today's expression of the Jefferson faith.

Thomas Jefferson was the first to set forth the Democratic faith for all Americans.

"We of the United States," he said, "are constitutionally and conscientiously democrats."

By "democrats" Jefferson did not mean party members.

He meant members of a whole society who acknowledge they are created free and equal. He meant a people endowed by their Creator with certain inalienable rights.

He meant a people ruled by a government deriving its just powers from the consent of the governed.

Jefferson further set forth his conviction in these words:

"The mass of mankind has not been born with saddles on their backs, nor a favored few booted and spurred, ready to ride them legitimately by the grace of God."

There was no room in Thomas Jefferson's democracy for that "favored few," whether their power derived from a claim to other men's worldly goods or a claim to other men's souls.

And for that same privileged few there is no room in our democracy today.

Americans have never had a monopoly on the longing to be free—or the insistence on being free.

In today's world, that longing and that insistence have spread among many peoples.

It is being expressed in struggle, and when frustrated, in fury and revolt.

Where the struggle is won, peace comes to the people and peace grows in the world.

Where it is lost, the rebellion and the fury of deprived peoples live on in plague-spots that also undermine the well-being and peace of the world.

That fury, that insurgence, can be dangerous.

They invite the very chaos on which enslavement feeds.

And, when, in this age of sudden and sweeping destruction, there is chaos anywhere, there is danger everywhere.

When the moral laws of mankind are shrugged off in one place—the criminal indifference that flows from it can infect all places.

If freedom is international, so are the forces that threaten it, and so is its defense.

In winning the peace, they do not serve who only stand and wait.

They do serve who hold the peace of the world inviolable by any aggressor, for any cause.

They do serve who act before initial aggression is allowed to grow into the threat of war.

They serve who meet the despair and the aimless fury of frustrated peoples by holding out to them the solid assurance of help and who lend them a hand on the hard road to self-support.

Two years ago, at almost this very hour, we hoped to hear the voice of Franklin D. Roosevelt. On the day before our gathering, the voice of Roosevelt was stilled forever.

But the words that came from his heart for that occasion remain in our own hearts.

And today, while the task of building the peace is yet to be completed, those words come back to you and me:

"The only limit to our realization of tomorrow will be our doubts of today.

"Let us move forward with strong and active faith."

Today from the fires of our faith—one resolve "burns with the hard, gemlike flame."

That resolve is—

War must not be.

War need not be.

And war shall not be.

The United Nations must build, must live, must stand forever as the great liberator of all peoples from the fear of war.

Nobody in a society of free men misunderstands that.

And no difficulty, no problem, great though it may be, is beyond solution while this knowledge is in the minds and hearts of men.

In this time of world crisis each citizen must ask himself, not "How can I be safe?"—but "How can I serve?"

Many times we have proclaimed our Bill of Rights.

Not often enough have we proclaimed the duties that are inherent in those rights.

I ask you to join with me tonight in a simple statement of our responsibilities to achieve world peace.

We citizens of America and fellow men of all peoples acknowledge our faith in God and our duty to our country.

It is our duty to take part as largely as we can in shaping the democratic destiny of our country and of the community of peoples which is mankind.

This we can do, this we shall do, in the ways open to a free people at peace with the world.

It is our duty to deserve those rights which are ours through heritage.

Our liberty does not come down to us as an unearned blessing.

Neither can we keep it so, but must earn it continuously with each generation, else it will be lost.

It is our duty to deserve the right to vote.

This we do by intelligently exercising that right at every election so that democracy will not perish by default.

It is our duty to support a world organization with the strength to stop wars.

This is a duty to our own country no less than to our fellow man of all countries.

It is our duty to seek the honest interchange of goods and ideas with peoples of other nations.

In so doing, we shall help all peoples to security and well-being.

It is our duty to achieve an economy that secures the bounty of the good life for the farmer on his land, the worker in his job, the businessman in his enterprise.

Our duty is not in adding more to those with much, but in providing enough for those with too little.

It is our duty to help keep our press and pulpits and classrooms free.

In the dissemination of information and religion and education the opinions of minorities must enjoy the same equality and right of utterance as majorities.

We believe that in the technique of abundance lie the promise of well-being.

It is our duty to seek the development and control of those techniques of progress so that the fullest benefits may be realized by the fullest number and that peace and plenty may live in our country and in the world. President Truman knows that responsibility is the great developer—just as love of freedom is the great incentive.

He wants the rewards of citizenship to be guaranteed to the lowliest, but he demands, as Jefferson did, that the duty of being worthy is a never-ending debt to be paid for by an all-weather loyalty and an ungrudging tolerance toward our fellow man.

Racial or religious bigotry can blight even the strongest democracy.

We have much to preserve, much to improve, and much to pioneer if we want the world's peace to last.

The burdens that confronted Jefferson in his time were no less staggering than those that Truman must meet in our time.

And that is where we, the Democratic Party organization, can be of service.

We can prevent Republican buck passing for Republican failures—by keeping ourselves and our fellow Americans informed.

We can prevent it by working hard in our local communities to keep our neighbors interested in what goes on in their Government, interested enough not only to read about it and talk about it, but when the time comes, to vote about it.

In the last election, two citizens out of every three failed to vote.

I repeat that: Two citizens out of three failed to report at the ballot stations of democracy in the last election.

This cannot—must not—hapuen again.

Our kind of democracy won't have the third chance.

Our first task will be to see to it that 60,000,000 Americans are registered to vote in November 1948.

Our next will be to see to it that they do vote in November 1948.

That is the way and the only way to stop the Republicans from leading us back to the normalcy of economic stagnation and social scrap heaps.

That is the way and the only way for millions of Americans to give proper expression to their ever-growing conviction that the Truman way is the human way.

President Truman and Henry Wallace

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15 (legislative day of Monday, March 24), 1947

Mr. LUCAS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an editorial entitled "Truman and Wallace," published in the Washington Evening Star of today, and also an editorial entitled "No Cause for Hysteria," published in the Washington Post of today. I hope all Senators will read both editorials.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of April 15, 1947]

TRUMAN AND WALLACE

It is a question whether there is much that the President can do, or ought to do, about Henry Wallace's extraordinary tirades in Britain. To do anything of a striking nature might have the effect of making Mr. Wallace appear to non-Americans to be more important than he really is, or it might have the effect of seeming to dignify the man's offensiveness toward his own Government.

Of course, the President might take back what he said the other day when he told a news conference that he had no desire to read Mr. Wallace out of the Democratic Party. But would it be wise to stage a spectacular political excommunication? Might not such an event be embroidered upon abroad—notably in Russia—as evidence of Mr. Wallace's significance or of our Government's unwillingness to let prominent Americans speak out in opposition?

After all, last September President Truman repudiated Mr. Wallace about as completely as any man could be repudiated. As Secretary of Commerce, Mr. Wallace was then doing his best to undermine Secretary of State Byrnes—who was at the Paris Conference of Foreign Ministers—by attacking American foreign policy for allegedly being too tough toward Russia. Mr. Truman finally resolved this by firing Mr. Wallace from the Cabinet and retiring him to private life.

Today, as a private citizen, Mr. Wallace seems to be well within his legal rights in saying the things he has been saying in Britain. Apart from sounding more like Ilya Ehrenburg than an American, his offense is that he has been showing a vast amount of irresponsibility and a shocking degree of impropriety. Capitalizing on the high honors once accorded him by his country, he has been grossly misrepresenting the motives of our Government, wittingly or unwittingly, through distortion and otherwise, painting a lurid picture abroad of the United States officially bent on a course of ruthless imperialism.

Under our laws, this sort of thing is permissible not less for Mr. Wallace than for others equally thick-skinned, reckless or lacking in good taste. The President may find that his wisest course is to allow Mr. Wallace to run down, like a clock that somebody decided not to wind again. Actually, as far as the overwhelming majority of the American people are concerned, Mr. Wallace has been pretty effectively repudiating himself. As for an answer to what he has been saying, resounding congressional support of our foreign policy will be answer enough.

[From the Washington Post of April 15, 1947]

NO CAUSE FOR HYSTERIA

We hope that President Truman will give no heed to the excited demands that he launch a campaign against his former Secretary of Commerce, Henry Wallace. Undoubtedly that is what Mr. Wallace is angling for. He would like to dignify his cheap assault upon the bipartisan foreign policy that is taking shape in Washington by crossing swords with the President. Numerous Republicans on Capitol Hill would also be delighted to see such an open fight between the Democratic President and a former stalwart in the Democratic Party. But the effect would be a useless dissipation of energy and a diversion of interest from the real issue before Congress and the country.

Effective replies to Mr. Wallace have already come from hundreds of different sources. The consensus seems to be that he has made himself foolish by misrepresenting the policy of his own country in speeches delivered in other lands. This loss of stature is a peculiarly fitting penalty for indiscretion in the exercise of the right of freedom of speech. For any man with political ambitions it is a devastating blow. But, aside from this fact, the suggestions now being made that Mr. Wallace's passport should be revoked and that he should be investigated by the House Un-American Activities Committee are so utterly out of keeping with our way of life as to be ridiculous. Democracy is not to be redeemed by abandoning its principles.

The best answer that Congress can give to Mr. Wallace is a resounding bipartisan vote in favor of the President's program of aiding Greece and Turkey to maintain their independence. The idea that Mr. Wallace's petulant and muddled speeches must be answered from the White House before Republican Senators will support what they regard as a sound and essential international policy is only a political aberration that cannot stand the test of analysis. The only sound reason for supporting the Truman doctrine is that it is right—that it offers a positive and feasible method by which democracy can protect itself against expanding totalitarianism. All the epithets and wisecracks that Mr. Wallace can utter will not change this fact. So long as he can play upon the novelty of bombarding the foreign policy of his country from a foreign shore doubtless he will have some listeners, but it will be the vote of Congress that will be heard in Athens, Ankara, Moscow, and every other capital in the world. Congress thus has it wholly within its power to muffle Mr. Wallace's sensationalism by the unperturbed and dignified methods of democracy.

Henry A. Wallace

EXTENSION OF REMARKS
OF
HON. CHESTER H. GROSS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. GROSS. Mr. Speaker, in connection with the remarks that have been made at various public meetings in England the past 2 weeks by the former Vice President of the United States, Henry Wallace, it appears to me that Mr. Wallace is attempting to influence the foreign policy, not only of the United States but of England and particularly of Russia.

May I quote you from section 5 of the Criminal Code of the United States, entitled "Criminal Correspondence With Foreign Governments; Redress of Private Injuries Excepted":

Every citizen of the United States, whether actually resident or abiding within the same, or in any place subject to the jurisdiction thereof, or in any foreign country, who, without the permission or authority of the Government, directly or indirectly, commences or carries on any verbal or written correspondence or intercourse with any foreign government or any officer or agent thereof, with an intent to influence the measure or conduct of any foreign government or of any officer or agent thereof, in relation to any disputes or controversies with the United States, or to defeat the measures of the Government of the United States; and every person, being a citizen of or resident within the United States or in any place subject to the jurisdiction thereof, and not duly authorized, who counsels, advises, or assists in any such correspondence with such intent, shall be fined not more than $5,000 and imprisoned not more than 3 years; but nothing in this section shall be construed to abridge the right of a citizen to apply, himself or his agent, to any foreign government or the agents thereof for redress of any injury which he may have sustained from such government or any of its agents or subjects. (Mar. 4, 1909, ch. 321, sec. 5, 35 Stat. 1088; Apr. 22, 1932, ch. 126, 47 Stat. 132.)

[From the Philadelphia (Pa.) Inquirer]

TRUMAN SHOULD REPUDIATE WALLACE

Senator VANDENBERG, in declaring that it is a shocking thing when an American citizen goes abroad to organize the world against his own Government, expresses the wrath of millions of outraged Americans against Henry A. Wallace.

Wallace, loud-mouthed No. 1 propagandist for Communist Russia in America, is in England busily engaged in belittling his own country, deriding its foreign policy and yelling for a Roosevelt New Deal for the world, presumably at America's expense.

He is haranguing British throngs with his denunciation of President Truman's plan to aid Greece and Turkey in stemming the red tide of communism. He is assailing—of all things—America's imperialism. He is saying that we are too selfish and laggard to lead the world to peace and that such a task is Britain's. He is pooh-poohing our part in World War II and charging that all we want now is normalcy. And the British, true to tradition, are lapping up this hog-wash.

What, in the name of American heroism and sacrifice, is Henry Wallace trying to do?

Is he striving deliberately to hasten a showdown between this country and the Soviet Union?

Is he seeking to stir enmity against the United States throughout the world?

Is he trying, by giving aid and comfort to the Moscow Politburo, to rally American Communists to direct action against the Government of the United States?

Wallace's disservice to his country was bad enough last fall when, at a critical moment in international relationships, he opposed a policy of firmness with Russia, starting an administration row which led to his belated removal from the post of Secretary of Commerce.

But his disservice is vastly worse, when, as a nominal private citizen, he lets out his anti-American, pro-Communist bleats in Britain and holds his Government up to world scorn.

For, however logically it may be contended that here at home Wallace is a political pipsqueak with no following but Communists, fellow travelers, and other crackpots, the fact remains that abroad he speaks not without a measure of authority.

Hand-picked stooge of Franklin D. Roosevelt, he is a former Vice President of the United States. He is a former Secretary of Commerce and Secretary of Agriculture. He continues to be a raucous exponent of big government and world WPA policies.

He is a man who not only typifies the Roosevelt "Raw Deal" to perfection but who missed being Mr. Roosevelt's successor in the White House only by a fluke—and who still wants to be President.

So it's perhaps understandable that the words of this blatherskite carry weight with the British, who trust America scarcely more than they trust Russia and who are using their sly old technique to prop up their sagging Empire by whatever means comes to hand. Wallace's slams at America, to judge from the enthusiastic crowds, is music to British ears.

But granting Wallace's right to free speech, there is a limit beyond which, in view of his past official position in this country, he has no moral right to go when abroad. He has already exceeded that limit and unquestionably has caused serious damage to America and its efforts for peace. It is time for the United States Government to show up the un-American activities of this touring editor whose proper editorial berth is in the office of Moscow's America-baiting Pravda.

Since this New Dealer has shown repeatedly that he has neither the good taste nor the good judgment to speak with discretion, President Truman owes it to the Nation to repudiate him publicly and vigorously so that the whole world may know, once and for all, that Henry Wallace's voice isn't the voice of America.

The Challenge of a Whirling World

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech I made last evening before the Ohio Society of New York City in which I discussed the challenge that the spread of communism presents to the United States:

This Nation is now grappling with the question of what should be the world role of the United States. The most momentous debate perhaps of our entire history is now in progress. It is being carried on wherever Americans live; in cities, villages, and on lonely farms and ranches. Every kind and condition of man is taking part in it. The fact of the debate, the manner in which it is being carried on, and the Nation-wide participation in it, is, as nearly as we can arrive at it, pure democracy. The people, through the time-honored American process of talking out things, are arriving at their own conclusions. Whatever they may decide, the result must affect Americans and the world for a long time to come.

Nothing is simple in a world as infinitely complicated as the world in which we live. Yet the issue before the people is relatively simple. It is: Should the United States oppose the expansion of communism? And, if it is decided that it should oppose it, how are we to go about it?

There is little in our temperament, training, or experience which fits us to deal with so novel a question. If it be true that there is nothing new under the sun, the situation that presently confronts us vis-à-vis the spread of communism, is certainly new under the American sun. We have never, for that matter, completely made up our minds as to what should be our role in the world. We have indeed adhered, roughly, to two principles only in our international relations. One is the Monroe Doctrine, through which we have insisted for more than a century that other nations refrain from attempting to dominate any nation of the Western Hemisphere. The other is—whether or not we admit it—that no one country, or group of countries, shall dominate the world. Twice within a generation we have fought in world wars and turned the scale against the would-be conquerors, because of our adherence to that principle. Yet our foreign policy—or our lack of it—has often been characterized by indecision, vacillation, and a lack of foresight phenomenal in a people who like to think of themselves as hard-headed.

It must be remembered, moreover, that by our very existence we exert a gigantic influence upon the world, as though we were the moon affecting the pull of the global tides. Such is our strength and influence, that we affect other nations almost as much by doing nothing as by doing a great deal. There is no fact upon earth which quite overshadows the minds of men as much as the fact of the United States. I do not say this out of a false pride, or a stupid chauvinism. We are great enough as a people, I hope, to have a proper humility, and wise enough to realize that while we owe much of what we are to ourselves, we also owe much of it to great good fortune. Consequently, I stress our power and influence in the councils of nations, not boastfully, but because it bears directly upon the great debate in which the people and their congressional representatives are now engaged.

Tonight we are the only truly powerful people on the face of the earth. We are the sole people who emerged from the war stronger than we were before. Only about 6 percent of the world's population lives within our borders. But we lead all other nations incomparably in horsepower, the key to production as production is the key in many ways to power and influence. We lead all other nations in agricultural production. We are the only people who have both a giant agriculture and a giant industry, while both are capable of almost endless expansion. We are the world's largest importers and exporters of both manufactured goods and raw materials. Our management is competent; our labor skilled; our techniques of production are unsurpassed. It follows, therefore, that since we loom over a battered and disorganized world like a colossus, whatever we may do, or fail to do, is of transcendent importance to men wherever they live.

In the struggle for the world that is now in progress, we are not without friends. Certainly the English-speaking nations of the earth are with us, from the home islands of Great Britain, to our neighbor Canada, to the other end of the earth in Australia and New Zealand. Similarly, western and northern Europe are our friends, and the extent to which that friendship may decline will depend more upon our default than their dereliction. Eastern Europe, hidden behind the iron curtain, is far from being natively hostile to us, but at the moment it is impotent and voiceless. Elsewhere in the world, we enjoy a large fund of good will. It springs from many factors. One is that we long ago abandoned imperialism. In the Philippines, we were the first nation to give a subject people their freedom, and this is not lost upon men. The other factor is that through our politico-economic system, we have managed to make men free and at the same time provide the world's highest standard of living. This, too, is not lost upon men.

Our influence in the world flows, then, not only from our material strength which is unmatched, but also from our spiritual attitudes. Most men do not fear us. They do not fear what we may do, but rather what we may refrain from doing.

Fate has so ordained it that there are only two titans left upon earth: the Soviet Union and ourselves. It would be criminally stupid to underrate our rival. The Soviet industrial and military potential is perhaps greater than our own. Russia's 9,000,000 square miles of territory and her 200,000,000 people—to say nothing of the land area and population of her satellites—constitute a staggering potential. Three times the size of the continental United States, with 60,000,000 more people than we have, and possessing gigantic stores of raw materials, the Soviet Union may ultimately become the earth's strongest power. But at this time she is weaker than we are.

At the outbreak of this war Russia was roughly where we were in the 1850's. She had a vast, undeveloped continent to develop. But, unlike ourselves, she had always been withdrawn from the world; aloof, secretive, dreaming, and—industrially backward. We had been in the mainsteam of nineteenth-century progress. She had stayed out of it. We went through many transitional industrial processes here. Russia attempted in one jump to go, not from the oxcart to the automobile, but from the oxcart to the airplane. We imported millions of foreigners to build America. They remained as loyal American citizens. Russia imported foreign technicans to help her. Then when their jobs were done they left the country. Nor is this all. Postwar investigations by our forces in Germany clearly show that it is nonsense to say that a dictatorship is more efficient than a democracy, because in a dictatorship everybody does what he is told to do and nobody talks back to the boss. The fact is that in a dictatorship men became robots. They do not dare to think. They are fearful of making a suggestion that might be useful. They do only what they are told to do, for the man who does more may lose his head or his meal ticket. Democratic freedom and democratic initiative are far superior in turning out goods, or fighting, to any dictatorship that men have ever devised.

Let us, however, grant for the purposes of our discussion, that Russia has had greater economic progress between the wars than we had expected. What then?

Russia's losses in the war were upon a colossal scale. Losses of houses, factories, bridges, railroads, dams, and electric power developments upon which she had so heavily relied. Russia's internal problems must be very heavy. And do not forget this. Her leaders must make good the promises upon which her revolution was predicated. It was promised to the Russian people nearly 30 years ago that if they would pull in their belts, work hard, and suffer privations for perhaps a generation, they would then come into a superior standard of living. The people did pull in their belts. They did suffer privations. But Russia's preparations for war must have lowered her already low standard of living. The war itself had a catastrophic effect upon her. That is why she has looted Manchuria and much of eastern Europe of everything she could lay her hands upon. And because her standard of prewar living was so low, Russian soldiers, coming into Europe at a time when it was destitute, stared bug-eyed at what they took to be the luxury of paradise.

Russia must spend the next 25 years restoring Russia if she makes good her word to her people. Even in such a land, the dictators must fear that the people will not forever wait upon them to make good their promises. I do not, then, think it an exaggeration to say that many of her actions during the past 2 or 3 years—actions which appear inexplicable to us—are dictated, not by strength, but by weakness. If, therefore, it is sound policy for us to oppose Communist expansion in the world, it is common sense to oppose it not when Russia—the homeland and heartland of communism—is strong, but when she is weak.

We do not deny that the Russians, or any other people, have the right to choose their own form of government; rather do we affirm it. We got on with Czarist Russia for more than a century although its absolutist principles were abhorrent to us, and we get on today with numerous governments that are—to put it politely—something less than democratic. If the Russians kept their communism to themselves; if they did not seek to impose it upon others by force, revolution, and boring from within, we could live in the same world with them, if somewhat uneasily. But if Russia is to use communism as a weapon for conquering the world, we must eventually come into conflict with her. As I have said before, we have fought in two wars within a generation to prevent any one country or group of countries, from dominating the earth. I have no doubt that we would do it again if unhappily the need should arise.

What are the prospects of preventing such a war? I think they are good. But they are good only if we carefully note the facts of human existence and act within the criteria that they impose.

We shall not triumph by merely denouncing communism. No physician denounces typhoid fever. Medical science finds what causes it; seeks to prevent it; and, if it strikes, tries to cure it. Denunciations of communism are childlike exercises in petulance, and must bring smiles to the faces of the hard-boiled men who rule Russia. So, too, if communism has any validity as a politico-economic concept, if it appeals to some men

in terms of idealism however mistaken we may think it, we cannot dispose of it by jailing some of its adherents. We can effectively combat it only by opposing to it our own democratic politico-economic ideas, and our own democratic idealisms. You and I believe that our system has more to offer men than communism has to offer them. And I think you would join me in saying that if we could carry our system, wholly or partially, to the peoples of the earth, they would aline themselves with us rather than with the Communists.

We must, however, act in terms of positive creation, instead of negative repression. You will recall how the early Christians were thrown to the lions and were scourged with whips. Yet Christianity spread despite the might of Rome, despite the killings and scourgings. It spread because its appeals to the minds and souls of men were greater than the appeals of paganism.

Remember, too, that for long centuries the ordinary man has been asking a larger share of the world's goods and services than he ever had before. It is a yearning that has never been entirely quiescent. It is a movement that we cannot, and should not, attempt to repress. Here in the United States, more than elsewhere, it has found its fullest expression. But over large areas of the earth, the movement has been stultified by ignorance, lack of techniques for industrial and agricultural production, or the blind greed of blind rulers. Wherever this condition exists, wherever men go naked and hungry, wherever they are hopeless of the future, communism makes inroads. If a man's life is an oscillation between sleep and hunger, if he is a slave in all but name, if his short days upon earth are but a journeying from one misery to another, there is no point in preaching to him the beauties of democracy. You cannot fry the Bill of Rights. You cannot keep warm under the Constitution on a cold night. Such indeed are the agonies of hunger, and the imperatives of self-preservation, that we know why many a European woman, during the war, starving herself or the mother of starving children, sold herself for a chocolate bar. Certainly in these terms, communism makes its greatest appeal to the hungry, the dispossessed, the bereft of hope; and these are as the sands of the sea today.

Yet bear this carefully in mind. The question is not whether communism is more capable than democracy of fulfilling the material and spiritual needs of men. It is not. The point is that communism comes in as a receivership when democracy is without vision; when, that is to say, it is moribund or bankrupt. Men embrace communism more out of desperation than out of conviction. They embrace it because at least it offers them hope of a better way of life than they have; as the only alternative when there is no other alternative.

I said before that the world does not fear us. Even the Russians do not, in my opinion, fear us militarily even though we have the atomic bomb. They believe that we will not use it unless we are first attacked. They would fear us only if we should adopt the one policy that they know to be effective as an antidote against their communistic expansions. That policy is one of counter-revolution.

By this I mean something relatively simple. The Russians know that hunger is revolutionary. They also know that bread is counter-revolutionary. It is not only a more humane weapon than guns, and a more rational weapon than repressions. It is also infinitely more effective. Bread, in long-run terms, is the only effective antidote to communism. Then add to bread the right to earn it in freedom, to eat in liberty, and communism will disappear like snow before the warm sun. Is there anything we can do to see that men get bread and enjoy it in freedom?

I think there is. The question is not whether we can do it, but whether we must do it. I believe that we must, because it is the only reasonable alternative to the building up of a situation that will ultimately result in a catastrophic war. During the last war we did not arm according to our resources, but according to our needs. We did not say that we could afford so many dollars for airplanes, and then build as many as we could get for that sum. We asked the armed forces to tell us how many airplanes they wanted. Then we found the money necessary to build them.

So now, faced with a crisis of appalling dimensions, we must consider not what we can do, but what we ought to do, what we must do. If communism continues to expand, if it should engulf country after country, the balance of power would eventually become so great against us that we could do one of two things. We could become part of the system. Or we could fight. I believe that we would fight. Obviously, the results would be catastrophic to us as well as to others. But we still have time to oppose the expansion of communism. We have the strength. The Russians, in all that counts, are presently weak. Their greatest strength lies neither in what they are nor what they do. It lies in what we do not do.

I suggest, therefore, that, after exhaustive studies have been made, the United States should announce a plan of financial assistance to the nations of the world upon a scale comparable to the needs. I need hardly add that I do not propose that this country should become a lady bountiful boarding-house keeper, ringing a bell and saying to everyone, "Come and get it." Prospective borrowers would have to demonstrate their needs beyond a shadow of a doubt, and borrow upon a budgetary plan according to conditions that we lay down and which they must live up to. I say budgetary plan because it must contemplate a period of 25 to 50 years for its completion. The tasks to be accomplished would take that much time, while we could finance it only in terms of decades rather than years. If, moreover, under such a proceeding, a borrowing nation did not abide by its promises, we could stop lending in the second year or the fifth year, and so we would retain a large measure of control over the way in which the money was being used.

There are many conditions to attach to such loans, but three are all important. These are:

1. The money must be used to develop projects that will enable the people to take care of themselves. For example, many areas in the world—especially in the Middle East—can raise their agricultural level only through irrigation. This means the building of dams, reservoirs, and similar works. We must stop supplying wheat to the starving, and supply them with the means of growing wheat.

2. Benefits flowing from our loans must accrue to the whole people of a nation, and not go largely into the hands of local grafters whether politicians or industrialists. This might imply direct American supervision of the spending of the money; or cutting off the annual installments when we were convinced that the money is being misused.

3. Borrowing countries must pay, so far as possible, for what they get in the form of exports, and the balance to be expressed in the form of a long-term loan without interest.

Two things are clear. We all know that modern technology in both industry and agriculture is fully capable of raising the standard of living of the people of the world to a higher scale than they have ever known. This does not necessarily mean that it can be raised to the American level. But most men would think themselves living in luxury if they were raised to the level of our very poorest people. We all know, too, that the ordinary man has long been demanding, will continue to demand, and rightfully does demand, a larger share of the world's goods and services than he ever had before. It follows, therefore, that if we do not show the world the way to a better life, the world will follow those who, if they do not lead the way, will promise to lead the way. Here in our country, thousands of Negroes are leaving the South for the North. My southern friends think they are foolish because, they say, Negroes will not be better off in the North than they are in the South. Such an argument, so far as the fact of Negro emigration is concerned, is irrelevant. Negroes will continue to go north so long as they think they will be better off there than in the South.

The plan I propose is designed to accomplish two objects. The one is the prevention of war. The other, directly flowing out of its operation, is the prevention of a perhaps catastrophic depression in this country. If that should befall us, most of the world would go down with us. This is the one great eventuality upon which the Soviet Union is counting. They hold that it is inevitable under our capitalist system. And—let us not blink the fact—they are joined in their prognostications of a great American depression, although for different reasons, by many British and American economists. But if we could set much of the backward world in industrial motion, if we could raise the standard of living of the more than 1,000,000,000 people of the earth who live at poverty levels, we should never have an economic depression, here or elsewhere.

The cost of such a plan will be high. Perhaps you will say that we cannot afford it. But what could cost us as much as a war; a war that would kill millions of Americans and destroy the whole structure of western civilization? How much would the parents and wives of our war dead give to have them back alive? What would now you and I pay if we could be assured that there would never again be war? Certainly I make no assurance whatsoever that the plan I have proposed will guarantee us against war. The most that men can do is to assess the world in which we live and proceed as reasonably as we know how to prevent the greatest of all human catastrophes. Surely if we should go to war tomorrow, no one would say that we could not afford it. We pay whatever war demands in lives and treasure as the price of our liberty. Everything on earth has its price. It may be that in the "heaven" of men's dreams one can eat his cake and have it too. But here below every single blessing must be paid for, sometimes doubly. It follows, then, that if we want a peaceful, orderly world, we wust pay the price. As against war, what price, in money terms, are we willing to pay?

And is that all that will be demanded of us? Most certainly, material riches alone will not suffice. Indeed, they could be our downfall unless purposefully applied by a meaningful people.

We may refuse to accept our destiny, but ultimately we cannot evade it. The situation we face is unparalleled. So must be our acts to meet it. We are not the darlings of history. History has no darlings. Geography has lost its concealing magic. The fates have not exempted us from the universal ordinance that life is in reality a hard road, dark and filled with tragedy.

It is our present lot to live in a time of the crashing of empires, the breaking of nations. Very well—what manner of men and women are we? Have we the courage to strip ourselves of all sham and littleness, and face up to the cold and all too tragic fact that upon our character and our capacity rests the future of our civilization? As against war, what price, in terms of discipline and sacrifice, are we willing to pay? As individuals and as a Nation, the moment of Destiny is upon us. We must either live greatly, or die meanly. Ours is the Choice.

Peace or War

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank V. Severne, editor of the Watkins Express of Watkins Glen, N. Y., entitled "Peace or War":

PEACE OR WAR

On March 12, President Truman delivered an address before a joint seession of Congress for an appropriation of $400,000,000 to preserve and secure the territorial integrity and sovereign rights of Greece and Turkey. "I believe," he said, "that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressure."

The English Magna Carta, our own Declaration of Independence, the promulgation of the Monroe Doctrine, and now the pronouncement of a globe-encircling foreign policy mark the forward sweep across the centuries of human progress and the federation of the world. One hundred and seventy-five years ago, 3,000,000 people, stretched for a thousand miles along the Atlantic shore from Maine to Florida, were confronted with the same problem and asked the same question: Does it mean peace or war? And Lexington was the answer.

A small group of men assembled in Philadelphia, by a divided vote, adopted the Declaration of Independence and pledged their lives, their fortunes, and their most sacred honor to the cause of freedom.

The question before the American people today is far greater than that which confronted the Thirteen Colonies. It is worldwide and fraught with incalculable possibilities. No one who has followed the trend of events since the end of the last war can misunderstand or misinterpret the diplomatic manipulation of European affairs.

In the darkest hour of the American Revolution, Benjamin Franklin was sent to France for help. Without that help there could have been no Yorktown and no United States of America.

Greece and Turkey, in their hour of distress and danger, have appealed to us for help. If we fail, their liberties as a free people are at an end, and our own peace and security at home and abroad will become the object of a growing and perpetual menace. The freedom we prize for ourselves must not be denied to others, and the American people turn with pride and confidence to their lawmakers at Washington, without regard to party, for approval of the President's request.

Displaced Persons

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

ALLEGHENY COUNTY COMMITTEE
ON DISPLACED PERSONS,
Pittsburgh, Pa., April 11, 1947.

The Honorable JOHN McDOWELL,
The House of Representatives,
Washington, D. C.

MY DEAR MR. McDOWELL: May we respectfully submit the following resolution taken by the Allegheny County Committee on Displaced Persons on March 31, 1947:

"Whereas there remain in Europe today 850,000 people—men, women, and children—who cannot be returned to their original places of residence, and, 2 years after the war are still residing in detention camps because they have no place to go;

"Whereas the people of the United States have a responsibility to those people of other nations who because of the war are without a place to live;

"Whereas the heritage of our Nation and of our own local Pittsburgh community comes from the contributions made by peoples of many nations and many faiths;

"Whereas we have faith and confidence that these people who are without a place, share our community of interests, and will contribute to our society if we give them an opportunity: Therefore, be it

"*Resolved*, That we, who have come together in an association known as the Allegheny County Committee on Displaced Persons, go on record in favor of permissive legislation of an emergency nature, so that a fair share of those people of Europe who are without a place to go may be granted an opportunity to enter the United States; and further, that copies of this statement be sent to the President of the United States and to those Members of the Congress of the United States who represent the people of Pittsburgh and Allegheny County."

Irish Achievement In U. S. A.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Irish World, Saturday, March 29, 1947.

IRISH ACHIEVEMENT IN U. S. A.

As the colorful battalions from colleges and high schools, from military and civic organizations, from Irish counties of all Ireland, from cultural, fraternal, educational, political, social and state societies marched up Fifth Avenue on March 17, 1947, we heard citizens exclaim in wonder their joy and pride and give expression to their pent-up emotions in hearty calls of "Splendid," "The best ever," "Once more a great parade," "They seem to grow bigger and better," and "A wonderful day for the race." Our own idea was approaching the philosophical in that we thought only a democracy could produce such a parade. Only a democracy would select a nonmilitary man for national and international honors. Then our mind turned back over the past, over a bridge of history and the grand roll unfolded.

Among the founders of the Republic there were of Irish birth and blood: Charles Carroll, Charles Thomson, secretary to our First or Continental Congress; John Rutledge who is the real father of our Federal Constitution; he was practically the founder of South Carolina as Carroll was of Maryland. There were Nixon, Lyons, and Lynch. When we speak of free speech today we must not forget the man who defied the Federalists and forced the repeal of the sedition laws was a native of Ireland. Lyons was the man that forged the weapons which Jefferson translated into laws and ended forever the discrimination against foreign-born citizens. There were Generals Sullivan, Conway, and others who served our armies. There were Barry, McDonough and hundreds of men who made our Navy. There were Andrew Jackson and Andrew Johnson. Democracy owes as much to Jackson as it does to any other man this country produced or brought to the top in the fires and furnaces of revolution and war.

In New York, Massachusetts, and New Hampshire the basis of religious liberty was established by the Irish. People who protest today against discrimination do not know what they owe to the early Irish of this Republic for their social freedom. Twelve signers of the Declaration of Independence and 11 of the leading generals of the Revolutionary War were Irish by birth or descent.

But the social and political work performed by the Irish-Americans of New York from Charles O'Connor down to the Civil War is a second brilliant chapter.

When the Union was seriously endangered and our country's life as a separate, independent, and self-sustaining Republic was challenged during the Civil War one of the great coordinating forces, one of the stanchest upholders of the Union and President Lincoln was the Irish. There were approximately 350,000 native-born Irishmen in the northern armies during the Civil War. The names of the generals and high commanders of Irish extraction and of Irish birth would fill an entire page of this paper. We need but mention Phil Sheridan and Thomas F. Meagher as samples of the glorious list to remind our readers of the debt to the Irish.

The two world wars are too close to us to be reminding our readers that the noble procession was kept up. A list of the Kellys, the O'Briens, the Sullivans, the Bradys, the Murphys, the Bradleys, the Delaneys, and Delahauntys, McAuliffes, Kennys, O'Donnells and Callaghans, with all the rest of the Macs and O's not forgetting the Devereux, the Lynchs, Dorans, Duffys, and Andersons, and all the unmistakable Irish soldiers and seamen who contributed to the glory of our country and who did so much to preserve its power and security as well as contributing to our country's leadership in the world would fill several volumes.

No doubt accompanying the men and women and the young students up the line of march were the spirits of the illustrious dead. Echoing were the voices of humanity from the four corners of the earth saying. "Sing, parade, march—march on. The world owes it to the Irish."

Managing Our Own Economy

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bergen Evening Record, Hackensack, N. J., which appeared on April 10, 1947:

MANAGING OUR OWN ECONOMY

Announcement in today's Bergen Evening Record of an average 20-percent reduction

on three distinguished stores' inventory of clothing extends into this territory a most astonishing and reassuring economic phenomenon. The dollars-and-cents facts of this merchants' rebellion against their own high prices are significant enough to us who consume. The reasoning which led to it is of even more importance.

For, like the reasoning which compelled the International Harvester Co., the Ford Motor Co., the Frigidaire division of General Motors Corp., and Emerson Radio to order drastic reductions in retail prices, the reasoning of Law, Inc., at the other end of the supply pipe line assumes a solemn responsibility of every one to this economic system of ours which is the basis of this political system of ours.

For the first time business acknowledges, even eloquently demonstrates, that if the free economy is to avoid catatrophic oscillation between boom and bust its participants must freely take a hand in preserving its equilibrium. "We accept our share of the responsibility," says the Law, Inc., announcement, "and thus earn the right to remind even more emphatically our fellow businessmen—as well as industry and labor—of the dire results (here as well as abroad) of waiting until a slackening in demand brings about a forced adjustment. Then production will be slowed down, employment will be even more drastically curtailed, and our national economy will be seriously crippled."

It goes without saying that if the general present trend is continued a crucial and increasing number of potential consumers will be priced out of the retail market; goods will back up on the shelves and in the pipe lines; lay-offs will start in the production industries; the consumer potential will still further contract; and we shall be on the sickening downward spiral which last time ended in the convulsion of the thirties. Let there be no mistake about it: If the United States economy collapses again it will be forever, as far as we now living are concerned. The administration which next becomes our trustee in bankruptcy will plan and regiment on a scale which will make the New Deal's bureaucracies seem by comparison the wildest dreams of a McKinley capitalist.

The alternative to this is what the laws, like Mr. Straus and Henry Ford II and Fowler McCormick now propose: That freemen take their planning, their pricing, their profits, their procedures, and their whole discipline back into their own hands. Their purpose is neither so visionary nor so improbable as might at first appear. By bringing back into the market consumers unable to buy at yesterday's prices they will accelerate turnover enough to maintain stable profits. And by providing yardsticks against which all prices can be measured they will force down less responsible merchants' prices; they will create between true value and the price tag a vacuum in which the profiteer cannot breathe.

Obviously, this is a challenge to industry, to labor, and to the consumer. How these partners in the common enterprise respond to the urgent challenge of the patent economic facts may be not only a test of freedom but to a degree the measure of whether we merit freedom.

Stop the Spending Spree

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. SPRINGER. Mr. Speaker, the people throughout the length and breadth of this Nation are extremely anxious that the wild and lavish spending of the taxpayers' money be curtailed. Of course, there is one way the Congress can curtail the spending of the people's money, and that one way is to materially reduce the appropriations of money to the many and various agencies of our Government.

I am very certain that many of the people desire that this spending spree be stopped at once. There are many potent reasons why that cannot be done, and I desire to present those reasons so the country and the people will know just what our situation is in that particular. Many of us desire that this spending be stopped at once—and I am one of those who so aspire; that wish is concurred in by millions of our people, because the taxes have been high and they have so continued for a long time. All classes of the people have struggled with the problem of paying their taxes. Those working for wages or salaries have found their pay checks in a smaller amount than anticipated because the withholding tax has been deducted therefrom. The common people, regardless of their occupation, have suffered the weight of the heavy hand of the taxing officials and this act alone has caused many of them to desist from employing help, making repairs, and engaging in needed and necessary remodeling and other pursuits. This fact alone has taken away the power of purchase and the power of employment. Their surplus has been absorbed in taxation.

Mr. Speaker, what is the cause of high taxes? Every American can answer that question, because when we spend we must tax. There is but one method of raising money for our Government, and that is by and through the method of taxation provided by law. The Government has no money except that which is raised by taxation, and that money comes from the people. We are the paymasters, and we are the only paymasters in that instance. The people pay the taxes to support our Government. And if and when excessive sums and amounts are recklessly spent by our Government, or by the boards, bureaus, and agencies thereof, and by the departments of our Government, that fact alone makes it necessary that the taxes be increased. Remember, when money is spent and spent foolishly the burden of paying rests upon the people, upon the taxpayers. Many people want and demand that certain public improvements or public services be extended, or inaugurated, and in many instances some of the people want and demand larger appropriations of money for certain purposes, but when that request, or demand, is made it is well that they remember that the money which will be so used must be raised from the people themselves by and through the method of taxation.

Mr. Speaker, the fiscal year of our Government begins on July 1 of each year, and it runs up to and until June 30 of the following year. The departments of our Government, and the boards, bureaus and agencies thereof, are still operating under the appropriations made prior to July 1, 1946, and these appropriations were available from July 1, 1946, until June 30, 1947. The appropriations which are now being reduced for the various departments of Government for the fiscal year commencing on July 1, 1947, and ending on July 1, 1948, will not become effective until after July 1, 1947. Therefore, the many and various departments, boards, bureaus and agencies of our Government are still operating under the appropriations made before July 1, 1946, at the time the President, and his party, were in full control of both houses of Congress. Therefore, the spending which is now witnessed and which we will continue to witness until June 30, 1947, is the handiwork of the President and his majority in the Congress. The country and the people should know that fact, and they should remember it well—because they have been the spenders in our country for needless things.

Mr. Speaker, it is my fervent hope that the appointees, who now hold their places in every department, board, bureau and agency of our Government will realize the sad plight of the people—the taxpayers—who pay the debts which they contract; the people pay the debts created by the large and unusual personnel employed in every place in our Government; they pay the debt created by every proposed gift, under the guise and pretense of a loan, made to foreign countries; the people—they pay, and pay, and pay. Yet, those in command—those in charge of our Government—fail to give one moment's thought or consideration to the struggle of the people to raise the money with which to pay the taxes imposed for the purpose of paying the debt created or the obligation made by them. Therefore, it is my hope that some thought will be exercised in behalf of the people who pay—the taxpayers. The spending must be cut, and the people must have relief—and this I urge.

Mr. Speaker, under unanimous consent, I include as a part of my remarks an editorial appearing in the Washington News of date April 1, 1947, which is as follows:

CUT SPENDING FIRST

Anyone who undertakes to dispute with John W. Hanes on taxation should do so with utmost humility. No other man in the country brings to the problem greater knowledge, intelligence, and sincerity than the former Under Secretary of the Treasury.

Mr. Hanes this week made the cheering announcement that the Government would end the current fiscal year, June 30, with a surplus of $3,000,000,000 to $4,000,000,000. And he estimated that, with present taxes and high business volume, the end of the next fiscal year, June 30, 1948, would show an accumulated surplus of $9,500,000,000 if Congress cuts the President's budget by $4,500,000,000 as the Senate has recommended, or a surplus of $11,000,000,000 if the cut is to the tune of $6,000,000,000, as the House has resolved.

Mr. Hanes uses the figures to fortify his argument that it is possible to cut taxes and reduce the public debt at the same time.

We do not dispute Mr. Hanes' figures, nor his argument that taxes are too high for peacetime economic health of the country and must be reduced soon if America is to continue to prosper. But we would like further proof in regard to his most dubious assumption—namely, that the Republicans controlling Congress are really going to economize on the scale they promised. To date

there is little to justify that hope. Appropriation bills already in the congressional mill scarcely threaten a dent in the President's budget. And commitments are running high, wide, and handsome.

As typical of how Republicans, no less than Democrats, respond to spending pressures, take the case of the $12,000,000 subsidy for importing and shifting farm labor, which Congress has just continued. That subsidy was started as a food-for-wartime measure, but it is being continued into the third year of peace because the boys who own the beet-sugar ranches and vegetable farms want it continued, and they apparently have the votes to get what they want.

Or take the wool subsidy voted this week by the Senate. It is estimated that will cost the taxpayers $75,000,000. This program, designed to maintain an above-market price for wool at a time when Government warehouses bulge with surplus wool as never before, will force all taxpayers, as consumers, to continue paying too-high prices for clothes made of that wool. It doesn't make sense, but apparently it makes votes among the wool people.

In terms of billions, these Treasury raids of millions are small, but they are symptomatic. And the millions quickly add up to billions. What happens, then, to the rosy promise of surpluses?

We still want to see spending cuts ahead of tax cuts.

Governor Dewey and the Ban on Public Strikes

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mark Sullivan which appeared in the New York Herald Tribune this past Sunday, April 13.

Mr. Sullivan hits the nail on the head in stating that the labor problem is in the public mind. My hat goes off to the legislation passed in New York State and approved by Governor Dewey which bans strikes by employees of the Government.

Today debate will start on H. R. 3020, the bill which the whole Nation has been so patiently waiting for. In going through the provisions in this bill, I believe the committee will be praised for their untiring efforts by every sound-thinking citizen in our country. H. R. 3020 should definitely correct the injustices that the rank and file of labor has been forced to accept. The bill prescribes the rights of an individual member of a labor organization and protects him in the exercise of those rights. It outlaws sympathy and jurisdictional strikes. It outlaws picketing of a place of business where the proprietor is not involved in a labor dispute with his employees, which action has recently caused considerable trouble in my own district. It makes labor organizations equally responsible with employers for contract violations. The bill also stops industry-wide bargaining which, in the past, has paralyzed our economy and imperiled the health and safety of our people. There are many other provisions in the bill which are most commendable and which, I believe, will go a long way toward bringing peaceful relationship between employer and employee.

My great hope now is that the upper House will approve of a similar bill, and that our President can report to the country along the lines of the report given by Governor Dewey when he stated that the labor legislation recently passed in New York State was the result of "fruitful partnership."

STATES BAN ON PUBLIC STRIKES CALLED ASSET TO DEWEY FOR 1948—MARK SULLIVAN DECLARES LABOR PROBLEM IS IN THE PUBLIC MIND, AND BECAUSE OF THE NEW LAW THE GOVERNOR IS NOW OUTSTANDING IN THIS FIELD

(By Mark Sullivan)

WASHINGTON, April 12.—Gov. Thomas E. Dewey, of New York, as a possibility for the Republican Presidential nomination, by quick and vigorous action on a new condition confronting him and his State and the country, has got for himself a secure and valuable asset.

There had arisen during recent years a new, extreme and dangerous use of power by labor unions and leaders—strikes by employees of Government. Such strikes had been considered so unthinkable that there was no law dealing with them in New York or in the Federal Government. That they called for legislation was obvious. Mr. Dewey acted, and by acting acquired to the public eye the distinction that goes with being the first.

There had been in New York City three threats of strikes which would have shut down the city-owned subway. It was these that moved Governor Dewey, though there had been minor strikes in other public services in other cities in the State. After two Republican members of the New York Legislature had prepared measures to make such strikes illegal there arose in Buffalo a strike of school teachers. Because this resulted in a shut-down of the schools in one of the country's largest cities it attracted Nation-wide public attention to the whole problem of strikes by Government employees. Taking account of the Buffalo strike, the proposed legislation was made stronger. Enactment of it, calling Governor Dewey to the attention of the country, gave him the asset he now has.

PROVISIONS OF THE LAW

The law as enacted makes a strike against the Government punishable by the discharge of the strikers. If the striker should be reinstated, the law provides that he cannot benefit from striking. He would be barred for 3 years from getting any increase in salary and his civil-service advantages would be otherwise curtailed.

The principle underlying this law was stated clearly by Governor Dewey: "The very right of private employees to strike depends on the protection of constitutional government under law. Every liberty enjoyed in this Nation exists because it is protected by government which functions uninterruptedly. Paralysis of government is anarchy, and in anarchy liberties become useless."

In another connection Governor Dewey stated another ancient principle of government. He initiated a measure aimed to provide larger salaries for teachers and otherwise improve education. But he insisted that the expense be met not out of the treasury but by local governments. To make this possible he initiated a measure giving larger taxing powers to local governments. And in signing this bill, he proclaimed a principle which he repeated on other occasions:

"Unless local governments are capable in large part of supporting themselves, we will rapidly degenerate to a centralized government, with the loss of freedom and careful scrutiny by the people which would inevitably follow. * * * Without close correlation between the spending of public money and the responsibility for collecting through taxes, local responsibility for government will degenerate rapidly and we shall have an all-powerful centralized government. * * * It is a fundamental truth that where a unit of government spends tax moneys which it does not raise irresponsibility and waste are inevitable."

PRINCIPLE APPLIED TO UNITED STATES

Then Governor Dewey applied the principle not merely to local governments and States but to the Federal Government, and not merely to taxation but to every form of legislation. His words might have been written by Thomas Jefferson:

"The strength of a free people is to be found in the alertness of its citizenry and their ability to watch and control the affairs of their government. Every power that can be left at home close to the people should remain where they can watch it and supervise it. * * * In this State and Nation we believe that the best government is that which is close to the people and under their constant scrutiny and control."

Governor Dewey's success in bringing about legislation which received applause was due in part to his leadership of the State legislature. He alluded to this as a "fruitful partnership." The ability of a governor or other party leader to get cooperation from his party is itself an asset, and this, too, weighs in Governor Dewey's behalf as a Presidential possibility.

The most conspicuous of the assets Governor Dewey has acquired is the legislation making strikes by government employees illegal. The labor problem is in the public mind, and in this field Governor Dewey is now outstanding. Public interest in the labor problem will soon turn to Congress when that body begins work on a comprehensive program of labor legislation. It is possible that some Republican in Congress, Senator TAFT or another, may acquire the kind of eminence in which Mr. Dewey is now most conspicuous.

The Party of Performance

EXTENSION OF REMARKS
OF
HON. P. W. GRIFFITHS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. GRIFFITHS. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an editorial from the Zanesville (Ohio) Times-Recorder dated April 11, 1947:

PARTY OF PERFORMANCE

The Republican Party, placed in control of Congress last November, has found it necessary to tread warily in the intervening months and this caution has resulted in much undeserved criticism.

Appropriately enough, the majority of the critics are those aligned with the opposition party, the discredited "tax and spend" group, the New Dealers, who with their wild-eyed theories and impractical philosophies were repudiated at the polls.

Republican Congressmen took office with a promise to bring the national expenses within income, to eliminate all unnecessary Federal bureaus and agencies, to wrest powers from a greedy bureaucracy, returning them to their rightful owners, the local governments. They pledged themselves to halt usurpation of legislative power by the executive branch,

to bring an end to debasement of the currency, to reestablish personal freedom, to remove penalties on individual enterprise—in short to restore the American Republic to the foundations laid for it by our forefathers.

This, obviously, is an ambitious program, its successful performance requiring the utmost in calm, considered judgment, demanding the highest degree of patriotic statesmanship. Yet, from every surviving group of New Dealers, backed by a skill in propaganda acquired in years of fooling the people, comes loud disapprobation of Republican lethargy; criticism based on the fact that in a few months the present Congress has not been able to remedy all the mistakes, rectify all the errors, restore all the ruins that have resulted from more than a decade of blundering, stumbling incompetence.

The present situation is not new. Every time the Democratic Party has been given power the people have found it necessary to recall the Republicans to clean up the mess.

We are confident the Grand Old Party will meet every responsibility, fulfill every obligation, and any delay must be laid not to unwillingness nor inability, but to almost insuperable difficulties and the need for extreme caution.

A glance at the record of the Republican Party is convincing proof of its ability to perform as well as promise.

The Labor Bills

EXTENSION OF REMARKS
OF
HON. EDWARD G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. ROHRBOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the following editorial from the New York Herald Tribune for Monday, April 14, entitled "The Labor Bills":

THE LABOR BILLS

If the two big omnibus labor bills now coming before Congress were actually the "first real step toward the development of fascism in the United States," as Mr. Philip Murray told an impassioned rally of his Congress of Industrial Organizations chieftains in Washington yesterday, then history would have to lay the responsibility very largely upon union leadership of the kind which Mr. Murray and his CIO have so often exemplified.

Shrieks of fascism now, grotesque in themselves, cannot conceal the fact that these bills were incubated in the huge, paralyzing strikes and threats of strikes of a year ago; they were nurtured in the peremptory refusal of the heads of the great industrial unions to admit any public responsibilty commensurate with the power they were obviously wielding over the public's life; a democratic mandate for some effective corrective action was clearly returned in the elections last fall, and, with a serious economic, political, and social problem thus plainly posed, the union chieftains have had little or nothing to contribute toward an answer save more threats.

Union dictation invited the mandate. It has forced several demonstrations since that the hand of ordered government is by no means powerless to act Mr. Lewis has pretty clearly shown us that while you cannot dig coal with bayonets the courts can set enforceable limits to the irresponsibility of the big union managements. State enactments of varying degrees of severity, like the Condon-Wadlin Act here, the Indiana and Virginia laws which averted telephone strikes in those States or the New Jersey enactments, which the telephone workers are now challenging, have offered tests, the results of which are certainly not yet clear but which are suggestive experiments in the democratic regulation of this area of our life so vital to democratic survival.

For the CIO now to shout "fascism," "damnable conspiracy," "complete crippling of labor," and so on, perhaps testified to the power behind the measures now being considered, but it neither repeals the history out of which they have grown nor helps toward the serious criticism of the bills themselves. They are open to criticism. A number of the lesser provisions of the House bill are of dubious justice or practicability, while two major proposals—the banning of closed-shop contracts and of industry-wide bargaining—rely on the method of flat prohibition rather than on the more flexible and more workable method of regulating the abuses arising under these practices.

The Senate bill is not yet complete. Less extreme than the House bill, it may carry further modification when it is reported out. Senator IVES has been working hard for limitations in the interest of both workability and equity. He would, for example, defer the very involved question of industry-wide bargaining for further study; and, in urging that the right to apply for injunctions against jurisdictional strikes and secondary boycotts should be confined to the Labor Board rather than given to employers, he draws a distinction important to the basic aim—which is not to "crush labor" but to establish a reasonable balance of rights and obligations between the parties to the industrial struggle.

That is what the Nation has demanded. Senator IVES, however, will not get much help from the CIO or other union leaders as long as they confine themselves to doing a tribal war dance about fascism. The bills are not ideal; but it is essential that they be got on the floor and subjected to real analysis. In such a process the only recipe for fascism is for any party to take a merely blind and stubborn view of the basic problems, economic as well as social, which have been forced upon us.

Franklin D. Roosevelt

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of President Truman's address on the Franklin D. Roosevelt memorial broadcast, as recorded in the New York Times of April 13, 1947:

My fellow countrymen, 1 year ago today I stood in silence beside a newly built tomb in the rose garden at Hyde Park. The tomb is a simple memorial of pure white marble. The inscription on it tells only that the man whose body lies there was born in 1882 and that he died in 1945.

But there is another and greater memorial to Franklin Delano Roosevelt which tells a fuller story. That story has been told to me a thousand times. I have seen it in the eyes and I have heard it in the words and I have read it in the hearts of men and women all over the country. It has come to me from those whom I have met in my travels, on trains, on ships, and in the air; even in foreign countries. It is the natural human response of people everywhere to something in the character and personality of Franklin Roosevelt. It is a response to his understanding and his sympathy for suffering—an understanding and a sympathy that were deep and sincere because they were born of a tragic personal experience.

That experience made Franklin Roosevelt peculiarly sensitive not only to the sorrows and the sufferings of others but also to their most cherished hopes and aspirations.

More impressive than marble monolith or anything printed on paper or carved in stone is the unending pilgrimage to that sheltered grave behind a high hemlock hedge above the Hudson. In the 12 months just passed, half a million persons have stood where I stood a year ago today.

Time will confirm Franklin Roosevelt's outstanding place in history. It is not for me or for any of his contemporaries to attempt to measure his great stature or to estimate the impact of his words and his deeds upon the days of his years. Today, as I think back to my visit to his grave a year ago, it is uppermost in my mind that he was a great humanitarian—that he brought hope and courage to despairing hearts when fear was destroying the faith of the people—and that through the most terrible war in history he remained the symbol of fortitude, justice, and humanity.

Franklin Roosevelt rests in a spot he held dearest—his home. He died fighting for what he loved most—his country, its homes, its institutions, its people, sharing their stubborn belief in freedom under a just God, in whose almighty beneficence rests the hope of the world this day.

His home and his grave are in the Nation's keeping. Let us bow together in a moment of silent tribute to his memory.

Indiana's Public Utility Law

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Wayne (Ind.) News-Sentinel:

REPUBLICAN ACHIEVEMENT

It is not by accident that Indiana's telephone workers remained on the job while 340,000 telephone employees elsewhere in the Nation were on strike.

According to the Associated Press, both union and company officials credit Indiana's new public-utility arbitration law with averting a walk-out in this State.

The Republican leadership in the 1947 general assembly will have earned the gratitude of all Hoosiers if the arbitration law survives this and future tests. Indiana is one of few States whose public-utility labor laws seem to have been adequately equipped with teeth to make them stick.

At any rate, James Orr, vice president of the Indiana Telephone Workers Local No. 1, said that in his opinion it was the law which averted the strike. More significantly Indiana members of the telephone workers' union have been forbidden by national headquarters to walk out.

An official opinion of the Attorney General given to Governor Gates is that the law applies in the present dispute. As a result, instead of a stoppage that is paralyzing most

of the Nation's communications system, Indiana telephone service continues uninterrupted, while contract negotiations between the company and the unions are in process.

According to the law, if collective bargaining (of or similar to the kind provided for by the National Labor Relations Act) fails, conciliators and boards of arbitration appointed by the Governor would attempt to effect a settlement.

Thereafter the State's arbitration and conciliation agencies would present their findings relative to wages, working conditions and/or whatever other matters may be in dispute.

Their decision may pacify both parties. But if either or both are still dissatisfied, an appeal may be carried to the circuit court of the county in which the dispute occurs. Upon review of the evidence, this court would make a decision which, if the law is observed, becomes final.

What happens if public utility workers walk off their jobs in event of their failure to bargain with management, thus by-passing the arbitration machinery?

There are two restraints making this unlikely. First, doing so makes them willful violators of the law. Violation of the anti-strike law carries maximum penalties of $2,000 in fines and a 6-month jail sentence. Second, if their case is equitable they stand to gain more by Government arbitration than they would from a long strike in which they would face the wrath of public indignation and loss of wages.

In the last recourse by law—that of an appeal to a circuit court—there may be the most serious weakness of the measure. It assumes an unwarranted capacity in a civil court to settle a problem calling for the special skills of a labor conciliator which many such judges lack.

Here would have been an ideal opportunity for establishment of a State labor court on the pattern of that advocated by Senator HOMER FERGUSON, of Michigan.

Nevertheless, the law appears to have real strength. It is so written as to make it highly desirable for both company and workers to settle their differences. Once the controversy goes beyond collective bargaining, either side stands to lose; and neither can tell who would end up the loser. The law encourages them to keep their chips on their own table.

Indiana has gained Nation-wide distinction because of this act. It should encourage the next legislature to carry the same principle into legislation affecting disputes in other types of industries. It promises to pave the way to similar laws in other States.

Henry Wallace's Speeches in England

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. SPRINGER. Mr. Speaker, recently, Mr. Henry Wallace, who is touring in Europe, made some very strong and very disagreeable statements. It is possible that the gentleman violated some of our criminal statutes, by so doing. If he *did* violate any penal statute, he should be compelled to answer for that violation. However, all of us realize that he has directly injured the cause of peace in the world—and his untimely and very undiplomatic utterances have, without doubt, materially injured our relations in some country or countries in Europe. It is a sad commentary for us to behold a man who has held high public office, and who, undoubtedly, now aspires to some higher place, to "speak out of turn", as Wallace has done, and he says he will continue talking in the future. There is one way to stop him—and if he continues to injure our Nation, as he has undoubtedly already done, he should be stopped—and he should be stopped at once.

A very enlightening editorial appeared in the Indianapolis Star, recently, upon this subject. Under unanimous consent to extend my own remarks, I include that editorial, which is as follows:

WALLACE SPEAKS OUT OF TURN

Henry A. Wallace might say anything in Madison Square Garden and not greatly disturb the people of America. The situation is different when he makes sweeping assertions at a press conference in London. His friends in this country may applaud what he says at home, and others will consider the source and not worry. Europeans are likely to weigh his words in the scales of his having been Vice President, and take them too seriously.

Henry, for example, told the European newspapermen he felt a sense of urgency in watching these two giant powers, America and Russia, getting ready for a death struggle. How will that sound when it is relayed to Moscow? And what will the Soviet bosses not do with that as an argument to the peasantry back in the hinterland? There it is, a plain admission from a former Vice-President of the United States that we are getting ready for a death struggle with Russia.

Secretary Marshall's patience and patriotic endeavor to bring about a better understanding with Stalin and Molotov are being hamstrung by the garrulous Wallace. The former Vice-President is not so dumb that he does not realize how ill-advised are his remarks. He cannot be excused by the remark that he is well meaning. If he were well meaning he would not embarrass his own Government in the present emergency.

Requesting the National Congress To Pass Legislation for the Immediate Cash Payment of GI Terminal Leave Pay Heretofore Issued in Nontransferable Bonds

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution which was adopted by the South Carolina General Assembly, this year:

S. 279—H. 357

(Concurrent resolution by Mr. Cantwell requesting the National Congress to pass legislation for the immediate cash payment of GI terminal leave pay heretofore issued in nontransferable bonds)

In the senate:
Introduced March 11, 1947.
Considered March 12, 1947; adopted.
Sent to house by order of the senate.

WM. BRANSWELL,
Assistant Clerk.

In the house:
Introduced March 13, 1947; veterans affairs.
Considered March 27, 1947; favorable.
Considered April 1, 1947; adopted.
A true copy.

JAMES H. FOWLES,
Clerk of South Carolina Senate.

Concurrent resolution requesting the National Congress to pass legislation for the immediate cash payment of GI terminal-leave pay heretofore issued in nontransferable bonds

Whereas the National Congress of the United States of America by legislation duly passed, issued to enlisted men of World War II terminal pay nontransferable bonds for their services as rendered; and

Whereas these veterans in the United States could more acceptably use such pay in the readjustment period in so many ways; and

Whereas there is now pending in the National Congress a number of bills to make immediate cash payment of these terminal-pay bonds to the veterans: Now, therefore, be it

Resolved by the senate (the house of representatives concurring). That the General Assembly of South Carolina hereby requests the National Congress of the United States to give as early attention as is practicable to the payment of the terminal-pay bonds heretofore issued to veterans of World War II; be it further

Resolved, That a copy of this resolution be sent to the Members of the National Congress from South Carolina urging immediate attention and assistance with this pending legislation: be it further

Resolved, That copies of this resolution also be sent to the President of the Senate of the United States and to the Speaker of the House of Representatives and to the legislative committee of the American Legion and to the Veterans of Foreign Wars, all in Washington, D. C.

Americanism Or?

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am including an essay written by one of my constituents, Roger Brucker, of Shelby, Ohio, who is one of the winners of the essay contest sponsored by the American Legion of Ohio.

I congratulate Mr. Brucker on being one of the winners and upon his achievement, and I respectfully urge the membership of the House of Representatives to read this essay, "Americanism Or?"

I also compliment the American Legion of Ohio for sponsoring such a worthwhile program and for bringing these winners as their guests to the greatest capital of the world.

The essay follows:

AMERICANISM OR?

(By Roger Brucker)

"Atom bomb levels Hiroshima." The atom bomb was not the only thing that went boom that day. In the minds of a good many Americans this started a chain reaction of thoughts—thoughts of future wars far more horrible than any yet dreamed of. Scientists began hinting of even deadlier things to come. Hand in hand with the thoughts of

war came those of peace, a peace which would insure fair and equal rights for the people of the world. How can the people of the world govern themselves and also keep peace?

For countless centuries, down through the pages of history, man has sought the perfect government. The Romans were on the road to this goal with their semidemocratic form of government, but greedy men seized power and the Roman Empire disintegrated. All this, however, did not take place within a short period of time. The Roman Empire lasted more than three times as long as our Nation has.

In 1787 a group of men attempted a difficult task. It is difficult to get 13 people to agree on matters pertaining to their rights. It is harder yet to get Thirteen Colonies to agree on the same question. The Constitutional Convention met in Philadelphia to unite these Colonies into a strong Nation—a Nation which today is the strongest in the world. These men studied the Roman and every other government to profit by their mistakes. With these experiences they drew up the Constitution and set in motion the wheels of a more perfect government than any yet devised. The freedom we have today must be attributed to the foresight of these men.

The spirit of Americanism was born in the people of the Colonies long before the drawing up of the Constitution. This spirit grew as America grew. Today many organizations are based around this spirit. The increase in the number of qualified persons voting is a good example of Americanism in operation.

Truly, Americanism is a good thing, but is it the greatest height to which democracy can rise? I cannot believe this to be true. I believe that democracy, in order to be really effective, must work on a larger scale. Let us consider it working on a scale called worldism. I feel that this is the ultimate goal of democracy.

Until the theory that nationalism is the primary concern of the people of a country is antiquated, we shall never have a true democracy or even peace. A new way of thinking must be developed now. A way that will make men realize that all men have equal rights and that no one is more important than any other. Just as in the early days of our country States were reluctant to give up petty advantages, nations, too, will not be willing to give up certain of their advantages. When the Thirteen Colonies agreed to the plan for a United States, they found that the gains realized from the Union far outstripped the losses. The people benefit when their welfare and happiness is put foremost. The uniting of the States was a give-and-take proposition the same as life is a give-and-take proposition.

By this we may conclude that Americanism is not an end in itself but merely a means to an end. One can easily see by comparison that Americanism is the most promising start yet known on the road to worldism. Americanism is the foundation to lasting peace. Worldism through peace, peace through democracy, and democracy through Americanism.

United States of Europe

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper articles:

[From the Washington Daily News of April 2, 1947]

UNITED EUROPE SOON?

(By William Philip Simms)

There will be a United States of Europe within 2 years, Count Richard Coudenhove-Kalergi, founder of the pan-Europe movement predicted today. The only doubt, he said, is whether it would be a union of democracies or a union of soviets.

Count Coudenhove-Kalergi is head of the Research Center for European Federation at New York University. He came to Washington to discuss related problems with officials here. He predicted to the writer that a united Europe soon will be official United States policy.

The Boggs-Fulbright resolution declaring that the Congress hereby favors the creation of a United States of Europe within the framework of the United Nations, Count Coudenhove-Kalergi observed, is the inevitable corollary of the Truman doctrine.

That doctrine, he said, has brought things to a head. Before its enunciation, European statesmen overwhelmingly favored a United States of Europe but many of them feared to work openly to bring it about.

Now things will be different. The little countries will not be so afraid of the Soviet Union. With American backing, they will go ahead. Next August, a customs union is schedule to go into effect among the Netherlands, Luxemburg, and Belgium. That will be the beginning. Others will follow and the movement will grow like a snowball. The United States of Europe will not spring up overnight. It will develop economically and politically along natural lines until, at last, there it will be.

While in Europe last summer Count Coudenhove-Kalergi polled 3,913 members of European parliaments, asking whether they favored a European federation within the UN framework. All members of freely elected parliaments were polled. Of 624 who have replied, all but 12 answered "Yes."

A Congress of European members of parliament will meet in Geneva next summer. Some 185 are expected. A European charter will be drafted with practical recommendations for economic and political integration. This will be done in line with article 52 of the UN Charter which provides for regional pacts and agencies.

The Communists are the principal holdouts. Moscow is bitterly hostile. She is suspicious of even the slightest collaboration on the part of any two of the western powers, however small. It is far easier for Russia to seize control of small European states, one by one, than to dominate all of them in a bloc. As long as the Kremlin dictatorship can call the tune, a united Europe will be difficult—unless the Kremlin can unite the Continent under the hammer and sickle.

But a forthright stand on the part of the American people behind the Truman Doctrine might lead Russia to see that her own best long-term interests lie in the direction of a peaceful, prosperous, united Europe. It is chiefly on this that proponents of a united Europe are pinning their hopes.

"Europe's future depends on America," observed Count Coudenhove-Kalergi. "But," he added, "America's destiny also is linked to the fate of Europe."

[From the Washington Post of April 8, 1947]

EUROPEAN UNION

The prospect of failure at Moscow to achieve any meeting of Russo-western minds on the German future puts the onus upon this country to leave Europe in no uncertainty about our American policy. All the conditions are favorable for the achievement of a western agreement over Germany. British and Americans have already come to a working arrangement in the amalgamation of their zones in Germany. The French, to be sure, are still absent from it. But the French would enter our system in Germany tomorrow if we were to apply their common sense to the problem of the Ruhr. An international regime in the Ruhr would make the French our copartners. And it would bring about a solution of the non-Ruhr problem of Germany by sheer attraction.

The Ruhr is so vital to all Europe, indeed, that its internationalization would make visible the community of Europe. Now the political manifestation of community is federation—a way out for Europe to which many of its public men have been converted as the answer to chaos and communism. The philosopher Lecky says that "the success of any opinion depends much less upon the force of arguments, or upon the ability of its advocates, than upon the predisposition of society to receive it." In our opinion there is now a predisposition in Europe for federation. It has acquired momentum in Britain and France from their economic difficulties. The Monnet plan in France, it is recognized, cannot succeed except in a larger context of population and resources. So Monnet's visit to London resulted in an organized exploration of the Blum bid for a Franco-British tie. Under the pressure of events more and more leaders in Britain are losing the duality of mind which persuaded Mr. Churchill at Zurich to advocate union for continental Europe and freedom of action for Britain. But the most significant step seems to have been made in the low countries. Dutch-Belgian negotiations looking to the setting up of a customs union have been successful. What has been the most formidable hurdle has been fear of Russian opposition; no country and no people in Europe are free from it. Yet that fear would be removed in an instant by American backing and financing of federation, and must be.

It is the logic of the Truman doctrine no less than the logic of failure in Moscow to demonstrate this backing on Secretary Marshall's return. The doctrine is profreedom. But it would lead to our national bankruptcy if we were to limit its application to nations only as their independence comes under the shadow of extinguishment. We cannot wait to bail nations out, nor have we the money to do it. The moral of the Truman policy is that we shall prevent these emergencies. This can be done by throwing all our energies into the task of making as much as possible of Europe into a going concern—first by political encouragement of federation and then by an American survey on the spot, coupled with consultations with the European commission, of what reconstruction will require. The alternative is chaos, a Russian-subjugated Europe, or a Europe located like an Old Man of the Sea on America's back.

A verbal investment in such a program is already before Congress sponsored by Senator FULBRIGHT and Representative BOGGS. Their 28-word resolution says that "the Congress favors the creation of a United States of Europe within the framework of the United Nations." Passage of this resolution would have an electric effect upon Europe if it were pushed and followed up by the State Department. It has already been given enough lip service to warrant action. Last year President Truman, in an interview with George Creel, applauded a United States of Europe. And Secretary Marshall came close to endorsement in Moscow when he said "We are not in favor of a Europe divided against itself," as it would be, in Senator FULBRIGHT'S words, as a congeries of fragmented sovereignties. The Secretary's negative requires to be completed with a positive, for an impasse in Moscow would leave a dangerous diplomatic void in Europe and accentuate fear in Europe of being squeezed between Russia and America.

[From the St. Louis Post-Dispatch of April 7, 1947]

THE TIME IS FAVORABLE

Senator FULBRIGHT, of Arkansas, in an eloquent article in the Post-Dispatch yesterday, called on America to look beyond patchwork accommodations in the international field and strive for a solution which will relieve us of the economic and military burdens of a disorganized Europe.

In the next 15 months the United States is expected to spend $7,000,000,000 on its international commitments, some $700,000,000 going to the support of our defeated enemy, Germany. As a practical people, Senator FULBRIGHT says, "we may well ask ourselves, how do we finally work out from under these obligations?" Then he answers his own question:

"In the Near East and in Europe a prerequisite to the revival of trade and industry is a United States of Europe. * * * With the federalization of Europe would come freedom of commerce, the free movement of persons, a common currency and efficient transportation. The result would be a rising standard of living and a lowering of the political rivalries and economic tensions generating war."

Senator FULBRIGHT points out that Europe desperately needs, for its rehabilitation, the full production of German industry. But because Europe is not organized in such a way as to protect itself from a possible revival of German militarism, it is planned to let Germany manufacture less than a third of its prewar production of steel, less than half of its rated capacity of fertilizer, and other goods in proportion.

Senator FULBRIGHT would have Germany broken up into the separate states which composed the Reich and then organize these with other continental countries into a European federation. So divided, the Germans could not dominate a European federation.

The Senator takes it for granted, of course, that European federation would have to be achieved over Russian opposition. He thinks it should be clear to us by now that Russia does not intend, if she can help it, to permit the rehabilitation of any European country, except under the aegis of the Communist party. It is up to the Western powers to see that Europe is rehabilitated, instead, under democratic auspices. He would have the United States extend encouragement for the calling of a constitutional convention to unite at least western Europe.

He admits the great complexity of the problem but adds: "The most propitious time to move forward is just after society has been disturbed by some great upheaval leaving it in an unstable and fluid state."

The western powers would do well to commit this statement to memory. The men in the Kremlin know it and it is their guiding principle at the moment. If the Western powers forget it, they do so at their peril.

[From the Washington Daily News of April 2, 1947]

AN ALL-OUT PEACE OFFENSIVE

Senator ALEXANDER WILEY, Republican, Wisconsin, has introduced a resolution favoring a United Democratic States of Europe—excluding Russia and her satellites. Senator J. W. FULBRIGHT, Democrat, Arkansas, urges a federation to include all European states.

Winston Churchill and many other statesmen view some form of federation as the only hope for Europe's peace and recovery. But the road is blocked by Russia's attitude that any action toward European unity is an effort to form an anti-Soviet bloc.

Yet, if Europe is to survive, the continental nations and Britain must learn to live and work together.

The Truman doctrine of protecting independent states against foreign aggression is sound, as far as it goes. But it is a defensive position against war. It will not, of itself, relieve sick and faltering Europe from unbearable burdens of armaments and fear. A broad, dynamic peace offensive is essential to save Europe and the world from economic chaos and disintegration.

The United States can do much to open the way for an era of good will and cooperation. We are the world's banker—the only great power that is solvent and able to give substantial aid to other nations.

That position entitles us to demand that Europe put her house in order, and live at peace as we do among our Western Hemisphere neighbors.

The Truman doctrine can be made a positive, winning program by our announcing that we will support nations which are willing to cooperate with one another, and withhold all aid from those which are disturbing the peace or contributing to economic stagnation. We are, in fact, backing into such a position now when we deny grain to Yugoslavia.

But what is needed is a dramatic pronouncement that will command world attention and respect. This is where the project of a united Europe comes in.

Europe's highly integrated economy will not respond to piecemeal treatment which remedies fingers and toes but overlooks lungs and heart. Rehabilitation, to succeed, must be on a continent basis. We should insist that an economic council of Europe be formed to draft a general recovery plan.

Not all nations would join at once in such a program. But, given firm support, the movement's strength would be cumulative.

With the world divided by ideological conflict, many peoples are on the fence, wondering which way to jump. The choice between a system backed by our productive capacity and genius and Russia's tottering, low-standard economy would seem inevitable—once we demonstrated that we meant business.

Russia? When Moscow becomes convinced that not enough war loot and reparations exist in devastated Germany to meet the demands of Russia's hungry people, the Soviets may see that their salvation lies in working with peace-loving nations in a common reconstruction program.

Relief? Some will be necessary, for a time. But the bulk of our money should be invested in self-liquidating enterprises, helping only those who are willing to help themselves. If economic unity brings a United States of Europe, well and good. But the first essential in Europe is for people to get back to work.

Palestine

REMARKS

OF

HON. ROBERT J. TWYMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. TWYMAN. Mr. Speaker, as a coincidence, after finishing the newly published book, Behind the Silken Curtain, by Bartley C. Crum, I picked up the Washington Times-Herald this morning and read the leading editorial which I recommend to all of the Members of the House. Regardless of how you feel about the Palestine situation, I think you should read this book. It contains some charges which I feel should be answered instead of being evaded. We, the strongest country in the world, should have a State Department upon which we can rely to deal forthrightly with all matters. The President of the United States, at least, should know what is going on in his own State Department.

UN TAKES UP PALESTINE

United Nations Secretary General Trygve Lie must be given credit for at least one thing, we think; namely, that he moved with strikingly un-UN-like speed in the matter of Palestine.

British Foreign Minister Ernest Bevin last February threw up his hands, admitted that direct Jewish-Arab negotiations in London had broken down, and signified Britain's willingness to submit the whole Palestine question to the UN.

This was done formally on April 2. Mr. Lie cabled notices to the 55 member nations of the General Assembly that he would like that body to begin consideration of Palestine on April 28. Approvals came in from the necessary majority—29 nations—and lo and behold, the debate is now set to start April 28 at the General Assembly's old stamping ground in Flushing Meadow, New York City.

This is phenomenal speed for the UN to show, and is rather as if Mr. Lie had turned suddenly from an elephant into a reindeer or gazelle.

Of course, the General Assembly won't be able to do anything definite about Palestine, like changing it from a British mandate to a UN trustee territory or a state split three ways among the Arabs, British and Jews.

The Assembly is only a sort of high-toned debating society. The real UN powerhouse, such as it is, is the Security Council, with its big five permanent members and six other rotating members.

However, an international debating society can at least debate—meaning it can let everybody concerned with the problem under discussion get up and speak his mind. That a lot of mind-speaking will be done and a lot of time consumed in this debate is a lead-pipe cinch.

Palestine is one of the most explosive issues in the world today. Primarily, the question is whether the Jews are ever to get the national homeland they want, in the most logical of all places in the map of the world. Mixed up with that primary question, though, are all sorts of secondary ones, having to do with Britain's strategic position in the Middle East, Russian ambitions to break the backbone of that British position, the desire of several nations including our own for easy access to Middle East oil, and so on.

It is conceivable that the General Assembly debate on Palestine may build up public opinion throughout the world to force a final and reasonably satisfactory settlement of the entire Holy Land issue. That would be a large feather in the cap of the UN.

At the least, it seems certain that many people will know more about Palestine at the end of this discussion than they know now.

We're hoping especially for the airing of a sensational charge going around about some dealings of our own State Department with regard to Palestine.

This charge is made in a recently published book: Behind the Silken Curtain, by Bartley C. Crum; Simon and Schuster, New York, 1947, 298 pages, $3. Mr. Crum was a United States member of the Anglo-American Committee of Inquiry on Palestine.

CRUM VERSUS ACHESON

We quote from pages 36 and 37 of the Crum book:

"I was given * * * a résumé of the State Department secret file on Palestine, the existence of which apparently not even President Truman had known. According to this

file, since September 15, 1938, each time a promise was made to American Jewry regarding Palestine, the State Department promptly sent messages to the Arab rulers discounting it and reassuring them, in effect, that regardless of what was promised publicly to the Jews, nothing would be done to change the situation in Palestine. This file confirmed the charge of double-dealing that had been hurled at both the United States and Great Britain."

Crum further says that Under Secretary of State Dean Acheson denied a charge by Crum that State Department subordinates had sabotaged the Truman Palestine policy; and that Acheson, challenged to make the abovementioned secret file public, had not done so.

The Crum book goes into some most interesting detail on this subject of State Department playing both ends against the middle. Crum's story, on the surface at least, has a well documented and responsible ring to it.

We move that this particular charge be placed on the program of the General Assembly's Palestine debate, well up toward the top, and that the whole truth about it be dug out and broadcast to the world.

Displaced Persons

EXTENSION OF REMARKS
OF
HON. MITCHELL JENKINS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. JENKINS of Pennslyvania. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech by A. A. Berle, Jr., former Assistant Secretary of State, at the fourth convention of American Federation of International Institutes, St. Moritz, New York, N. Y., March 28, 1947:

Exclusion of displaced persons from any permanent home is the blackest page in postwar history.

Callous Nazi cruelty and, I am sorry to add, inhuman Allied policy has made some millions of innocent people into permanent prisoners behind barbed wire—or wanderers on the face of the earth. The Italian treaty we are asked to ratify displaces even more; since its signature nearly 30,000 poured into Italy.

Many hundreds of thousands we may never hear of again. These we cannot reach; for them we can only hope.

But we can do something about the 900,000 or so who are in western Europe. More than that, we are jointly responsible. As they die, we share the guilt.

And I say with all conviction that history takes its toll for guilt of this kind. These pools of misery we call concentration camps or DP camps scattered throughout Europe are weights thrown into the scales of international affairs. They breed fear, despair, and hatred. If they are unrelieved, they lead in time to violence, anarchy, and war. Having spent much of my life in international affairs, I have seen whole nations pay in blood and tears for guilt of this kind.

All Allied nations should be working to clear up this problem. But even if others fail, the United States Congress can act. I am here today to ask that you and all of your friends join in urging that Congress do something now.

The 900,000 displaced peoples in western Europe include refugees of all races. Twenty percent are Jews; the rest are Christians. They are Italian and Polish and Lithuanians and Catholics. They are Protestants from Finland and Latvia. They are Greek Catholics from Yugoslavia and Greece. They are new migrants from Venezia-Giulia on the Yugoslav border.

These men, women, and children are not going home. They cannot. Some would be killed if they went. Others have been forcibly driven out by the occupying nations. You may say that Europe ought to take care of its own. No doubt; but Europe will not, and the United States apparently is unable to change that situation. Devoted Americans—I am proud to mention my friend, Eddie Warburg—have pounded in every government without success. It comes to this: If the United States does nothing, practically nothing will be done.

But we, who absorbed the European refugees after the massacres of Kishinev, and when the Armenians were being forced out of Turkey, and in many other cases can take, and must take, a substantial number of these people.

We can do it by proper handling of our immigration laws. These laws permit the immigration into the United States of 154,000 quota immigrants annually. This was authorized by the Congress more than 20 years ago.

But in fact during the war years immigration substantially stopped. We did not take in 154,000 people a year, because they could not leave. So that in fact immigration was suspended in large part since 1939. Actually, since 1930 less than 600,000 immigrants reached the United States on immigration visas.

Because of this, a former Commissioner of Immigration, Earl G. Harrison, is now proposing legislation which would permit 400,000 displaced persons to enter the United States, in adidtion to the immigration permitted under the quota law. These immigration visas should be available to displaced persons only.

The Congress can do this without changing the immigration policy to which they are committed. The United States can do this without absorbing more immigration than was estimated when it passed the present law. The public can demand this in the name of common decency. You can influence a fair share of public opinion.

Nobody need say: "There is nothing I can do about displaced persons." There is a thing that can be done. Gov. Herbert Lehman has been urging action along these lines. So has Charles Taft. Fiorello LaGuardia has asked for it, so has Jim Farley. They are entitled to some help.

And, while you are at it, throw your weight against the diplomacy that wants to push populations out of one country for the benefit of another.

That policy was adopted in the evil days of the Hitler-Stalin pact. One of the first results of that pact was the displacing of great numbers as a result of the partition of Poland and the rearrangement of frontiers in eastern Europe. Both sides displaced thousands of homes. I have never discovered how some Allied governments were willing to accept this cynical and hideous idea. The brutal fact is that displaced persons are not all victims of Nazi cruelty. Some of them are victims of Allied mistakes.

Behind barbed wire or in sodden barracks there are men and women and 150,000 children whose lives are as important in the sight of heaven and civilization as your life or mine. They have been hounded through the tragedy of exile and hunger to the greater tragedy of hopeless despair. This country has in its hands the keys to those camps and has not yet seen fit to open their gates.

In the name of God, how long?

Air Power Supremacy and Security

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Maj. Gen. William E. Kepner, commanding general, Technical Training Division, AAF, Scott Field, Ill., before the Air Power Is Peace Power dinner, First National Aeronautics Conference of the American Legion Thursday evening, March 20, 1947, at the United States Naval Armory, Indianapolis, Ind.:

Down through the ages the security of any nation has depended on its ability and determination to provide the necessary means. This has been followed by the tactics necessary to overcome the opposition. The supremacy of equipment and manpower has been a beacon light to those leaders who held responsibility.

Supremacy is a condition of fact upon each successful termination of conflict. In a struggle of attrition, it happens at a majority of local conflicts. The combining of these miscellaneous supremacies of action produces national supremacy, whether it be industrialism, statesmanship, or war. I hold it to be a law of nature that nothing stands still—you either go ahead or you go backward. Hence we must struggle to go ahead.

Fortunately, in both World Wars I and II the industrial supremacy of North America, and in particular the United States of America, was an established fact. Happily, its ability to survive a destructive attack such as Europe or Japan endured was never seriously challenged.

Our statesmanship saw us through war. It is now confronted with going ahead in organizing the peace and preventing another war. It is a very great task. Progress can only be evident when success is assured. May God grant them supremacy.

However, we must deal in capabilities, and I do hold that a proper security of our present industrial supremacy demands air-power supremacy if we are going to maintain security and peace.

At least two, and possibly three, other populated centers of the world have the capabilities to produce developments that we must keep abreast of in order to maintain our Nation's supremacy.

In World War II our air strategy in Europe seems to have been, first, slowing down growth of the German Air Force, by bombing attacks that stopped him from increasing in strength; second, by a bleeding-to-death process of the whole German Air Force structure that eventually gained air supremacy for the Allies Then the air-war decision was in our favor, and no longer seriously contested. In this, we used a team of bombers, fighters, and logistics, where each depended on the other two to gain and maintain supremacy.

Logistics was an endless chain of moving supplies, equipment, and personnel. One end was the source in the United States of America, supported by 140,000,000 people who made it possible. The discharge end in Europe and Africa. The carrier space (the ocean and the airways between), protected by both sea and air escort defense. Factories and depots supplied bombers and fighters.

Bombers attacked strategic targets, i. e., war munitions, tank factories, airplane factories, transportation, oil and electric facilities, submarine bases, enemy docks, and fleet bases. These attacks definitely helped the fighters to survive, also the flow of logistics to all.

The fighters escorted bombers to the limit of endurance. This endurance increased through logistic planning until they went all the way. They also attacked transportation and German air force logistic installations. The guiding principle being to attack and destroy or by every conceivable means, to heckle and confuse to the end, that we might gain air supremacy and by the use of all air power prevent the German air force from maintaining air supremacy.

It was a problem of logistics, a race of production headed by the President, statesmen and industrial organizations of people at home in the strategy of providing the means. The air combat strategy headed by General Arnold directing the flow to General Spaatz in Europe and General Kenny in the Pacific.

It was also a race against time. The Eighth Air Force (one of 16 air forces), on its first mission in 1942, led by General Eaker without American fighter escort, consisted of 12 bombers. In December 1944, the Eighth Air Force under General Doolittle put 2,000 bombers, escorted by about 1,000 fighter escorts, on a mission. Air supremacy was in sight but not yet an established fact.

It became a fact on the conclusion of the air battles of Berlin, in March of 1945. The German Air Force air supremacy was broken, the body bleeding to death, and his development going backward.

It is needless to say this was accomplished not by the Eighth Air Force alone, but by all the Allied air forces in the European theater of operations. It was made possible through the understanding support and appreciation of the Supreme Commander in Chief, General Eisenhower, backed by the Supreme Allied War Council and Joint War Chiefs of Staff.

We demonstrated, among many things, that courage and aggressiveness in air warfare cannot be stopped, except by destruction at the base, or in the air. It is a matter of record that in no single case did an attack turn back because of opposition.

Nor were these principles or actions peculiar to one air force. They were equally true of United States air power everywhere, regardless of war theater or the color of the uniform.

How did we grow up to air supremacy in the face of the unquestioned German Air Force supremacy? The answer is, they (the German Air Force) committed several serious errors in strategy and tactics. My personal opinion is that the following is pertinent:

1. They did not go after the English fighters in the Battle of Britain, thus they failed to soften up the air ahead of their bombers.

2. They did not attack and annihilate our fighters and thus prevent effective escort of American bombers, particularly when they frequently outnumbered us locally by four or five to one, in the beginning.

3. They went to a fighter defense over Germany instead of providing for strategic attacks on our English bases or in the vicinity, when we were assembling or returning.

4. They failed to use flexible plans that would enable their combat leaders (in the air) to take advantage of combat intelligence on the spot.

5. They dealt with air war in a tempo and psychology of their own past successes, when there had been a different enemy and equipment in the air. They were too inflexible to meet surprise either in tactics or strength. This severely restricted all local German Air Force air commanders' initiative.

Whether these observations of mine were decisive factors, may be open to question. But it is a fact they did not maintain air supremacy; they eventually went backward.

Much is being said about the next war being a push-button affair. Well, it may be, but that depends on when it happens and what development goes on between now and then. If it happens tomorrow, there won't be too many buttons ready. And any potential enemy knows that as well as we do. I trust such an enemy does not exist, but if he does exist, I hope he is at least no smarter than we are along the lines of science and technology.

Our security depends on an ability to go through a transition phase between the methods available today and those of a future push-button era, if and when it arrives.

All future wars will probably be planned on the blitz pattern. It certainly is far more satisfactory to the winner if a war can be won quickly. For in another war of any duration, even the winner is going to receive some severe body blows that are costly.

If a war comes tomorrow, we shall have to use what we have today. Our present machines manned with currently trained personnel, will have to suffice, at least in the beginning.

While industry will tool up on advanced design, it will take time. The only time won will be through our reserve forces that we can use immediately, if we are the object of initial attacks.

Does anyone doubt that these planes will be our present active bombers and jet machines? If war occurred immediately, we would not be too far behind in development compared to the rest of the world. What a more distant date would involve, I cannot predict.

However, as for training and organization, it has been said by others that we are not in nearly as good shape as we were at the end of World War II, due to rapid demobilization. That condition can only be corrected by strenuous all-out effort on the part of everyone. Again, it is a question of time. On this point we need to squarely face the plain truth. Churchill proved that a democratic nation would face it, when he promised only blood, sweat, and tears with a real hope of victory in the end.

If we must face a complete push-button war in the unknown future, it takes time for development as it took time in World War II. We get time only through surviving an attack or preventing one. Let's hope it is prevented.

Atomic energy and the atom bomb is but a point on the threshold of science. It adds tremendous capacity to air power. What would have seemed fantastic destruction 5 years ago, is today a reality. Apply speeds and ranges demonstrated this past year and the desirability of holding air supremacy rises up as a grimly necessary objective at once. Security of our industrial productivity is mandatory and we dare not relax until we are sure there will be no more war.

The examples of destruction by air power at Hiroshima and Nagasaki are proof enough of the destructive force of one air weapon. The Bikini test fully vindicated the forecast of the scientists. I need not repeat here the results. Some of you saw them, as I did when I was privileged to be Vice Admiral Blandy's deputy commander for Army and Navy aviation on those tests. An array of vessels of some sixty-odd were located in the lagoon of Bikini Atoll, and on these vessels, which in themselves were instruments, were placed some 10,000 instruments that would measure the effect of the bomb. Knowing that there was always some dispersion at the point of impact of bombs, the vessels were arrayed, spread out so that the mission would be accomplished; i. e., graded damages—maximum to minimum.

I have a profound respect for the atom bomb. I would say only in general terms that the bomb lived up to all expectations and to the forecast of the scientists as to what its destructive force would be, that it was equivalent to the explosion of 20,000 tons of TNT.

Probably the next question to arise is, What targets could one conceivably use it on? These are: Targets of concentration, and they include transportation centers, communication centers, critical industrial areas, and, of course, concentrated arrays of surface vessels, concentrated invasion forces, and closely allied to this, concentrated defense forces where invasion forces might desire to land, miscellaneous targets that will inevitably appear, due to the enemies' tactics, either in defense or offense.

The Bikini tests also proved the utility of the multi-engined as well as the single-engined drone in actual operation. Also, a practical use of television. The strategy and tactics possible with drones is a long step forward and is a present reality. It does point to considerable development in elaborate control, complex observation requirements, and combat intelligence. This development in turn requires a high degree of training in commanders' staffs and operating personnel. For, be assured we still need highly trained men and brains to guarantee success if, or when, a "push button" war becomes a complete reality in the future. Even now, the special training requirement is becoming evident. It always pays to make operations as foolproof as possible. This is not a new theory.

For example, throughout the European air war each mission was given a dry run as a theoretical combat exercise each night before we put out the order. We had officers to theoretically use the estimated German Air Force on one side, while our operations officer would use our fighter force on the proposed order. If the German Air Force side of the exercise won, we immediately made a new plan that could stand up. Then that proved solution went out as an order. It often paid big dividends.

The cost of air supremacy in peacetime is high. But if we have it, the other fellow is not going to succeed in the air war provided we remember the lessons learned from the German Air Force, World War II, even granting he is foolish enough to attack. Anyway, compared to the cost of equipment in the air from the Eighth Air Force alone on one mission—estimated $480,000,000—it all makes sense.

Then, again, if it saves lives, who can evaluate the cost?

General Eisenhower said: "He who would have security must bear its burden."

Finally, great as the atom bomb is, it alone does not justify completely disarming. We will still need an Army to fight on land, police, and organize. As long as there is commerce on the sea, we still need a navy. We most certainly need air power to establish and maintain air supremacy and prevent the other fellow from gaining supremacy.

I do not subscribe to the idea there is no defense against attack. There is. But we must deal in generalities. There are three, possibly four, general defense measures to be considered:

1. To prevent attacks before they occur which means if the enemy is already at war with us, to attack him at his bases and in such a manner that he is thus not able to make an attack.

2. So array our own dispositions that they offer no suitable targets for him to attack. This is extremely difficult in a highly industrial country like our own for it means that we should go to extreme dispersion and with certain critical installations greatly isolated.

3. Maintain an ability to retaliate in the event the enemy is so foolish as to attack. This means, of course, that his attack would be effective only to a limited degree and that once he has attacked, we must be so

situated as to retain enough equipment of our own to retaliate in a fashion that would make him pay.

4. To provide suitable shelters and protected areas.

The final answer is to be eternally vigilant in our world-wide intelligence system, exercise the best of judgment, educate all of our people to such an extent that they keep their balance, and the Nation as such remains in equilibrium, prepared to maintain itself in the face of all aggression. I am a firm believer that ignorance breeds worry and worry breeds fear. From this, misunderstanding and inefficiency will inevitably be the results. By removing ignorance we correct the whole matter. For that reason those in authority must be perfectly honest with the mass of the people who after all are definitely concerned with their own personal welfare and in the last analysis, they make up a democratic nation.

We should keep internationally alert, for this insures peace. It is as important to win a peace as it is to win a war. Winning the peace produces lasting benefits, for with world peace, there would be no war. In an atomic age, total war (if not completely disastrous) is so expensive to civilization that we just cannot afford one. We won't have a war if every nation is honest, considerate, and unselfish to a reasonable degree. As I have stated before, atomic energy is one of the great discoveries. It has been said that atomic energy at present is at about the same stage in usefulness to civilization as was electricity when Benjamin Franklin slid his key down the kite string. If this be true, we cannot afford to neglect the benefits of atomic energy and must approach the problem intelligently as we did with electricity. We can do this if development and utilization be directed toward improving the public welfare, increasing the standard of living, strengthening free competition in private enterprise, and promoting world peace.

Remember brainpower and manpower are a nation's security and survival power.

Finally, the next war should be won before it starts or it may be disastrous to both the loser and perhaps the winner.

How Can "Truman Doctrine" Defend United States Against Atom?

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. BENDER. Mr. Speaker, I would like to include in the Appendix of the RECORD the following editorial from the Akron Beacon-Journal as an extension of my remarks, written by John S. Knight, president and editor of that newspaper:

HOW CAN "TRUMAN DOCTRINE" DEFEND UNITED STATES AGAINST ATOM?

Now that the Senate Foreign Relations Committee has voted 13 to 0 for the President's $400,000,000 gift to Greece and Turkey, the administration's Stop Russia program will be approved by Congress with only token opposition.

Senator VANDENBERG's amendments which obligate the President to withdraw American aid to these two countries if either the General Assembly or the Security Council of the United Nations, by majority vote, so determine, have placated the Peppers and lulled the public conscience.

Actually, the amendments are meaningless because they are in conflict with established United Nations rules and procedures. The veto power, for instance, cannot be set aside by congressional action whenever it suits our purpose so to do.

The Vandenberg amendments attempt to do by subterfuge what the administration fears never could be accomplished within the United Nations because of Russia's veto power.

Senator HARRY F. BYRD, of Virginia, is far more realistic in urging reorganization of the United Nations if such action is necessary to permit it to function.

Russia has been justly blamed for her obstructive tactics within the UN but it is well to remember that the United States is also smugly relying upon the veto power to protect our interests in case Russia, Great Britain, France, and China ever decide to graze in the same pasture.

Need we add that stranger things have happened.

We have opposed the revolutionary Truman doctrine as it has been called by his glorifiers because it:

1. Destroys the original and fundamental concept of the United Nations.

2. Commits the United States to the role of world policeman.

3. Stems from the idea that you can buy good will and fight communism with dollars.

4. Misleads the American people into believing that this is another glorious triumph for democracy.

5. Issues an open invitation to war. It is now apparent that our fight has been lost. In a few days the Congress of the United States will vote $400,000,000 to Greece and Turkey, which will be small change in comparison to the billions that must follow.

For the Truman doctrine, if sincerely conceived, cannot stop with our intervention in Greece and Turkey. To be effective, it must be carried to China, Korea, India, and the Near East.

World Report, a well-documented publication on global affairs, reveals in its current issue that implementation of the Truman doctrine will mean "United States financing of other countries at the rate of $7,000,000,000 a year for the next 3 years, if Washington follows through on the new policy as set for Greece and Turkey. That policy is designed to preserve the economic and political ntegrity of many nations, prevent the spread of communism, and restore stability throughout the world."

To get the full import of our new foreign policy, read that last sentence once again.

It means that we shall spend twenty-one billions in the next 3 years in public loans and grants to England, Germany, Italy, Austria, Greece, Turkey, China, Japan, the Philippines, Korea, and other countries.

It means that litle, if any, of the money will ever be recovered.

It means that we are headed on the road to bankruptcy, for, as Louis Bromfield said in a recent article, "We have not enough money, raw materials, or machinery to rehabilitate the whole of the world. If we attempt to do so we shall only bleed ourselves white and reduce our natural real wealth and living standards to the level of the more desperate European nations."

It means, that as in two previous World Wars, the youth of America will once again be sacrificed in vain.

Critics of our opposition to the Truman doctrine point out that the United Nations is simply an adventure in sentimental futility. "The way to stop Russia," they say, "is to get tough now."

How different from the idealistic spirit in which the people of the United States embraced the United Nations as the means of preserving world peace.

Can they excuse President Truman's failure to consult the United Nations when Great Britain, in hysterical haste, decided to pull out of Greece?

Can they forget that article 1 of the UN Charter states that the purposes of the United Nations are:

"To maintain international peace and security, and to that end to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace."

If such an excellent statement of principle is now adjudged to be meaningless by the United States Government less than 2 years after it was signed by 51 nations, what rightful claim can we make to the moral leadership of the world?

Employment of a new foreign policy designed solely for the purpose of "containing" Russia will have tragic results because it discards practical idealism for mailed fist power politics which have been responsible for the scourge of war throughout the centuries.

If Russia is flexing her muscles for world conquest, we might better spend some of the billions we are shipping abroad on the largest and technologically best developed air force that can be assembled.

The retaliatory striking power of such an air armada probably would cause the Russians to do some reflective thinking before emulating the late, unlamented Mr. Hitler.

Since virtually everyone concedes that the next war, if it comes, will be fought with atomic weapons and rockets, perhaps some apologist for the Truman program will now step forward and explain how the expenditure of $400,000,000 in Greece and Turkey will "contain" Russia when she has learned how to manufacture atomic bombs and decides to use them on us?

Or should I not have asked that one?

JOHN S. KNIGHT.

Air Power, the Aircraft Industry, and the American Legion

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Maj. Gen. Oliver P. Echols, president, Aircraft Industries Association of America, Inc., before the first American Legion National Aeronautics Conference, March 22, 1947:

It is a real pleasure to be here with you this morning to represent our country's aircraft manufacturing industry in this very important conference. The American Legion has had an enviable record on the critical issues of national security. Throughout the many years preceding World War II when most Americans were blind to developments abroad, the Legion was sounding clarion-clear-warnings. It is because of this remarkable record of unswerving devotion to adequate national preparedness that the aircraft manufacturing industry is so deeply gratified that you are embarking upon an air-power program.

You have heard the other speakers describe the latest developments in air power, its significance in the warfare of today and tomorrow, and of some of the critical problems that now confront us. Yesterday at Wright Field you were given a picture of some of the remarkable scientific problems

that must be solved and some of the instruments that must be perfected if this country is to retain its leadership in the air. It is our hope that these sessions have given you the information you need to carry the story about the air-power problem to your own communities. The manufacturing industry is convinced that the Legion can be the most potent force for overcoming the problems that face us and for insuring that America retains its air power. Accordingly, we are deeply appreciative of your willingness to undertake this program, and we heartily congratulate you on your foresight and patriotism in so doing.

My assignment here today is to discuss with you the role of the aircraft manufacturing industry in air power, its record in fulfilling that role in the last war, and its own immediate problems which contribute to the critical situation in which we find American air power today.

THE ROLE OF INDUSTRY

I believe that several of the speakers who have preceded me have emphasized to you that air power consists of far more than the air-striking forces of the Army and Navy. All leading students of air power, both here and abroad, now stress the fact that air power consists of the air forces, industry-equipped to produce the most modern instruments of warfare and vehicles for transportation, a commercial air transportation system capable of fulfilling its role in the logistics of the wars of the future, and an air-minded citizenry.

I believe that it is generally recognized that without a manufacturing industry capable of producing the most recent weapons and capable of immediate expansion in an emergency, there can be no air power worthy of the name.

It is perhaps important to make clear to you the exact role of the manufacturing industry in modern air power. In this country the commercial aircraft manufacturing industry is charged with the task of design and development of new aircraft—and that phrase includes flying missiles—as well as the production of the aircraft in the quantities required. This is a fact that is not as widely understood by the public as it should be. Our Federal Government maintains huge laboratory facilities, those operated by the National Advisory Committee for Aeronautics, to carry on pure research in the science of aeronautics.

The armed services also must maintain the facilities such as you saw at Wright Field yesterday and such as the Navy has at Philadelphia and Patuxent, to carry on the exhaustive evaluation testing of new equipment and to develop the specifications for military aircraft. It is important to bear in mind that these Government institutions do not design and develop aircraft. I repeat—the design and development of aircraft, as well as the production, is the assignment of the aircraft-manufacturing industry. This repetition is essential if the public is to comprehend the importance of the survival of a healthy nucleus of the aircraft industry.

As a measure of what was accomplished in this role of design, it is interesting to recall that the industry developed 425 separate models of 155 distinct types of aircraft during the war period. Each model incorporated an improvement in combat power or operating performance over its immediate predecessor.

THE INDUSTRY'S RECORD

The record of the aircraft industry during World War II has been praised widely and frequently. Perhaps one of the most authoritative appraisals of that record is contained in the aircraft report of the Senate's Special Committee Investigating the National Defense Program. This is the Truman-Mead-Brewster committee which exhaustively investigated aircraft production throughout World War II.

The aircraft report of this committee states, "We may be justly proud of our war record of mass production of aircraft. The 300,000 airplanes produced exceeded by a wide margin the most optimistic expectations."

The committee further pointed out that—

"This production record is an even greater accomplishment if we consider that it was done at a time when aircraft production was a continuously expanding business with all the intricate and seemingly unsurmountable problems of such unprecedented growth."

Let us recall the figures showing the expansion undertaken by the industry. Production during the 1930's had fallen to a pitifully low level. Even in 1939, with Hitler on the march, our output consisted of some 2,500 military and transport aircraft. From that low level we were forced to expand until output reached 96,000 in 1944.

There is another aspect of the industry's wartime record that deserves special emphasis. The aircraft manufacturing industry carried out this remarkable growth and produced the aircraft necessary to win the war on a record-breaking low rate of profit. The industry's rate of profit on sales in the peacetime year of 1939 was 10.3 percent. From that level the rate of profits dropped sharply and continuously until it reached 1 percent on all sales in 1944. In 1945 the rate of profit was 1.6 percent.

Official reports from the Securities and Exchange Commission and the authoritative statistics compiled every year by the National City Bank of New York reveal that the aircraft industry had the lowest rate of profits on sales of any important industry producing war material. This record of having the lowest rate of profits on sales was maintained throughout the war years.

THE PROBLEMS WE FACE

Unfortunately, it appears that the production record has been too quickly forgotten and that the costly lessons learned in that era are to be ignored. Let us look at what has happened since VJ-day.

The aircraft industry, which produced the weapons to win the war, is disintegrating. From a production peak of 9,000 planes per month, output has tobogganed to a mere dribble of a few dozens a month.

Total output of military aircraft in 1946 was 1,330 planes. An additional 467 two- and four-engine transports were produced, making a total of 1,797 planes having some potential military use produced in 1946. Thus our output in 1946 fell below the production level of 1939.

More important, production in 1946 was well below the rate which the Air Coordinating Committee, the official group designated by the President to recommend policies on air power, has recommended as the minimum yearly production for national safety. The Air Coordinating Committee has stated that at least 3,000 military airplanes should be produced each year, even—and I quote—"after maintenance of world peace is well assured and a substantial degree of disarmament has taken place."

This same Committee stated that if the need was for "a substantial striking force ready at all times to cooperate in the maintenance of world peace," that a minimum annual production of 5,780 planes was essential. Obviously, 1,330 is a far cry from 3,000, not to mention 5,780.

In allowing production to fall far below the safety medium, we are apparently repeating the disastrous and costly record following World War I. During World War I the then new airplane was hastily placed into production, and 18 manufacturers were engaged in the industry at the end of that war. Output had increased from only around 150 planes a year to 14,000 by 1918.

Following World War I output fell back to a trifling level, and by 1926 all but three of the 18 companies were out of business.

Today, following the repetition of the drastic curtailment in production, we find that 7 of the 11 largest airframe manufacturers operated at a loss in 1946. Among the smaller manufacturers, also, losses were the rule last year. Four of these smaller companies have been forced to undergo financial reorganization in Federal receivership actions.

This year and early next year the military aircraft industry will be engaged in producing several hundred new high-speed airliners, in addition to the small military volume that remains. However, when those airline orders are completed and delivered, no replacement market is in sight. These new airliners will approximately double the number of seats available on the nation's airlines, and the higher speeds of which they are capable will further enlarge capacity. From this it should be apparent that the military aircraft industry will be entirely dependent for actual survival upon orders for new equipment needed to maintain a modern and effective air force such as the armed services require.

WHAT SHOULD BE DONE?

The program

That is the situation with regard to the aircraft industry. Other branches of aviation likewise have their difficulties, as you have heard. Many of the airlines are operating at a loss and are desperately seeking ways to finance new equipment and the facilities for all-weather flying. These and other problems, together with our own, have convinced the aircraft industry that the time has come to undertake a comprehensive audit of our air policy. It is not enough to have this survey made by an administrative agency. The policy must be determined and incorporated into law by the Congress. We believe that such a comprehensive survey and the reestablishment of a basic air policy will not only safeguard the national security, but it will place aviation on a basis that will within a few years enable it to become one of the Nation's important industries, providing steadily expanding employment for thousands of enterprising young Americans.

In summary, preservation of our air-power leadership attained so dearly in World War I seems to me to require the following:

1. Maintenance of a modern air force in being at a level sufficient to discharge our world obligations in connection with the maintenance of peace;

2. Establishment of a 5-year production program on a consistent basis at levels suggested by the Air Coordinating Committee so that American air power will be backed at all times with a productive nucleus capable of rapid expansion in any emergency;

3. Provision of an organization and policies in research that will insure tecnnological leadership in the air for this Nation;

4. Adoption of policies with regard to commercial aviation that will preserve an air-transport system required for logistics of the wars of the future;

5. Mobilization planning on a level necessary to keep pace with changes in military weapons and in the art of production;

6. Establishment of an air-policy board or committee that will review our progress annually and report to the Congress on the status of the air-power program.

With such policies, we could feel secure. We could also feel confident of a progress that would insure the future of our commercial aviation and provide thousands of new jobs for enterprising young men.

Certainly it is a program in the national interest, and one that I hope each of you will want to support wholeheartedly. With your support in explaining the need for this program in each of the States and communities where the Legion's air-power program will soon be in operation, we can look more

confidently into the future. If the public comprehends the exact status of its air power and is informed of the remedies, then we can expect action. That job of taking the story to the public is one the Legion can do more effectively than any organization with which I am familiar.

In conclusion, let me assure you that the industry is fully alive to our own responsibility in this activity. If we can be of help to you, call on us and it will be forthcoming, if the assistance is within our means and ability.

Antilabor Features of H. R. 3020

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a letter sent to Republican Members of Congress by Walter W. Cenerazzo, national president, the American Watch Workers' Union, exposing in vigorous language the antilabor features of H. R. 3020:

APRIL 14, 1947

DEAR CONGRESSMAN: The omnibus bill which the House Labor Committee has prepared is, and will be, the kiss of death to the Republican Party unless the clear-thinking Members of Congress who belong to the Republican Party take the initiative and eliminate from this bill the hymn of hate which is written into it.

There are two groups in American life that must be isolated and identified by the American people if there is to be industrial peace. These two groups are the reactionary group in management who would turn the pages of history back and again make labor the slave of the master, and the illusionary revolutionists in the labor movement who preach the doctrine of greed and teach those that have not to plunder those that have. Both of these groups are bad for America.

The intelligent leadership in the Republican Party should immediately exert their influence within the Republican Party and its Members of Congress if they desire to save it. There is no hope for the workingmen and women of America in the Republican Party if this omnibus bill is what its leaders represent. In 1948 it will be impossible for any person to support the Republican Party who is interested in social welfare if the omnibus bill is passed by Congress, even though it is vetoed by President Truman. The kiss of death will have been firmly implanted on the Republican Party making it the party of reaction and antilabor forces through the passage of this bill.

The American people in 1946 voted for labor reform, but they did not vote to put a strait-jacket on legitimate objectives of the working men and women of the United States. If the Republican Party is ever again to win the rank and file of the working people of our country it must refuse to represent either the illusionary revolutionists of labor or the reactionary forces in management; it must represent the public interest. In swinging the pendulum back it must not swing that pendulum back to the extreme right. The place for that pendulum is on dead center.

The answer to industrial peace in America is human understanding between labor and management. No legislation, including the omnibus bill, can bring that about. Labor and management must educate themselves and be made to realize that they must work together for more productivity at lower unit costs, with that productivity sold to the American consumer at much lower prices than they are paying today.

The omnibus bill gives to the members of unions a bill of rights, it establishes union democracy by law, but then takes away the benefits of such a bill of rights by outlawing the closed shop and limiting the union shop. There can never be industrial peace over a long period of time in any company without the union shop or a union security clause. The outlawing of the closed shop is playing into the hands of the reactionary groups who hate and would destroy labor unions. Outlawing the closed shop would bring chaos and industrial discord to the printing trades industry where collective bargaining has existed on a community level for well over a century. It would break down the skills and apprenticeship standards of the trades in the printing industry. There are many other industries where industrial peace has reigned for many years that would be similarly affected. It should not be the intention of the Republican Congress to destroy existing peaceful relations between employers and employees which have existed over a long period of time. The passage of legislation which would outlaw the closed shop would accomplish just that.

Intelligent management and intelligence labor leadership has always been able to negotiate the issue of closed shop, union shop, or maintenance of membership, satisfactorily to both sides. The closed union evil has been corrected in the bill under section 8 (b) which specifies unfair labor practices for unions. If all clauses which refer to the outlawing of the closed shop and regulations concerning the union shop were eliminated from this bill it would take much of the poison out of it. The clause which submits the union shop to ratification of the members of the bargaining unit should remain in the bill.

The House Labor Committee in their anxiety to curtail John L. Lewis, has dealt a death blow to every legitimate union in America, in the section which has to do with industry-wide collective bargaining. This committee should not be allowed to destroy the relationship between international unions and their affiliated local unions as the omnibus bill would do. No international officer could assist a local union in negotiating its contracts under this bill. No international union could even advise its affiliated local unions on economic problems under this bill. This bill would make every international union an impotent organization. It would also eliminate sound leadership from assisting in bringing labor-management cooperation. This section should be rewritten so as to eliminate industry-wide collective bargaining but at the same time allow an international union to aid and assist local unions in collective bargaining on a local or community level.

A very bad feature of the omnibus bill is that it prevents the negotiation of pension plans, group insurance benefits, hospitalization benefits which make it mandatory for all employees to participate, even though the union has nothing whatsoever to do with the administration of the plan, such as plans which are put into effect by insurance companies by private industry. This section which prohibits this is section 8 (c) (3) and section 2 (11), starting on line 14 of page 9 and ending on line 4 of page 10 which specifies what may be bargained for. Under this section, paid holidays could not be negotiated for.

Another clause which is extremely dangerous is section 8 (d) (3), which would allow an employer to maintain an employee representation plan. In effect, this would recreate the company-union problem, which should be illegal under any circumstances. A company union never properly represents its membership. A company union is not an independent union.

The omnibus bill, in section 10 (h), beginning on line 3, page 43, to line 11, would allow the courts to nullify the Norris-LaGuardia Act in ordinary labor disputes, as this section would authorize the courts to use broad judgments in the issuance of injunctions in labor disputes. The courts would be permitted to have a heyday in the issuance of injunctions in labor disputes which would destroy the legitimate objectives of working men and women when they are organized. It would bring us back to the days of mob violence, tear gas, and other scenes which were brought out in the La Follette Civil Liberties Committee report which were so frequent prior to the passage of the Norris-LaGuardia Act. The omnibus bill correctly limits mob action by members of unions. It should not allow it again by employers through the use of injunctive processes.

Analysis of the entire bill is now being made and will be submitted to you in detail form. For you as a Republican Congressman to endorse this bill without realizing its contents would indeed be a miscarriage of justice.

In fairness to the Republican Party you should demand a postponement of consideration of this bill by the Republican caucus until such time as you have a chance to see an analysis of this bill by all interested groups. The steam-rolling tactics sometimes used to put a bill through should not prevail in this case if a stigma is to be prevented on the name of the Republican Party.

Thanking you for consideration of this memo, I remain,

Cordially yours,

WALTER W. CENERAZZO,
National President,
American Watch Workers Union.

Analyzing the bill starting on page 1, and taking up each section which is objectionable:

Title 1, amendment of National Labor Relations Act: Section 1, O. K. Section 2, subsections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, are O. K. as to meaning. Section 2, subsection 11 (B) (iii) does not call for enough conferences; there should be at least eight conferences of at least 4 hours duration within the 30-day period.

Section 2 11 (g) would cause every union to have a strike vote before collective bargaining really commenced. This section should be broken down into two questions. (1) Shall the employer's last offer of settlement of the current negotiations be accepted or rejected? (2) And then if the employees vote rejection they should be allowed to vote whether they desire to continue negotiations or whether they desire to strike? The way this clause is presently written all an employer would have to do is to have his timing right and he could force a strike at any time by presenting ridiculous counterproposals to the union. Lines 14 on page 9 to line 4 on page 10 I have described before although it would appear that good faith on either side was not essential in order to comply with this law.

On page 11, lines 7 to 10, would prohibit the organization of office employees of insurance companies and many other industries that handle matter of a confidential nature.

On page 12, line 19, subsection 16, would prohibit a national union from paying strike benefits in any strike regardless of how well justified a strike may be. It also would prevent moral or economic assistance in any way by an international union to an affiliated local union. There are many international unions which have employees of competing employers organized, and which have responsible union leadership and who do assist in bringing about industrial peace and labor-management cooperation. Also the only way in which an employer who

refuses to be fair can be made to be fair and collectively bargain in good faith is through the threat of a strike or an actual strike supported by an intelligent international union. This section as written destroys the relationship between the international union and the local union in such industries as the glass industry where the international union and the employers have had industrial peace for so many years. While this clause prohibits the industry-wide strike it also prohibits any international union from servicing its members of affiliated unions.

On page 13, line 20, subsection (e), while it sounds reasonable and fair would also prohibit a union from bargaining on the use of imported parts from a foreign country with much less labor cost.

As for the creation of a Labor-Management Relations Board, starting on line 6, page 14, and continuing through to page 19, line 2, is a matter of opinion and patronage, and one which I do not believe will seriously make much difference whether it is the present National Relations Labor Board or the way it is established under this bill.

Under section 8, unfair labor practices, starting on page 19, line 20, there are several clauses which are extremely unsound. Subsection (c) (i), on line 12, through line 20, would appear to curtail the union shop and would definitely cause industrial discord in any plant now having a check-off. Regardless of how anyone feels on the check-off, to allow any employee to drop out of the union at any time is simply asking for trouble in a plant between employees.

On line 20, page 20, subsection 2 (C) (ii), again would prohibit pension funds, death benefits, and homes of any kind.

On line 20, page 20, subsection 2 (C) (ii) would prohibit joint charitable trust funds in which the union and management both would have trustees. It also would prevent an employer from contributing to a pension trust where the union has representation; also employees benefit plans where the union has representation. Many of these trusts and funds are of a cooperative nature and a part of sound industrial relations. To prohibit them by law would take away from employees of industry many benefits.

Line 18, page 21, through line 22, is too broad and sweeping and would be subject to many misinterpretations, and is another one of the many clauses which would limit union security contained in this bill.

Line 1, page 22, through line 7, is also another one of these similar clauses, as would line 24, on page 22, through line 4, on page 4, again prohibiting maintenance of membership or union security.

Page 23, lines 5 and 6, is one of the worst clauses in this bill. It reads: "To compel any member to agree to contribute to, or participate in, any insurance or other benefit plan." This would kill the benefit features of many international unions, and in the printing trades particularly would destroy the Union Printers' Home of the International Typographical Union, the upkeep of which is paid for by the members of that union and is compulsory as a condition of membership. This home was founded and donated by two employers over 50 years ago and has been maintained by the membership through that period and has over 500 residents at present. In addition, it would kill the pension plan and death fund of the same union, as well as those of other printing-trade unions. What right has Congress to abolish historical institutions and benefit plans which thousands of persons have received constructive benefits from and which the membership of an international union has voted for in honest referendums?

Lines 7 and 8, on page 23, is an unreasonable clause, as it gives unlimited right for any member to resign from a labor organization at any time and still remain an employee. If a person receives the benefits from a collective-bargaining agreement and is a member of the union, he should be obliged to remain for the duration of the agreement at least. This clause as it is written would raise havoc in any plant where the employer wanted to break up the union.

Line 10, page 24, through 13, is another clause which is aimed at union security.

Line 20, page 24, through line 5, on page 25, should also include national unions; if we are to have union democracy, let's have it for international unions as well.

Line 11, page 25, should also provide that unions could submit financial reports monthly or quarterly if they desired to submit reports oftener than annually.

Page 26, lines 3 to 9, would permit company unions as was stated before. Under no circumstances should this be allowed.

Section 4, lines 10 through 19, page 26, makes State laws supersede Federal laws on union security. It is another clause which assists antilabor advocates.

Line 15, on page 27, limits the employer from discharging employees on discipline by the union to the nonpayment of dues. This is an inconsistency with subsection 6, on page 23, line 19 through page 24, line 9, which specifies other offenses all of which are bad and a person should be expelled out of a union for this. Line 15, on page 27, however, would allow these persons to continue to work even though they had committed and been proven guilty of such offenses as described in the other section.

Line 22, on page 27, allows groups of employees to present grievances to their employer without intervention by the bargaining representative if a settlement is not inconsistent with the terms of a collective-bargaining agreement in effect. This would cause tremendous unrest in a plant that does not have a union shop. It also would allow favoritism by the employer in the settlement of grievances. It should be eliminated.

On lines 11 and 19, page 28, the percentage should be raised from 30 to 50 percent, so as to be sure that the representatives do represent a majority in the unit and that those challenging that representation also represent a majority. This would stop minority groups from creating industrial discord through organization campaigns utilizing Government agencies as a means to their ends.

Lines 12 and 14, should be defined as to what an interested party is and if it means a union the union should have at least 30 percent applications to intervene.

Page 30, line 11 through line 2, on page 31, would completely smash the present relationship between the national unions and local unions which are affiliated. It is entirely wrong to stop a union from advising its affiliates. The same arguments which were described against the monopolistic strike section apply here.

Line 6 on page 31, would wreck many industrial unions and could be utilized by an employer who wanted to play skilled workers against unskilled and vice versa.

Section 4 starting on line 16, page 31, through page 32, line 2, seems to allow a great latitude of conduct for both unions and employers. And to allow them to use examples of international unions in industries not even related to their own as a means to use unfair tactics.

Section 5, line 3 through 14 on page 32, seems to allow for a union which is not even on the ballot to participate in a certification election, also it deliberately delays the run-off for 60 days which could be utilized to weaken the union.

Section 8, line 8 through 15 on page 33, seems to allow a union to partition for certification during the life of an agreement between another union and an employer. This is presently forbidden by NLRB procedure and to allow such a practice would tear asunder industrial relations in every plant where the union is unable to obtain what the employees during negotiations and where another union claims it could accomplish the objectives.

Section (g), page 33, line 16 through page 35, line 11, should be rewritten to eliminate any reference to economic action on the union-ship issue and should simply provide for secret ballot ratification of the union contract including all of its clauses, as it is presently written, it would if an employer desired, tie up a signing of a contract indefinitely.

Again, on line 11 through 16, on page 38, is one of those trick sentences which would give to an employer the right to take such action as he desires, provided he can justify it as something that a national union once did. Two wrongs don't make a right.

On page 43, lines 3 to 11 refer to the Norris-LaGuardia Act which were described previously in the original memo. This clause is a very dangerous one to industrial peace.

Lines 6 through 19, on page 47, it would appear would limit mass picket lines and other actions which we would deem un-American and should be eliminated; however, lines 60 to 13 could easily be used to obtain an injunction on the slightest flare-up.

Line 2 on page 48 refers to monopolistic strikes and should be made more clear by further interpretation.

Line 19 on page 49 through line 2 on page 49 would start a lawyers' field-day in suing unions. Another clause could be written which would require adherence to union contracts which would not be so punitive as this clause.

Lines 3 to 8, on page 49, again attack the Norris-LaGuardia Act.

Lines 17 to 19, on page 49, while giving an individual the right to refuse to work, automatically implies that when a group of employees do it, or two or more employees quit work, it is concerted action.

The rest of the bill has to do with abolishing of the National Relations Board, conciliation of labor disputes in industries affecting commerce. This is a matter of judgment, opinion and patronage and should be decided by each Congressman's personal use. However, section (f) starting on line 9 to 17 on page 52 should be clarified so that it would not mean recertification of every union now having a collective bargaining between them.

On strikes impairing public health and safety there are several sections which would appear to give an employer a chance to disrupt a union such as lines 23 on page 59 through lines 5 on page 60, which would allow employees after a decision has been given to decide who their bargaining representatives should be instead of determining bargaining representative prior to such action.

On page 62, under title of Equal Responsibility and Liability, section 302 (a), would appear to allow the courts to use wide latitude in determining amounts in judgments against unions and could well bankrupt unions into inactivity and impotency.

Page 63, Reports of Labor Organizations to Members and page 64, Restrictions on Political Contributions, I agree with in their entirety.

There are other clauses in this bill which would help straighten out labor relations but they are of no value as long as this material which is being criticized remains in the bill.

It is imperative that Members of Congress understand the contents and implications of this omnibus bill before voting upon it. Mistakes cannot be rectified after a vote is cast on this measure. The steamrolling tactics of having this bill voted before Members of Congress can analyze the effects of it are wrong. A steamroller whether it is run by Republicans or Democrats is wrong. It would appear that this bill is going to be jammed through on Wednesday or Thursday

and is going to be made a party measure. To do so is political suicide for many Members of Congress who come from industrial districts for it will put ammunition into the hands of those who have always been hostile to Republicans and Republican policies and there will be no labor leader worthy of the name who will dare to lift his voice in assistance of Republican candidates for Congress if this bill passes as presently written.

This analysis has been prepared in a friendly spirit with the hope that there are enough courageous Republican Congressmen who have a desire to keep that pendulum on dead center and have no desire to serve the extreme left or the extreme right and who want the public interest served. There are probably many other persons who can analyze this problem and assist Members of Congress in their decision but as time is short I am taking the privilege of submitting this analysis to you trusting that you will receive it in the spirit in which it is offered, a plea by a responsible union leader who practices the doctrine of labor-management cooperation; who represents the union which practices union democracy and who realizes the effects of what would happen to the Republican Party if this omnibus bill is passed. Thanking you for your consideration of this analysis, I remain

Cordially yours,

WALTER W. CENERAZZO,
National President,
American Watch Workers' Union.

BOSTON, MASS.

Turkey's Financial Status Compared With Ours

EXTENSION OF REMARKS
OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. BENDER. Mr. Speaker, is it true that civil liberties do not exist in Turkey? Why did the New York Times correspondent have his license to file cables taken away from him in the last 2 weeks? Is it true that the Turkish Government owns all of the industry in Turkey? Is it true that the Turkish Government persecutes Christian and Jewish minorities in Turkey? Is it true that the present dictatorship is completely arbitrary in its actions? Mr. Speaker, these are questions that need answering.

Mr. Speaker, perhaps the Congress, difficult as it may be, would like to compare the financial status of the present dictatorship with our financial status. After all, we have been asked to vote $100,000,000 for Turkey as a first installment on a military alliance, and it might be a good idea to take a look and see whether we can afford this kind of military alliance, and whether there is any quid pro quo. Also, if we are to guarantee Turkey continued armed control of the Dardanelles, would it not be smart to find out whether the Turks can afford to take care of themselves?

Now, Mr. Speaker, we have a national debt of $260,000,000,000. We pay annual interest of 6 or 7 percent on that debt. The American taxpayer voted for the Republican Congress in the belief that we could reduce taxes, effectuate savings in the Federal Government, and at the same time, begin to retire the national debt.

When we look through the so-called secret documents which the State Department presented to the House Foreign Affairs Committee and subsequently released to a selected 10 newspaper men, we discover that the Turkish foreign debt is approximately 268,000,000 lira. The bulk of this foreign debt, according to our State Department is owed to Great Britain. It seems that the British have had a military alliance with the Turkish Government for a very long time—unfortunately, the Turkish Government refused to honor it during the last war—they violated it—but the British, despite the violation of agreement by the Turks, have continued to lend their money so that today, the bulk of this 268,000,000 lira is owed to Great Britain. The annual burden of service charges, including the retirement of principal, is said by our State Department to be 17,000,000 lira, about 25 percent of which is payable in gold or foreign exchange. Holdings of the Central Bank of Turkey are 201,900,000 lira. In order that the annual payment on the Turkish foreign debt, including the payment on principal, amounts to 17,000,000 lira, of which one-fourth and roughly 4,500,000 lira is payable in gold or foreign exchange. In brief, the Turks with their present foreign exchange holdings could pay for 40 or 50 years on their present indebtedness without any difficulty.

For the past 10 years, the Turkish Government has steadily increased its exports over its imports—indeed during the war, their exports increased 80 or 90 percent over their imports; they did business with the Nazis; they permitted us to buy chrome at three or four times the market price; they made money in the past 10 years—lots of it. So much, Mr. Speaker, that their foreign exchange holdings went up from 5,700,000 lira in 1938 to 201,000,000 lira in 1946. These people have been making a killing. They have been rolling in clover. In fact, they seem to be getting a little fat, while the American taxpayer has been sweating it out. It is interesting, Mr. Speaker, what our State Department says about Turkey's present economic position, and permit me to quote from the famous secret documents:

> Turkey's principal difficulty is that of meeting the economic and financial burden of maintaining a large standing army. This expense costs the Turkish Government not far from one-half of its annual revenues and requires foreign exchange exceeding that available from current income.

I believe, Mr. Speaker, that the Members of the House should note that our State Department itself says that the Turkish Government is in an excellent financial position, but that the armament expense of the Turkish Government requires foreign exchange exceeding that which is available from current income.

In other words, Mr. Speaker, our State Department asks us to go into debt to arm the Turkish Government. Our State Department would rather that we go into debt than that Turkey should go into debt. Note that Turkey's position is excellent but that because her army takes almost one-half of their annual revenues, they need foreign exchange—a little more foreign exchange than what is available from their current income. Mr. Speaker, what is current income? That is a very interesting phrase, Mr. Speaker—that "current income." What is current income? Do you suppose that the American taxpayer is interested in current income? I understand that there was an election in America last fall and that there was considerable discussion of current income. I suggest that there are at least 140,000,000 people in America who are interested in current income. So we must tell the American taxpayer that his current income has to be reduced so that the current income of the Turkish Government can be increased. We put our hands into the family budget of 60,000,000 American families. We take and we give to a dictatorial Fascist Turkish Government. Oh, yes, their financial position is excellent. In fact, it is better than ours. Their national debt is tiny. They settle their lend-lease account in cash. They profiteered during the war. They still have hundreds of millions of dollars in Nazi assets and $75,000,000 of looted Nazi gold, but they want us to pay for their army with our current income. I believe, Mr. Speaker, that one Congressman after he had read these famous secret documents, suggested that we should seek a loan from Turkey. That is not so funny, Mr. Speaker, when we begin to look carefully at what the Truman doctrine implies. I would suggest to the House that nobody knows where this policy ends. Nobody knows what it will cost. I suggest now that this policy become known as the Truman bankruptcy policy for America. If the policy is executed, it will mean bankruptcy. It does mean inflation now. It pours out billions of goods in service. It increases our taxes. It pushes prices up—it prohibits us from paying on our national debt. Mr. Speaker, with all my heart, I hope that before the House acts, it will examine with the greatest care exactly what this policy means in financial terms. We have had enough financial megalomania—enough of wasteful spending.

American Policy in the Middle East, Including Palestine

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the American Federation of Polish Jews, Chicago, Ill., April 13, 1947:

> The confusions and fears of our times demand a frankness of discussion. There are far too many silences.
>
> One silence I have reference to is the deliberate omission of any mention of Palestine

by President Truman in his now famous aid-to-Greece statement. We are moving into the Mediterranean. That much, at least, is obvious. Mr. Truman asked for $400,000,000 plus military and civilian personnel for Greece and Turkey to, he said, "insure peaceful development of nations free from coercion." Even the most naive of political spectators cannot dissociate Palestine from the Middle East. Equally patent is the fact that Palestine is a country not "free from coercion." We can reach no other conclusion but that the omission of Palestine from Mr. Truman's presentation was deliberate and calculated.

I am quite sure that in their discussions Secretary of State Marshall and Foreign Minister Bevin are talking about the Palestine situation. If we are to be intimately concerned about the peace in and the stability of the Middle East, certainly we cannot afford to ignore the explosive situation in Palestine. Of course, in the instance of Greece, compulsion comes from the east and in the instance of the Holy Land the oppression comes from the west. May I ask, "Do we measure evil by who fosters it?" If the United States speaks of favoring Greece and Turkey to save it from disintegration and speaks of it in terms of a presumably composite picture of the Middle East, then the United States cannot brush Palestine aside, nor, indeed, any of the other portions of the Middle East. As has been said, "if it is not all, it is nothing." I say categorically there can be no peace in any part of the Middle East, including Greece and Turkey, unless there is peace in Palestine. There can be no piece-meal peace. If we are to make the Middle East safe for democracy, then in the name of logic and common sense, let us not forget our geography.

Or are there other things we are remembering? Things like oil, for instance? The American oil company known as the Arabian-American Oil Co., which is jointly owned by Standard Oil of California and the Texas Corp., has arranged a $250,000,000 scheme to develop the Saudi-Arabian petroleum output and to build a 30-inch, 1,050-mile-long trans-Arabian pipe line from the Persian Gulf to the eastern Mediterranean. Those are the future plans. In the recent past, from 1944 to 1947, the Arabian-American Oil Co. made a profit of sixty to seventy million dollars on its sales of Near East oil to our Navy. Actually, therefore, American taxpayers paid the company's original investment of $27,500,000 plus another $43,000,000, the cost of its new refinery, and, furthermore, American taxpayers paid an $18,000,000 subsidy which the oil company presented to King Ibn Saud. Nice work—if you can get it.

Thus, on one hand the American taxpayer supports feudalism in one part of the Middle East and then again is asked to support democracy in the lands of Greece and Turkey. Let's pursue this thought a bit further: Britain has withdrawn from Greece because she can no longer afford to maintain military establishments therein. The United States feels called upon to step in with its money and personnel. Britain, however, has already spent $400,000,000 on the maintenance of 100,000 troops in Palestine "for the sake," as Winston Churchill put it, "of a senseless, squalid war against the Jews." Are we not then being used in a financial sense to help Britain liquidate the Jewish national homeland? Do we not help Britain maintain her police state in Palestine?

It is not denied that Greece is sorely in need of our help in reconstruction. But what is true of Greece is true of the Middle East as a whole. You will not cure by binding some wounds and allowing other wounds on the same body to fester. Palestine is another sector of the same zone. It is the task of the statesman to see the picture, and see it whole.

Let's turn for a moment and view the British in Palestine. For 8 years now Britain has ruled Palestine without supervision since the Permanent Mandates Commission of the League of Nations ceased to function. Indeed the shameful and shocking record of Britain's administration of its mandate over Palestine is not the common knowledge it should be. In Palestine we are concerned with living people whose pattern of political life had been set by international covenant and then upset by the tenacious, unrelenting grip of the appointed trustee.

One would be led to believe by the behavior of Britain that Palestine is her own vassal state to be dealt with without regard to the obligations and responsibilities she has assumed with the granting to her by the League of Nations the mandate over Palestine.

In the settlement following World War I, the issues were clearly cut and clearly met. The Allies promised independence to the Arabs in certain former provinces of the Turkish Empire, which empire up to that time was in complete domination of the Arabian world, and Palestine was set aside as a country for the Jewish national home. Palestine was specifically exempt for the purposes set forth by the Balfour Declaration, "to facilitate the establishment in Palestine of a Jewish homeland." This was definitely agreed to by King Emir Feisal, representative of the Arab people at the Peace Conference.

The promises to the Arab peoples have been kept scrupulously. Even Transjordan, once part of the Palestine mandate, was thrown in for good measure. But the solemn pledge of a Jewish national homeland in Palestine was breached again and again by the power entrusted with its fulfillment. Seven independent Arab States exist today, five of whom have representation on the United Nations and other international councils. Their area extends over 1,000,000 square miles. Of all class A mandates established by the League of Nations—Syria, Lebanon, Iraq, Transjordan, and Palestine—a class A mandate being one that is directed toward self-government, only Palestine's independence is unfulfilled. This tiny bit of land of 10,000 square miles is now the scene of frustration and tugging interests, where human and moral values struggle with the demands of power politics, oil, military defenses, and the British cry of external security.

In 1939 the British promulgated the Palestine white paper, which drastically restricted land purchases by the Jews of Palestine soil and limited immigration of Jews into the Holy Land. After a total of 75,000 entrees was reached, further immigration was to be dependent upon Arab consent.

The reasoning behind this infamous maneuver was quite obvious. Then, as now, the Arab leaders used threats and blackmail to throw their support and their oil to the highest bidder. It was relatively simple for the British to seize this pretext of Arab opposition and turn it to her own uses. "We are helpless," the British told the world. "We cannot do otherwise but to stay in Palestine to maintain law and order."

Meanwhile, 6,000,000 Jews perished under Hitler's rule. No place would accept them and the gates of Palestine were sealed by British perfidy. Boatloads of escaping Jews sank off the shores of Palestine while the British colonial administration followed the policy of the British Foreign Office. Thus, the land which by international covenant signed by 52 nations of the League of Nations and subsequently by the United States by separate treaty, was to be a national homeland for the Jews was opened to everybody but the Jews. And at a time, too, when every civilized country professed its horror at the tragedy that had befallen the defenseless Jews.

The peace brought with it, for a while, the beginning of new hopes for the little countries and for minority peoples. The Labor government came into power in Great Britain as standard bearers for a new liberalism in Europe. The Jews in Palestine and the Jews who had witnessed the massacre of their kin, but who had themselves survived, reviewed the record of the Labor Party and its stated—and restated—policy on Palestine, and were jubilant. Surely, now, deliverance was at hand.

In 1940, the Labor Party Conference declared, "that in order to remove the root cause of Jewish suffering and to insure the existence and free development of the Jewish people, international assistance should be given for the continued growth of the Jewish national home in Palestine by immigration and settlement." The London Conference of 1942 reaffirmed "Its determination that in the new international order after the war, Jews shall enjoy civil, religious and economic equality with all other citizens, and that international assistance shall be given to promote by immigration and settlement the Jewish national home in Palestine." The Labor Party Conference of 1942 and 1943 stated in its resolution "that victory must insure for the Jews full civil, political, economic equality and their national rights. It reaffirms the traditional policy of the British Labor Party in favor of building Palestine as the Jewish national home." In 1944, the Palestine problem formed a special chapter in the document known as the international postwar settlement proposed by the national executive and introduced by the present Prime Minister, Mr. Attlee. It received 8 months deliberations by the party. It must be kept in mind, too, that at the time the 1944 Palestine policy was adopted the Labor Party was not in opposition, but a full responsible partner in the coalition government. The Labor Party, in other words, was in a position to know, and did know, all the pertinent facts. I read a part of the Palestine chapter as written by the Labor Party in 1944. "But there is surely neither hope nor meaning in a Jewish national home unless we are prepared to let Jews, if they wish, enter this tiny land in such numbers as to become a majority. There was a strong case for this before the war. There is an irresistible case now after the unspeakable atrocities of the cold and calculated Nazi plan to kill all Jews in Europe."

In 1945 the national executive of the Labor Party published this resolution: "The Committee reaffirms the policy accepted by the annual conference in December 1944 on Palestine. It therefore calls upon the British Government to remove the present unjustifiable barriers on immigration and to announce without delay proposals for the future of Palestine in which it has the full sympathy and support of the American and Russian Governments."

And, finally, I'd like to quote a few sentences from Mr. Arthur Creech Jones who is presently Colonial Secretary. "This" he stated in 1939, "is not a conflict between the Jews and Arabs, but it is largely a conflict between the new order which the Jews stand for in Palestine and the old crumbling feudal system for which a few rich Arab landlords stand. That difficulty of conflict between the new and the old order has been exploited by Fascist Imperialism; it has been exploited by those who hate the very principles for which the Jewish democracy stands; and it has been exploited largely because in that crumbling feudal order one saw spreading in the Middle East a new democratic faith which would ultimately undermine the foundations of the older system. The Jews are asked to end their experiment because our own Government is unable to carry through those equitable principles of good govern-

ment which they have declared for in the Balfour Declaration. Those of us who have seen the great achievements of the Jews on the spot * * * feel it would be a great betrayal for that experiment to be brought to an end." So much for the Colonial Secretary who was so verbally brave when he was without authority to act.

Those are the words of the Labor Party on record. But the words of record are far, far removed from the deeds of record. But no sooner had the Labor Party come into power than there came a complete reversal of attitude, policy, and direction. Jews who after months and months of the long, long trek following the beacon of Palestine found not the dignity, not the hope of beginning life anew, but the barbed wire of concentration camps on the island of Cyprus. Illegal searches and seizures on the part of the British colonial administration became the order of the day. Imprisonments without trial withdrawal of the right of peaceful assembly, daily curfews became part of the routine of Palestine life. Martial law was imposed and the economic life of Palestine was disrupted. Adding injury to injury and heaping insult on insult, only some 2 weeks back the British Palestine Government announced it will require the Jewish community to pay for the damage of at least one million dollars caused by fires at Haifa. This damage was sabotage and was ascribed to terrorists. The British action was equivalent to visiting punishment upon the innocent. Responsible Jews in and out of Palestine deplore terrorism. I condemn it. Jews themselves have been hurt and killed by the unlawful action of members of the Stern and Irgun gangs. Certainly, the entire Jewish community should not be made to pay for the crimes of a few desperadoes. Attlee and Bevin fail to realize that the deliberate default of their solemn pledge to open the gates of Palestine to refugees has caused despair, creates terrorism. But why hold innocent people as hostages and make them pay blood money?

It has been well put in one newspaper editorial, "The historian may reflect that if one-tenth of the energy, persistence, expenditure and military might invested in the preservation of the notorious white paper were devoted to the fulfillment of the mandate the problem would be at rest."

It is little wonder, therefore, that the bitterness and frustration in Palestine reached the breaking point. The Jews who had redeemed the soil of Palestine, made of it a center of science and cultivation in the Middle East, Jews who died of disease in clearing the marshes and planting the life-sustaining trees, Jews who had contributed more than their alloted share to the allied war effort were all forgotten. It is little wonder that they asked, "Why?"

The English proposed and the United States acceded to an Anglo-American Committee of Inquiry. That Committee recommended the immediate admission of 100,000 displaced Jews into Palestine. The Eisenhower report and the Harrison report, both undertaken at the request of President Truman, revealed the dire need of the displaced Jew for Palestine. But again there followed delay. It would seem that the British by every possible device sought to postpone any equitable solution. Twice they offered what they knew would be unacceptable federalization plans for Palestine, but turned down the proposal of a carefully worked out, reasonable plan for partition offered by the Jewish Agency for Palestine.

Now, the British in transparent insincerity offer submission of the Palestine problem to the General Assembly of the United Nations. In the interim period until recommendations are made by the Assembly, Britain will maintain her control over and her vicious practices in Palestine. Until such time she considers the situation "static or frozen." They say, too, that they can reject any recommendations made by the United Nations because they point out the General Assembly can only make recommendations and no final decisions. Is Britain telling the world that if she likes the recommendations she'll accept them; if she doesn't she'll reject them? Such an attitude necessarily makes any action by the General Assembly a farce. Is it again another British dodge and stall for time? Is there yet to be another investigation followed by discarded recommendations? How sordid a business this is, this playing about with broken lives and desperate hearts.

We must at this point ask ourselves: Shall the United States, which since 1922 has reaffirmed its policy of favoring the establishment of the national Jewish homeland in Palestine, permit the United Nations to serve the purpose of British imperialist interests in the Middle East? Cannot the United States at least demand that Britain give some evidence of its good faith? Keep in mind that the United States has openly and continuously reiterated this policy, not only by separate treaty with Great Britain, but through congressional resolutions and declared Executive proclamations by various Presidents of these United States, beginning with President Wilson and following through to President Truman. It has been repeated in the political platforms of the two major political parties and has been the subject of numerous congressional debates.

Now the opportunity presents itself concretely to the United States Government to stand by its Palestine policy when it arises before the United Nations. By its great moral strength, by the force of its present leadership in world affairs, the United States can prevent in this instance the development of another farcical ending. By direct interest and guidance, the United States can throw its great weight on the side of the equities, sustained as it is by the existence of recognized international documents and international and national commitments. It is up to the United States to avert the tragedy that must follow in the wake of British political machinations to continue her control in Palestine without regard to corresponding responsibilities.

And again, if the approach in the United Nations is to be a sincere one, then direct representation to the Jews of Palestine, through the Jewish Agency, must be allowed. The Arabs, as I have previously stated, already have such representation. Britain has her own vote and those of the Dominions. The Jews of Palestine, who constitute over a third of the population of Palestine and who have specific and special international status as conferred upon them by the League of Nations mandate have no such representation. Most certainly, the contention cannot be made that they are not interested parties.

I believe, too, that if the United Nations is to act as a court of equity, then Britain must come into that court with clean hands. To do so, Britain must open the gates and abrogate at once the Palestine white paper of 1939 which was and is in direct contravention to the purposes of the mandate of the League of Nations. The Mandates Commission of the League of Nations declared at the outset that in so promulgating this white paper, the British were acting unilaterally in breaching an international covenant, and, therefore, rested on no legal foundation. The British must cease to pervert the purposes of the mandate. Otherwise, she brings with her submission of the Palestine issue to the United Nations the evidence of her betrayal of a trust and stands self-condemned by her own record of complete misadministration of the mandate which in good faith was placed into her hands.

The question is still open. Will the United States permit Great Britain to use the instrument of the United Nations, fashioned we hope, to secure our peace, as a cloak to hide her ill-becoming practices in Palestine? To permit Britain to do so would weaken tragically the basic structure of the United Nations. Or will the United States stand firmly and independently behind its own declared policy on Palestine?

What cruel, perverse trick of fate is this that the destiny of a people should be subject to the whim and blunted vision of a man like Bevin? Had he a shred of compassion or even the faintest trace of graciousness in his make-up, he would at least keep quiet and not dance verbally about like the bull in the china shop. The folly and inhumanity of Britain's conduct in Palestine is tragic enough without Mr. Bevin throwing his weight around. Not since he has been in office has Mr. Bevin uttered one statement that was statesmanlike or conveyed a sense of his grasp of the Palestine situation.

His skin is safe; he has enough to eat and drink; he lives in security within his own country. He cannot comprehend the plight of those who do without; there is too much fat around his soul for so compassionate a thought to penetrate. His offensiveness, his boorishness would be of little matter were it not the clearest kind of signal for the continued British policy of brutality and repression in Palestine.

Let us not be mistaken about this. The submission of our cause to the United Nations, even if Britain were acting with sincerity, does not necessarily mean a recommendation in favor of justice and the equities. We must remember that in the General Assembly there will be considerable teamwork between the Arabs and the Latin-American bloc. That was discernible at the last meeting of the General Assembly despite the protests of the United States. Twenty of the countries south of the Rio Grande joined with five Arab countries to obtain the election of their candidates to the Security, Economic, Social, and Trusteeship Councils. Although their numbers fall short of a majority, the combination must be reckoned with. They can practically nullify any conclusion reached by the General Assembly, if they so desire.

Again, we don't know what the attitude of Russia will be but we do know this. Whatever the Russian attitude is, it will be shared by Czechoslovakia, Poland, Yugoslavia, and White Russia and Albania. In the past, the Soviet Union has shown little sympathy with the aims of Zionism.

We shall meet with many unknown factors. What will the final vote of India be? Will she concern herself with the reaction of Indian Moslems or will she consider first the importance of the development of the Middle East that is spelled out by a Jewish national home in Palestine. How will the little countries react?

We know then that we cannot sit idly by and await inertly the outcome in a special session of the General Assembly, if one be called, or the conclusions reached by the General Assembly today. We know we must warily watch the British maneuvering. Many of the countries who will participate know nothing of the actual facts of, in and about Palestine. It must also be remembered that much of the anti-Semetic propaganda of the Hitler machine penetrated deep into the conscience of occupied countries. Remember Jews have no voice on an international level. Who speaks for them? Judging from the past—no one. I hope the American people at least will pay heed and insist that honor and decency prevail.

Punitive Labor Law

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. MADDEN. Mr. Speaker, I wish to incorporate as part of my remarks a timely editorial on punitive labor legislation in this morning's Washington Post. Every Member of Congress should read this editorial and the debates in Committee of the Whole held today on H. R. 3020, known as the Hartley bill:

PUNITIVE LABOR LAW

Hostile reaction to the New Jersey antistrike law provides evidence—if any is needed—that punitive legislation will not insure peace on the labor front. For New Jersey telephone workers, although ordered to return to their jobs on pain of excessive fines or jail sentences—following State seizure of company properties—have remained on strike. Moreover, a million unionist sympathizers are preparing to stage a 1-day work stoppage as a protest against the law.

Legislators should have learned from experience that repressive laws cannot be effectively enforced unless supported by public opinion. The American people seem disposed to uphold legislation that will eclipse the power of labor unions to impose intolerable hardships upon the public through work stoppages. But we do not believe they will countenance punitive legislation of the kind passed by the State of New Jersey, aimed at local suppression of strikes by coercion of individual strikers, especially if those strikes do not involve any major threat to the general welfare.

Furthermore, the haste with which New Jersey's Legislature acted to put teeth into a nonpunitive existing law banning utility strikes during a cooling-off period tends to discredit its action. Particularistic legislation aimed at suppression of a strike already in progress is naturally resented as an invidious attack on the group immediately affected. Legislation passed in the midst of a crisis when tempers are heated and judgment biased is almost certain to be defective. It appears that the New Jersey Legislature will have good reason to repent of its precipitancy.

Care of the Blind in Pennsylvania

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16 (legislative day of Monday, March 24), 1947

Mr. MARTIN. Mr. President, at this time I wish to present a statement made by O. E. Day, chief of the State Council for the Blind, Department of Welfare of Pennsylvania, and also a statement by Miss O'Hara, former Secretary of Welfare of Pennsylvania, which relates to the care of the blind. I think it most appropriate to present the statements at this time because so many of the lower levels of government are looking to the national level for assistance. I think a reading of the statements will prove very illuminating and show what can be done at the State level. I ask unanimous consent to have printed in the RECORD the statements by Mr. Day and Miss O'Hara.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

O. E. DAY, CHIEF, STATE COUNCIL FOR THE BLIND, DEPARTMENT OF WELFARE, SAYS:

DID YOU KNOW?

The 1943 General Assembly, in addition to appropriating funds necessary to carry out the general objectives of the State Council for the Blind, Department of Welfare, for the 1943-45 biennium, granted $90,000 for remedial eye care, restoration and prevention fees; $69,700 for the initiation of a home-teaching program for the adult blind; and set aside in the State treasury a $20,000 employment revolving fund for the purpose of establishing blind persons in business?

The 1945 General Assembly granted an appropriation of $288,700 to cover the activities of the council in the general fields of home teaching, remedial eye care, and the prevention of blindness?

In addition, an appropriation of $100,000 was designated for expanded rehabilitation service to adult blind Pennsylvanians. Immediately following the enactment of the new legislation, the Secretary of Welfare, who is the executive officer of the State Council for the Blind, requested a complete reorganization of the council. The major steps of the reorganization, designed to improve efficiency and to gear the council to assume increased responsibilities, were effected by July 26, 1945.

The State Council for the Blind is now divided into three distinct sections: Rehabilitation, home teaching, and remedial eye care and prevention of blindness. Each section is under the direct supervision of one person who is responsible to the chief, not only for the efficient operation of his section, but for the coordination of the services of his section with the activities of other two sections.

The guiding philosophy of the State Council for the Blind is to marshal all the existing splendid forces in our commonwealth for the purpose of presenting greater opportunities for the visually handicapped.

The State Council for the Blind, Department of Welfare, Education Building, Harrisburg, extends a vocational rehabilitation service to the capable blind of our commonwealth.

WOULD YOU LIKE TO KNOW?

Who is eligible for our service? Any man or woman residing in Pennsylvania, who has reached his sixteenth birthday, and who has a permanent employment handicap by reason of greater than a 30-percent loss of visual functioning (usually determined by visual acuity of 20/60 or less in the better eye with best correction).

What services were given by the rehabilitation section last year?

During the last year the rehabilitation section provided a total gross income of $211,435 to 152 different industrially blind residents of the commonwealth. This income was created at an over-all cost of approximately $33,000. The service cost included professional and stenographic salaries, traveling expenses, and office supplies. The average yearly income of the persons placed in employment was $1,391. The average monthly income, $115.91. This average monthly income exceeded the ceiling of the pension by $15.91. It cost the commonwealth an average of $217 per client to serve the above number in employment. This section was able to provide $1 of income for the above-mentioned number of clients at a cost of 15.6 cents.

The industrial unit of the rehabilitation section placed or maintained in employment 84 persons during the year ending May 31, 1946. The average monthly income of these persons was $114. Average yearly income, $1,368. The business unit of the rehabilitation section placed or maintained in employment 50 persons with an average monthly income of $175. An average yearly income of $2,100.

The sheltered-employment unit of the Rehabilitation Section placed or maintained in and created employment for 18 persons, who average a yearly income of $179. Average monthly income, $15.

The services extended to the 152 blind persons consisted of counseling, training, and employment placement. These services were rendered without the benefits of Act 75-A or Public Law 113.

What services were rendered to the blind last year by the home teaching section?

The approximate cost for the operation of the home teaching section for the year ending May 31, 1946, was $39,103. The number of teachers averaged 13, with an average of 50 students per teacher. However, in addition to the actual students taught, more than three times that number of blind persons were given services during the same period. A total of 2,185 blind persons were visited, making a per capita cost of $17.89 for the 12 months. The total number of calls made was 9,886 at the cost of $3.95 per call, based upon the total cost of the program as shown above. The services given were instruction in embossed type, writing, typing, crafts, personal adjustment, leisure-time activities, together with an understanding of the local resources for the blind and interpretation of problems of the blind to families and communities.

How were the blind and visually handicapped benefited last year through the Remedial eye care and prevention of blindness section?

During the last year eye care was given to or supplemental work was performed for 5,181 persons, resulting in the expending of $58,689.86 for such services as examinations, glasses, refractions, repair of glasses, surgery, treatment transportation, and prosthesis. Of the 5,181 persons served, 2,066 persons were out-patients who received clinical services. A total of 5,181 visually handicapped persons were served, making a per capita cost of $11.13 for the 12 months.

To summarize: During the year ending May 31, 1946, the gross expenditure of the council was approximately $130,792.86 and we served 7,518 visually handicapped and blind Pennsylvanians, resulting in an average per capita cost of $17.39 for services rendered.

During last year 150 blind Pennsylvanians enjoyed restored useful vision as a direct result of the council's services.

During last year the council rendered financial aid to six Pennsylvania eye clinics for services extended to visually handicapped and blind clients of the council.

During the last year, in cooperation with the State department of public instruction, two sight-saving classes were started making a total of 29 classes.

During last year, through cooperation with the 67 county offices of the department of public assistance, talking book machine service was rendered to 2,164 blind Pennsylvanians.

The records of the State Council for the Blind reveal that 16 blind Pennsylvanians were established in business enterprises through non-interest-bearing loans amounting to $16,200 from the State revolving fund.

Under Pennsylvania law, Pennsylvania visually handicapped and blind persons enjoy more improved conditions than do the blind of any other State in the Nation.

REMARKS BY S. M. R. O'HARA TO THE PENNSYLVANIA FEDERATION OF THE BLIND ON MARCH 20, 1947, AT HARRISBURG, PA.

Mr. Chairman, ladies and gentlemen, when your representative asked me if I would ac-

cept honorary membership in the Pennsylvania Federation of the Blind, I was happy to reply that I would accept and was honored, indeed, by the invitation and such evidence of your friendship. Tonight, with pleasure, I formally accept honorary membership. I am profoundly moved by your action.

I am moved by your action because I have given little to the blind of Pennsylvania but the blind of Pennsylvania have given much to me by the example of your courage, by your wise choice of a positive way of life and an equally wise rejection of the folly of defeatism.

In the discipline for living taught to me by loving parents and wise mentors, there is a fundamental precept for acceptable conduct. That precept is that there is only one unforgivable sin, and that sin is despair.

Now if ever I have known a group of men and women who give living exemplification of the fruits of rejecting despair, or what is diluted despair: defeatism—that group is the blind of Pennsylvania.

You are living examples of the same firm and consistent courage that carried the early settlers of our Nation through encircling forests, across broad rivers, over steep mountain ranges from the Atlantic to the Pacific.

By your example, you are teaching not only the blind and the visually handicapped to surmount their physical barriers, but also you are teaching the sighted to break through the accepted boundaries of the five senses of hearing, smelling, feeling, tasting, and seeing.

You are teaching the sighted that not only may each sense be raised to an unknown *n*th degree but you are adding evidence to the existence of an extrasensory perception with which both sighted and visually handicapped may make contact with the world about us.

Again I am honored by inclusion in your membership because I respect your political and social judgment.

In your political and social philosophy as a group, you have chosen not to capitalize the generous sympathy of your fellow citizens, but have chosen the knightly way of training for your tasks, asking of your fellow citizens only the opportunity to enter the tournament of living on a fair field with a fair economic and social handicap.

Others have told you the details of the program and the achievements of the Department of Welfare through the State Council for the Blind. These achievements have been attained with your understanding assistance and that of other citizens, who are not only benevolent but also intelligent.

The current issue of We, the Blind presents a readable story of the work in Pennsylvania for the blind by the blind.

One of these stories is captioned: "Build it yourself." It thrills me and fills me with faith in the capacity of brave men and women to surmount physical handicaps.

I well remember the staff meeting in the Department of Welfare when the assignment was made to the State Council for the Blind to plan and man the department's exhibit in the 1947 State farm show.

Thousands must have left that farm show with a better understanding of what Pennsylvania's blind are doing to help themselves with a little help from her citizens.

The Department of Welfare was happy to coordinate their efforts to make that contact with the substantial farm groups of this State.

The people must know what you are doing. The people must believe as we in the department of welfare knew that the program of the State Council for the Blind is dynamic, constructive, and offers a profitable investment to the taxpayers of Pennsylvania in her visually handicapped.

In the same issue of We, the Blind, Mr. Day has analyzed the dollars-and-cents investment in service for the blind and the return on that investment. You will be amazed. That is political engineering; that is human engineering equal to the best mankind can create in the way of roads and buildings and education, and a small return indeed to many in your group who have incurred their handicap in the military service in our behalf.

I wish I could name the men and women, name by name, who have helped to build the program of prevention of blindness, remedial eye care, home teaching, and social and industrial rehabilitation in Pennsylvania.

To one and all let us say thank you, and to one and all may I add: The blind continue to need the understanding cooperation of the intelligent citizen who is also the sympathetic interpreter. They need it to protect them from the ill-considered benevolence that leads to parasitic groups, and they need it to support them in the knightly way of self-training, self-discipline, and social and industrial life on a fair field.

You have honored me with an expression of your confidence in my work as a public official for the blind.

I shall cherish this plaque always as a beautiful and tangible momento of our work together for the blind of Pennsylvania and the blind everywhere.

Report on American Youth for Democracy

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the Committee on Un-American Activities, House of Representatives, Eightieth Congress, first session:

REPORT ON AMERICAN YOUTH FOR DEMOCRACY

(Investigation of un-American propaganda activities in the United States by the Committee on Un-American Activities, House of Representatives, 80th Cong., 1st sess., under Public Law 601)

American Youth for Democracy: Temporary address, 13 Astor Place, room 612, New York 3, N. Y., Algonquin 4-4646.

Cochairmen: Robert Thompson, Naomi Ellison; executive secretary, Carol Ross; vice chairmen: Winifred Norman, John Gallo; secretary-treasurer: W. Robert McCarthy.

OCTOBER 1943.

American Youth for Democracy: National office, 150 Nassau Street, room 412, New York 7, N. Y.

Naomi Ellison, chairman; Carl Ross, national executive secretary; Henry Cooperstock; Terry Grabel; Winifred Norman; John Gallo, vice chairmen; Vivian Levin; Leo Rifkin; Philip Schatz.

New York State office: Corp. David Livingston, chairman; Lillian Gates, executive secretary; Bob McCarthy; Beryl Michaelson, Jimmy Schlecker, Nettie Selling; Everett G. Thomas; Leon Wofsy.

DECEMBER 1945.

A shrewd observer once remarked that "France lost the war not in Flanders but in the schoolrooms." No serious-minded person can deny that America is confronted today with a possible threat to its security as critical as any in its history. The fact that forces hostile to American democracy and seeking its destruction are penetrating our schools and colleges in an effort to subvert the great body of American students is, therefore, a matter of major national concern.

The specter of communism stalks our college campuses masked under the cloak of the American Youth for Democracy. This organization, which claims 60 chapters in colleges in 14 States and a total membership of 16,194, is neither American nor democratic in its origin or purposes. Manipulated by shrewd and specially trained organizers operating in a narrow circle behind the scenes, it endeavors to exploit to the advantage of a foreign power the idealism, the inexperience, and the craving to join, which is so characteristic of our college youth. Behind a veil of a multitude of high-sounding slogans, one is conscious of a determined effort to disaffect our youth and to turn them against religion, the American home, against the college authorities, and against the American Government itself. It is, indeed, a training school in lawlessness. Its methods are underhanded and devious, in line with the Trojan-horse policy initiated at the Seventh Congress of the Communist International. These methods have been graphically described by the Canadian Royal Commission in its recent report on espionage activities. The tragedy is that this movement has been able to corrupt some of our young people for its subversive designs. As Rev. John Courtney Murray, S. J., has said in an informed article entitled "Operation University," in America for April 13, 1946:

"There is no doubt that Moscow understands the power of youth. It is consciously enlisting the aid of youth in furthering its own purposes, whose sinister character is ably concealed beneath the aura of idealism that youth finds so seductive."

With amazing guile the youthful representatives of the American Youth for Democracy resort to numerous devices in order to deny and conceal the Communist character of the organization. Section 1, article II, describes the AYD as a "character-building organization dedicated to the education of youth in the spirit of democracy and freedom, as set forth in its program."

Writing in PM of March 10, 1947, in behalf of the New York State AYD, Leon Wofsy assured its readers that "we have no skeletons in our closets. There are no grounds for any 'exposure' whatsoever. AYD is an independent organization of, by, and for young people."

Repeatedly AYD representatives have denied Communist Party domination or relation to the Communist Party. What are the facts?

ORIGIN

On October 15, 1943, a special convention of the Young Communist League was held at Manhattan Center at Thirty-fourth Street and Eighth Avenue in New York City. At this convention the Young Communist League officially transformed itself into the American Youth for Democracy. Addressing this convention, Earl Browder, then general secretary of the Communist Party, USA, called "for a broader unity among the young people's organizations, to reach out and to dissolve old and outlived barriers which have kept apart too many youth organizations."

Prior to this convention, Max Weiss, president of the Young Communist League, had published a proposal in the Communist of September 1943, "a magazine of the theory and practice of Marxism-Leninism," which has been the theoretical organ of the Communist Party for about 20 years, "to change the program and name of the YCL and to broaden its leadership in order to help create a new, united anti-Fascist youth organization."

The intent of this maneuver was frankly disclosed by Mr. Weiss in the same article, in the following remark:

"It is certainly true that the changes will help blunt certain weapons used by defeatists and reactionaries who pointed to the

name of the organization as 'evidence' that the YCL was the 'youth section' of the Communist Party."

In other words, this was one of a long chain of alleged disassociations and changes of name executed by the Communist parties throughout the world and their auxiliaries, to disarm and confuse the outside world. The Communist Party, USA, for example, decided to "cancel and dissolve its organizational affiliation to the Communist International" on November 16, 1940, in order to evade the provisions of the Voorhis Act. Similarly the Communist International was "dissolved" on May 30, 1943. Numerous Communist publications and front organizations changed their names. The Young Communist League was simply carrying out another phase of the Communist's policy of organized deception.

Mr. Weiss added that "all Communists will naturally hope that thousands of youth who will join the new organization will also later join the Communist Party."

Again indicating the kinship of the AYD and the Communist Party, he insisted that the new organization "must militantly champion the principle of full citizenship of the Communist Party in the democratic life of the country."

The convention dissolved itself promptly at 5:40 p. m. on October 16, 1943, and empowered Max Weiss, Frank Cestare, and Claudia Jones to "conduct all necessary steps to wind up the affairs of the Young Communist League within 30 days from date."

On October 17 these same delegates met at Mecca Temple in New York City in a special constitutional convention to form the American Youth for Democracy.

INTERLOCKING PERSONNEL

The new Trojan-horse strategy provides for the broadest possible network of enticement and the narrowest concentration of control in strictly Communist hands. The following interlocking table of officers of the American Youth for Democracy, the Communist Party, and the Young Communist League shows the close identity of the inner core of the AYD and the Young Communist League.

Name	American Youth for Democracy	Young Communist League
Pauline Annone	State and regional organizations—western Pennsylvania (letterhead, Oct. 17, 1943).	Member, National War Service Council (Meet the Young Communist League, p. 27).
Warren Brown	Vice chairman, Buffalo (AYD Builder, January 1944)	Registered member, Communist Party, Los Angeles County, Calif., November 1938.
Fay Caller (also Fay Caller Vedro).	Member, national board (AYD letterhead, Oct. 17, 1943)	Administrative secretary, New York State (Daily Worker, Mar. 2, 1942, pp. 1, 4).
Frank Cestare	Founder, convention, Oct. 15, 1943	National administrative secretary (Young Communist Weekly Review, Apr. 7, 1942, p. 6).
Leo Cooper	Managing editor, Spotlight, official organ (April 1944, p. 2)	Managing editor, Weekly Review, official organ (Mar. 30, 1943, p. 10).
Margaret Delehanty	New York State leader	Signer of statement in defense of Mrs. Earl Browder (Daily Worker, Dec. 23, 1943, p. 1).
Jack Epstein	State and regional organizations—Connecticut (letterhead, Oct. 17, 1943).	Member, War Service Council (Meet the Young Communist League, p. 27).
Francis Franklin	Contributor, Spotlight, official organ, April 1944, p. 24	Member; member, managing board, Champion, official organ (Special Committee on Un-American Activities hearings, vol. 9, p. 5605).
John Gallo	Member, national board (letterhead, Oct. 17, 1943)	Attended a banquet of the Young Communist League at 12th and Taylor Sts., Detroit, on July 13, 1940. Signer of statement, National Free Browder Congress (Daily Worker, Mar. 16, 1942, p. 2).
Claudia Jones	do	Educational secretary, New York State (Daily Worker, Oct. 4, 1940, p. 4); chairman, New York State (Daily Worker, May 2, 1940, p. 5).
John Hudson Jones	Member, city council, chairman, Harlem Youth Center (AYD Builder, January 1944).	Contributor (Worker, Dec. 20, 1942, p. 12, section).
Adeline Kohl	State and regional organizations, Michigan (letterhead, Oct. 17, 1943).	Acting State secretary, Michigan; speaker at Lenin memorial meeting and rally for victory, Jan. 18, 1942, Detroit. Member, executive committee, New York County (Young Communist League Yearbook, 1937, p. 55).
David Livingston	Acting president (letterhead, Nov. 11, 1943)	Chairman of convention credentials committee (Washington Times-Herald, Jan. 25, 1946).
Daisy Lolich	State and regional organizations, Ohio (letterhead, Oct. 17, 1943)	Secretary, Ohio; speaker, Communist Party (Daily Worker, Feb. 3, 1942, p. 5).
Bill Mardo	Contributor, Spotlight, official organ (January 1944)	Sportswriter (Daily Worker, Nov. 29, 1943, p. 3).
Robert McCarthy	Secretary-treasurer (Daily Worker, Oct. 18, 1943)	Signer, petition to free Earl Browder (Daily Worker, May 2, 1941, p. 2).
Carl Ross	Executive secretary (Daily Worker, Oct. 18, 1943)	Executive secretary (Daily Worker, May 22, 1937, p. 8).
Lillian Ross	Acting secretary (letterhead, Nov. 11, 1943)	Divisional secretary, Communist Party (Sunday Worker, Oct. 13, 1940, p. 3).
Phillip Schatz	Organizational director (AYD Builder, January 1944)	New York State educational director (Daily Worker, Apr. 25, 1938, p. 4).
Herbert Signer	Executive secretary (Daily Worker, June 17, 1946)	Mid-West secretary.
Marcella Sloane	Member, city council, New York State student secretary (Builder, January 1944).	Secretary, college division.
Celeste Strack	State and regional organizations, California (letterhead, Oct. 17, 1943).	Organizer, Los Angeles (Sunday Worker, Feb. 1, 1942, p. 5).
Everett Thomas	Listed on letterhead (Nov. 11, 1943)	Field officer; speaker, Communist Party rally, New York City, Mar. 7, 1946 (Daily Worker, Mar. 8, 1946).
Robert Thompson	Member, national board (letterhead, Oct. 17, 1943)	Member, national secretariat, Communist Party (Worker, July 28, 1946, sec. 3, p. 4).
Max Weiss	Founder	President (Dust Off Your Dreams, the Story of the American Youth for Democracy, p. 14).
Selma Weiss	State and regional organizations, Maryland Washington, D. C. (letterhead, Oct. 17, 1943).	Secretary, Washington, D. C. (Daily Worker, Nov. 4, 1942, p. 3).
James West	State and regional organizations, New Jersey (letterhead, Oct. 17, 1943).	Executive secretary, Northwest convention (Daily Worker, Oct. 5, 1940, p. 5).
Leon Wofsy	President, New York State (PM, Mar. 10, 1947, p. 21) (Daily Worker, Dec. 17, 1942, p. 12).	President, Marxist Cultural Society, City College of New York; editor of the CCNY Communist publication of Marxist Cultural Society (Interim Report and Conclusions of the New York City Subcommittee Relative to Subversive Activity Among Students in the Public High Schools and Colleges of the City of New York, Dec. 1, 1941, p. 102).

The high-handed tactics of the Young Communists at the October 17, 1943, convention were described in detail by Pfc. Richard A. Holman, 1944, in a subsequent issue of the Cornell Bulletin, as follows:

"Of the 314 'representatives' of youth at the YCL (now AYD) convention, 242 came from Young Communist League chapters. The remainder were largely from front groups and controlled unions. * * * Of the 100 members of the AYD executive committee, these 'representatives' chose 80 out of a slate of 80 presented to them. * * * The only additional nomination from the floor was thrown out by the chairman."

This account is particularly interesting in the light of Communist emphasis upon the issue of civil liberties, whenever an AYD chapter is under fire.

PROGRAM AND CONSTITUTION

Despite its professions of independence from the Communist Party, the AYD has aped its parent organization closely in its program and constitution.

CONSTITUTION AND BY-LAWS OF THE COMMUNIST PARTY OF THE UNITED STATES

(Workers Library Publishers, New York, 1938)

The Communist Party of the United States of America is a working-class political party, carrying forward today the traditions of Jefferson, Paine, Jackson, and Lincoln and of the Declaration of Independence (p. 5).

AMERICAN YOUTH FOR DEMOCRACY — PROGRAM ADOPTED OCTOBER 17, 1943

These ideals, embodied in the Declaration of Independence, in the Constitution of the United States, and the Bill of Rights. * * * We are inspired in our devotion to these great ideals by the example of such great patriots as George Washington, Thomas Jefferson, Samuel Adams, Tom Paine, Andrew Jackson, Abraham Lincoln, and Frederick Douglass.

Article III. Membership

SECTION 1. Any person 21 years of age or more, regardless of race, color, national origin, sex, or religious belief, who is a citizen of the United States * * * shall be eligible for membership (p. 7).

Article IV. Initiation and dues

SEC. 4. Fifty percent of the initiation fee shall be sent to the national committee and 50 percent shall remain with the State organization (p. 9).

Article III. Membership rights and obligations

SECTION 1. All young people, regardless of color, national origin, religious belief, or political party affiliation who accept the program of the American Youth for Democracy may join.

SEC. 2. The yearly membership fee to the American Youth for Democracy shall be $1; 50 cents for high school students. Fifty percent shall go to the national council and 50 percent to the State or regional office.

Article VIII. National organization

SECTION 1. The supreme authority in the Communist Party of the United States of America is the national convention. Regular national conventions shall be held every 2 years.

SEC. 6. The national committee is the highest authority of the party between national conventions.

SEC. 7. The national committee elects from among its members a political committee. * * * The political committee is charged with the responsibility of carrying out the decisions and the work of the national committee between its full sessions (p. 17).

Article VI. National convention

SECTION 1. The national convention shall be the highest policy-making body of the American Youth for Democracy.

SEC. 2. The national convention shall be convened at least 2 years.

Article VIII. National council

SECTION 1. The national council shall be the highest policy-making body of the organization between national conventions.

SEC. 5. The national council shall elect from its members a national executive board. Between meetings of the national council the board shall transact the business of the national council.

This highly centralized structure is copied bodily from the structure of the Communist Party of the Soviet Union.

CONSTITUTION AND BY-LAWS OF THE COMMUNIST PARTY, UNITED STATES

Article VI. Rights and duties of members

SECTION 1. The Communist Party * * * * opposes with all its power any clique, group, circle, faction, or party which conspires or acts to subvert, undermine, weaken, or overthrow any or all institutions of American democracy whereby the majority of the American people have obtained power to determine their own destiny in any degree (p. 10).

AMERICAN YOUTH FOR DEMOCRACY — PROGRAM ADOPTED OCTOBER 17, 1943

We will expose and combat the activities of all enemies of the welfare of the Nation and its youth, the agents of defeatism and fascism, who work within the labor, progressive, and youth movements.

These face-saving formulas were obviously adopted to counteract the growing conviction that the Communist Party and the American Youth for Democracy are part of an international conspiracy seeking to undermine and destroy democractic countries throughout the world in the interests of Soviet aggrandizement. They are signs of a guilty conscience. There are enough weasel words attached to provide plenty of loopholes for an attack upon our Government on allegedly imperialistic and reactionary grounds. Gullible liberals will, no doubt, fall victim to this trap.

COMMUNIST LOYALTY

The Communist Party, the Young Communist League, and the AYD have never on a single occasion deviated from the main line of the Communist Party of the Soviet Union, despite their professions of loyalty to our founding fathers. AYD's complete adherence to the line of the Communists remains the acid test of the foreign loyalty which dominates all its activities.

Prior to 1935 the Young Communist League supported the Oxford oath, under which it was pledged not to support its own country in any war in which it may become involved, regardless of the nature of the war and its causes. This was the period during which the Soviet Union feared attack from capitalist nations. The chief Communist-front organization at this time was the American League Against War and Fascism, with a program of open treason against our armed forces.

Here is a sample of the line of the Young Communists at the time taken from a manifesto published by the Young Communist League in 1934:

"Youth of America: Service notice on the bosses' government that you are through serving as cannon fodder * * * We must turn our guns on our real enemies—not the workers of other countries—but our own bosses in this country. Fight for a Soviet U. S. A."

With the outbreak of the war in Spain and Soviet support of the Loyalist cause, it was deemed expedient to repudiate the Oxford oath. Gil Green, general secretary of the Young Communist League, found no hesitation in reversing himself at its eighth national convention, when he declared:

"If we in this country face the same conditions as the young people of Spain, we would not hesitate for 1 second in defending democracy against fascism to the last drop of our blood." [1]

Hostility toward the United States moderated after the Seventh Congress of the Communist International in 1935, when the Soviet Union was seeking to establish a united front with the democracies against the Fascist aggressors. Gil Green, general secretary of the Young Communist League, who had been a delegate to the Comintern Congress, voiced this reversal in these terms:

"American youth realize that they live in the wealthiest country in the world * * * [the anti-Fascist youth forces] have recognized the natural love of youth for the land of their birth." [2]

As soon as the Stalin-Hitler pact was signed, the Young Communist League was quick to change its position on the question of war. A leaflet distributed on the streets of New York by the Young Communist League attacked President Roosevelt and sounded the cry:

"Not a man, not a cent, not a gun for imperialist war preparations. Every increase in the armed forces of the United States is but a step toward preparing this country for entry into the European war. * * * The armed forces must not be expanded. American youth must not be militarized. * * * Support the peace policies of the Soviet Union."

The Young Communist League published a deluge of pamphlets along the same line, and its members participated in the Youth Congress delegation which booed President Roosevelt on the White House lawn.

The AYD was born during the period of World War II, when Russia was already an ally. The AYD was active in securing blood donors, selling war bonds, running canteens, and furthering the March of Dimes. The national board of the AYD affirmed its support of the "timely proposal of Secretary of Navy Knox, for a system of postwar universal obligatory training for youth," adding that "this world-wide war has taught us that we can never again allow a generation of youth to exist who are not fully equipped to defend this country with arms in hand." [3]

The October 17, 1943, program of the AYD was most extreme in its expressions of patriotism. It declared:

"All of us stand ready to lay down our lives in defense of our Nation, our people, and our democratic heritage.

"We pledge allegiance to our country and to the cause of liberty and justice for all. * * * It is a just war to destroy fascism. It is a people's war for national liberation.

"We will resolutely combat the treacherous conspiracies of the Fascists, defeatists, and their fifth column."

The international Communist line changed after the end of the war, and the AYD subserviently followed the pattern set down for it. Its emphatic views on universal military training were forgotten in its startling reversal on this question. We quote:

"American Century is a fancy way of disguising the most aggressive kind of American imperialism, out to conquer the world, economically, then politically. Is that fascism? It's exactly what Hitler tried, only he called it Lebensraum and German destiny. * * *

It's in the light of this that we understood President Truman's call for universal military training. * * * Well, our foreign policy is headed away from cooperation with other nations for peace. It's aimed at world imperialist expansion. That's why President Truman looks for a giant-size army. * * *

"So we're opposed to universal military training because it means a large army to be used for antidemocratic purposes of our army in China. * * * It means setting up the big stick for a big-stick policy." [4]

While there has never been a syllable of criticism of the Soviet Union in AYD literature, its attack on the United States embraces every phase of American life from foreign policy to the labor movement and the universities. The AYD pamphlet further declares:

"Me—the hero—I haven't even got a place to live. * * * I pick up a newspaper and read where there are people—some of them in high places with a lot of power—throwing out their chests and telling the world how tough they are * * * how we've got the biggest Army and the biggest everything it takes to fight another war. * * *

"It stopped being funny when our Government began to play around with Fascists in other parts of the world. With the Mikado in Japan, with cartel big shots in eastern Europe, and with the reactionary Kuomintang in China." [5]

The pamphlet also describes the activities of the Chicago senior division of the AYD, which paraded through the Loop with placards and leaflets, calling for the withdrawal of "our boys" from China and the "speedy demobilization of the veteran men and women in the armed forces."

During the San Francisco Conference of the United Nations, the Philadelphia AYD organized a picket line outside the Argentine consulate and sent the State Department a "hot telegram" protesting against his policy to Argentine.[5]

Speaking at the World Youth Conference held in London in November 1945, Tom Neill, of the United Electrical Radio, and Machine Workers Union (CIO) and an AYD supporter, declared:

"We submit that sole ownership by the United States of the 'secret' of the atomic bomb can only serve to create and intensify

[1] Make Your Dreams Come True, Workers Library Publishers, June 1937; Report to the Eighth National Convention of the Young Communist League, U. S. A., May 2, 1937, p. 43.

an armament race. If this policy is permitted to develop, it will undermine relations between the United States, Great Britain, and the USSR, as well as France, China, and all nations."[6]

The renewed militancy of AYD members in the labor movement and in college circles is an expression of present line of the Communist Party and the American Youth for Democracy.

It is difficult to understand how AYD's professed devotion to the ideals of Washington, Jefferson, Adams, Paine, Jackson, and Lincoln can be blithely so reconciled with actual devotion to the wishes of Josef Stalin as shown by these changes.

RELATIONS TO THE COMMUNIST PARTY

The close relationship between the Communist Party and the American Youth for Democracy, though continuously disavowed by the AYD in non-Communist circles, is openly admitted and described in detail by Max Weiss, its leading founder, in the Communist press. Speaking of the "relationship of the party to AYD."

Mr. Weiss, in his report to the national committee of the Communist Party, affirms that "toward the end of November (1946) the national board (of the Communist Party), in consultation with the youth commission of the party, formulated a memorandum."

The policy of appointing a youth commission of the Communist Party to handle all important matters of its auxiliary youth organization is standard practice, according to the statutes of the Communist International. It means that the AYD is neither autonomous nor independent and that its national executive board is simply a mouthpiece for the youth commission of the Communist Party.

Mr. Weiss, in his official report, demanded that "the entire Communist Party and its leadership develop systematic Communist Party work and Marxist education among the youth and give party guidance and direction to young Communists active among the youth."

In other words, the AYD has admittedly the benefit of the advice of its more experienced conspirators in the Communist Party.

Quoting the memorandum that was drawn by the party, Mr. Weiss explicitly declared:

"Today the most important and effective channels for organizing and promoting effective action of the advanced anti-Fascist youth is the American Youth for Democracy. It would be the crassest mistake to minimize the importance of the organization or to fail to give it effective assistance."

Displaying a frank and authoritarian right to interfere in the affairs of the AYD, the national board of the Communist Party declared itself "opposed to the proposition that the Young Communist League shall be reconstructed." The national board was clear in its perspectives, which are outlined as follows:

"One, that the party will become a party with mass influence among the youth, with masses of youth joining the party; * * * and, secondly, the party will help develop the AYD as a mass, advanced anti-Fascist youth organization in which the Communists play a leading role."[7]

There could be no more forthright avowal of the party's overshadowing interest in the American Youth for Democracy.

As late as March 10, 1947, the AYD officially defended the position of the Communist Party, USA, in a statement appearing in PM, on page 21, and signed by Leon Wofsy, New York State AYD president, from which we quote:

"We subscribed without reservation to the full and equal citizenship of Communists with all democrats. * * * We judge Communists as we judge others in our organization, on the basis of merit. * * * The Communists who are among those elected to leadership in the AYD are there because the membership feels that they have proven their worth."

It is interesting to note in passing that the former headquarters of the AYD at 13 Astor Place, New York City, were located in the same building with a number of other Communist-controlled organizations: L'Unita del Popolo, Italian Communist paper; Veterans of the Abraham Lincoln Brigade; State, County, and Municipal Workers; School for Democracy; Camp Arcadia, AYD camp; Friends of the Campus; Tom Mooney Hall; Progressive Forum; Teachers' Union, Local 555, which was expelled from the American Federation of Teachers, AFL, for Communist activities.

A typical issue of the Daily Worker, official Communist Party organ, for March 15, 1947, contains the following notices of AYD functions: Penny party of AYD Village Young Adult Club; Brooklyn College AYD's March social; Dance-a-round, American Folksay Group, AYD; Hunter College AYD entertainment; smorgasbord and square dancing, American Folksay Group, AYD, Brooklyn. The various names used are illustrative of the guises under which the AYD appears.

Gracing various AYD entertainments, meetings, and campaigns, or contributing to its magazine, Spotlight, is the usual list of sponsors which are invariably found supporting the Communist Party and its front organizations, including such names as Paul Robeson, Benjamin J. Davis, Jr. (a Communist Party leader), Rev. William H. Melish, Rev. Jack R. McMichael, Ferdinand Smith, William J. Schieffelin, Norman Corwin, Howard Fast, Harry F. Ward, Edward G. Robinson, Col. Evans F. Carlson, Zero Mostel (an AYD member), Martley C. Crum, John T. McManus, Donald Henderson, Joseph E. Davies, and Lt. Comdr. Charles S. Seely, United States Navy (retired).

To some extent conservative groups and even the Government itself has been responsible for lending prestige to the AYD and its leaders and for misleading the public as to the subversive character if this organization.

At the AYD convention of October 1943, "Whitey" Goodfriend spoke as a delegate, praising the Soviet Union and demanding the opening of an immediate second front. His remarks were echoed by a chant taken up by the audience to the words of Open Up a Second Front Now. Goodfriend had been selected by the OWI during the war as the "typical American youth."

VETERANS

With the admission of over 1,000,000 veterans to our colleges, the Communists have displayed an increased and understandable interest in the campus. John Williamson, a member of the secretariat, the highest political body in the Communist Party, USA, has expressed this interest in the official Communist magazine, Political Affairs, of March 1946, on page 238, as follows:

"The Communist Party should particularly attract the militant youth—especially the veteran."

Writing in the same magazine for February 1947, pages 132, 133, and 134, Marvin Shaw, former student secretary of the Young Communist League, emphasizes this point and indicates the direction of current Communist agitation among these veterans. Calling attention to the presence of 1,080,000 veterans in our colleges, he insists that these veterans "know that another economic crisis will not allow them" to use their technical skill and academic training. This is merely an insidious method of inciting dissatisfaction with the Government's veteran program, which is considered the most generous in the world. Indicating the Communist line of agitation on foreign policy, he declares: "Veterans also expressed concern over the ways and means of preserving peace." This, again, is another invitation to provoke veteran dissatisfaction with American foreign policy.

The potential danger involved can best be appreciated when it is remembered that the Communists first initiated the veterans' bonus march in 1932, which later escaped their control. The current Communist press is replete with accounts of veterans' marches on State capitols and city halls. The Worker of March 2, 1947, carries an account of a teen-age youth march on Albany. The Worker of the same date speaks of a midnight special of student veterans leaving for Washington, D. C. The Daily Worker of March 8, 1947, page 4, speaks of the Seattle continuation committee of the veterans' bonus march which cooperated with the Communist Party of Washington in a march on Olympia, the State capital. David Livingston, AYD leader, should be remembered as one of the leaders of the GI demonstrations in Hawaii. Other Young Communist Leaguers led similar mutinous demonstrations in other parts of the world.

RELATIONS TO THE LABOR MOVEMENT

AYD claims a strong kinship with labor. Its program declares:

"We regard labor as the most consistently democratic force in our country's life, the most progressive social force in modern society. We draw on its strength and experience. * * * We call on it to champion even more boldly the cause of youth. We, in our turn, place our organization at the service of the labor movement. * * * And we appeal to the working youth to join American Youth for Democracy."

Despite these ardent overtures, it is to the credit of the young people in the labor movement that the AYD has made a very slight impression in labor organizations. The AYD has, therefore, been compelled to rely upon Communist-controlled unions for any support they may have been able to secure.

Communists who are members of unions have been instructed to try to secure official recognition of the AYD from the organization's executive committee or from the organization itself. Once that is obtained the way is paved for financial donations, pro-AYD articles in the union press, appeals for AYD members, sports and dramatic activities under AYD auspices, distribution of the Spotlight, sending AYD propaganda to young members, and the public endorsement of AYD by leading union officials. Among its leading trade-union representatives are David Livingston, of the retail and wholesale clerks union; John Gallo, of the Ford Local 600, UAW; and Bob McCarthy, of the shipbuilders, all of the CIO.

ORGANIZATION

It might be well at this point to analyze the composition of the founding convention of the AYD held in October 1943, since it furnished a good cross section of the membership of the organization as a whole. It is estimated that there were 332 regular delegates and 150 guests and observers representing 156 Young Communist League clubs coming from 18 States, including the District of Columbia. The ages of these delegates ran as follows: Under 14—3; 14 to 17—45; 18 to 20—79; 21 to 25—130; over 25—65.

According to the Spotlight of June 22, 1944, the following is the membership distribution of the AYD at that time. Although these figures, undoubtedly vary somewhat at the present time, the table does give an idea of the geographical spread and density of the

[6] American Youth at the United Nations of Youth, World Youth Conference, 1945, p. 7.

[7] Daily Worker, April 3, 1946, pp. 11, 14.

organization in various parts of the United States:

New York	8,300
California	1,394
Michigan	1,370
New Jersey	860
Illinois-Indiana	1,250
Wisconsin	146
Maryland-Washington, D. C	534
Massachusetts	480
Eastern Pennsylvania	641
Western Pennsylvania	97
Missouri	116
Connecticut	245
Washington-Oregon	240
Ohio	450
Minnesota	66
Colorado	5

Those who would be inclined to minimize the significance of this comparatively small figure should realize that for the most part each of these young people has received concentrated training in organization methods and propaganda at the hands of the Communist Party and that they are actually the dangerous ferment in an amorphous and highly impressionable student body.

The AYD has held a number of regional conferences in various parts of the country, which are organized by regional or State councils, of which the following are typical: November 23, 1943, at the Tuller Hotel in Detroit; December 19, 1943, at the Hotel McAlpin in New York City; January 7, 1944, at the Wisconsin Hotel, Milwaukee; January 9, 1944, at the Central YMCA in Chicago; and March 15, 1946, at the National Maritime Union Hall in Philadelphia.

SWEETHEARTS OF SERVICEMEN

A division of the AYD born during the last war is the organization known as the Sweethearts of Servicemen. Its maiden effort was a delegation of 75 young women who arrived in Washington to petition Congress "to give their soldier boy friends and husbands the chance to vote in the 1944 Presidential elections." The delegation was featured in the Daily Worker of December 14, 1934, on page 1. It included such active AYD figures as Pauline Jacobs; Pauline Anoni, of Pittsburgh, "boy friend of Corp. David Grant," who in private life was the organizational secretary of the Communist Party of western Pennsylvania; and Naomi Ellison, cochairman of the AYD and the wife of Victor Ellison, Communist candidate for commissioner in Pierce County, Wash., in the election of November 1942. The next day the Daily Worker published an editorial in honor of the delegation.

FRIENDS OF THE CAMPUS

Initiated in 1945 in order to mobilize "moral and financial support" behind the AYD, Friends of the Campus is headed by a group of individuals closely identified with Communist causes. Included in this list is Donald Henderson, honorary president, who has been previously cited by this committee as "a publicly avowed card-holding member" of the Communist Party "for more than 10 years"; Honorary Chairman Jack MacMichael and Vivian Liebman, leaders of the American Youth Congress, which booed President Roosevelt on the White House lawn; Joseph Starobin, columnist for the Daily Worker; and Bob Burke, former member of the Young Communist League, who was expelled from Columbia University in December 1940.

WORLD FEDERATION OF DEMOCRATIC YOUTH

Naive students who become involved in the AYD are blissfully unaware that they have automatically become entangled in a network with far-reaching international commitments, over which they have no control. The AYD is affiliated with the World Federation of Democratic Youth, which was founded in London in November 1945 by delegates from over 50 nations. This organization now has its headquarters in Paris, which has become the extramural center of the subrosa Communist International and its auxiliary organizations, such as the Women's International Democratic Federation and the World Federation of Trade-Unions.

The delegation to the January 1945 World Youth Conference, which laid claim to representing approximately 2,000,000 organized youth (a fantastic figure), included among its 20 delegates the following: Esther Cooper, of the Southern Negro Youth Congress; Frances Damon, of the American Youth for a Free World; Alice Horton, of the United States Student Assembly; Mollie Lieber, of the American Youth for Democracy; Elizabeth McCandless, of the Los Angeles Youth Council; Thomas Neill, of the United Electrical, Radio and Machine Workers (CIO); and Doris Senk, of the American Youth for a Free World. The following Americans were elected as officers: Elsa Graves, industrial council, YWCA, as vice chairman; Frances Damon, as treasurer; and the following were chosen as council members: Naomi Chertoff, of the Junior Hadassah; Esther Cooper, Frances Damon, Elsa Graves, Russell Jones, of the National Intercollegiate Christian Council; and Thomas Neill.[8]

From the outset the World Federation of Democratic Youth demonstrated that it was far more interested in serving as a pressure group in behalf of Soviet foreign policy than it was in the specific problems of international youth. It immediately concerned itself with the question of Franco Spain, condemnation of the reactionary Greek Government, and support for Marshal Tito. No single word of criticism of the Soviet Union was tolerated. Delegations were organized to visit Russia; and Mollie Lieber, the AYD representative, has since toured the United States to speak in glowing terms of her experiences. Her first report was delivered on April 5, 1946, at the Hotel Diplomat in New York City before a session of the New York State AYD.

The World Federation of Democratic Youth brought into being the International Union of Students, which held a meeting in Prague on August 17-31, 1946. The administration and direction of this project was entrusted to a 17-man executive committee, of whom 12 were known Communists. In all of these international youth conferences the Soviet Union controlled a two-thirds majority, consisting of a solid bloc of the Soviet delegates, those from the Soviet-controlled states in eastern Europe, plus a disproportionate number of Communists and fellow travelers from other countries.[9]

So strong was the Communist domination at the London conference that it aroused the deepest concern of the English bishops, notably the present Cardinal Griffin.[10]

An example of the marked anti-American bias of the World Federation of Democratic Youth was a resolution to call on the then Secretary of State Byrnes in Paris to condemn the "lynch atrocities and the rising tide of Fascist terror which are being perpetrated against the Negro people in Georgia, Mississippi, and the southern part of the United States."

The action was taken on a motion by Mrs. Dorothy Burnham, educational director of the Southern Negro Youth Congress, a Communist-controlled front organization.

METHODS

No study of the American Youth for Democracy would be complete without a detailed analysis of the devious methods employed by the Communists in their operations among our young people—methods which bear all the earmarks of systematic training and shrewd direction from professional international conspirators. These methods should receive the most careful study in the various universities, so that students may be fully equipped to meet the Communist wiles in a truly American fashion. In this connection we shall rely on the testimony presented to our committee by former members of the Young Communist League. These methods, which are still actively in force, indicate the essentially conspiratorial nature of the Communist movement among the youth and its corruptive influence.

Members at large: Those active in strategic positions where a Communist label would be disadvantageous are affiliated as members at large so that they do not have to meet with any unit or branch of the party and can, therefore, work in front organizations and church groups and not be known as members of the organization. Among such members at large have been Kenneth Goff, alias John Keats, former member of the national committee of the Young Communist League, and Edward Strong, a member of a special branch, and head of the Southern Negro Youth Congress, which the Young Communist League surreptitiously controlled.

Concealment of membership records: The interim report and conclusion of the New York City Subcommittee Relative to Subversive Activity Among Students in Public High Schools and Colleges of the City of New York found on December 1, 1941, after hearing many witnesses, that the following methods were used in recruitment for the Young Communist League:

"Students were permitted to join under fictitious names; that the student's name would not be entered in any records, since all records pertaining to each student were kept by key numbers instead of names; that the YCL would not send any mail to her home; and that all notices to attend meetings and all instructions would be communicated by word of mouth" (p. 45).

Secret mail: Letters of instruction from the national office of the Communist Party or the American Youth for Democracy are often coded or sent by special courier for return after having been read.

Communist caucuses and party consultation: The Communist group in each youth organization holds a preliminary caucus on all major matters of policy or on the election of officers. All key matters are taken up with the local Communist Party leaders in advance. All important posts in any Communist-controlled youth organization are filled either by Communists or their trusted adherents. Enlarging upon the methods used by the Young Communists at Brooklyn and City College, the subcommittee studying the New York City public schools and colleges explained that this group was able to exercise a degree of influence utterly disproportionate to its numerical strength by obtaining a monopoly of positions of undergraduate leadership as the result of "an elaborate system of conniving, masquerading, interlocking directorates, agitation, and propaganda."

Penetrating religious groups: Those who deal with Communist youth organizations are frequently deceived by the number of religious organizations apparently represented. Religious groups are notoriously naive and easy prey for the young Communist power politicians. Every young Communist is instructed as a first step to join a mass organization such as a "Y" or a church, a trade-union, or a student group. With religious groups the Communist strategy is to speak in terms of Christian principles but actually to exploit them to

[10] "Operation" University, by John Courtney Murray, in America, April 13, 1946, p. 28.

establish contact and use them for Communist propaganda, often with considerable success. Out of a total of 52 members of the national council of the American Youth Congress, 22 have been identified as Communists. This list is given here for the purpose of indicating the technique employed whereby they appear not as Communists but as the representatives of religious and other respectable groups:

William Hinckley, Christ Episcopal Church, Missouri.

Irma Garner, South Side Settlement House.

Howard W. Lederer, Ninety-second Street YMHA, New York City.

Elizabeth Scott, St. James Presbyterian Church, New York City.

Rose Terlin, student secretary, student division, YWCA.

Rose Troiano, national industrial council, YWCA.

Hazel Lehman, Youth Forum and Commonwealth Federation, Washington.

Robert Clemmons, Epworth League, Cleveland, Ohio.

William Dorsey, City-wide Young People's Forum, Baltimore.

Bert J. Duzykowski, Central Committee of Polish Youth, Milwaukee.

Kenneth Goff, Wisconsin Townsend Clubs.

Florence V. MacDonald, Wisconsin Young People's Conference.

Harold Peterson, Minnesota Junior Farmer-Labor Association, Minneapolis.

In some States the young Communists have even penetrated the Young Democrats.

Attitude toward religion and ethics: In view of the penetration of religious groups by these connivers, it is well to note at this point, Lenin's instructions to young Communists on ethics, morality, and religion, instructions which are basic regardless of all deceptive maneuvers to the contrary. These words furnish a standard whereby one may judge the nature of the inner corruption resulting from membership in the ranks of the Communists. We quote:

"But is there such a thing as Communist ethics? Is there such a thing as Communist morality? In the sense that it is preached by the bourgeoisie who declared that ethics were God's commandments, we, of course, say that we do not believe in God and that we know perfectly well that the clergy, the landlords, and the bourgeoisie spoke in the name of God in order to pursue their own exploiters' interests.

"In what sense do we repudiate ethics and morality? * * * We say that our morality is entirely subordinated to the interests of the class struggle of the proletariat. * * * For us, morality is subordinated to the interests of the class struggle of the proletariat." [11]

Assignments and training: It must be realized that we are dealing here not with any spontaneous or indigenous movement but one which is carefully cultivated and directed from outside. Thus young Communists will suddenly appear out of nowhere as a result of a disciplined assignment from central headquarters. They have been trained to be professional revolutionists and ignore home, scholastic, or fraternal ties in submission to orders. Speaking before the National Resident Board of the Young Communist League on April 9, 1933, Henry Winston declared in this connection:

"There is a great need for the training of people in the South. We should send someone down there for a couple of months to conduct classes, study groups, etc., to train and educate the youth commissions of the party on how to work and develop a mass movement."

A letter from the YCL national office to its members dated December 14, 1937, demonstrates how specifically detailed such instruction and training is:

"In order that all district organizers and the league as a whole can provide leadership to the broad youth movement that is developing, they become specialists on youth problems * * *. We are listing here a number of sources of youth research material and a number of publications with which every district organizer should be familiar."

According to the YCL national board minutes of November 6, 1937, arrangements were made with the Visual Education Press for the publication of charts and lectures for the use of YCL branches.

Defiance of college rules.—The New York City subcommittee studying subversive activity among students in the public high schools and colleges of New York City received in evidence a document presented by a group of YCL students to a committee of professors headed by the dean of the City College. The document is a manifestation of an attitude toward the college authorities which those dealing with the AYD, successor to the YCL, would do well to remember. We quote:

"The rules and regulations of the City College which we are asked to obey and which are put before us are necessary levers for the functioning of an institution. They are in reality rules and regulations calculated to prevent struggle on the part of the student body against the forces of society which the college represents. We as Communists therefore regard it as our duty to struggle against these forces in society and, of course, incidentally, against the rules which these forces in society have adopted. * * * We who are Communists point out, in conclusion, that we do not fear repressive measures on the part of the faculty and the administration of the college."

Grievances: The same committee pointed out the tendency of this group to seize upon every grievance, whether real or imaginary, in order to identify the college authorities with the bosses, or the boss-controlled government, and the student with the oppressed and exploited workers of the world, thus instilling in the minds of the students a contempt for democratic processes and the recognized forms of social and political change in a democracy.

Student strikes: From 1935 to 1939 the high schools and colleges of the country were afflicted with an epidemic of Communist-staged peace strikes. The New York Board of Superintendents reported in 1936 that "although some of the pupils who absented themselves last year did so from a sincere belief in the cause of peace, yet some pupils participated for other reasons and some pupils threatened their classmates with violence if they did not join with them in the peace strike."

Teacher cooperation: The aforementioned committee found numerous examples of teacher and student cooperation in Communist projects. In many instances young Communist groups were assisted by faculty advisers.

Tactics of harassment. The committee has described tactics employed by the Communist-dominated American Student Union chapter against Dr. Harry D. Gideonse, president of Brooklyn College, which are worthy of note. We quote in part:

"His home telephone rang into the small hours of the morning, telegrams were received announcing deaths; student pickets wearing gas masks paraded in front of his home, frightening his small children."

CHARACTERIZATIONS OF THE AMERICAN YOUTH FOR DEMOCRACY

Harry D. Gideonse, president of Brooklyn College, New York:

"Announces the denial of a charter to the American Youth for Democracy 'because both students and instructors feel that it is not a bona fide group. * * * Communism has appeared in the last few years in one camouflage after another, and now it comes in the guise of a youth organization concerned with democracy, in which it was never interested'" (New York Times, March 26, 1944, p. 44).

Dr. Harry Noble Wright, president of the City College of New York:

"Speaking of the American Youth for Democracy, he warned liberals 'to guard against those who, under the pretense of working with us, so conduct themselves as to destroy the sincere and open functioning of our institutions'" (New York Times, March 26, 1944, p. 44).

Prof. John J. Theobald, chairman of the faculty committee of the City College of New York:

"That the AYD was sponsored and initiated by the Young Communist League, which was then disbanded in favor of the new organization; that former members of the Young Communist League have been active organizers of the local AYD initiated at the college; that the strategic position of national executive secretary of AYD is held by the former New York State chairman of the Young Communist League; and that there is printed evidence in the September 1943 issue of the Communist that members of the Communist Party harbor the hope that 'thousands of youth who will join the new organization will also later join the Communist Party, and that many will become leaders of the Communist Party'" (New York Times, January 6, 1944, p. 25).

John P. Lewis, editor of PM, March 6, 1947, page 21:

"On October 17, 1943, in Mecca Temple, New York City, 400 delegates of the Young Communist League—official organization of the Communist Party—met to dissolve that organization and to begin the formation of a new one that would 'broaden the base of leadership' and take in 'non-Communist youth.' * * * Temporary officers named at the dissolution meeting of the Young Communist League to preside over the formation of the new organization were elected to permanent offices in the AYD, dispelling any possibility of doubt as to the paternity of the latter organization. * * * Information available to PM (clippings from city newspapers and many political publications of all shades of opinion) does not indicate that the AYD has ever taken any action to repudiate either its Communist parentage or the Communist Party's assumption of prerogatives in its development as an 'organization in which the Communists play a leading role.'"

Hon. J. Edgar Hoover, Director, Federal Bureau of Investigation:

"In our own country and in our own time, we have seen another youth movement arise. It still flourishes. I refer to that high-sounding, idealistic title, 'American Youth for Democracy,' which conceals the evils and the corruption of American communism. This name is but a new one for the former Young Communist League. It reflects all the sinister purposes of the Communist Party of the United States. It employs the same techniques and has the same objectives, namely, the conversion of our haven of liberty and freedom to worship as we choose to a godless, totalitarian state where the adversaries of democracy can do as they please" (Appendix of the CONGRESSIONAL RECORD, p. A1225).

Robert L. Stearns, president of the University of Colorado:

"I have just received the report of the special committee which was appointed last month to investigate and report on student organizations having a political aspect and in particular the organization known as the American Youth for Democracy.

"This report is fair, thorough, and judicial. * * * It concludes, in part, as follows: 'It is our opinion that the organization known as the American Youth for Democ-

[11] Lenin Speaks to the Youth, published by International Publishers, 1936, second printing, 1937, pp. 13 et seq.

racy, which has headquarters at 150 Nassau Street, New York City, and which has a chapter on the campus of the University of Colorado, is in its underlying purpose what is known as a Communist front, and therefore a front for some other and undisclosed ideology which is in fact illiberal and contrary to our system of government'" (statement issued subsequent to special committee report of March 15, 1947).

CONCLUSION

Some colleges and universities have taken steps to ban the operations of American Youth for Democracy on their campuses. Other institutions have taken other methods to outlaw or curtail this thoroughly un-American and communistically controlled organization.

Each college or university will know the best course of action to follow in its local situation to restrict the vicious influences which the AYD exercises on any campus where it operates. Your committee recommends the following steps as being among the most effective methods for dealing with this problem:

1. The committee calls upon the Governors or legislatures of the various States as well as the administrative heads of the various colleges and universities to thoroughly expose the Communist connections of the American Youth for Democracy as well as the inimical objectives of the Communist Party in America.

2. The Communist Party should be exposed as an organization which is completely and uniformly subservient to the interests of the Soviet Union just as the German-American Bund was subservient to the interest of Nazi Germany. Members of the AYD should therefore be looked upon as young bundists whose basic loyalty is not to the United States but to the Union of Soviet Socialist Republics.

3. The AYD should not be given the honorable status of a bona fide student organization. Its members on each campus should be made publicly known and registered as such. Parents, fellow students, and faculty members should be provided with these membership lists together with a candid explanation of the true nature of the organization and its affiliation with Soviet-dominated communism in America. Student advisers should seek to dissuade students from affiliating with this blatantly un-American outfit.

4. Wherever there are overt acts of violation of either college or civil authority or obscenities committed against the American flag by the AYD or its members, such acts should be dealt with sternly in accordance with the law.

APPENDIX

COMMUNIST INTERNATIONAL AND YOUTH

The Communist International in its franker days has made explicitly clear its aims and its methods in reaching the youth of the so-called capitalist countries. We cite, for example, the following authoritative resolution from the Sixth World Congress of the Communist International adopted on August 29, 1928:

"39. The growth of the importance of the youth in industry, due to capitalist rationalization, and the growing danger of war makes it more than ever necessary to intensify work among the youth.

"The congress instructs the Young Communist International to examine the question of the tactics and the methods of work of the Young Communist International, with a view to embracing larger sections of the working youth, to adopting more varied methods of recruiting, to securing more lively and active response to their economic, educational, and theoretical requirements, while at the same time preserving the militant features of the Young Communist Leagues." [12]

Commenting in a complimentary vein upon the achievements of the Young Communist League in capturing the American Youth Congress, O. Kuusinen, former secretary of the Communist International, spoke as follows before the same World Congress:

"Third, the American young comrades have also learned to overcome their former inflexibility in tactics and to apply elastic tactics * * *.

"Fourth, the comrades of the Young Communist League of the United States have learned that it is essential to enter the big youth organizations led by the bourgeoisie. And not only that, they have also learned how to work in these organizations. * * * in the course of not quite a year the Young Communist League in the United States has succeeded in creating 175 fractions in these mass organizations * * * [applause] * * *.

"How can we speak at all of preparing the working classes to fight war in the event of its outbreak, if we do not work in these bourgeois mass youth organizations? * * *

"The mass of the young members will be caught by surprise and will be dragged into the war by deceit, if they are not prepared beforehand for all this by their connections with the Communists * * *. The doors of our youth organizations must be thrown wide open! * * *

"Above all, it is absolutely essential that the Communist Parties should give the youth movement constant and solicitous aid, much more effective aid and leadership than hitherto * * *.

"We want to attack our class enemies in the rear, when they start the war against the Soviet Union. But how can we do so if the majority of the toiling youth follow not us, but, for instance, the Catholic priests or the liberal chameleons?

"We often repeat the slogan of transforming the imperialist war into a civil war against the bourgeoisie * * *. We need a broad revolutionary youth movement at least 10 times as broad as our parties, and a united youth front hundreds of times broader still * * *.

"Long live the glorious Soviet fatherland.

"Long live the great leader of the world proletariat—Stalin." [13]

Stripped of its Communist jargon, there is outlined in the above citation a complete blueprint of the tactics and policies of the young Communists operating in the American Youth for Democracy: (1) The necessity for the employment of "elastic tactics"; (2) the need for penetrating YMCA's, YWCA's, religious organizations, and various other "big youth organizations of the bourgeoisie"; (3) the policy of maintaining Communist cells or fractions in these organizations; (4) the support of organizations like the AYD by the Communist Party; (5) the subordination of all youth activities to the primary strategy of attacking alleged enemies of the "glorious Soviet fatherland" in the rear and "transforming the imperialist war into civil war." It must be recalled that the Communists are quick to classify as an imperialist warmonger any individual or nation which opposes its aspirations for world conquest, the most recent example being furnished during the period of the Stalin-Hitler pact and the picketing of the White House. Today the Soviet-Communist propaganda apparatus is again using these terms against the United States.

Mr. Vandenberg's Role

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 16 (legislative day of Monday, March 24), 1947

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an able editorial from the Evening Star, of Washington, D. C., commending the address by the Senator from Michigan [Mr. VANDENBERG] on aid to Greece and Turkey.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. VANDENBERG'S ROLE

In his eloquent speech on American aid to Greece and Turkey, Senator VANDENBERG has done more than show that the President's proposed program is both sound and necessary. In a personal sense—and of course without seeking to do so—he has demonstrated once again his statesmanlike stature. Before the war he was numbered among the isolationists. During the war, undergoing a profound intellectual conversion, he came to see the world, and his country's relation to it, in an entirely fresh light. With admirable forthrightness, refusing to be bound by any narrow consistency, he lost no time in making clear that he had moved forward—far forward—to new ground. Today no one in the United States speaks with greater force or intelligence on our towering responsibilities in the family of nations.

Mr. VANDENBERG'S role within recent years has been truly remarkable. He played a key part in the founding of the United Nations at San Francisco. While his party was in the minority in the Senate, his counsel loomed large in the deliberations of the Big Four Foreign Ministers. As the Republican member of former Secretary Byrnes' senatorial advisory team, no man did as much as he to make our foreign policy genuinely bipartisan—a contribution of major historical importance. When last November's elections changed the control of Congress and raised him to the chairmanship of the Foreign Relations Committee, he decided that his new responsibilities would not permit him to continue his direct participation in diplomatic meetings abroad. Events have since shown that this was a wise decision. His presence has been needed in the Senate; it is needed now when international issues press from every side and demand the kind of vision and statesmanship he has displayed.

The United States is fortunate in having this man at the head of the Senate Foreign Relations Committee. His position on aid to Greece and Turkey is typical of his capacity to give enlightened leadership in matters that are at once complex and fateful not only for our own country but for the

world as well. His role in this sense is of crucial importance, bearing as it does, in a significant measure, on the shape and durability of the next peace. It is a happy thing that he has proved himself amply equipped to play it.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 16 (legislative day of Monday, March 24), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement issued by the Senator from West Virginia [Mr. KILGORE] concerning labor legislation being considered.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Congress' vociferous labor wrecking crew appears determined to wipe out, in one major sweep, many of the rights of labor achieved only after a long, hard struggle.

This wrecking crew may have the votes to wipe out labor's gains. But, if it does achieve this undemocratic goal, it will awaken one day in the not too distant future to learn that industrial peace cannot be assured by the passage of laws that create new barriers between labor and management, or by laws that place labor in an unfair bargaining position.

Our system of free enterprise can survive only if our Government protects the rights of both labor and management. Both are composed of human beings, and both make errors.

Those who blindly scream that labor is responsible for all industrial strife fail to consider the rights of the worker who is struggling to achieve something that even resembles a balance between wages and the cost of living.

It is an undisputable fact that organized labor has raised the standard of living in our great land. It has not been an easy battle. Oftentimes the workingman has been forced to strike to achieve even meager concessions even though in many cases his wages are not high enough to afford a decent standard of living.

Apparently, the wrecking crew is not interested in these facts. It is operating under the blind, unrealistic theory that industrial peace can be achieved only if organized labor is subservient to industry.

Short-sighted men in other nations and of this Nation in the past also have followed such a course, and their countries lived to regret their actions.

In an effort to speed action on their program of punitive labor legislation, these Congressmen are saying that they are saving labor from itself. Nothing could be further from the truth.

Past history proves that blind reaction will bring down the house of industry as well as that of labor. It is regrettable that some Members of Congress have not profited by the mistakes of others in this respect.

Jefferson's Authorship of Declaration of Independence

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, April 16 (legislative day of Monday, March 24), 1947

Mr. SMITH. Mr. President, I ask unanimous consent to publish in the Appendix of the RECORD a letter I have received from Mr. Julian P. Boyd, librarian of Princeton University, who heads a committee engaged in the publishing of a complete edition of the letters and writings of Thomas Jefferson. This important work originated in the Thomas Jefferson Bicentennial Commission, an agency created by the Congress. The work is being carried on by a group of scholars and will be published shortly by the Princeton University Press, under a subvention from the New York Times Co.

In the letter Mr. Boyd calls my attention to the fact that those working on the compilation have discovered in the Jefferson papers in the Library of Congress a fragment of the earliest known text of the Declaration of Independence. Mr. Boyd says in his letter:

The fragment consists of only a few lines, but these are sufficient to prove beyond all doubt that they belong to an authentic composition draft. More than this, they prove with equal finality that Jefferson's famous rough draft, which is one of the great possessions of the Library of Congress * * * was originally a fair copy, transcribed from the text of which the fragment (just discovered) was a part. Finally, the discovery of this fragment should put an end to efforts made in the nineteenth century and even at present to prove that Jefferson did not write the Declaration.

This brief quotation indicates the importance of the discovery, and I am, therefore, asking that the entire letter from Mr. Boyd, going into more detail, be printed in the Appendix.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PRINCETON UNIVERSITY,
Princeton, N. J., April 8, 1947.

Hon. H. ALEXANDER SMITH,
United States Senate, Washington, D. C.

MY DEAR SENATOR SMITH: Following our conversation, I should like to give you a few details about our recent discovery in the Jefferson Papers in the Library of Congress of a fragment of the earliest known text of the Declaration of Independence. I am glad to do this because, as you doubtless know, our plan to publish through the Princeton University Press, under a subvention from the New York Times Co., a complete edition of the letters and writings of Jefferson in about 50 volumes, originated in the Thomas Jefferson Bicentennial Commission, an agency created by the Congress. To that Commission and to various other officials and agencies of the Government, particularly to Dr. Luther H. Evans and his colleagues at the Library of Congress, this enterprise is deeply indebted. We have now assembled photoduplications of some 48,000 letters and documents of Thomas Jefferson and we hope to begin publishing in the near future. Obviously, this considerable progress could not have been made if we had not received such cordial support from the Library of Congress and other agencies of the Government.

This considerable mass of Jefferson documentation, assembled from several hundred sources in this country and abroad, contains many letters and documents throwing fresh light upon the life of Thomas Jefferson and the history of his times. One of these that we have discovered is a small fragment of the text of the Declaration of Independence in Jefferson's handwriting. This fragment had escaped the attention of historians owing to the fact that it now appears upside down on the draft of a resolution which Jefferson intended to present to Congress on the matter of General Sullivan's request to resign his military commission in 1776. The few lines of this fragment belong to that part of the Declaration which criticized the British people for their acquiescence in ministerial measures, a passage which Congress wisely and almost completely eliminated from the final text of the great document. The fragment consists of only a few lines, but these are sufficient to prove beyond all doubt that they belonged to an authentic composition draft. More than this, they prove with equal finality that Jefferson's famous "rough draft," which is one of the great possessions of the Library of Congress and which I regard as the most interesting document in American history, was originally a fair copy, transcribed from the text of which the fragment was a part. Finally, the discovery of this fragment should forever put an end to efforts made in the nineteenth century and even at present to prove that Jefferson did not write the Declaration. No serious historian has ever had any doubt about Jefferson's authorship of the Declaration of Independence, but the absence of any text earlier than the rough draft has caused some investigators, more zealous than critical, to assume that there was a different authorship. When the Library of Congress published in 1943 a brochure describing the evolution of the text of the Declaration, this brochure advanced the hypothesis that the rough draft was originally a fair copy of some earlier text. The discovery of the fragment confirms this hypothesis.

The first announcement of this discovery will be set forth in an article in the New York Times magazine on Jefferson's birthday, April 13. In that article I made the following statement: "Even Jefferson could not dash off such a noble text in a moment of inspired zeal for his country. The history of the evolution of the Declaration of Independence is a history of painful composition, of hesitation over the right choice of words, of deletions, and of additions. In this the Committee of Five and finally the Congress had a hand and, both as politics and as literature, the Declaration was a better document after they had made their heavy excisions, painful though they were to the sensitive author."

Again let me say how greatly I value your deep interest in the effort we are making to assemble a complete and dependable edition of Jefferson's writings. Let me add also how greatly we value the splendid cooperation of the Library of Congress, of the Thomas Jefferson Bicentennial Commission, of the National Archives, of the Director of the United States Mint, and of other officials and agencies of the Government.

With warm regards, I am,

Cordially yours,

JULIAN P. BOYD,
Librarian of Princeton University.

The Newsprint Shortage

EXTENSION OF REMARKS
OF
HON. GEORGE A. WILSON
OF IOWA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16 (legislative day of Monday, March 24), 1947

Mr. WILSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Freedom Depends on Paper," from the Red Oak (Iowa) Express.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREEDOM DEPENDS ON PAPER

One of the most stringent shortages—and it seems much worse than during the war—is paper, and particularly newsprint. And believe it or not, American freedom depends on an adequate supply of newsprint. If any party—say the Communists—could close up all the newspapers, it might not take long to change our form of government. The people must get the facts to defend their rights. It's just another angle of the freedom of the press.

While the situation is not yet that serious, it is extremely acute. This newspaper, for instance, has been unable to obtain any extra supply of newsprint. The Express would like to provide more news space, take care of more subscribers, and improve its publication, but until more paper is available, we have to do the best we can.

As a general thing, the smaller papers have been the hardest hit. Many of the large dailies own their own mills. Even so, the Philadelphia Bulletin, largest evening paper in America, went virtually adless for a week. Business in Philadelphia suffered; so did the subscribers, for ads are really business news, and can point the way to savings for all classes of buyers.

The shortage seems to be due to a number of reasons. First, there is the tremendous demand, with some of the paper entering the black market at high prices that all cannot afford to pay. Second, a lot of mills have been gobbled up by big publishers who proceed to hog the output that formerly went in part to others. Third, there has been a shortage of freight cars, with the result that many mills have not been able to get shipments out of their plants.

Part of the trouble may be temporary, but the loss of buying capacity by smaller purchasers, through the action of the big fellows who bought up mills, is permanent, unless something is done about it. One only has to look at the last several issues of the Saturday Evening Post and Life magazine, the largest in months, to know where some of the paper is going. One paper company for instance, which is owned by one of the largest magazine publishers, has consolidated about 43 firms, with the idea of providing for the needs of the magazine. When a paper company goes out of the public field, where are its customers to go, since other firms already have more orders than they can fill.

Time magazine, in a recent issue, virtually admits the charge, saying:

"Last week the committee (Senate Small Business Committee) called in 50 big publishers, asked about sharing a little of what newsprint makers call the 'currency of civilization.' The guests just stared at the ceiling. But when the impatient Senator WHERRY threatened legislation to restore newsprint controls, the publishers promised to see what they could do. Local associations, they hoped, would see to it that no daily or weekly had to suspend."

And except for the fact that big-business New York Times lent the Communist Daily Worker some paper, that sheet would have had to fold up temporarily. A nice gesture from the Times at that, but not one that will solve the problem permanently.

Something has to be done about print paper, to see that the smaller papers get a fair supply—all papers, for that matter. No matter how small a newspaper may be, it takes about so much paper to publish. Not many of the little fellows can exist unless there is revenue from advertising of sufficient volume, because the rates per page are so much less. It costs just as much to set a page in a small paper as a larger one; the amount of copy is about the same.

But thoughtful publishers will oppose rationing. To make it work, there must be price control, and the first thing that happens when profit leaves is that the mills curtail production, same as anyone else would do. We want to get away from all forms of rationing.

There is a better way out. That is to require the mills, bought up by large publishers, to continue to supply the usual quota to their old customers until new installations take up the slack, or demand recedes. One might argue that to do so would be to confiscate the property of large publishers who bought these plants for their own use. Not at all. The owners of the plants would make a profit on all sales made, but they might have to wait until additional capacity could be provided at their own mills before they could hog all the paper. Really, if too many mills are devoted to a few publications, it amounts to a combination in restraint of trade.

At that, the big fellows should remember that real freedom grows at the grass roots. If the smaller papers cannot succeed, it won't b long until some smart bureaucrat will figure how to get control of the big boys. The smaller fellows are in the majority; the thousands of members of the National Editorial Association, for instance, can probably pack a bigger wallop votewise than the big boys. It's a thought, anyway.

And we respectfully suggest that Mr. WHERRY and his committee check up and see that something is done about the shortage other than staring at the ceiling.

The Agricultural Conservation Program

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mr. CLASON. Mr. Speaker, under leave to revise and extend my remarks, I include the following article by Sumner R. Parker, State director, Production and Marketing Administration, United States Department of Agriculture. This article, which appeared in a recent issue of Farm Bureau in Massachusetts, sets forth in a conservative and forceful way what 10,000 farmers in Massachusetts do with the money which the Congress appropriates for the agricultural conservation program.

THE AGRICULTURAL CONSERVATION PROGRAM

(By Sumner R. Parker, State director, production and marketing administration)

Maintenance of soil fertility has been a major objective of the agricultural conservation program in Massachusetts since it was first authorized in 1936. Approximately 10,000 farmers have continuously participated in this program.

In 1946 they used 74,000 tons of lime. Only a part of the cost of this was furnished by the program. The farmers paid for the rest of it as they do on all of the practices that are encouraged. This is more than double the amount of lime that was previously used in the State, and is still much less than is needed.

SUPERPHOSPHATE WAS SCARCE

Superphosphate was scarce in 1946, and less than half as much was used as farmers wanted. Seven thousand seven hundred tons were supplied under the program, when 18,000 tons was the estimated amount that would be used if it were available. Superphosphate is the principal source of phosphorus that builds bones in animals and humans. If the soil is low in phosphorus, so are the crops and livestock that live on the soil. Calcium from lime and phosphorus from superphosphate have been proven many times to be healthful to the population that lives on the products of the soil.

Two thousand five hundred tons of potash were used by farmers in 1946. Without potash, clover, alfalfa, and other legumes failed to grow. These nitrogen producing plants manufacture from the soil and air foods that are essential to livestock, and increased yields of forage from the land.

COVER CROPS ENCOURAGED

The program encourages the use of cover crops by paying a part of the cost of the seed. Thirty-five thousand acres are seeded annually after the main crop has been removed. These cover crops are the green fields of rye that are observed in the month of November scattered all over the special crop area of the State. Formerly less than 10,000 acres of land were covered over the winter with this soil-retaining crop. Many more acres could be benefited by the use of this practice.

Only recently has attention been given to the better control of water on the slopes of our tilled fields. We call this washing. Much of it is very slow. Recently erosion control practices have been added to the program of agricultural conservation. These are performed under the supervision of the engineers of the Soil Conservation Service who assist farmers in laying out diversions to carry off the water, and ditches to drain the land. The soil building program aids in this by reimbursing the farmers for a part of the cost in connection with erosion control.

The mulching of orchards and vegetable lands is a practice that has been growing over the last few years, and is highly recommended by all fruit growers and vegetable men. To encourage this practice, a small payment has been made for the mulch that is placed under the trees or is applied to the vegetable land to prevent the evaporation of moisture and to add humus to the soil. Fifty-five hundred tons of mulch are applied annually throughout the State. While the payment is only a small part of the cost, yet frequently it makes the difference between the application of the material and the neglect of the land.

FARMER ADMINISTRATION

The agricultural conservation program is administered by State committeemen, county committeemen, and community committeemen—men who participate in the program and are chosen by other participants to administer the program in their field. For this reason many special services that have been necessary in the last few years have been administered by the committeemen of the agricultural conservation program. They are now, of course, a part of the Production and Marketing Administration, and just a mention of some of these special services will call to mind problems and trials that farmers have lived through in the last few years.

SPECIAL SERVICES

Last spring and summer, for instance, feeds were scarce and high. Protein meals were particularly short, and it was necessary to ration them. With the assistance of a feed advisory committee, composed of all sections of the grain trade, assisted by the Extension Service and other State and Federal organizations, protein meals were rationed to all Massachusetts feed dealers and mixers. When other feeds became scarce, special supplies were allocated to this region and again ordered shipped to dealers in the State where the supplies were shortest. The additional sources of feed were not adequate to meet the need, but through the efforts of the State and county offices, the feed committees, and the dealers, 193 carloads were handled.

Price support for potatoes in the summer and fall of 1946 was another duty that was assigned to this same group. Under the price-support program that was pledged by Congress to producers of potatoes, the Department of Agriculture was bound to find a market at the support price for the potatoes that the farmers produced. This was done by buying 280 cars of potatoes during the early part of the season. Later, after the potatoes were dug and placed in storage, 340 more cars were handled, and permanent storage loans were made on an additional 800 cars. During this period no potatoes were wasted. No farmers were refused the opportunity to deliver their potatoes. No potatoes were piled in the fields. In all, 669 carloads were bought, and of these 87 cars went to welfare institutions and school lunch and 582 cars went to dairy farmers for livestock feed.

In the early part of 1946 a part of the price of milk that consumers did not pay was paid by a subsidy directly to dairy farmers. This was handled by the county offices of the agricultural conservation program. They made payments to 5,700 dairy farmers, three times during the first half of the year covering the periods as follows: The last 3 months in 1945, the first 3 months in 1946, and the second 3 months in 1946.

These special services are now largely completed, and we hope that the occasion for them will not soon return.

A PERMANENT PROGRAM FOR SOIL BUILDING

The permanent program of soil building, however, is one in which the general public is vitally interested. Very little progress was made in maintaining the soil fertility of the country until Federal assistance was given to the program. True, good farmers everywhere have practiced soil building, but the continued downward trend of crop yields and fertility was not halted until a national program of soil building was put into effect.

William Crowell

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Shore Breeze, Shore High School, Euclid, Ohio:

WILLIAM CROWELL, ONE OF THE STATE WINNERS IN LEGION ESSAY CONTEST, AWARDED 7-DAY TRIP TO WASHINGTON, D. C.; ESSAY WAS ONE OF THREE BEST IN STATE

William R. Crowell, 16-year-old sophomore, was one of the most surprised people in the assembly sponsored by the American Legion, Monday. Breathlessly he accepted the medal, as Mr. W. L. Deweise, chairman of youth activity in Ohio, informed him that he was a State winner in the essay contest. Still a little flustered, he read his essay, titled "Americanism or ?". Beaming, he took a seat of honor on the stage.

Although this is not his first attempt, it is the first time he has won anything for his writing. Fame came to him once before, however, when he won second place in a county speaking contest. All publicity is not pleasing Bill found out when a newspaper carried a story headlined, "Euclid girl wins contest."

William will get, along with 11 other State winners, a free 7-day trip to Washington, D. C. There were three winners in each high school grade.

The other winners were announced by Mr. Hinch. Winners for the twelfth grade were Joe Mayer and Janet Schulmeister, Bob Steele and Carol Wilson, for the eleventh grade; Bill Crowell and Lois Webb, for the tenth grade; ninth grade winners were Jim Verbsky and Ruth Thomas. Bob Steele and Carol Wilson were the winners for the school.

Dr. Loos introduced Mr. Joseph Gorg, vice commander of the Euclid Post, No. 343, and Mr. Victor Johnson, district commander of the Ninth District of the State of Ohio. Mr. Johnson then introduced Mr. W. L. Deweise, who gave a talk on Boys' State before presenting Bill with his medal. The representatives of Boys' State and Girls' State are Bob Steele and Aldona Thomas. Roger Wach was the representative last year for the Boys' State.

AMERICANISM OR?

(By William Crowell)

Americanism, to me, is synonymous with the most beautiful word in our language—freedom.

Its alternatives—communism, fascism, and socialism—are among the ugliest, because they all entail the deprivation of the precious freedoms which make being an American the rarest privilege in the world.

Freedom to complete my education in a land where there are no restrictions on the dissemination of knowledge, and where freedom of thought and discussion is encouraged.

Freedom to choose my life work; to seek useful employment wherever I choose.

Freedom of opportunity to advance in my chosen field, limited only to my own ability to improve myself and to progress.

Freedom to travel the length and breadth of my country as a free man, and to found a home for myself and my family wherever we elect to live under the protection of the Stars and Stripes.

Freedom to worship, to read, to write, to speak, and to think according to the dictates of my conscience through all the years of my life.

Freedom to choose, in free elections, those who make the laws under which I must live, and to remove them from office by the ballot if they prove false to their trust.

By toil, blood, and unselfish sacrifice, my forefathers developed and secured these freedoms, making this country great, powerful, and prosperous, with the highest living standards in all the world.

I know that the price I must pay for the full enjoyment of these freedoms is constant vigilance against the encroachment of alien "isms"; that only by working, and, if need be, by fighting, to preserve these freedoms will I earn the right to the privileges that go with the American way of life.

I know that if ever I and others of my generation grow careless or indifferent to our duty to make Americanism work, these sacred freedoms will be lost and the light of liberty will dim and die.

I know that today there are forces at work in this country seeking to supplant Americanism with these alien "isms" which, if permitted to prevail, will destroy the free America in which I wish to live and die.

We have only to compare the socialistic way of life as it exists today in Russia and other lands with what Americanism has to offer to reach the conclusion that we who live in this blessed Nation have many freedoms for which to thank our God.

In countries where these alien "isms" rule there is no freedom such as we in America enjoy, regardless of class, race, creed, or color. In the blighted lands where communism and fascism prevail the state is supreme and the individual counts for naught. The American ideal holds the individual to be supreme, the state his servant.

I ask only the right to live, work, play, pray, and die a free American, proud to pass on intact to those who follow me the sacred heritage of freedom which my fathers entrusted to my keeping.

National Policy Committee Survey of Opinion on Labor Legislation

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. HAYS. Mr. Speaker, under leave to extend my remarks, I include the following statement issued by the National Policy Committee following a meeting at Princeton, N. J., on April 12:

The American people have a "yes, but—" attitude toward pending Federal labor legislation, according to a statement released today by a panel of the National Policy Committee reviewing a Nation-wide series of meetings on labor-management relations held under the auspices of that committee since December.

This panel has been meeting here at the Institute for Advanced Study during the last 2 days, and has considered reports of 17 meetings held in 11 different cities, from Boston to Portland, Oreg., and from Minneapolis to Memphis. All meetings were off-the-record sessions, permitting frank interchange on the part of the 243 participants. Among those taking part were 55 from management, 54 from labor, more than 20 each from education, law, government, press, and radio. Others represented agriculture, the church, and citizens' organizations.

"Legislation is not the final answer," says the review panel of 15. "Industrial peace will grow only as management and labor both recognize their responsibilities to the public and develop better trained representatives for day to day plant relations as the basis for workable contract negotiations. They can't pass the buck to Government and expect to avoid the controls that neither management nor labor seems to wish."

Reviewing the discussions in these 11 widely scattered localities, the panel found it significant that there was broad acceptance in principle, of labor's right to organize, to bargain collectively, to strike. There were, however, immediate exceptions to these principles at the point of application. It was agreed that labor has the right to organize, but should this include the right to force men to join a union? On the other hand, should a nonunion man "free-wheel" on what the union does for its members? It was agreed that labor has the right to bargain collectively, but should this include a closed, as contrasted with a union, shop? It was agreed that labor has the right to strike, but members from all sides took a sober view of the effect nationally of the misuse of labor's highly concentrated power. Concern for sustained production was repeatedly emphasized. On the other hand, there was substantial opinion that if that right is denied in cases clearly affecting pub-

lic health, welfare, and safety, the denial must be sincerely balanced by workable equivalents.

Concern was repeated that labor and management both tend to bypass the public interest. At the same time, it was said that if the public wishes to intervene as a balancing factor in labor-management disputes, issues must be better understood and governmental machinery equipped with skilled specialists to operate it.

The Nation-wide series of meetings which this panel reviewed was an attempt on the part of a private organization to provide local occasions at which representatives of the contending factors could meet for discussion of issues free from the pressures of specific negotiations. The National Policy Committee has its headquarters in Washington. Its chairman is David Winton, of Minneapolis. Funds for these discussions were provided by the Scaife Foundation of Pittsburgh.

Dr. Frank Aydelotte, president of the Institute for Advanced Study, met with the group at dinner on Saturday night. The review panel of 16, chaired by William H. Baldwin, of New York City, included a number of members who had participated in the regional meetings. Among those present were Winfield Riefler, of Princeton; H. K. Thatcher, of Little Rock, Ark., secretary of the National Association of State Commissioners; secretaries and directors of agriculture, Bradley Morison, editor of the Minneapolis Times; Sam Sponseller, of Cleveland, regional director, CIO; J. Lawrence, of SKF Industries, Philadelphia; Marion Lyndon, public relations counsel, of Boston; and Bernard Noble, of Portland, Oreg.

Contrast Between Democracy and Communism

EXTENSION OF REMARKS
OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 16 (legislative day of Monday, March 24), 1947

Mr. LODGE. Mr. President, in the March-April issue of Labor's Monthly Survey, a publication issued by the American Federation of Labor, occurs a very concise and striking article which in parallel columns contrasts the way of life of democracy with the way of life of communism. It is noteworthy not only because it is well expressed, but also because it is sponsored by one of our great labor organizations.

In the same issue there appear two tables, one of which contrasts what one gets for work under a free-enterprise system as compared with the communistic system. The other table contrasts the high living standard which is produced by free enterprise and free labor in the United States as compared with conditions elsewhere.

I ask unanimous consent that the summary of the differing ways of life, the table regarding free enterprise and communism, and the table showing the high living standard produced in the United States, may all three be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

TWO WAYS OF LIFE—A CONTRAST

DEMOCRACY	COMMUNISM (OR RUSSIAN "DEMOCRACY")
Everyone has basic rights and freedoms guaranteed.	No one has guaranteed rights. Everyone is subservient to 14 Politbureau dictators.
Freedom of the person	
No arrest without warrant; no arbitrary seizure of persons or property or search of homes. Trial by jury guaranteed.	Arbitrary arrests; imprisonment without trial; secret police seize anyone, search any home; everyone watched by spies.
Other freedoms	
Free press and radio, free speech.	State-controlled press and radio, persons criticizing Government imprisoned.
Freedom to seek truth, in schools, universities.	State tells everyone what to believe, though often untrue.
Religious freedom.	Church dominated by state.

TWO WAYS OF LIFE—A CONTRAST—Continued

DEMOCRACY	COMMUNISM (OR RUSSIAN "DEMOCRACY")
Representative government	
Government by laws enacted by chosen representatives of the people.	Government by decrees of dictators, without consent of the people.
Free elections, candidates nominated in primary elections or conventions of parties.	One-party "elections," candidates chosen by Communist Party officials.
Economic freedom	
Anyone is free to start any kind of business.	State controls all business. No private enterprise.
Anyone may own a home, farm, or business.	State owns housing facilities, farms, businesses.
Worker is free to choose job and change job.	State dictates job, freezes worker in job.
Collective bargaining, union contracts.	Wages and conditions dictated by bureaucrats.
Result	
High living standards.	Miserable living standards.

End of Wasteful Spending

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mr. BRADLEY of California. Mr. Speaker, in the face of all the propaganda and untrue statements being circulated by some commentators and newswriters, I think the following article by David Lawrence, published by the Long Beach Press-Telegram, Long Beach, Calif., is so outstanding in its truthfulness and in clearness that it deserves to be made a part of our national records. I am, therefore, inserting it in the Appendix of the CONGRESSIONAL RECORD in the hope that its circulation will be greatly increased thereby:

REPUBLICAN CONGRESSMEN VOTE END TO 14 YEARS OF WASTEFUL SPENDING

(By David Lawrence)

WASHINGTON, March 29.—When the House of Representatives passes a tax-reduction bill by virtually a two-thirds vote, it may be taken for granted that the measure represents a preponderant public sentiment.

The best indicator of this is the fact that 40 Democrats, out of the 173 who voted, cast their ballots for the bill along with 233 Republicans. Considering that only 3 Republicans voted against the bill, out of 236 voting, it is evident that the Republican majority is not only cohesive but it can command support on the Democratic side, too.

For several weeks there has been a smear campaign waged against the Republican Congress. It has been argued that tax reduction would unbalance the budget and bring other dire consequences. The truth is the Democratic party is badly split. One group is politically sagacious and is envious because the Republican Party has been given the opportunity to gain prestige through tax reduction. The other group, of course, wants to keep on spending indefinitely.

The spenders in the Democratic membership in Congress are still the more numerous inside the minority party and one wonders what would have happened if the Democrats had regained control of the House in last November's elections.

If the Democrats were in control today, the economy-minded would have been outvoted by the spenders and it is questionable whether any such vote for tax reduction could have been mustered even with Republican help.

Without a promise of tax reduction, the Nation today would be in the midst of runaway inflation and economic chaos. The New Dealers have been denouncing the Republican Congress, and the left-wingers have been assiduously cultivating the impression that the Republican Congress has been bungling its job. The truth is that delays were encountered because the entire congressional structure has been reorganized pursuant to legislation passed last year, and no Congress in history has had to face the reorganization of committees and the rearrangements of procedures which have been imposed on the present Congress by statute.

Notwithstanding these time-consuming steps, the Republican majority in the House has given an example of resoluteness in passing—within 90 days of the day the session began—a tax bill which not merely fulfills the promises made to the people in the autumn elections but dramatically reverses the tide of spending which, if not blocked, would have bankrupted the Nation.

The trouble about the tax-bill controversy is that the bureaucrats in the administration have been concealing the truth. First, they put figures in the Budget estimates which were plainly padded. Not only were receipts underestimated but the expenditures were placed much higher than they should be. Then the President took the ridiculous position of opposing tax reduction—a blunder in politics if ever there was one.

The Republicans refused to be swayed by the smear campaign and put through a tax bill. It will be revised in the Senate, but the final bill is not likely to be vetoed unless Mr. Truman wants to commit political suicide in 1948.

The fact is the American people are tired of spendthrift government and now want economy and an end to spending. The consequence of the House action will be felt throughout the whole economic system. It is a breath of fresh air after nearly 14 years of wasteful spending by the New Deal.

Lindbergh Urges United States World Role

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Charles A. Lindbergh from the New York Times of April 14, 1947:

LINDBERGH URGES UNITED STATES WORLD ROLE—FORMALLY DROPS ISOLATIONISM FOR ACTIVE HELP TO ALL IN PERIL FROM AGGRESSION—TEXT OF STATEMENT

(The statement follows:)

Seven years ago, I toured this country pleading for a consistent American policy toward Europe. At home and abroad, I had been advocating that England, France, and America build their strength but refrain from war while Nazi Germany and Communist Russia fought out their totalitarian ideas. I believed that our withdrawal from Europe after the First World War had committed us to a policy of neutrality, and that American intervention in a Second World War would leave European nations prostrate and destroyed without gaining the ideals that we fought for.

Those of us who opposed intervention were unsuccessful. Our country went to war and we went with it. With Americans of all viewpoints, we worked, fought, and many died in the cause of victory. From a military standpoint, that victory has been achieved decisively. But we emerge from war with western civilization greatly weakened in a world full of famine, hatred, and despair. We have destroyed Nazi Germany only to find that in doing so we have strengthened Communist Russia, behind whose "iron curtain" lies a record of bloodshed and oppression never equaled.

I believe we could have prevented the war in western Europe and that it has resulted in one of the greatest of human tragedies. But it will do little good to argue the wisdom of the past. The action we have taken cannot be changed, and it forms the foundation upon which we must unite to build a better future.

STRESSES CONSISTENCY

Today, I plead again for a consistent American policy toward Europe. It would be disastrous for us to continue wavering back and forth between intervention and withdrawal. We made our decision when we entered the war. Our honor demands, our security depends, on carrying through what we have started. We must help to rebuild western civilization. We must reestablish and protect the ideals we believe in. This will require our extending financial assistance. It may require the use of military force. But no necessary cost is too high for the accomplishment of these objectives.

The welfare of other nations has always been of great importance to us; but, in years past, we Americans could live securely behind our own defenses regardless of conditions abroad. Even with the aircraft and high explosives of World War II, transoceanic bombing against a strong power was impracticable. The cost was out of proportion to the damage that could be done. Now, in a rocket-atomic age, the welfare of other nations is more than important, it is vital to us. No earthly distance is adequate defense against the latest weapons of science. Our security now depends on preventing the assembly of modern weapons by an aggressive power. It depends on the cooperation of peoples who believe in the freedom and dignity of man and in a way of life that is basically similar to our own. Wherever these peoples need help, we must assist them. There is no better way, probably there is no other way to attain security, peace and the progress of our civilization.

Pending Labor Bill

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mr. MADDEN. Mr. Speaker, this morning's Washington Post has a timely editorial entitled "Overdoing It" which I incorporate as part of my remarks. I ask each Member of Congress to read the same.

OVERDOING IT

Chairman ALLEN, of the Rules Committee, indulged in no exaggeration when he said in the opening debate on the House labor bill that this undoubtedly is one of the most far-reaching and important bills that any Member of this Congress will be asked to vote on. The bill outlines a new national policy governing the relations between management and labor, and the relations of both to Government. To say that it is sweeping in its terms is an understatement. We can get nearer to the truth by saying that it is a vast and complex network of ideas—many of them undigested ideas—dumped into an omnibus bill without much regard for what the net effect upon our economy may be.

We think the bill contains numerous constructive provisions. For example, it would recognize unfair labor practices on the part of unions as well as employers. It is an attempt to democratize unionism, to correct such evils as mass picketing, jurisdictional strikes, and strikes that imperil the national welfare. The trouble is that in many instances it invokes crude and repressive remedies. It is not a carefully devised effort to redress the balance between industry and

labor; on the contrary, it is a sharp swing of the pendulum in the direction of unreasonable restraints on organized labor. It is not surprising that the long delay in correcting the defects of the old system should produce this sort of a reaction. But this explanation of why the bill has taken the shape it has still does not make it intelligent legislation.

No doubt the bill will be vehemently assailed because it would abolish the NLRB and set up in its place a Labor-Management Relations Board. But this may prove to be one of its happier aspects. The main idea behind the proposed change is to separate the prosecuting and judging functions of the NLRB. The task of investigating alleged unfair labor practices, of preparing complaints and carrying on all the executive work under the act would be assigned to an Administrator. The Board would become a truly quasi-judicial body for the hearing and deciding of cases taken before it. With unions and their officials certain to be hailed before the board on charges of unfair practices, this effort to secure greater objectivity in its decisions might reasonably be welcomed by labor.

But the House Committee on Education and Labor was not content to give the Board a more judicious character or even to rewrite the Wagner Act. It has provided for a system of judicial review that might tie up most of the vital business of the Board in the courts for rehearing. The bill also sweeps on to take many labor problems out of the hands of the Board and Administrator and lodge them in the courts by restoring use of the injunction to cope with certain forms of picketing, illegal boycotts, jurisdictional strikes, and so forth.

Especially unsound, in our opinion, is the provision which would authorize the President to secure an injunction to halt any strike which he believed to threaten curtailment of essential public services. We have often emphasized the necessity of providing some means of dealing with union tyrants, such as John L. Lewis, who are willing to paralyze our entire economy for the sake of gaining their ends. But in all conscience, free use of the injunction in public-utility walk-outs is not the answer. Let the Government take over an industry essential to the public health, safety, and welfare, if necessary, while a dispute is being settled. But certainly the Government should not intervene by means of an injunction and then rely upon the crude machinery that would be created by the House bill to bring about a fair settlement.

Nor is this all. The bill would abolish the closed shop (although authorizing some forms of the union shop), outlaw industry-wide collective bargaining, create a new conciliation service outside of the Labor Department and set up a rather crude system for balloting among employees before strikes may be called. It is too much of an undigested lump. We doubt that many members of the committee are familiar with its details. Certainly the rank and file of House Members are not. And the great American public is almost completely ignorant of what Congress is trying to do.

This is not the way to secure sound legislation. It is not even good politics. At the very least, it seems to us, the bill should be broken down into three sections—one modifying the Wagner Act and the other two dealing with the conciliation service and emergency handling of utility strikes affecting the national interest. Only by this means do we see any chance of the country understanding what its legislative arm is doing. If the steamroller which seems to be going into action in the House disregards this widespread demand, the chief burden of legislating in this field will fall upon the Senate, where evidence of a more responsible attitude is apparent. Failure of the Senate to heed current warning signals would doubtless result in a veto, and the whole mess would be in the lap of Congress once more. The time to avert such a calamity is now while it is still possible to strip this legislation to reasonable proportions.

Oversupporting Wool

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Boston Herald of Friday, April 11, 1947:

OVERSUPPORTING WOOL

By April 15 the Secretary of Agriculture proposed to have the Government out of the wool business, unless Congress directed otherwise. Now the Senate has directed otherwise, and if the House follows suit, the United States will be well launched on a vast and very expensive program of peacetime agricultural support by Government purchase and selling.

The Government has been buying the domestic wool clip at around 41.6 cents a pound. Forbidden to sell at less than parity price, currently 42 cents, it has been unable to meet the lower price of foreign wools, even after a 34-cent tariff. So the stock of domestic wool is up around 480,000,000 pounds; the Boston wool trade has had its domestic business practically cut off except as handlers for the Government's CCC, and the American taxpayers have been footing the bill, already $39,000,000.

That is a bad program to continue. It is damaging to a business that employs 3,000 people here in Massachusetts. It is heavily subsidizing inefficiency in American wool production. It is preserving long after the war a program of artificial price support that will keep this country out of free world markets and stifle healthy international trade. It is costing us—particularly us in the industrial region—a pretty penny in taxes.

But the farm bloc will not let go. It even came to Congress with a plan to increase its take. The support price was to be the higher of either the 1946 support level or 90 percent of the comparable price, an elaborate new formula which is widely superseding straight parity because it is higher. In the case of wool, 90 percent of comparable would be 46.9 cents, as of April 1.

This scheme to advance the Government's purchase price by 5.3 cents was opposed even by the Department of Agriculture, and it was dropped from the bill on the Senate floor. But the Senate also killed the substitute bill of SALTONSTALL and LODGE, which would have set support at 90 percent of parity, or 37.7 cents as of April 1 a figure within competitive range of foreign wool. The final Senate version retains the 41.6 figure for two more years, which means 2 more years in which the Government will take over the business that belongs down on Summer Street.

But there is more to it than that. The wool bloc has dipped its fingers into our pockets. Wyoming, for instance, will receive $2,500,000 (Department of Agriculture estimate), but it will cost the State only $30,000 in Federal taxes. Texas will get $8,000,000 and pay $850,000. Who does help pay the cost? You guessed it, we in Massachusetts, the same people who lose the wool business that goes to the Government.

Having seen the raid that can be made by the wool growers, producers of other commodities are going to demand—and in the present temper of the Senate, at least, are going to get—similar subsidies. Where the end will be, no one can guess; but the Senate's adoption of the wool support bill is disturbingly like an attack on our whole economy. It sets a costly precedent for a Senate which talks so loudly of saving the taxpayers' money.

Triple A Report

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. TRIMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a report from the Production and Marketing Administration of Searcy County, in my district. This report shows what an excellent piece of work this agency is doing. It also indicates the necessity for a continuation of the appropriations:

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Marshall, Ark., April 1, 1947.

Hon. JAMES W. TRIMBLE,
House of Representatives,
Washington, D. C.

DEAR MR. TRIMBLE: We believe the enclosed Summary of Conservation Practices Data Under the 1946 Agricultural Conservation Program carried out in Searcy County in 1946, will be of interest to you.

This summary gives the extent of the various conservation practices in which the Government invested $34,572.12, plus approximately $15,000 of the farmers' cash, plus $15,000 farmers' labor equals $64,572.12, total cost of getting this conservation done. This is only a small percent of the value in conservation to the national welfare. For instance, if the 580,500 pounds of phosphate in which the Government invested $3,830.84 used at the rate of 300 pounds per acre would cover 1,935 acres, assume this was all used on lespedeza meadow, and the production of hay was increased a ton per acre times 1,935 acres equals 1,935 tons of hay. One thousand nine hundred and thirty-five tons of hay at $20 per ton equals $38,700, or a return of 10 times the Government investment of $3,830.84. Phosphate shows results for 3 years or more. If the average increase for the 3 years is figured at $30,000 worth of lespedeza hay, the return on the Government investment for the national welfare is $90,000, or 23 for 1.

Yours sincerely,

RALPH HUDSPETH,
C. HOWARD TREECE,
County Committee.

Summary of conservation practice data under the 1946 agricultural conservation program

County: Searcy. State: Arkansas. [Source 46-SR-54]

Friend of Labor

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Washington Daily News:

FRIEND OF LABOR

Mrs. MARY NORTON, Democratic Member of Congress from New Jersey, has enlivened the labor-legislation debate by resigning from the House Labor Committee.

Her reason: "I have no respect for the present chairman."

The present chairman, a Republican from Mrs. NORTON'S State, is Representative FRED A. HARTLEY, JR.

It may be that the tough labor bill for which Mr. HARTLEY and a majority of his committee are seeking a big vote in the House is, in some respects, too tough. Anyway, Mrs. NORTON is entitled to her opinion of Mr. HARTLEY, who by this time probably is used to being called an enemy of labor.

But the chairman of the House Labor Committee, through many years while the Democrats controlled Congress, was the same Mrs. NORTON, who considers herself a great friend of labor.

In those years no proposal, however mild, for safeguarding the use of organized labor's power and correcting the many abuses that had grown out of the Wagner Act's lopsidedness, could get even as much as a fair hearing from the House Labor Committee.

Mrs. NORTON and other Democrats operated both House and Senate Labor Committees on the theory that friendship for labor consisted in doing their level best to kill every measure to which the big union leaders and lobbyists had the slightest objection.

Time after time during those years we warned that this policy of blocking moderate corrective labor legislation would, inevitably, build up public pressure for legislation likely to prove immoderate and punitive.

It gives us no pleasure that there seems an opportunity to say, "We told you so." But we do believe that labor's cause has had, among its indulgent friends, more really dangerous enemies than Mr. HARTLEY.

Pan-American Solidarity

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, this week, in the celebration of Pan-American Week, the United States joins the 21 Western Hemisphere Republics in paying tribute to the spirit of cooperation which has united our two continents for generations.

This observance has become one of the most significant anniversaries in the world today. It is the only day which is dedicated to the reaffirmation of unity in international relationships and cooperation, a movement which has quite signficantly spread into the hinterlands of the two continents.

Technically speaking, the celebration of pan-American solidarity dates back to the founding of the Pan American Union in 1890, but actually the idea has been manifested by great leaders of all generations. In 1826, when Simon Bolivar, the great South American liberator, called a meeting of the South American countries, this was the real beginning of pan-Americanism, as expressed by the sister republics themselves. Prior to this, in 1823, President Monroe issued the famous Monroe Doctrine which cemented the solidarity of the Americas. The period between the promulgation of this historic doctrine and the Act of Chapultepec of 1945 is a story of increasing achievements in the fostering of hemispheric solidarity between our continents, greatly influenced by the efforts of our late President Roosevelt and Secretary of State Hull. It was chiefly through the efforts of these two great statesmen that the good-neighbor policy was established, and which now stands as the greatest single move toward better relations between our countries.

The foundation for this solidarity has been made. It now becomes our duty and privilege to keep this spirit alive, and to maintain the close bond that now exists among our people. I believe that such a policy can be a lasting contribution to the preservation of peace, not only among ourselves, but among the other nations of the world. The strength of pan-Americanism should help to strengthen the United Nations. As our delegate to the United Nations stated recently, "The world security for which the United Nations is striving rests on the oaken beam of Western Hemisphere solidarity."

So, it is for us to implement and make pan-Americanism a working thing.

Representing a section of the United States that has become a gateway for the Americas, and which has pioneered in the development of the cultural, commercial, and spirtual bonds with our neighbors to the south of us, I would like to point out the steps that have been taken in New Orleans toward the acceptance of the tremendous challenge that lies before us in the fulfillment of true hemispheric cooperation in the troubled world of today.

New Orleans, since the very early days of its history, has ranked as one of the greatest ports of the world, and has always been closely bound to the Latin-American nations, through its geographic position, its climate, its tempo, its temperament, and its traditions. As the natural outlet to the sea, goods flowed through the mouth of the mighty Mississippi River to our southern neighbors, but most of the traffic was lethargic, and no real effort was made to encourage the Latins in the use of this magnificent port, and no conscious attempt was made to know our traders better, other than through the inherent ties which already existed. What had to be imported was imported. Further developments and idea-exchanges were by-passed. No move to encourage trade and travel between the two continents was made.

Suddenly with World War II, came the biggest shipping boom the Crescent port had ever experienced, and New Orleans business leaders decided that they would make an all-out effort to maintain the terrific port business that had developed during the war and build up trade with Latin America.

Now, through the combined efforts of the business, civic, educational, and financial leaders of the city, New Orleans has set about to recapture the flow of people and goods through its port which has served as an example for dozens of other cities who are already establishing similar programs. In order to encourage the trade and travel of the Latin-American neighbors through its city gates, New Orleans leaders have taken into consideration the fact that a good neighbor is an understanding one, and they have set about making it possible for visitors to the city to leave our shores with a much better understanding of the people of the United States, and we in turn have learned to know our neighbors with a renewed appreciation. Here is how it works:

When a Latin-American importer, businessman, traveler, or government official enters New Orleans, he is at once informed of the unique institution of International House. This is a magnificent, modernistic 10-story structure, located in the heart of the business district, where the visitor is ushered into its main lobby, received and registered. From then on, his visit is made more pleasant by such

conveniences as an international restaurant, where he may obtain any type food he desires, use of private offices, and a World Trade Reference Library, the only one of its kind in existence. A bilingual secretary will take his dictation in his native tongue, appointments with leading businessmen are made for him, trade information is obtained, conferences arranged, and his time devoted to business matters is practically cut in half.

Examples of the unusual services that International House's expert staff have performed in the few years of its existence have already circled the globe. Today this civic, nonprofit institution has well-established friends all over the world who continue to make use of the services of the World Trade Development Department wherever they are, as this department is constantly establishing the necessary contacts for businessmen all over the world.

Already similar International Houses are being planned in a dozen or more far-flung cities throughout the world. Nelson Rockefeller, who led the inauguration ceremonies of this unique organization in 1944, said:

> In International House we see the good-neighbor policy in action. For that policy would be a sterile thing if it were not the avowed and cherished ideal of the people of this country as well as the people of all the other Americas.

So successful was this initial attempt in the furthering of good will between the Americas, that New Orleans has embarked on a second project, which is soon to be completed. In November of 1946 I was privileged to lay the cornerstone for an International Trade Mart, which will house the products of all nations under one roof, affording the Latin American buyer as well as the seller an opportunity to view and place orders for goods of every possible variety in a centralized exhibit spot. Enhanced by the congenial atmosphere of the presence of people who speak his own language, trade experts, and sales representatives to offer whatever information he desires, the visitor from Latin America will now have a much better opportunity to conduct his business here with ease.

The city has recently opened its new Moisant International Airport, with direct flights to many Latin-American cities. It has established a Department of International Relations, and opened a new foreign trade zone, to facilitate transshipment of goods, and is continually on the alert for new ways to make it easier for the Latin American businessman to transact his business with the United States, and most important of all, to know us better.

I wish there could be an International House in every port of our great country. What better investment could be made by a municipality and by our country than to insure a bond of friendship and mutual good will with our sister republics to the south? A true manifestation of pan-Americanism among our peoples can make a lasting contribution to the establishment of permanent peace throughout the world. May we continue to work for its fulfillment.

Central Valley Project

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. MILLER of California. Mr. Speaker, the people of the West are greatly affected by reports emanating from Washington to the effect that budget cuts will be made in those departments of Government that are charged with the preservation of our natural resources and the further development of our western lands.

The Republican Governor of California, the Honorable Earl Warren, appreciates the seriousness of this situation as is demonstrated by his recent visit to Washington to personally appear before the Subcommittee of the Interior Department of the House Appropriations Committee urging an appropriation beyond that recommended by the Bureau of the Budget for the immediate completion of the Central Valley project, including publicly owned transmission lines and a standby steam-power plant.

Under date of March 24 the Governor addressed a letter, a copy of which I include with these remarks, in which he pointed out the necessity of further safeguarding the natural resources of the West, particularly the great forests so important to our national economy. In his letter he points out that the development of the Central Valley project ties in so closely with the protection of our national resources that a material reduction in the appropriation would be detrimental to the welfare of the West.

I want to urge Congress to weigh carefully all of the factors concerned before materially reducing appropriations for fire and pest control, for flood control, and for reclamation and irrigation. I urge them to read Governor Warren's letter made a part of these remarks.

STATE OF CALIFORNIA,
GOVERNOR'S OFFICE,
Sacramento, March 24, 1947.

Hon. GEORGE B. MILLER,
Member of the Congress,
Washington, D. C.

DEAR CONGRESSMAN: I have been following congressional action in regard to budget matters with a great deal of interest, particularly as the recommendations affect cooperative State and Federal programs dealing with our natural resources of water, power, timber, and range. As California is the heaviest lumber-using State and one of the largest lumber-producing States, I am concerned about any program that will seriously impair our cooperative programs and reduce the effectiveness of forests and watershed management and protection by the United States Forest Service. This whole program ties in so closely to the Central Valley project and our agricultural and industrial life, that I feel any material reduction in appropriations affecting the management and protection of our wild lands will be extremely detrimental to California's welfare.

California has initiated regulatory measures for timber harvesting and range improvement and has effectively increased participation in insect and disease control measures in cooperation with Federal agencies and private industry. No matter how effective are our regulatory programs, if we fail to give adequate protection to those resources from fire, insects, and disease, our efforts will have gone for naught because that protection is fundamental to the growing of a continuous crop of forest products.

Our department of natural resources advises me that the Forest Service is having to materially reduce its trained protection force for the coming season because of budget limitations. This is particularly serious, in view of a greatly increased population and a 50-percent deficiency in precipitation to date.

I am advised by the department that at the present time there is no enabling legislation wherein the Federal Government can adequately cooperate with the States and private industry in effectively controlling tree-killing insects and diseases, but that S. 597 and H. R. 1974 are intended to correct this situation. The department reports that during the past 15 years California's loss from insects alone has been in excess of 10,000,000,000 board feet of pine timber—enough to run all of our pine sawmills for that period.

Because of the seriousness of the situation, I urge that you support legislative programs with necessary appropriations which will assure continuity in the protection and management of our wild-land resources.

Sincerely,

EARL WARREN, *Governor.*

Prayer of an Unknown

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a prayer which was taken from The City Without Walls:

PRAYER OF AN UNKNOWN

(This prayer of an unknown person before the time of Christ was recorded in a collection of noble early sayings compiled and written down by Eusebius, bishop of Caesarea, about 325 A. D.)

May I be no man's enemy, and may I be the friend of that which is eternal and abides.

May I never quarrel with those nearest to me; and if I do, may I be reconciled quickly.

May I never devise evil against any man; if any devise evil against me, may I escape uninjured and without the need of hurting him.

May I love, seek, and attain only that which is good.

May I wish for all men's happiness and envy none. May I never rejoice in the ill fortune of one who has wronged me. When I have said or done what is wrong, may I never wait for the rebuke of others, but always rebuke myself until I make amends.

May I win no victory that harms either me or my opponent.

May I reconcile friends who are wroth with one another.

May I, to the extent of my power, give all needful help to my friends and to all who are in want.

May I never fail a friend in danger.

May I be able by gentle and healing words, when visiting those in grief, to soften their pain.

May I respect myself.

May I always keep tame that which rages within me.

May I accustom myself to be gentle, and never angry with people because of circumstances.

May I never discuss who is wicked and what wicked things he has done, but know good men and follow in their footsteps.

Workers Must Be Protected

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. WEICHEL. Mr. Speaker, the workers of this country must be protected against the hazards of employment. The safety laws have resulted from the bitter school of experience and these laws for the protection of our workers should be carried out. I am including a timely editorial by Spencer Canary, editor of the Bowling Green (Ohio) Sentinel-Tribune, covering mine disasters.

CURB MINE DISASTER

The more one reflects on the mine disaster at Centralia, Ill., and the more he learns about seemingly unnecessary hazards, the more deeply one feels the necessity of the Federal Government passing a law with teeth in it that will protect coal miners and all others engaged in dangerous mining.

The Federal law now provides for safety inspections that may be suggested to the States; but, until the Government took over the mines last November to prevent a strike causing national economic chaos, it did not have the power to enforce safety regulations; and it will not have the power after June 30, when the mines must be returned to the owners, unless a new law is passed.

The miner's boss, John L. Lewis, muffed a golden opportunity to focus public opinion on the safety question when the mines were taken over by the Government. That was more important to the miners than was Lewis' strike called against the Government on the ground that the latter was paying the miners' welfare fund the 10 cents a ton after instead of before the coal was washed.

The Government, too, has been derelict in not insisting on safety measures, such as Secretary of the Interior J. A. Krug is now taking by closing 518 mines which produce 26 percent of the Nation's bituminous coal. Evidently Mr. Krug's inspectors did discover a lot of hazards and ordered them removed; but, although Mr. Krug said that neither the preliminary nor final report (on inspections) at Centralia found imminent danger which would have called into play emergency procedure under the mine safety code, he declared that the final inspection March 17-20 showed 55 items of noncompliance with the Federal safety code, including 52 repeat offenses, and also that reports of the operating manager on correction of deficiencies had been misleading.

Harry Nierman, assistant superintendent of the Centralia Coal Co., told a Senate investigating committee that rock dusting of the mine the week-end preceding the explosion had been postponed for a week because of mechanical failure of the dusting machine; and coal dust has in the past been often given as the cause of explosions. Why not await for repair of the machine instead of sending men into the mine—an action that resulted in death?

Of course, the inclination of workers to take chances despite regulations will always be a source of accidents. Everyone knows that in factory or farm carelessness causes a lot of accidents. Autoists and pedestrians take chances—and sometimes die as a result, as 40,000 a year and a million injuries attest. Even in homes a multitude occur.

In the Centralia mine disaster that snuffed out the lives of 111 men, there may have been carelessness, for it is suggested that an electrical flash or a rock falling into an open box of dynamite caps might have caused the deadly explosion.

But the hazards of mining are such that not only fines but prison sentences should be imposed on those who do not obey safety regulations.

Marquis Childs, the columnist, says that, during the past 46 years, 71,000 recorded mine fatalities, or an average of 129 deaths a month have occurred; and that at present the average fatality a month is 85. Surely the Nation cannot permit this to go on unheeded. Is life in America so cheap?

One thinks of the charge of the Light Brigade at Balaklava.

"Onward to death rode the 600."
"Someone had blundered."

"Lame Duck" Prosecution by OPA

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1947

Mr. HARRIS. Mr. Speaker, in February I introduced a bill that would prohibit the OPA from continuing unjustified "lame duck" prosecution of thousands of business people throughout the United States. I proposed to relieve the people from this persecution, based on border-line interpretation of regulations and orders no longer in effect.

Several other Members of Congress have introduced bills that would have the same purpose and objective. Many additional Members of Congress have called and talked with me about the progress that has been made and expressed a very great interest in some action being taken immediately.

In January the gentleman from Illinois [Mr. DIRKSEN], who has also been very active and especially interested in this problem, had incorporated in the Appendix of the RECORD a letter from the Honorable William E. Remy, Deputy Administrator for Enforcement of OPA, which explained the situation at that time and the policy being pursued, as well as listing the pending cases as of October 31, 1946. At that time there were 28,131 cases pending.

On December 23, 1946, an enforcement petition was granted in all treble-damage claims involving decontrolled commodities in which the single amount of the overcharge is less than $200, all such cases to be dismissed forthwith. This action reduced the backlog of cases to 17,652 as of December 31, 1946. The backlog of cases was further reduced to 15,449 as of January 31, 1947.

On March 1, 1947, there were 1,991 pending investigation, 4,589 pending disposition, and 6,495 cases pending litigation, or a total of 13,075 cases.

The most serious type of cases are the so-called treble-damage cases, of which there were 4,873 pending as of March 1, 1947. Treble damages claimed in these cases amount to $41,773,000.

A few days after I had introduced H. R. 2100, the Administrator of OPA called me and discussed the entire situation and the problem with which they were faced. Several conferences with other Members of Congress and discussions have been had with representatives of OPA and the Office of Temporary Controls. An effort has been made to determine a policy that would eliminate a great number of the small cases which are by far the greatest majority of the number and a small percentage of the dollars involved.

After much discussion and reviewing the record, it was a considered judgment of most of us that if all such cases involving decontrolled commodities in which the single amount of overcharge was less than $3,000 were dismissed that the greatest injustices would be immediately eliminated. Before this conclusion was reached we obtained a complete breakdown as to what would be the effect. We found there were 1,872 or 42 percent of the cases pending involve something like $36,000,000 or 85 percent of the total claims in dollars. In other words, if a policy of a cut-back of all such cases were issued, 3,000 cases would be immediately disposed of and only approximately $5,000,000 involved.

We submit, Mr. Speaker, that such action on behalf of the agencies would be thoroughly justified. If they want to show good faith in an effort to dispose of these little insignificant, technical, and borderline cases, and grant this relief to small business people who are having a hard time protecting themselves, this in our opinion would be the most equitable approach to it. Many of us have been led to believe that some such action would be taken and that in addition the larger cases would be reviewed with a view of prosecuting those who really engaged in large black-market operation and endangered the economy of this Nation proceeded against.

I do not think, Mr. Speaker, there is anyone in this House who wishes to see willful and flagrant violations where they benefited by thousands and thousands of dollars at the expense of the public extended a general amnesty.

In these large cases the Government stands generally to be successful where there is a willful and flagrant violation. In these small cases, the recovery is going to be extremely small. The juries and the courts throughout the country are not going to convict them. Then by proceeding with such cases the Government is only spending money with little hope, if any, of return, to say nothing of the justice or injustices involved.

Some in the agency now claim there is some doubt that they have the authority to issue such a policy. Such a doubt was raised when the $200 cut-back order was issued and the same authority exists on the larger cut-back figure as existed when that action was taken. It is apparent, Mr. Speaker, that there are still some in these agencies who wish to extend their authority and jurisdiction just as far as they can, notwithstanding the action of the President last November and the Congress at various times since.

I think this is a matter to which the Congress should give immediately its attention. I know there has been some discussion among the members of the House Committee on Banking and Currency as well as other Members of the

House. It is a matter, I believe, that could be more appropriately handled by administrative action but since that action has been held up I urge that the Congress give consideration at an early date.

In order that the House of Representatives may have the general information, I ask to include in my remarks information and tables provided by the Office of Price Administration, together with general sanction policies: Case No. 6, enforcement exception granted—C–2; No. 7, enforcement exception granted—C–3; case No. 14, enforcement exception regarding motor vehicle regulation; enforcement exception case No. 16; and enforcement exception cases Nos. 17, 18, and 19. There are other exceptions, Mr. Speaker, being granted but this gives you an idea, not only as to the procedure in reference to these cases but the tremendous difficulty anyone charged with such violation has in trying to find out just what his status is. A small businessman has little chance of defending himself and should be given relief.

FEBRUARY 26, 1947.

MEMORANDUM

To: William B. Remy, Deputy Commissioner for Enforcement.

From: Miriam Ziony, analyst.

Subject: Reduction in review and disposition work load on decontrolled commodities from October 31, 1946, to January 31, 1947.

Comparison of schedule A, Review and Disposition, backlog figures for October 31, 1946 (revised), and January 31, 1947, shows by the beginning of February a marked decrease in pending load as follows:[1] 45.1 percent drop in total number of backlog cases, from 28,131 to 15,449 cases; 47 percent drop in cases under investigation, from 4,607 to 2,443 cases; 50.7 percent drop in cases awaiting disposition, from 12,395 to 6,106 cases; 36.7 percent drop in cases pending in court, from 10,788 to 6,823 cases.

All types of cases pending in court showed a decrease during this period and suspension orders pending also dropped considerably by the end of January. The only increase indicated was in determination proceedings pending on meat subsidy withholding cases, which rose from 8 cases in October to 13 cases as of the end of January.

Changes in backlog on decontrolled commodities by type of case pending were:

SCHEDULE A.—*Review and disposition—backlog on decontrolled commodities, Jan. 31, 1947*

	Total	Meat	Other decontrolled foods	Apparel	Textiles and leather	Industrial materials	Automotives, fuel, and services	Durable goods
Cases under investigation	2,443	221	307	279	90	482	865	199
Awaiting disposition	6,106	1,201	1,152	769	219	1,010	1,304	451
Cases pending in court	6,823	1,285	1,342	564	225	1,173	1,737	497
Federal, criminal	593	143	92	11	23	56	258	10
Local, criminal	48	11	19			1	13	4
License suspension	147	76	35	2		2	27	5
Administrator's own treble-damage claims [1]	2,643	349	560	267	162	783	243	279
Administrator's consumer treble-damage claims [2]	2,047	240	394	95	7	137	1,030	144
Injunctions	1,314	452	238	186	33	190	161	54
Contempt action	31	14	4	3		4	5	1
Suspension orders	64	62	2					
Determination proceedings (subsidy withholding)	13	13						
Total	15,449	2,782	2,803	1,612	534	2,665	3,906	1,147

[1] On commodities sold for resale or for use in the course of trade or business.
[2] On commodities sold to consumers.

Dollar bracket	Number of cases	Percentage of cases	Treble-damage claims	Percentage of claims
Cases over $10,000	716	15	$21,480,000	51
Cases over $5,000	1,385	26	31,530,000	75
Cases over $3,000	1,872	42	35,913,000	85
Cases over $2,000	2,215	46	37,971,000	90
Cases over $1,000	2,878	56	39,960,000	95
Cases over $500	3,614	75	41,018,000	98
Cases over $200	4,873	100	41,773,000	100

PROBABLE WORKLOAD AS OF JULY 1, 1947

When we consider the clean-up job on the 8,200 cases to be closed out, plus the fact that few cases can actually reach trial prior to June 30, plus the office turmoil which successive reduction-in-force procedures produce, plus a few and slightly increasing but time-consuming suits against the Government to enjoin the OPA or to recover subsidies, it does not appear reasonable to assume a sharp reduction of the 4,873 cases prior to June 30, 1947.

EXHIBIT A.—*Review and Disposition Division—pending treble-damage cases on decontrolled commodities, by commodity and dollar amounts of single damages, Mar. 1, 1947—national total*

	National total	$200 to $500	$500 to $1,000	$1,000 to $2,000	$2,000 to $3,000	$3,000 to $5,000	$5,000 to $10,000	Over $10,000
National total	4,873	1,259	736	663	343	487	669	716
Meat	412	52	59	68	28	41	90	74
Other foods	770	152	119	129	56	69	128	117
Apparel	492	60	52	51	36	53	123	117
Textiles and leather	143	8	16	19	14	15	30	41
Industrial materials, Lumber	1,115	226	161	152	98	135	162	181
Autos, fuel and services	1,465	642	274	192	80	101	77	99
Durable goods	476	119	55	52	31	73	59	87

CHAPTER 9–15. GENERAL-SANCTION POLICIES

Sec. 9–1501. Application of sanctions to violations and granting enforcement exceptions

Sec. 9–1502. Notification of formal action

Sec. 9–1501. Application of sanctions to violations and granting enforcement exceptions.

.01. Scope: The procedure stated in this section shall apply to all cases handled in the enforcement division.

A. This procedure shall not apply to cases being handled by the area rent offices (see secs. 9–6601 and 9–6602).

B. This procedure does apply to cases stated in paragraph A when such cases have reached the enforcement division by referral.

.02. Application of sanction.

A. General: No case which discloses a violation shall be closed without the application of a formal sanction, e. g., criminal, license suspension, contempt, treble damage (suit or settlement), injunction or administrative suspension, except as stated in .02B, 1, 2, 3, and 4. The determination concerning the appropriate formal sanction shall be based on outstanding instructions. Civil cases involving overcharges shall include a claim for treble damages. License-warning notices are not formal sanctions, but in accordance with outstanding instructions. they shall be issued in conjunction with formal sanctions wherever ultimately a license-suspension suit would be appropriate in the event of further violation.

B. Exceptions: There shall be no deviation from this procedure except where:

1. The violation is clearly trivial and inconsequential. Such case may be closed with an appropriate admonitory letter. A violation is considered trivial only where the overcharge is extremely small and the nature of the violation is very minor in terms of price-control objects to be accomplished by the regulation.

2. No formal sanction is available under law.

3. The investigation has not been substantially completed but does reveal some violation, where the field has been placed in the "B" category.

4. An enforcement exception is granted by the deputy commissioner for enforcement. There may be cases where compelling equitable features suggest that formal sanction be withheld or withdrawn, in whole or in part. It is impossible to leave such decisions to the determination of each office. Experience has shown that a serious lack of uniformity results and often the full implications of such a decision are not evident to the members of one office.

.03 Procedure for securing an official enforcement exception.

A. The regional enforcement executive, on his own motion or upon request from the regional administrator or regional section chief may submit to the deputy commissioner for enforcement a request for consideration of the issuance of an enforcement exception in any case. The request shall be accompanied by:

1. A memorandum setting forth the entire facts of the case with a recommendation of the type of exception, and a proposed statement of a rule to cover similar cases.

2. An investigation report or a copy.

3. If the regional enforcement executive is requested to submit such a memorandum by any of the other officials named above, he shall submit such memorandum with a notation of his views.

B. Before transmitting the request for consideration of the issuance of an enforcement exception, the regional enforcement

[1] Revision made in all categories on other decontrolled foods on the basis of smaller revised percentage estimates for sugar cases which had to be subtracted out of total October figures reported on Field Form No. 4 for all foods except meat but including sugar; also previous low estimates on other food cases under investigation and cases awaiting disposition have been changed to the actual figures indicated in Field Form No. 4 for November as pending as of the end of October. Prior to November, sugar cases were not listed separately in Field Form 4 but were included in the totals on other foods. Original October estimates on sugar cases were too high. Total revised backlog on decontrolled commodities as of October 31, 1946, includes 3,427 more cases than in original tabulation, with a corresponding decrease in total backlog for sugar as of October 31, 1946.

executive shall submit the matter to the regional administrator so that the latter may join in the request, or express his opinion thereon, or submit additional facts as he thinks significant to a consideration of the request.

C. The decision with respect to each case considered under this section is published as appendixes 9-1501A through L.

.04 The deputy commissioner for enforcement reserves the right, on his own motion, to grant an enforcement exception in any appropriate case after consultation with the regional enforcement executive in the region where the specific case is pending.

.05 Procedure subsequent to granting of enforcement exception. If an enforcement exception is granted by the deputy commissioner for enforcement, either upon request or upon his own motion, a statement of the rule covering the enforcement exception will be issued to all enforcement attorneys for future application in similar cases. Enforcement attorneys are instructed to apply all outstanding enforcement exceptions to cases which, in whole or in part, fall within the rule stated in the exception.

A. Any case upon which an enforcement exception has been issued, and all similar cases falling within the same rule, shall show within the file that the disposition, in whole or in part, has been governed by the specific enforcement exception.

B. The rules stated in enforcement exception shall govern all cases falling within the rules, irrespective of whether or not formal sanction has already been instituted, but shall not apply to completed sanction cases.

C. There are certain types of situations which will not alone be considered sufficient for the granting of an enforcement exception:

1. Where the defendant claims that his violation was committed subsequent to an interpretation not given in accordance with procedural regulation No. 1.

2. Where the defendant after violation applies for and receives a price adjustment.

3. Where the defendant claims that he had to charge a higher price because the ceiling price was too low for him, or for the industry.

4. Where the defendant claims that he charged over the ceiling because he was required to purchase over the ceiling.

CASE NO. 6. ENFORCEMENT EXCEPTION GRANTED—C-2

Facts: A retailer entered into a contract with a manufacturer for the delivery to the retailer of 5,000 cultivators in monthly installments, order prepaid. The retailer properly priced the cultivators under GMPR. When the retailer had received approximately half the delivery, the manufacturer received an order from OPA under MPR 188 fixing his ceiling price and requiring a tagging of a retail price announced in the order. The order was duly filed and published in the Federal Register. The retail price fixed in the order was lower than the GMPR price at which the retailer was selling. Although the manufacturer thereafter continued to make deliveries to the retailer under the contract, the retailer had no direct knowledge of the order. When the retailer was first informed of the order, he discontinued the sales at the GMPR price.

Decision: Enforcement exception granted as to all such sales already made by the retailer or any other seller similarly situated.

Basis: Enforcement exception C-1 would have applied automatically to this case, except for the fact that here the retailer's ceiling price was not based on fixed or percentage mark-up over supplier's price, not exceeding supplier's ceiling price. But the underlying reason is substantially the same. The retailer was engaging in a course of legal conduct until, by the act of the agency on application of the manufacturer, the retailer's price became illegal. While it is true that publication in the Federal Register constitutes constructive notice to all, there is nothing to prevent the agency from adopting a policy which does recognize the fairness of withholding sanction under proper circumstances. There was nothing to cause the retailer to inquire whether the manufacturer had applied for any price, or whether one had been ordered, or whether the order affected the retail level. In cases such as these, it is unreasonable to expect the retailer to watch the Federal Register scrupulously because of the mere possibility of publication of an order that might directly affect him.

The same considerations would also apply to some sellers other than retailers who could find themselves in the same position.

As in enforcement exception C-1, the exception does not apply to merchandise remaining unsold after the seller has been told or has otherwise learned of the change in legal price. The undelivered merchandise must be repriced.

Rule: Where any seller has been selling at or less than the ceiling price, and where the supplier has applied for a price which the agency orders and duly publishes in the Federal Register, and where the order also fixes a price for the seller which is less than he has been charging, and where the seller does not know and has no reason to make further inquiry to determine that such application was made by the supplier or acted upon by the agency, enforcement exception granted as to all such sales by seller insofar as seller's price was legal but for the order. On all merchandise remaining unsold seller must reprice in accordance with order.

Coverage: All regulations in all commodity fields at all applicable industry levels.

Washington, D. C., March 29, 1946.

GEORGE MONCHARSH,
Deputy Administrator for Enforcement.

CASE NO. 7. ENFORCEMENT EXCEPTION GRANTED—C-3

Facts: On November 9, President Truman announced that ceiling prices on all commodities except rent and sugar and a few minor commodities were lifted. The October 31, 1946, statistical reports show that there were 2,707 Administrator's claims and 2,211 Administrator's consumer claims pending in court, 11,002 cases completed investigations awaiting disposition, and 4,184 cases under investigation. Our personnel has been substantially cut except for rent, sugar, and sales-control enforcement. A number of the courts have been reluctant to go forward with cases involving small amounts of overcharge.

Decision: The enforcement exception is granted.

Basis: This decision is necessary in order that we may reduce the work load of our staff and to relieve it of the less significant cases. Also, by making this decision we are eliminating the number of small cases from the court dockets thus enabling our attorneys to proceed with the more significant cases.

Rule: All treble damage claims involving decontrolled commodities in which the single amount of the overcharge is less than $200 shall be dismissed forthwith. This is applicable both to pending litigation and to cases pending disposition. A case should not be dropped where the evidence presently in the file establishes single damages of less than $200, and the file indicates that by further investigation made in accordance with Review and Disposition Directives 4 and 5 single damages in excess of $200 will be developed.

Coverage: All regulations in all commodity fields at all industry levels where the commodities are now decontrolled.

Washington, D. C., December 23, 1946.

WILLIAM E. REMY,
Deputy Administrator for Enforcement.

CASE NO. 14. ENFORCEMENT EXCEPTION GRANTED

Facts: The used-motor-vehicle regulation, RMPR 341, MPR 540, and MPR 569, provided dollar-and-cents prices for used vehicles. These prices, called "as is" or base prices, were the maximum which any person selling a vehicle could charge. A person regularly engaged in the business of selling used vehicles could charge the warranty price which is $100, or 25 percent, more than the "as is" price, if he applied for and obtained written authorization from the district office to sell as a dealer, as that term is defined in the regulations. Before issuing the authorization the district office price division generally verified that the applicant had a place for the display and sale of used vehicles, and facilities for the repair and reconditioning necessary to put and keep vehicles in good operating condition.

Situation A: A truck concern applied for authorization and pending issuance of such authorization sold a truck at the warranty price. The authorization was never issued, and enforcement instituted a treble damage action based upon the difference between the "as is" and the warranty price. The district office price division has advised the enforcement division that the seller had the facilities necessary to qualify as a dealer and that the authorization was not issued because the application had apparently been misplaced in the district office.

Situation B: A seller has been engaged in the business of selling used cars and trucks. He applied for and received authorization as a used-car dealer. Subsequent investigation disclosed that he had sold trucks at the warranty price although not specifically authorized as a truck dealer. The overcharge is the difference between the "as is" and warranty prices. The subject has facilities adequate for the repair and reconditioning of used cars and trucks.

Situation C: A seller regularly engaged in the business of selling used vehicles sold such vehicles at the warranty price although he never applied for nor received written authorization to sell as a "dealer." The overcharge is the difference between the "as is" and the warranty prices. Subject has always maintained facilities for the repair and reconditioning of vehicles, has given purchasers the written warranty required by the regulations, and has performed the services necessary to meet the terms of the warranty.

Decision: Enforcement exception is granted.

Basis: In a going price control program it is absolutely necessary to hold the seller to the price he was entitled to receive at the time the sale was made even though he could have received authorization to charge the higher price had he properly applied for such authorization. However, after a commodity has been decontrolled the reasons for holding the seller to the lower price no longer exists if he can satisfactorily prove that he could have qualified for the authorization which would permit the higher price to be charged.

Rule: Where a seller of used motor vehicles establishes to the satisfaction of the Chief of the Regional Review and Disposition Section, the Regional Enforcement Executive and the Regional Administrator that he would clearly have been entitled to an authorization as a dealer if he had made application therefor or having made such application if the same had been properly acted upon, any case based upon sales at not more than the price he would have been entitled to charge as a dealer shall be dismissed.

Coverage: RMPR 341, MPR 540 and MPR 569.

Washington, D. C., February 21, 1947.

WILLIAM E. REMY,
Deputy Commissioner for Enforcement.

ENFORCEMENT EXCEPTION CASE NO. 16

Facts: No request for an enforcement exception has been made in this case. However, the Deputy Commissioner on his own motion has considered an exception.

No court action has been taken. However, an investigation has been made and

an action would be filed in accordance with agency policy and procedures if no exception is granted.

The claim is against A. C. Wells et al, d/b/a J. W. Wells Lumber Co., Menominee, Mich., hereinafter referred to as the company.

The company operates a hardwood floor mill in the Upper Peninsula in Michigan, the producing area of hardwood lumber. It purchased hardwood lumber and hardwood logs and made them into hardwood flooring which they sold primarily at ceiling prices established for mill sellers of hardwood flooring by MPR 432. The company screened the best hardwood lumber amounting to about 10 percent of all the hardwood lumber it purchased, dried this lumber and resold it, as lumber, in carload quantities. Also it had been selling hardwood flooring in small quantities near its mill at what it called retail prices. Sometime in August 1945 James A. MacDonald, price specialist in the lumber unit in the Escanaba district office, called upon A. C. Wells at the company's place of business. It appears that the company had been selling all of its lumber at the ceiling price for mill sellers as provided for in MPR 223, and all of its hardwood flooring, including a small lot of so-called retail sales at the mill ceiling price established by MPR 432. The company requested an interpretation of MPR 467 and MPR 215 from the Escanaba district office inquiring as to whether or not it could take the mark-ups provided in those regulations (MPR 215 provides a mark-up for retail sellers of hardwood flooring out of a distribution yard stop; MPR 467 provides for mark-ups of mill prices on sales of hardwood lumber by distribution yards). Because of the wording of the applicable regulations, it was not unreasonable for the seller in good faith to request an interpretation as to whether or not he was entitled to those mark-ups. Mr. MacDonald told the company orally that based upon the regulation and upon the operation being performed by the company and its past performance prior to the war that it was qualified to use the mark-ups contained in MPR 467 and MPR 215. The company requested that this interpretation be given to them in writing. On August 13, 1945, the Escanaba district office wrote the company authorizing it to take such mark-ups. The letter was signed by James A. MacDonald, Price Specialist, Industrial Commodities.

There was no price attorney in the Escanaba office in August 1945. Mr. MacDonald states that he orally discussed this with the regional price attorney in Cleveland and the regional price specialist in Cleveland. This discussion was made after August 13, 1945. The price specialist was orally told that the interpretation set forth in the August 13, 1945, letter was correct.

On September 1, 1945, the company raised its prices in accordance with the interpretation set forth in the August 13, 1945, letter. In August 1946 the company was investigated by enforcement. It was then determined that the interpretation set forth in the August 13 letter was erroneous. The overcharges from September 1, 1945, through August 1, 1946, totaled $12,840.

Decision: Exception granted.

Basis: Enforcement exception case No. 4 denies an exception where an oral authorization was made by the Office of Price Administration in violation of procedural regulation No. 1. That decision is reaffirmed.

The provisions of procedural regulation No. 1 are sound and are necessary for the administration of any Government activity. The 1946 amendments to the Emergency Price Control Act recognized this principle in that Congress provided that no action could be maintained if the violation arose because the person selling the commodity acted upon and in accordance with the written advice and instructions of the Administrator or any regional administrator or district director of the Office of Price Administration.

The issuance of written interpretations by unauthorized employees of the Office of Price Administration is a violation of internal instructions and can be held to a minimum by proper supervision and corrective measures taken against persons violating such instructions. A serious question arises as to what enforcement action should be taken against a member of an industry who, in good faith, applies to the Office of Price Administration for an interpretation, receives a written interpretation from a person with apparent authority, and relies upon this interpretation to the end that he, by doing so, is in violation of an Office of Price Administration regulation.

Where no element of fraud and collusion are present and the enforcement attorney is satisfied that there was need for the interpretation and a price specialist, although unauthorized, issues one, which was in good faith relied upon, no prosecution should be had against the person receiving such interpretation if it develops that such interpretation is erroneous.

Rule: Where a person applies to an office of the Office of Price Administration for an interpretation of a regulation and receives an interpretation in writing from a person in that office who has been designated as the price specialist for the commodity or commodities involved in the interpretation, and the person applying for the interpretation has no actual knowledge of the fact that such price specialist does not have authority to issue the interpretation, enforcement exception is granted the person receiving the interpretation, with respect to those violations which occurred solely as the result of such interpretation, provided that all the following conditions are met:

1. The person applying for the interpretation correctly stated all relevant facts.

2. The matters contained in the written interpretation were a proper subject for interpretation.

3. The applicable regulation or regulations did not state a rule clearly contrary to such interpretation.

4. There was no element of fraud or collusion on the part of or between the price specialist and the person seeking the interpretation.

5. That the person applied for and relied upon the interpretation in good faith.

WILLIAM E. REMY,
Deputy Commissioner for Enforcement.
WASHINGTON, D. C., *February 20, 1947.*

ENFORCEMENT EXCEPTION CASE NO. 17

Facts: Section 5 (e) of 2d RMPR 19 with respect to certain shipments of southern pine lumber invoiced as containing in excess of designated percentages of certain grades, established the No. 2 common price as the applicable maximum price for lumber invoiced as No. 1 common and higher grades, if any such shipment did not bear the grademark of a qualified inspection agency or was not accompanied by a certificate of inspection by a proper inspection agency. Some producers of southern pine lumber who were not members of a qualified inspection agency, and for that reason were unable to comply with the grade-marking provision of the section, made shipments which were invoiced as containing quantities of the higher grades in excess of those set forth in the section and such shipments were not accompanied by a certificate of inspection by a recognized inspection agency. However, these producers had in their employ inspectors capable of properly grading southern pine lumber in accordance with the recognized rules of the industry. These shipments were actually graded by such graders in accordance with industry rules and practices and the invoices for these shipments accurately reflected the quantities and grades of lumber determined by the graders.

Decision: Enforcement exception is granted.

Basis: Section 5 (e) was incorporated in the regulation to combat widespread violation by upgrading of lumber. A study of southern pine grade distribution for the year 1941 was made by the Southern Pine War Committee, an industry organization. This study disclosed that the normal log out-turn of No. 1 common and higher grades in the production of southern pine lumber varies in different geographic areas from a low of 5 percent to a high of 30 percent. The results of this study were taken into consideration in establishing the various percentages set forth in the section. In the early part of 1946, because of an aggravated general violative condition existing in the lumber industry, our lumber enforcement activity was considerably increased. One of the most prevalent forms of violation in southern pine lumber was upgrading. Because of the extensive upgrading practices and the fact that the Government had only limited facilities available for detecting such upgrading, the agency placed heavy reliance on section 5 (e) and took extensive enforcement action based upon violations of that section. Since decontrol the considerations expressed generally in Enforcement Exception No. 10, and particularly as illustrated by parts A, B, D, and G, apply with equal validity to the considerations disclosed by the above facts. However, since none of the situations stated in Enforcement Exception No. 10 is applicable to this express situation, it is necessary to issue a separate enforcement exception to cover violations of 5 (e) of 2d RMPR 19.

Rule: Any case where the claim for treble damages is based upon violations of section 5 (e) of 2d RMPR 19 shall be dismissed if all of the following conditions are met:

1. The shipments involved in the case were actually graded by employees of the shipper qualified to and capable of properly grading southern pine lumber in accordance with the recognized rules of the industry.

2. The invoices for such shipments accurately reflected the quantities and grades of lumber as determined by such grading and there was no upgrading of any of the lumber involved in any such shipments.

The term "upgrading" as used in this exception means any misrepresentation or misdescription as to the grade or quantity of any item of lumber where such misdescription resulted in a higher price than the applicable legal ceiling.

This exception is expressly limited to violations of section 5 (e) of 2d RMPR 19.

WILLIAM E. REMY,
Deputy Commissioner for Enforcement.
WASHINGTON, D. C., *March 13, 1947.*

ENFORCEMENT EXCEPTION CASE NO. 18

Facts: Enforcement Exception No. C-3 (case No. 7), issued December 23, 1946, provided: "All treble-damage claims involving decontroled commodities in which the single amount of the overcharge is less than $200 shall be dismissed forthwith."

The question has been raised as to whether that exception applies, or should be extended, to cover installment payment settlement agreements (not reduced to judgment) where the balance remaining unpaid on December 23, 1946, was less than $200. Two situations are presented, one where the settlement was originally in excess of a sum of $200 and was reduced by partial payments to less than $200, the other where the original settlement was for a sum less than $200.

Decision: Enforcement exception granted as to both situations.

Basis: The same considerations which led to the adoption of Enforcement Exception No. C-3 are here applicable. From the point

of view of the work load involved in processing those cases where the balance remaining unpaid on December 23, 1946, was less than $200 it is immaterial whether the original settlement was for more or less than $200. However, with respect to installment-payment settlement, where the balance due on December 23, 1946, was more than $200 and installment-payment settlements entered into after that date, where the total amount of the settlement exceeds $200, the agency must undertake the work load involved, both in effecting the initial settlement and in collecting the full amount of the settlement even though eventually the final installment or installments may be less than $200.

Rule: Any case in which (i) a settlement had been effected and payment was to be made by installments, and (ii) the claim had not been reduced to judgment, and (iii) the amount remaining unpaid on December 23, 1946, was less than $200, shall be closed and no further proceedings taken to effect collection of the balance due under the installment-payment settlement.

Coverage: All regulations in all commodity fields at all industry levels where the commodities are now decontrolled.

WILLIAM E. REMY,
Deputy Commissioner for Enforcement.
WASHINGTON, D. C., *March 27, 1947.*

ENFORCEMENT EXCEPTION CASE NO. 19

Facts: MPR 420, effective July 12, 1943, established a higher price for manufacturers of custom heels produced in Brooklyn, N. Y., and Rochester, N. Y., than it did for other types of heels. The statement of considerations recited that the higher price was limited to manufacturers in Rochester and Brooklyn, N. Y., because available information indicated that the volume of such heels produced outside of those two cities was negligible. A producer of custom heels in Massachusetts charged and collected the ceiling price applicable to heels produced in Brooklyn and Rochester, N. Y., and filed a protest to the regulation. Pending decision on the protest, he was granted an adjustable pricing order. An enforcement action is pending against him for treble damages arising out of his taking the higher price prior to the issuance of the adjustable pricing order. On November 8, 1946, amendment 8 to MPR 420 was issued. That amendment removed the geographical limitation and established the higher price for manufacturers of custom finished hardwood heels, irrespective of where produced. The statement of considerations for that amendment recited that information obtained since the time the original regulation was issued disclosed that a large quantity of custom-finished hardwood heels was produced in areas outside of Brooklyn and Rochester, N. Y., and that the prices originally established in the regulation "caused hardships" to manufacturers of custom heels outside of those two cities. The enforcement department has been advised by the Court Review, Research and Opinion Division that, in their opinion, the protest must be granted. The Court Review, Research and Opinion Division has further represented to the Enforcement Department that, in their opinion, it would be more expeditious to handle this matter on the basis of an enforcement exception than by granting the protest; in either event the result, insofar as the seller is concerned, would be the same, namely, the extinguishment of our treble-damage claim.

Decision: Enforcement exception granted.

Basis: Since it appears from the oral representations and written memoranda of the Court Review, Research, and Opinion Division that the Administrator does not have a legal claim against the seller for treble damages arising out of sales of custom-finished hardwood heels at prices not in excess of those authorized under amendment 8, the only question is whether this case should be disposed of by enforcement, exception, or favorable action on the pending protest. We accede to the views expressed by the Court Review, Research, and Opinion Division that it would be more expeditious to dispose of this case by enforcement exception than by granting the protest. It also appears probable that there are other provisions of regulations to which the same principle might hereafter be extended. It is therefore desirable to state a general rule to cover not only this situation, but others of like character which may arise in the future, but, in order to prevent unwarranted extension of the rule, to limit its coverage to specific provisions of specific regulations named in this exception or added to it by subsequent order of the Deputy Commissioner for enforcement.

Rule: Where the Court Review, Research, and Opinion Division advises the Deputy Commissioner for Enforcement in writing that a provision of a regulation or order is invalid, and it is the opinion of the Enforcement Department that it is preferable to dispose of cases arising out of violations of the invalid provision by enforcement exception rather than to grant the protest, an enforcement exception is granted as to all actions based upon such provisions of such regulations as may be specified in this exception or may hereafter be added to it by order of the Deputy Commissioner for Enforcement.

Coverage: This exception is limited to the following regulations and orders:

(1) Section — of MPR 420, prior to amendment 8, to the extent that said amendment 8 is to be considered as having retroactive effect to the effective date of the regulation and no enforcement action is to be instituted or maintained against a seller of custom finished hardwood heels when the only violation charged consisted of selling at prices which would have been legal had the provisions of amendment 8 been in effect from the effective date of the regulation.

(2) Section 16 of Second Revised MPR 215, prior to amendment 20 (April 23, 1946) to the extent that said amendment 20 is to be considered as having retroactive effect to the effective date of original MPR 215 and no enforcement action is to be instituted or maintained against a mill or concentration yard when the only violation consisted of selling at retail through distribution yard facilities in the manner and under circumstances that would have been legal had the provision of amendment 20 been in effect from the effective date of the regulation.

WILLIAM E. REMY,
Deputy Commissioner for Enforcement.
WASHINGTON, D. C., *April 3, 1947.*

Rural Electrification

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. TRIMBLE. Mr. Speaker, the Rural Electrification Administration has done more than any other single governmental agency to bring the comforts of the present day to the American farm home. We should not cease to work for its continuation until every farm home in America has all the electricity it needs and at rates it can afford to pay. Rural electrification in America did not come about overnight. Only after long years of hard fighting in the Congress by such men as Senator George W. Norris, of Nebraska, Congressman Sam Rayburn, of Texas, Congressman John Rankin, of Mississippi, and others, was it made a national program.

Among the pioneer workers for rural electrification in my State was Clyde T. Ellis, former Member of Congress from the district which I am now honored to represent. He served for years in the Arkansas State Legislature and sponsored the first rural-electrification law for Arkansas. While in the Congress he was an active, aggressive fighter for rural electrification. He is now the executive director of the National Rural Electric Cooperative Association. There are scores of other men in this House today who deserve much credit for the success of this program. To say that rural electrification is making good would be a trite expression. None of the Members of this House who have rural electrification in their districts can doubt the benefits of it.

From press reports, I gather that there is some opposition to the program and perhaps a movement is on foot to trim the budget recommendation for the Rural Electrification Administration. I hope these reports are unfounded. The funds appropriated for the Rural Electrification Administration to lend to the co-ops throughout the country come back to the Treasury of the United States with interest. The co-ops have a fine record for repayment of their loans, while at the same time extending their own services. In very few instances has a co-op defaulted, and in most instances they pay up even ahead of time. So it is false argument to say that the Government cannot afford the funds. Progress in a community helps everybody in it, including the Government, and history shows that progress follows electricity, especially cheap electricity.

Some argue that the co-ops should be abolished or the loans cut for the reason that they pay no taxes. The Carroll Rural Electrification Cooperative has its headquarters in my home town, Berryville, Ark. The other day I wrote to my friend and neighbor, J. E. Simpson, attorney for that co-op, and asked him to give me a statement of the taxes paid by that cooperative. I have his reply and I quote the following from his letter to me dated March 24, 1947:

In accordance with your request of March 21, 1947, I have examined the records of the office of the Carroll Electric Cooperative Corp., a rural electric cooperative, serving 5,000 members with approximately 1,620 miles of rural lines in eight counties in northwest Arkansas and southwest Missouri.

The monthly operating reports show payments of taxes for the last 6 months of 1946 and the first 2 months of 1947, as follows:

July	$478.30
August	528.92
September	483.09
October	592.20
November	613.94
December	602.75
January	493.95
February	507.20

The tax records of the cooperative show the comparative payments as follows:

	1945	1946	5-year average
Ad valorem tax	$4,581.69	$4,878.47	$4,024.95
Membership tax	339.44	339.44	317.86
Pay-roll tax	864.24	763.54	618.61
Membership 2-percent sales tax		3,840.00	
Total	5,785.37	9,821.55	4,961.42

I only check the records of sales tax paid by the members for the year of 1946. This record agrees with the receipts received from the different collection agencies and shows that the cooperative and its members, by reason of the service of the cooperative, paid $9,821.55 in taxes for the year of 1946.

Have You Had Enough?

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include a news item which appeared in the Belleville (Ill.) News-Democrat of Monday, April 14, 1947:

ONE BAKERY RAISES PRICE

The long-promised increase in bread prices started this morning as the General Baking Co., manufacturers of Bond bread, ordered a 3-cent-per-loaf increase. Other bakers in St. Louis, East St. Louis, and Belleville are expected to fall into line within the next few days.

Carl Ruffing, vice president and manager of Feickert's Bakery, Inc., largest local producer, said that no plans had been made, but that if the increase became general, bakeries in Belleville would be obligated to follow suit. He did not anticipate any immediate increase in the price of sweet-dough products, most of which were affected by an increase following the lifting of price controls last fall.

Retail dealers in Belleville were notified by drivers of the General Baking Co. this morning that the retail price of the 1-pound loaf had been increased from 12 to 15 cents per loaf, and the 20-ounce loaf from 15 to 18 cents per loaf.

House Labor Bill

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a very interesting article by James Marlow that appeared in the Lynn Item, Lynn, Mass., as follows:

PROPOSED MEASURE A MAZE OF WORDS—63-PAGE EXPLANATION OF 68-PAGE BILL INDICATES A LACK OF CLEAR UNDERSTANDING IN THE PROGRAM

(By James Marlow)

WASHINGTON, April 15.—This is written to point out the importance of the labor bill which the House starts to debate today.

It is the most far-reaching bill—in the sense of the restrictions it would place on unions ever considered by Congress.

It would make profound changes in the Wagner Act, the law covering relations between employers, workers, and unions.

The House expects to vote on this bill Friday. Later the Senate will vote on its own bill.

Both Houses then will agree on a compromise bill which President Truman may veto. Congress may pass it into law over his veto.

This House bill was designed by the House Labor Committee, where the Republican members, in a majority, and several Democrats, approved it.

But six Democrats on the committee not only voted against letting this bill out but denounced it as dangerous and damaging.

The bill is 68 pages long. With this bill the majority on the committee produced a 63-page explanation of what it means.

The committee minority in turn wrote a 49-page explanation, which was a criticism and denunciation.

Since only a handful of House Members are on the committee, the full House, when it votes, will have to depend upon the committee members for a lot of guidance on what each section of the bill means.

There are so many things in this bill that, if it becomes law, it probably will be years before the full significance of all its details can be known. And for this reason:

The National Labor Relations Board, which administers the present Wagner Act, is still interpreting its meaning, although the act was passed 12 years ago.

A new board will be set up to interpret the new act, if the House bill becomes law. So it undoubtedly would have to go through the same process of interpretation.

In order to understand the bill and have some sureness of what he was going to write, this writer first took the bill to one of the chief attorneys of the CIO.

After three painful hours of examination—which still was only pretty sketchy—the writer and the attorney had covered only 27 of the 68 pages in the bill.

The CIO attorney gave his own interpretation of what he thought this word or that section of the bill meant.

Then, to get the other side, the writer conferred with one of the most important Republican members of the Labor Committee, one of the men who helped put the bill together.

On some points he said he thought the CIO attorney had given the right interpretation, but on other points the committee member said he wasn't sure of the answer.

So here, before the bill reached the floor for debate, sources of argument and varying interpretations had arisen.

But it would do so much, and the bill is so complex, that not one and probably not three or more stories could tell it in unmistakable language, even if both sides agreed on what each provision means.

The committee members themselves take extreme views of what it would do. The majority of the committee said, in part, in its explanation:

"The committee believes that the enactment of the bill will have the effect of bringing widespread industrial strife to an end."

But the minority members, after voting against the bill, said in their explanation that the bill's proposals are:

"Deliberately designed to wreck the living standards of the American people. * * * It turns the clock of history back at least a century and a half."

Pending Labor Legislation

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. BEALL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of Tuesday, April 15, 1947:

THE RIGHT IDEA

Mr. Philip Murray unburdened himself of an important aphorism Sunday. The occasion was an all-day meeting of 250 leaders of his Congress of Industrial Organizations, before which he worked himself up into a lather on the subject of the pending labor legislation in the House and Senate. The Communist issue had been injected into the meeting, causing an angry digression from the subject in hand. Whereupon Murray intervened with the remark that "too often men's tongues will wag whilst their brains stand still." The application to Mr. Murray himself is too apt to be ignored.

A number of the provisions in the House bill seem to us to err on the drastic side, however justified they may appear in the light of organized labor's frequent disregard of the public's health and safety in the last 14 months. The Senate bill promises to be of a milder nature, though stiff enough, depending somewhat on the influence of Senator IVES, who is reputed to hold the balance of power in the committee. We are hoping his influence will be fairly decisive, since as a moderate leaning to neither extreme and as a lawmaker long trained in labor legislation at Albany, he understands the practical side of the problem.

Basically, the Senator prefers regulation to prohibition as a remedy for labor's abuses, the exception being the ban on the closed shop. He seems to be satisfied that the tyranny over the individual worker exercised by this institution warrants its eradication. On the other hand, he objects to some features of the proposed restrictions in the Senate measure on the union shop, which makes union membership a condition not of getting a job but (after a brief interval) of keeping it. The distinction, though on the right side, seems a little too slight, perhaps. There are in effect today approximately 50,000 labor agreements covering 15,000,000 workers and 73 percent of these agreements, affecting nearly half of these workers, call for some form of the closed shop, more often the union shop. To bear down too heavily on both therefore might well disrupt the whole structure of the country's labor relations.

As for industry-wide bargaining, Mr. IVES would neither prohibit nor restrict it until Congress has learned much more about its workings than it knows today. In England and Sweden, where industry-wide bargaining has become traditional, it has contributed markedly to industrial stability. Again the practical goal should be proper regulation.

He opposes a flat ban against secondary boycotts, certain jurisdictional strikes, strikes

in violation of contract provisions and strikes to force an employer to bargain with a union. He has said these should be declared unfair labor practices and handled by the National Labor Relations Board which, instead of private employers, should have the power to seek injunctions against these practices. Why isn't this a wise detour, avoiding, as it would, the bad blood of a direct legal conflict between management and men?

Of course, any curb on the present license of organized labor will bring down on the heads of those who suggest it, including Senator IVES, the anathemas of gentlemen whose tongues wag while their brains stand still. But the Senator, above most of our lawmakers, seems to us to have the right idea.

The New Soo Power Plant

EXTENSION OF REMARKS
OF
HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mr. BRADLEY of Michigan. Mr. Speaker, under permission granted to extend my remarks in the RECORD, I insert at this point a very timely editorial from the April 11 issue of the Evening News of Sault Ste. Marie.

The War Department is presently preparing to commence construction of the 14,000-kilowatt plant in the late spring and giving every consideration to the extension of a long-time lease to the Michigan Northern Power Co. for a reasonable proportion of the excess water from the Soo Rapids so this company can definitely stay in operation for years to come.

The editorial follows:

FOURTEEN THOUSAND OR FORTY-FOUR THOUSAND

For the person devoted to the Sault it is hard to understand arguments that the Michigan Northern Co. plant and canal should be junked and that the Government should spend taxpayers' money to put up a huge new power plant in the Rapids.

These facts stand out and are unassailable. Let's take them in order.

A 44,000-kilowatt plant would replace the Michigan Northern; the Michigan Northern Power Co. would be scrapped, Sault would lose a third or more of its taxes, and if power costs were high the Union Carbide division would close up.

If the Carbide and Michigan Northern suspended operations, some 700 workers and families would be looking for jobs, be added to the unemployed list which is already high.

Lake Superior discharges only so much water and no more. Unfortunately the water cannot be sent back over the Rapids to be used again. The maximum power from the Rapids will be developed when the new 14,000-kilowatt plant is in operation together with the Michigan Northern.

Thus an argument for the 44,000-kilowatt plant is an argument to knock the props from under the Michigan Northern and the Union Carbide. When the city and chamber of commerce join in fighting the 44,000-kilowatt plant they are fighting for the jobs of the 700 men and for their families; they are fighting for the welfare of every one of us because 700 jobs mean so much to the Sault; they are fighting needless spending of Government money to put out of business a firm that pays a big share of Sault's taxes; they are fighting against the economic sin of destroying an operating organization merely that it might be replaced by a Government organization, a process comparable to depression-day process of killing off little pigs and plowing cotton under; they are fighting a flight of industry from the Sault. If the city and chamber of commerce did not take the course they are taking, they would be betraying the interests of the city and of all of us.

Thus arguments that the Government should build a 44,000-kilowatt plant in the Rapids would be understandable from a person, say in Detroit. It will be remembered that the first one to boom the 44,000-kilowatt plant was a TVA proponent who wanted to ship our power to Detroit for use as a club over Detroit Edison. He didn't care what happened to the Sault. Once the 44,000-kilowatt plant is built (if ever) and the power assigned to Detroit or elsewhere nothing in the world will bring it back and the Sault will be sitting high and dry, minus its carbide plant.

We have no assurance that any new industry will come here if the Carbide goes. Right now we have a block of 2,000 kilowatts at the city's disposal for new industry and there has been no rush of industry to the Sault. When the 14,000-kilowatt plant is built, there will be power available for new industry, and power available to Newberry, the REA, and St. Ignace. George Baldwin, president of the Edison-Sault, himself said so.

Moreover, the 14,000-kilowatt plant is only a starter. When the Michigan Northern plant wears out, we can add other units to the Government plant. That will be the time to fight for a 44,000-kilowatt plant.

Meanwhile any talk of a taxpayer-money utility merely to junk the Michigan Northern plant to satisfy somebody's grudge is sheer madness. It should arouse resentment in every one of us as a cold-blooded stab at the very heart of Sault Ste. Marie's economic stability.

H. R. 3020 Is Not Antilabor

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. BREHM. Mr. Speaker, these remarks are directed primarily to those millions of men and women who comprise the rank and file of organized labor. Those individuals who have really become the forgotten men and women in the so-called labor movement. Those individuals whose only prerogative in many instances consists in paying dues and being ordered to work or not to work at the whim and fancy of some power-hungry self-seeking individual who terms himself a labor leader.

Over 2,000 of these individual dues-paying union workers have written me appealing for protection and their right to work under conditions which they choose without any coercion, restraint, or interference from any source. This bill, if enacted into law, will do just that for them.

The legislation now before us will prove very unpopular to some of those unscrupulous labor racketeers who have been exploiting and opposing the humble worker expressing any individuality or personal initiative.

Mr. Speaker, if you will pardon a personal remark, I would like to state that I feel qualified from personal experience to address these remarks to those loyal and patriotic men and women who comprise the vast majority of our trade unions. At the age of 8 I started selling newspapers in my home town in Ohio. From here I advanced to assistant janitor of the public schools.

During the summers I worked as a common laborer in the cement and carpenter construction industry at $1.25 per day. I have driven a 5-ton truck from morning until night at $2.50 per day. I have walked 2 miles to work and 2 miles back and packed a bucket in order to wheel brick at 10 cents per hour. I walked 1 mile to work and 1 mile back, to work beside the hot blast furnaces in the steel mills at $60 per month. I have worked in the oil fields, the rubber factories, and the flour mills with top wages $2 per day.

I walked from town to town, and house to house, over parts of Wisconsin and Illinois, taking orders for a portrait company on a straight commission basis. I mopped floors, tended furnaces, and waited table for my board and room in an effort to get a college education. I have pitched hay, shocked wheat, and mowed briars from morning until night for one meal and 50 cents per day.

In other words, I feel that I have worked just as long hours and sweat just as much for just as small a wage as any of those to whom these remarks are now being addressed. When I see men and women at their jobs I can appreciate all the physical vicissitudes which are plaguing them because I also have been there. When I see the farmer in the harvest field I know just how many running briars are digging at his ankles, how many sweat-bees are nipping at him and how much chaff and dust is going down the back of his neck or into his eyes and ears.

Now, Mr. Speaker, I am not bragging because I have worked my way up through the ranks, but neither am I complaining. I would not for the world want to see the young men and women of today return to the long hours and some of the working conditions under which I have labored for most pitiful wages. However, neither would I want some so-called leader of an organization to tell me that I could not work if I wanted to work and circumstances made it necessary that I did work, unless I paid tribute to him.

I believe in most organizations. I believe in the organization of churches, of schools, of labor, of farmers, of the business and professional men and women. In fact, I believe in any organization which has as its ultimate objective the creating of a better society for its members and for mankind in general.

I believe in the organization of the United States as we have known and loved it for the past 171 years. I believe in it because I feel that it has done the greatest good for the greatest number of people of any government that has or will exist.

As previously stated, I feel qualified to speak particularly to those folks in the Eleventh Congressional District of Ohio because I have known quite a few of them personally for over 25 years and some of them their entire lives. I have sat in church and in lodge with many of them. I have hunted and fished and played with them. I have done dental work for scores of them. I have talked with them concerning their families and their personal troubles. I have heard many of them express themselves against those in our country who were not loyal to its fundamental principles and have heard them say, "Those folks should be shot or deported."

In other words, Mr. Speaker, I know them for what they really are in their hearts. All of them are Americans. Most of them are family men and women. Most of them are honest and most of them are asking for one thing, and one thing only, and that is a decent job with a decent living wage and an opportunity to live a decent, normal life, with some hope of security when they reach the sunset of life.

Knowing these things to be true, I asked for membership on the Labor Committee, feeling that I might somehow be instrumental in helping these folks attain their objectives without ruining our entire American economy. Personally, I feel that the bill now before us is the greatest piece of proposed legislation to dignify the individual worker that has ever been presented to the United States Congress.

The workers in my district know, or should know, that there is a group in America who are attempting to gain control of both them and their organization. If these forces should gain control, they would wipe out all organizations—even the churches. They would be regimented into classes and they and their children's children would work for the state and not for themselves and their families. They would be herded into groups and sent to work any place and at any job wherein they best could serve the interest of their masters. The first step toward accomplishing this objective is to deny the individual the right of free speech and a secret ballot. This legislation for the first time in history establishes democratic processes of government in labor unions.

As we have set forth in our report on this bill, the necessity for legislation is admitted by all fair-minded individuals.

This legislation, if enacted into law, will give to the working men and women a new Bill of Rights. It will add dignity and stature to their position as well as establish peaceful, harmonious relations between them and their employers. This is as it should be in America where class hatred, bigotry, and intolerance have no place.

I would have welcomed a bill of rights of this nature when I was employed in the various capacities as above described, and I am confident that when the honest, patriotic American working men and women learn the real intent and purpose of this proposed legislation and read the 18 rights accorded them under its provisions, as set forth below, that they will join me in saying that a new day has dawned both for the working men and women of America and also for a long-suffering public, who are so dependent upon them for service. This bill provides among other things that the worker shall have:

First. The right to join with his fellow workers to select as their bargaining agent the union that they want, not the union that is forced upon them.

Second. The right to get a job without joining any union.

Third. The right to vote by secret ballot in a fair and free election on whether his employer and a union can make him join the union to keep his job.

Fourth. The right to require the union that is his bargaining agent to represent him without discriminating against him in any way or for any reason, even if he is not a member of the union.

Fifth. The right with his fellow employees to make demands of their own and to bargain about them through the leaders of their own local union without dictation by national and international officers and representatives and without regard to the demands of other employees upon other employers.

Sixth. The right to keep on working and getting his pay in spite of sympathy strikes, jurisdictional disputes, illegal boycotts, and other disputes that do not involve him and his union or his employer.

Seventh. The right to know what he is striking about before he is called out on strike, and to vote by secret ballot in a free and fair election on whether to strike or not after he has been told what his employer has offered him.

Eighth. The right to express his opinion concerning union policies, union officers and candidates for union office, and to make and file charges against his employer, the union, or union officers, without suffering any penalty or discrimination.

Ninth. The right to vote by secret ballot, without fear, in free and fair elections on any matter of union policy—how much dues he shall pay, what assessments the union can make him pay, what the union can spend the money for.

Tenth. The right to vote by secret ballot in free and fair elections for his own choice of union officers.

Eleventh. The right to know how much money his union has, how much it pays its officers, and how much of the union's money the officers use for their expenses.

Twelfth. The right to refuse to pay the union for any kind of insurance that he does not want.

Thirteenth. The right to stay a member of a union, without being suspended or expelled, except for first, not paying dues; second, disclosing confidential information of the union; third, violating the union's contract; fourth, being a Communist or fellow traveler; fifth, being convicted of a felony, that is, of a serious crime; sixth, engaging in disreputable conduct that reflects on the union.

Fourteenth. The right to be free of threats to his family for doing things in connection with union matters that an employer or a union does not like.

Fifteenth. The right to settle his own grievances with his employer.

Sixteenth. The right, without fear of reprisal, to support any candidate for public office that he chooses and to decide for himself whether or not his money will be spent for political purposes.

Seventeenth. The right to go to and from his work without being threatened or molested.

Eighteenth. The right to have a fair hearing, before an impartial board, without cost to himself, whenever he believes that any employer or any union is depriving him of these rights.

Now, Mr. Speaker, the workers of America will be told by high pressure national and international officers—whose job depends on selling them a phony bill of goods that he is indispensable to their welfare—that this is an antilabor bill. They will tell them that this legislation is a stab in the back of labor. They will tell them that this bill, if enacted into law, will set labor back to the days of the sweatshop. Now, Mr. Speaker, I just want to suggest to the workers when they hear these accusations made, that they again read the 18 advantages granted them in this bill and judge for themselves whether this is antilabor or just good plain pro-American doctrine.

I believe and am convinced that honest, loyal, patriotic Americans will agree that the enactment of this bill will have the effect of bringing widespread industrial strife to an end and that employers and employees will once again go forward as a team united to achieve for their mutual benefit and for the welfare of the Nation the highest standard of living yet known in the history of the world.

Rev. Dr. Joseph Francis Thorning

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. BEALL. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD I herewith insert the prayer offered by the Reverend Dr. Joseph Francis Thorning in the House Chamber on April 14, 1947. Dr. Thorning is the associate editor of "The Americas" and "World Affairs" and is rector of St. Joseph's Church, Carrollton Manor, Md.

Dr. Thorning has traveled extensively in Central America where he has lectured at a number of universities. In this country Dr. Thorning is urging that the United States Congress make it unmistakably clear that every Marxist totalitarian be regarded and registered as a foreign agent exactly on a par with any Nazi-Fascist totalitarian. It happens that Dr. Thorning's parish at Carrollton Manor is the original home of Charles Carroll of Carrollton, one of the Maryland signers of the Declaration of Independence. I feel justly proud that a man of Dr. Thorning's background and teachings is occupying this historic estate.

In the name of the Father and of the Son and of the Holy Spirit. Amen.

Almighty Father, look down with favor upon the Speaker of this House and all the Members of the Congress of the United States.

Remembering the devoted cooperation of the other American Republics and Canada in an hour of trial we beg the help of Thy grace on Pan-American Day for constancy in the cause of Western Hemisphere solidarity.

Bestow Thy benediction, dear Saviour, upon all peoples who honor their obligations as good neighbors. Instruct their minds and guide their hearts in the courses of true friendship. Inspire the children of the Americas with the love of truth, justice, and freedom. Grant that they may fit the values of inter-American friendship into the framework of world order.

This we ask through Christ our Lord. Amen.

Overdoing It

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks, I present herewith an analysis of the Hartley bill, H. R. 3020, which appeared in today's issue of the Washington Post:

OVERDOING IT

Chairman ALLEN of the Rules Committee indulged in no exaggeration when he said in the opening debate on the House labor bill that "this undoubtedly is one of the most far-reaching and important bills that any Member of this Congress will be asked to vote on." The bill outlines a new national policy governing the relations between management and labor and the relations of both to Government. To say that it is sweeping in its terms is an understatement. We can get nearer to the truth by saying that it is a vast and complex network of ideas—many of them undigested ideas—dumped into an omnibus bill without much regard for what the net effect upon our economy may be.

We think the bill contains numerous constructive provisions. For example, it would recognize unfair labor practices on the part of unions as well as employers. It is an attempt to democratize unionism, to correct such evils as mass picketing, jurisdictional strikes, and strikes that imperil the national welfare. The trouble is that in many instances it invokes crude and repressive remedies. It is not a carefully devised effort to redress the balance between industry and labor; on the contrary, it is a sharp swing of the pendulum in the direction of unreasonable restraints on organized labor. It is not surprising that the long delay in correcting the defects of the old system should produce this sort of a reaction. But this explanation of why the bill has taken the shape it has still does not make it intelligent legislation.

No doubt the bill will be vehemently assailed because it would abolish the NLRB and set up in its place a Labor-Management Relations Board. But this may prove to be one of its happier aspects. The main idea behind the proposed change is to separate the prosecuting and judging functions of the NLRB. The task of investigating alleged unfair labor practices, of preparing complaints and carrying on all the executive work under the act would be assigned to an administrator. The Board would become a truly quasi-judicial body for the hearing and deciding of cases taken before it. With unions and their officials certain to be haled before the Board on charges of unfair practices, this effort to secure greater objectivity in its decisions might, reasonably, be welcomed by labor.

But the House Committee on Education and Labor was not content to give the Board a more judicious character or even to rewrite the Wagner Act. It has provided for a system of judicial review that might tie up most of the vital business of the Board in the courts for rehearing. The bill also sweeps on to take many labor problems out of the hands of the Board and Administrator and lodge them in the courts by restoring use of the injunction to cope with certain forms of picketing, illegal boycotts, jurisdictional strikes, and so forth.

Especially unsound, in our opinion, is the provision which would authorize the President to secure an injunction to halt any strike which he believed to threaten curtailment of essential public services. We have often emphasized the necessity of providing some means of dealing with union tyrants, such as John L. Lewis, who are willing to paralyze our entire economy for the sake of gaining their ends. But in all conscience, free use of the injunction in public utility walkouts is not the answer. Let the Government take over an industry essential to the public health, safety, and welfare if necessary, while a dispute is being settled. But certainly the Government should not intervene by means of an injunction and then rely upon the crude machinery that would be created by the House bill to bring about a fair settlement.

Nor is this all. The bill would abolish the closed shop (although authorizing some forms of the union shop), outlaw industry-wide collective bargaining, create a new conciliation service outside of the Labor Department, and set up a rather crude system for balloting among employees before strikes could be called. It is too much of an undigested lump. We doubt that many members of the committee are familiar with its details. Certainly the rank and file of House Members are not. And the great American public is almost completely ignorant of what Congress is trying to do.

This is the way to secure sound legislation. It is not even good politics. At the very least, it seems to us, the bill should be broken down into three sections—one modifying the Wagner Act, and the other two dealing with the conciliation service and emergency handling of utility strikes affecting the national interest. Only by this means do we see any chance of the country understanding what its legislative arm is doing. If the steamroller which seems to be going into action in the House disregards this widespread demand, the chief burden of legislating in this field will fall upon the Senate, where evidence of a more responsible attitude is apparent. Failure of the Senate to heed current warning signals would doubtless result in a veto, and the whole mess would be in the lap of Congress once more. The time to avert such a calamity is now while it is still possible to strip this legislation to reasonable proportions.

University of Delaware Observes Army Week

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mr. BOGGS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered on April 10, 1947, at the University of Delaware by Lt. Gen. Eugene Reybold, retired, on the occasion of the university's observance of Army Week. General Reybold, I may say, is a graduate of the University of Delaware and for several years prior to his retirement in 1946 was Chief of the Army Corps of Engineers, climaxing a long and distinguished career of service in the United States Army. I would like to add also that General Reybold was the first nongraduate of the United States Military Academy at West Point to be appointed Chief of the Corps of Engineers.

The audience which had the pleasure of hearing General Reybold was comprised of a very large portion of the student body of the University of Delaware. Significant in this connection is the fact that approximately 75 percent of the entire male enrollment at the university is comprised of veterans of World War II.

For those who may not have previously realized it I wish to point out that the University of Delaware is one of the oldest institutions of higher learning in the Nation, having had its inception as an academy in 1743. It has grown and developed along with our Nation, and its graduates have made great contributions to the development of our way of life and have answered the call to arms in every war from and including the American Revolution.

The clear and concise manner in which General Reybold, one of our country's outstanding citizens and soldiers, has presented the picture of today's need for a recognition of the requirements of national security makes his address, which follows most interesting and thought provoking:

Many of you here today have had active service in our armed forces, and I feel sure that those of you who do fall in that category are glad to get out of uniform, take up where you left off in your educational program, and otherwise resume your normal way of life. Since I spent 4 years on this campus and have recently removed my uniform, I would say we have much in common. To be with you on this occasion is a pleasure, and I am honored to be on your university-hour program.

This being Army Week, I have chosen to say something about our national security, and by this I mean the security of our country and of our way of life—security against all disturbing elements. Our armed forces exist for this very purpose, and in my judgment they must be maintained as never before. I believe the next war, if one should come along, will be quick and an "all out" affair. We are a peaceful Nation but must be prepared to strike back and strike hard at the fellow who chooses to start something. The sneak attack by the Japs at Pearl Harbor will have been but a drop in the bucket as compared to what could and probably would take place in another major war, and we don't care to be on the receiving end. We were miserably prepared at the start of each of the last two wars, and had we not been able to mobilize behind vast ocean fronts and distant battle lines held by our allies, we might have been badly hurt. As it was, not a single hostile shot reached the shores of this country. Will we be so fortunate the next time? Personally, I have grave doubts. The airplane has certainly "washed up" our protective ocean fronts, and the first shots could very readily be fired the next time right into our own front yards.

In World War II we witnessed the development of radar, electronic devices, the proximity fuse, pilotless aircraft, and the beginning of warfare with guided missiles and atom bombs. The future will bring forth further scientific developments, and if we wish to remain abreast of things, or better still, be a step ahead of the other fellow, we must establish on a permanent basis the best research and development organization we can possibly get together. It seems that modern war has no respect for property or humanity. When better weapons of war are developed, let the United States be the first to do so and then be sure to lock up the prescriptions.

It was our money, our industries, our shipping, and our manpower that put the finishing touches of victory to the last two wars, and our enemies know it. With the United States out of the way in any future world conflict, a strong aggressor nation would probably have free sailing around the rest of the globe. Our European enemies overlooked that consideration in the last two wars and paid the penalty. They estimated us to be weak, and we were weak. Then was the time for them to strike, but they failed to do so. I fear they will not make the same mistake three times. If our armed forces become weak again we are inviting attack. If we remain strong, all aggressors will think twice before striking. In other words, and as stated by others over the radio and in the press, a strong America is a peaceful America.

When we attempt to discuss matters relating to our national defense, it is well to have in mind an understanding and an appreciation of what we have in this country of ours as against that of other countries. The things some nations would like to grab off. Think of our natural resources, our vast agricultural and mineral lands, our industrial capacity and the know-how of our management and labor, our magnificent transportation and communication facilities—in brief, our great national wealth. Think of our freedom from dictation, our liberties in speech and religion, our daily way of doing and saying things, our American way of life; all fought for and established by our forefathers. It is for these precious things that we must have now and in the future a strong national defense. Let us be determined that no aggressor nation or group of nations shall ever get a foothold in this country and tell us what we will do or not do. We had enough of that in our pre-Revolutionary days. And let us begin right now to clean up certain subversive elements who are attempting to bore from within our governmental structure. The President has started the ball rolling by an Executive order and Congress is beginning to take serious notice of these and other underground activities in the country. The FBI is on the trail of the offenders, and that to me means real business. We must all join hands and kick these disturbing and disloyal elements out of our midst.

Let us take a look at the world structure as of today. While Germany is no longer a threat as a military power, she must be watched over carefully and nursed into a sense of decency not only for her own people but for her neighbors and for the world. That means occupational troops for some time to come. The British Empire has been considerably weakened and will probably never be as strong as before the recent war. England, the very heart of the Empire, is a target for mass destruction from Continental Europe. However, it would make a great difference in our capacity to wage war whether England be with us or against us. I suggest she remain with us in the future as in the past. France is relatively weak from a military point of view and seems to have lack of unity among her own people. Prior to the last war she rotted rapidly through fifth-column activities and has not yet recovered. Italy can be written off completely and does not know where to go or what to do. Japan, like Germany, is out as an immediate threat, but she is important in world trade. China is torn by internal trouble and may be counted out from a military viewpoint. However, if taken over and led by a strong and resourceful nation, her manpower and natural resources might become important factors in any war. So, that leaves the United States and Russia, the two great military powers of the day.

We are all hopeful that the United Nations set-up will some day become a potent instrument of peace in world affairs, but as yet it is nothing more than a newly born child. Russia seems to be hard to get along with at every turn of the road, and the United States seems to be doing everything from dollars to doughnuts to establish peace and freedom throughout the world. In order to carry out our thoughts in the matter we cannot permit our Army, Navy, and Air Force to fall back to prewar levels or anywhere near such levels. We are in the international ring of freedom no matter whether we like it or not. We can stay in that ring only as long as we have the will power to do so and the physical strength to stand up and fight for our democratic principles of government and for those weaker nations who wish to follow in our footsteps of liberty and freedom. This business of the big fellows knocking down the peaceful little fellows who are free and love it should be stopped before it becomes a disease and penetrates this hemisphere.

Until the United Nations organization is in full force and effect and until this world has leveled off into peaceful and neighborly understandings, we the people of the United States had better watch our step and see that an adequate defense is provided. And don't forget that the best defense is the ability to assume at any and all times a strong and prompt offense. Of course, we are all for cutting the cost of Government, for reducing taxes, for paying off our national debt and for balancing our budget—but let us not at this critical time go so far in reducing our annual appropriations as to weaken further our armed forces.

Modern wars are total wars and they involve not only the military forces, but the entire civil life of communities and nations. The civilian elements of our country would be harder hit than our field forces if an enemy should reach our shores. We would then need unity of effort on the part of every man, woman, and child in the country. Why wait—let's begin now and try to be realistic. Just think of what an atomic bomb or a group of guided missiles would do to New York City or any other large center. The very thought leads us to the conclusion that we must have well-trained troops available to send into such centers of population and also have trained and disciplined civilians in every community for the purpose of restoring order out of chaos. With universal military training we would have in each community trained and disciplined civilians.

What has happened to our armed forces since VJ-day? We had during the war about 12,000,000 men under arms. I understand we now have about 1,750,000, including our naval forces. The Army is down to about 1,200,000, which represents a reduction of some 90 percent. So when pacifists and fifth columnists begin to talk about disarmament, just remember that we have already done a large piece of disarming. I am informed that the Russians have cut their ground forces by about 67 percent and air forces only about 33 percent. We should always estimate the capabilities of other countries rather than probabilities. One of the things about the last war was that our people did not estimate properly what the Japanese could do. They gave too much consideration to what the Japs would probably do, rather than what they were capable of doing. On the other hand, it would seem that the Japs made a very careful estimate of what it would take to defeat the British and the United States in the Far East, and then did it with only 13 divisions in addition to their naval and air forces.

I am told that an airplane with a range of 5,000 miles could take off from Siberia and cover all the United States, not just the industrial centers. Same thing from Iceland, Greenland, and the near end of Norway. I mention these facts as an indication that we are under the guns of those who might not like us and who might choose to occupy and jump off from these places. In the Pacific there is no doubt that we should extend our front well beyond Pearl Harbor and stay put. Nobody knows how long we will have to occupy Germany, Japan, and Korea. So when you add up all these things, plus our present diplomatic dealings, we should listen attentively to the estimated requirements of the State, War, and Navy Departments and back them up, especially during this transitional period from war to peace.

Dr. Carlson, president of the University of Delaware, has told you this is Army Week and the purpose thereof. Let us therefore be more specific about the Army. Nobody knows better than the Secretary of War and the Chief of Staff what size Army we should have. They have set a figure of 1,070,000 men as of July 1947. Counting National Guard and Reserve units, they have set an M-day force ready for action of 1,750,000 men. Until things settle down throughout the world I do not think we should tamper with these figures, either directly or indirectly. The country has many outlying tasks yet to perform. The War Department has recently released the following statement on the subject:

"Today the national interest admits of no theory in acknowledging specific obligations. Broken down into basic tasks of the armed forces, they include:

"(a) Occupation of Germany, Japan, and Korea.

"(b) Provision of forces committed for use by the United Nations.

"(c) Exercise of United States foreign policy abroad.

"(d) Assistance of Western Hemisphere nations in mutual defense.

"(e) Development of an adequate intelligence organization.

"(f) Maintenance of supremacy in research and development."

Since the performance of these tasks is to solidify military victory and establish the opportunity to work out world peace, the necessity of maintaining a respectable military posture cannot be overstressed. General Eisenhower has signified the principle thus:

"The strength we need is that required to meet the solemn commitments our country has made throughout the world and a sufficient framework of organizations behind them to secure us in peaceful activity and to give confidence to those who seek to emulate. Not a man or a gun should be maintained for aggressive purposes—but every American and every friend of America in the world has the right to know that they can count on us for a full share in upholding the democratic ideal."

A matter of real concern is whether the War Department can secure through voluntary enlistments the manpower to fulfill its stated requirements. There are indications it cannot. The selective service law is, as you know, no longer in force. The veterans from the last war are still available but in diminishing numbers. In a few years they

may be counted out. In order to establish and maintain a force of trained men, especially for the National Guard and Reserve Units, we should, in my judgment, enter into a system of universal military training at the earliest practicable date. The War Department has such a plan and has presented its views to Congress. I can assure you it is a good plan. It would be helpful if all good citizens, mothers and fathers alike, would urge upon Congress the adoption of such a plan of training for the youth of the country.

Let me say in passing that universal military training is not universal military service. It's not conscription as practiced by European powers. The entire Army of the United States, including the Regular Army, National Guard, and Organized Reserves, normally will be made up wholly of volunteers in time of peace. Generally speaking, under the War Department plan, our young men 18 years of age would be inducted for training only; they would not be members of the Military Establishment or available for combat or any other operational requirements during the period of training; they would not be subject to court martial or provisions of the Articles of War, but would be governed by a special code of conduct which would be established and guided by the recommendations of a civilian advisory board. In addition to military training, athletic, religious, educational, and recreational programs would be provided to improve the mental, physical, and moral fiber of the youth undergoing the training. I venture to say that, once the system be established, the graduates themselves would be the strongest supporters. Aside from other things, let us ask ourselves this question: Is it not a sound and democratic principle that each physically and mentally fit male citizen and alien residing in the United States owes an obligation to this country to undergo training which will fit him for military service in an emergency? If the answer is "yes," why not do something about it.

I am reminded at this point that we have an ROTC unit here at the University of Delaware, and I hope it grows bigger and better as the years roll on. In my opinion, no system of peacetime training in the country paid bigger dividends in the last war, and I urge upon every male student to take advantage of the opportunity.

Let us now turn our minds back to the broader subject of national security and quote another recent release of the War Department.

"Creation of the atomic bomb, guided missiles, long-range aircraft and other scientific devices revises the security concept, accentuates its relationship to every segment of our population. No longer can it be delegated, even in peacetime, solely to the armed forces. The unprecedented integration of civilian and military effort when the country's life was at stake proved beyond all question the existence of a partnership which must continue uninterrupted in peace. The military half of the mission is discharged with arms; the other half includes responsibilities of peace to be met by soldier and civilian in terms of foresightful citizenship which recognizes the nature of military strength and what that strength implies for future peace and welfare, not only of the United States, but of the world. In point are the words of General Marshall:

"'I think we have got to compress theories with realities. We will have to bear in mind the inevitable human reactions of the postwar aversion to military matters and the taxpayers' passion to reduce military expenditures. We will have to take the nations of the world as they are, the prejudices and passions of the people as they exist, and with those considerations, develop a method so that we can have a free America in a peaceful world.

"'The men and women of the United States Army are citizens of a democracy. They, like their Government, are servants of the people. Were it otherwise, the concept of democracy, as we know it, would surely perish. In seven major wars its rank and file stood as a true composite of any American community. In the aftermath of those wars its members went back to civil life to enjoy the same privileges and carry out the same duties as any other citizen.

"'Yet today's peacetime Military Establishment is unique among armies of history. Primarily, it is of a free people and is constituted of the largest force of volunteer soldiers ever to serve under one flag. Traditionally, it fulfills a mission prescribed by the public under a constitutional delegation of power to the Congress—a literal chain of command that remains unaltered after more than 160 years' practice.

"'In previous years proclamation of Army Day symbolized the Nation's acclaim to soldiers of all our wars—a rededication to the ideals they served well. The innovation of Army Week serves to focalize attention on the interdependence of all groups to national security and national welfare. Public familiarity with military problems is as essential to good citizenship as the knowledge of public schools or public finance. Thus, the problem of security becomes as much the concern of every man, woman, and child in this country as it is to the armed forces which attempt to provide it'."

Triple A Report

EXTENSION OF REMARKS
OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. TRIMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a report from the Producing and Marketing Administration of Washington County, in my district. This report shows what an excellent piece of work this agency is doing. It also indicates the necessity for a continuation of the appropriations:

CONSERVATION—HOW MUCH AND WHO?

Is it the farmer's responsibility to keep our soils productive, or is it the responsibility of the consuming public to assist?

Through the exploitation of agriculture we have built up a great nation. Agriculture is our most important natural resource. Some of our other natural resources are not particularly important. It costs about as much to mine or develop nonimportant resources as you get in return for them. Of course, some have made fortunes but hundreds have lost everything, so it balances up. This is not true with agriculture. Agriculture has paid a tremendous return.

Before the agricultural conservation program in 1936 people did not comprehend what was happening to the soils of this country. Those who have served for long periods in the fields of agriculture education had the idea that, if we developed an agricultural program that was formulated well enough to bring to the attention of the farmer what was necessary from the standpoint of conserving the fertility of the soil, that was all that was required. His personal interest and pride would do the rest. But it didn't work out that way. It wasn't because he didn't understand that it failed. The answer was that he couldn't. The tremendous financial drain that had been made upon agriculture through its contribution to the development of other industries made such a program impossible.

Our National Government began to realize the futility of depending upon the farmer for maintaining the productiveness of our soils when it required all his energy to make a living. We were losing the productiveness of our land, our greatest natural asset.

In short, farmers could no longer justify the expense of anything more than what was necessary for eking out a subsistence for themselves and family, and anything beyond that had to go by the board. It was during this period that the Government came to a realization that this fundamental national resource was being rapidly abused to a point where it was a liability, and that if it were to be preserved for posterity, the Government and public needed to make their responsibility in this respect evident.

It was under these conditions that the Agricultural Conservation Program was inaugurated, a plan to assist the farmer in doing many things that was generally known to be necessary but which he could no longer justify because of lack of money.

When the Soil Conservation and Domestic Allotment Act was first being considered, we had a dust storm in New England that had its origin in the Great Plains. When concern was expressed regarding this matter, there was an attitude in evidence that this was the concern of those who live in those areas and not the Government's affair or the general public's. The facts were, that those who were supposed to take the responsibility for controlling this condition had already left the farms, but their soil was still blowing. When the soil erodes from wind or rain, the farmer alone can't stop it. He has to have cooperation. It is not solely the farmer's responsibility to keep the soil productive. This is everyone's responsibility as a consuming public, as the public depends on America's soil for the high standard of living of which we are so proud. If it becomes necessary for the farmer to move off the farm because of soil depletion, it is very evident somebody else must take over. If constructive methods are to be inaugurated for the purpose of protecting our soil from exploitation, the public might better use the farmer's energies for that purpose while he is still able to continue his operations than to wait until he is forced to leave the farm to make a living.

The consuming public should cooperate with the farmer by bearing part of the cost of maintaining the fertility of the soil, and not depend upon him for the entire responsibility. We will never keep our lands on a highly productive basis if we depend on farmers to do it alone.

Now, after several years of operation under the Soil Conservation and Domestic Allotment Act, many of the original practices that were deemed necessary but now considered unessential have been eliminated, and the program has been strengthened to the point where everyone who is in close touch with the program is fully convinced of its necessity and fundamental soundness. We are still in danger, because the general public and many of our national leaders consider the support of this program an unnecessary use of public funds. This, in the face of what has been accomplished, seems little short of tragic. Right-thinking people owe it to themselves to become better informed regarding the objectives of the AAA soil and water conservation program.

Soil and water conservation practices carried out under the 1946 agricultural conservation program in Washington County

[Participating farms, extent and value of soil-building practices carried out by practices in connection with the AAA program in 1946]

Practices	Number of participating farms	Extent	Government assistance
Phosphate	661	[1] 4,187,013	$27,632.29
60-percent potash	98	[1] 46,211	600.74
Limestone	106	[2] 2,278.83	5,468.19
Ryegrass	711	[1] 219,179	15,332.03
Lespedeza—not harvested for hay	1,145	[3] 18,615.0	27,922.50
Small grains seeded fall 1945	148	[3] 1,431.1	2,146.65
Summer legumes left or turned	159	[3] 784.3	1,176.45
Winter legumes	223	[1] 55,026	7,739.40
Seeding approved pasture mixtures	213	[1] 57,819	9,231.23
Vegetative waterways established	9	[3] 10.31	204.20
Contour ridging pasture land	2	[4] 8,100	12.15
Harvesting grass and legume seed	163	[3] 1,535.6	5,374.60
Terraces constructed	12	[4] 29,199	291.99
Stock ponds constructed	148	[5] 164.868	19,784.16
Construction of drainage ditches	4	[4] 4,000	101.10
Do	4	[5] 2,693	215.44
Mowing pastures to control weeds	1,002	[3] 18,900.0	14,461.50

[1] Pounds.
[2] Tons.
[3] Acres.
[4] Feet.
[5] Cubic yards.

Total assistance for the above practices in 1946, $129,122.84.

Number of farms in county, 5,047; cropland, 206,698.

Participating farms, 2,047; cropland, 121,559.

Percent participation, 41; percent cropland, 59.

Let us determine the return per dollar invested in some practices for Washington County, and then decide how the funds allocated to our county can be invested to bring the Government the best return, over a period of years, on the money invested.

Application of phosphate, 66 cents per hundredweight: Government assistance of $27,634.28 plus $25,122.08 of the farmer's cash plus $17,585.68 of farmers labor equals $70,342.04 which will purchase and place in the soil 4,187,013 pounds of 20-percent phosphate; 4,187,013 pounds used at the rate of 250 pounds per acre will cover 16,750 acres.

Lespedeza hay production was increased by 1 ton per acre times 16,750 acres equals 16,750 tons of hay; 16,750 tons of hay at $20 per ton equals $335,000, or a return of 17 times the Government's investment of $27,634.28 the first year.

Phosphate shows results for 3 years or more. If the average increase for 3 years is figured at $200,000 worth of lespedeza hay, the return on the Government's investment for the national welfare is $600,000 or 22 for 1.

Ground limestone, average $2.40 per ton.

Government assistance of $5,469.19 plus $2,506.71 of farmers' cash equals $7,975.90, total investment in purchasing, hauling, spreading and working in 2,279 tons of lime on 1,139 acres.

Results to be expected: Missouri Experiment Station Circular No. 218 indicates that lime applied with phosphate to lespedeza showed an increase of 700 pounds of hay over lespedeza to which only phosphate was applied. The number of pounds of protein in the hay produced on untreated plots was 192.6 pounds per acre. On plots receiving phosphate alone 216.1 pounds per acre. On plots receiving phosphate and lime 336.3 pounds of protein per acre. Apparently the calcium functioned in moving phosphorus into the plant. The plots receiving phosphate and lime showed an increase of 144.6 pounds of protein over untreated plots. This is equivalent to 352 pounds of 41 percent cottonseed meal.

If meal is $3.50 per hundredweight, the increase is worth $12.32 per acre; $10.32 of the increase can be credited to the lime; 1,139 acres times $10.32 equals $11,754.45 return on the investment per year. If we figure that the application is effective only 8 years we show a total return on the $5,469.19 investment of $94,035.30 or over 17 to 1.

Establishing cover winter legumes, $3.37 per acre: Government assistance of $7,749.40 plus $3,874.70 of farmer's cash plus $3,874.70 of farmer's labor equals $15,498.80, which will purchase seed and inoculation, haul the seed home, prepare the land, and plant the seed on 2,300 acres.

A crop of hairy vetch, for instance, adds from 5 to 10 tons of organic matter and 90 pounds of nitrogen per acre, according to Arkansas Experiment Station reports. A pound of commercial nitrogen costs retail from 10 to 16 cents, depending upon the type of nitrogen fertilizer used. If we use an approximate average of 13 cents, 90 pounds at 13 cents equals $11.70, would approximate the value of the nitrogen in a crop of vetch. The value of the organic matter is not so easily figured, but certainly a conservative estimate would be 50 cents per ton or $3.50 per acre. Nitrogen $11.70 plus organic matter $3.50 equals $15.20 per acre; 2,300 acres times $15.20 equals $34,960 return for 1 year. The experiment station report indicates that a crop of hairy vetch turned under at the proper time provides enough nitrogen and organic matter to carry two or three succeeding cultivated crops, so we may figure 2½ times $34,960 or $87,400 return on the Government's investment of $7,749.40 or 11 to 1.

Construction of stock ponds, 12 cents per cubic yard: Government investment of $19,784.16 plus $9,892.08 for farmers' cash plus $9,892.08 farmers' materials and labor equals $39,568.72 which will construct 155 stock ponds averaging 1,064 cubic yards of dirt moved per pond.

Results: In Washington County there are 206,698 acres of cropland to be found on 5,047 farms or 41 acres per farm on an average. It may also be assumed that on these farms an additional 50 acres of land will be found which can provide grazing for 10 head of cattle or about 1 cow to 5 acres. This land is not being used for anything because the timber is scrubby and scattering, stock water is not available so no pasture improvements are made. This type of land should be developed perhaps as pasture and timberland, but some sort of current income must be in sight before such development will be made.

An investment of $127.64 by the Government matched by an equal amount of cash and labor by the farmer in constructing a stock pond for adequate water would result in an added production and income from 10 head of cattle at least. If we figure this income at $20 per year per cow we have a $200 added income per farm on 636 farms or one-fourth of the farms in Washington County, $12,720. This return should continue over an indefinate period. If we figure 30 years we show a total return of $381,600 on a $19,784.16 investment or 19 to 1.

It should also be remembered that if the water supply had not been made available this land would probably have gone into cultivation and much of the soil lost. In most cases the stock pond will bring about proper land utilization instead of exploitation.

Can Science Remain Free?

EXTENSION OF REMARKS
OF
HON. PRESTON E. PEDEN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mr. PEDEN. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following address by Rev. A. Powell Davies of the Unitarian Church, Washington, D. C.:

CAN SCIENCE REMAIN FREE?

Harvard University has recently completed one of the most astonishing and intricate pieces of mechanism ever contrived by man. It is a giant calculating machine, capable of solving in a matter of minutes complicated mathematical problems which might otherwise take weeks and months to carry to a conclusion. It works—does this calculating machine—4 hours a day for Harvard University, the remaining hours for the United States Navy. It can calculate the path of a rocket in the stratosphere, taking into account air resistance, wind pressure, the pull of gravity, and the effect of the earth's rotation. It can include the influence of even more subtle factors which are not as yet disclosed. In addition, it can deal with multiple double-jointed equations, of the kind mathematicians sometime have to solve by the thousand when employed in such matters as discovering more about the inner workings of an atom. It will be seen, therefore, that though it is only a machine, it is a very remarkable machine, and moreover, useful.

But to advance its usefulness it so happens that people like Prof. Norbert Wiener, of the Massachusetts Institute of Technology, are almost indispensable. He is one of the few people on the face of the earth who know what such a machine is all about. For that reason, he was asked to make an address on the subject. During the war he had participated in research aimed at the development of rocket bombs and controlled missiles, so he also knew the military uses of such an astonishing mechanism.

And Dr. Wiener refused to speak. He is all through, he says, with helping to develop new weapons. He rebels against the use to which science is being put. "I do not expect," he writes in an explanation of his stand, "to publish any future work of mine which may do damage in the hands of irresponsible militarists * * *. To provide scientific information is not necessarily innocent act, and may entail the gravest consequences. The practical use," he concludes, "of guided missiles can only be to kill foreign civilians indiscriminately, and it furnishes no protection whatever to civilians in this country."

This, then, was the significance of his refusal; he is the first of the top-level scientists openly to rebel. There will be others. Not a doubt of it. And what is the reason? The reason is that science has become, even to scientists, too dangerous to be left unregulated. Unless it can be socially controlled—one of the most difficult things ever contemplated since the beginning of history—science will be the means by which civilization will be totally destroyed. Professor Wiener, recognizing this, refuses to lend himself to such disastrous possibilities, and decides the issue presented by his practical judgment, in the full light of his moral responsibility.

Other scientists have taken for the time being a somewhat less drastic stand. Some of them have gone about the country, from platform to platform, warning people of the peril that is darkening the future. They

have tried to influence politics. They have forsaken their ivory towers for the unaccustomed adventure of public life. They have succeeded in reinforcing popular approval for some new and important agencies that science has made necessary—such as the provision for civilian control of atomic energy within the United States and the United States sponsored International Atomic Development Authority contemplated as the basis of United Nations world control.

But their success, though remarkable, has not caught up with the problem. The development of weapons has been going on at a much faster rate than the development of international control. It was predictable therefore, that faced with the unavailability of larger solutions, some of the scientists would follow the promptings of individual conscience and rebel. They have apparently begun to do so.

Such individual rebellions are certainly not without usefulness if they emphasize the problem we are not solving—or even beginning to solve. But beyond that they will do no good. Individual scientists, by withholding their labors or concealing their discoveries, can never know whether they are hastening a disaster or postponing it. They cannot know because they are unable to tell what other work is going on, perhaps in other countries, or whether in the end their own contribution would make disaster more likely or less. Too many factors are involved, not all of which are visible to individual scientists. Moreover, it is certain that if enough scientists refused to cooperate with the government of their country, or with the armed services, an attempt would be made to coerce them.

Last spring, when I was Chairman of the Emergency Conference on Civilian Control of Atomic Energy, I saw very plainly at times the resentment of politicians that scientists were so elusively difficult to control. "Why aren't the scientists more patriotic?" the legislators—some of them—would ask. By which they meant, "Why don't the scientists do what the politicians decide?" This is not a matter to be taken lightly.

What I am driving at, however, is that a revolt of individual scientists is not a solution, and that it is very doubtful that an organized revolt would do much better. It has to be understood, too, that nobody is going to give the scientists the right to do as they please, even though their intellectual status is above the average. Some way has to be found of regulating science—if there is ever again to be security—that represents the entire population. And the extraordinary fact—quite incomprehensible to anyone who has absorbed the significance of what has happened in the last few years—is that nothing is yet being done to find a means for the social regulation of science. Nothing, that is, on a scale proportionate to the problem.

Let me make a little clearer what our actual situation is. We have not yet got the international control of atomic energy. Whether we shall succeed in getting it very soon is still in doubt. Even if we do, it is only the beginning of what is necessary. Science has not arrived at a stopping point. There is as much possibility of discovery in the future as there was in the past. But today, as one atomic physicist lamented to me only a few months ago, you cannot even give a bright graduate student a piece of research to do without fearing that he may stumble upon something that in one way or another has dangerous potentialities.

The American plan for the international control of atomic energy is a brilliant solution—but a limited one. How limited it is, is well known to those who developed it. It represents only a beginning.

Moreover, atomic energy and indeed the whole area of applied physics is only one part of the problem. At present, it is the easiest part to keep watch over—not easy, not by a long, long way, but nevertheless, the easiest. What shall we say of little laboratories, here, there, or anywhere, in which deadly bacteria can be developed? Already we can use bacteria to destroy crops—the basic food supply of an entire nation—leaving the people to starve. Atomic vaporization might be more merciful. Further possibilities lie ahead. Is it conceivable that we shall leave laboratory research uncontrolled? If we do, it is certain that sooner or later, either by accident or by design, some fearful disease will wipe out the lives of millions. Yet, this is something that could come out of the laboratory of a small hospital, or of a drug manufacturer, or even of a private researcher.

When we recognize the implications of the point to which modern science has advanced and then remember that it is still advancing, most of the things with which the congresses and parliaments of the world are at present concerned pale into insignificance. The really commanding requirement of the period immediately before us is to work out, nationally and internationally, the means of regulating science in all its departments so that its dangers will be limited and its benefits insured. Even the benefits we could afford to postpone for a season—most of them. But the dangers are immediate.

In the sense in which the word was applied in the past, it is impossible for science to continue to be free. It is impossible for it to remain morally irresponsible. That is a very hard recognition to make, particularly if, like myself, you are devoted to the methods and purposes of science. It sounds like a new kind of heresy. But the test of a scientific mind is whether it can accept the realities of a situation, even if they are unwelcome. The realities of our present situation are indeed unwelcome. It may be generations—if we manage to avoid still worse things—before these realities seem entirely friendly to mankind. But there they are: Realities.

If science is not controlled by considered and deliberate purpose; controlled in such a way as to provide optimum freedom of the kind most necessary for scientific work; if science is not regulated on a public-welfare basis, openly and candidly with all the people knowing what is being done, then let me state the alternative. When the situation becomes critical enough, there will be panic and science will be regulated by tyranny, perhaps in the first place by the military. This has nearly happened already in the case of atomic energy. The McMahon bill was only passed after a long struggle and against formidable opposition. It may not remain undisturbed. I am not criticizing the military in saying this: if nobody else protects the public, the military will doubtless do its best to fill the blank. But where would this end? Would it be likely to prevent war—and the consequent complete disaster?

There ought to be, immediately, both national and international commissions, composed partly of scientists and partly of able, public-spirited citizens who are not scientists, whose assignment would be to work out continuously for as long a period as may be necessary the detailed arrangements by which scientific research and all its applications can be regulated. This, without doubt, is the most important item on the world's agenda. Without the regulation of science, right through from research to technological application, the destruction of civilization is sooner or later inevitable. If the regulation is military and despotic, destruction is just as probable as if there were no regulation at all. By regulation, therefore, we mean civilian control, openly responsible to all the people and moving as rapidly as possible toward the universal.

I say that this is the most important item on the world's agenda. If it is not so regarded, and rather soon, science is on its way to anarchy in the first place, and final domination for destructive purposes immediately afterward.

Dr. Harlow Shapley, one of the greatest of living astronomers, begins a recent article by saying that civilization has few friends. (Harvard Alumni Bulletin, January 1947.) "Nobody cares aggressively about its continuance," he says. "It is accepted casually, like the air we breathe and the rhythm of the heart. But can we longer leave it safely to chance?" he asks. "Civilization needs friends * * * needs planning and thoughtful action," or before long, he concludes, there will be no civilization left to befriend.

One wonders how it could be put, so vividly that people would be shocked into recognition of realities. Perhaps it could be put in a sort of parable. Suppose we opened our newspapers some morning and read this headline: "Ocean liner on fire: life aboard goes on as usual." Suppose beneath it were the following story: "The famous luxury liner *Western Civilization*, radioed last night that a fierce fire had broken out below decks which may result in the ship becoming a total wreck. All aboard, however, though naturally a little alarmed, are taking the situation very calmly. No unusual measures are contemplated such as might extinguish the fire or place it reliably under control. All meals are being served as usual, the customary sweepstakes on the daily mileage of the ship are very popular, and the crew has been ordered to polish the bright-work and put on a new coat of paint on the funnels.

"When the owners were telephoned in New York early this morning they said they fully expected that the fire would make no difference to the usual profits and that they were above all opposed to any kind of new regulation or governmental interference. The maritime union, when informed of the emergency, said that the strike which had been called for the near future would not in any circumstances be postponed. When a reporter asked Congressman Typical, chairman of the Committee on Committees-as-Usual, whether he wished to make a comment, the celebrated Congressman from the Third District of Everywhere impatiently replied that if we would all put our hands to the plow and our shoulder to the wheel and stop rocking the boat, we would have nothing to fear. 'The way to fight fire,' he concluded, 'is with fire.'"

Suppose we found such a story in the morning newspaper. It is incredible, you say. We never could. Yet, we are doing something even more incredible every day. We are permitting the affairs of the Nation to go on, not to mention those of mankind at large, almost as though nothing exceptional had happened in the last few years.

How does it come to pass that nothing is being done about the most urgent problem of the present age? I ask, with Dr. Shapley. Where are the friends of civilization?

Federal Aid for Education

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. MORTON. Mr. Speaker, I am today introducing a bill which attempts to solve the serious crisis that exists in my State and many others in the field of education. This is a companion bill to S. 472, introduced by the senior Senator

from Ohio and seven other Senators. The bill has two general purposes: First, to guarantee a certain minimum educational program in public elementary and secondary schools and, second, to reduce the inequalities of educational opportunity between the several States.

There is much discussion and debate throughout the land and here in the Halls of Congress on the question of one world. However, on the question of one nation, there is no disagreement whatsoever. We are one Nation, dedicated to a program of equal opportunity for all citizens. To accomplish this program, we must afford to the children of America equal opportunity in the field of education.

In Kentucky, we now face a serious crisis. We, in Kentucky, spend a larger percentage of our per capita income on education than do our neighboring States, Ohio and Indiana. Yet Ohio and Indiana, because of far greater per capita income are able to spend twice as much per child per year. This is causing a very serious teacher problem in Kentucky and other low-income States. My bill corrects this inequality through Federal aid to the low-income States. Under its terms, the States are obligated to meet certain financial requirements in order to qualify for Federal aid. The bill does not permit the States to rescind any funds now being spent for education. Federal aid is a supplement to the present State programs. Furthermore, this bill completely safeguards State control of the educational system. Its passage will permit higher salaries for teachers and greater educational opportunity for the children of the low-income States.

My bill will be referred to the House Committee on Education and Labor. After 3 months of untiring efforts on the part of the members of that committee, a bill was yesterday brought to the floor dealing with the complicated problems in the field of labor. It is my hope that the committee can now turn its efforts to equally important problems in the field of education. In Kentucky and other low-income States, we are face to face with a grave and serious crisis.

Address by Hon. Alexander Wiley, of Wisconsin, Before Wisconsin Manufacturers Association

---

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 17 (legislative day of Monday, March 24), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of an address which I delivered on Tuesday, April 15, before the Wisconsin Manufacturers Association in Milwaukee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

How Congress Is Meeting Its Challenges

Mr. Chairman, friends of the Wisconsin Manufacturers Association, at the outset, I want to express my appreciation for the opportunity to address this distinguished assemblage—this assemblage of builders, sustainers. It is like a homecoming to me after the strenuous life of Washington.

EXPRESSION OF APPRECIATION

Yes, I am grateful to the manufacturers of Wisconsin for the privilege of addressing you. My sense of appreciation, too, is deep and thorough for the loyalty and support that I have received from the people in Wisconsin as expressed in person and by letters. That, as you realize, is the real compensation which a public official receives. In a very real spirit of humility, I can only say that I shall strive constantly to merit that continued confidence.

(a) I am particularly grateful to folks in the State who have written me endorsing policies which I have established as chairman of the Senate Judiciary Committee. The response was most gratifying, for example, after the Judiciary Committee initiated the practice of screening all judicial nominations through the State bar associations. So, too, there was generous endorsement after I urged that FBI confidential reports be made on judicial nominations in an effort to insure the highest possible caliber of judicial appointees.

(b) I am grateful also for the appreciation shown in the mail for my efforts in endeavoring to reestablish the Great Lakes package freight. The problem of freight rates for our area is another problem which will require increasing scrutiny. Increasing coastal competition renders imperative a thorough study of the entire midwestern freight-rate problem.

(c) I am grateful also for the letters that have come from members of your group in the past few weeks with reference to efforts in Washington to secure a centennial coin commemorating the admission of our State into the Union next year. Your own Joe Heil has spearheaded this effort because, like most good businessmen, he believes that it should be possible to finance a State-wide celebration of this character on a business-like basis. Your group is, of course, peculiarly a part of any observance of a century of achievement in Wisconsin, and consequently has a very proper interest in the centennial.

(d) I am grateful also for the fine efforts that the manufacturers of this State have put forth not only throughout the war effort, but especially in getting postwar production and in getting veterans back on the job despite many pressing problems.

(e) I want to express my gratitude also for the support which the folks back home here have given to the congressional efforts to eliminate the grave economic menace of the $6,000,000,000 flood tide of so-called portal-to-portal pay suits.

(f) I am grateful for the support back home of congressional efforts to limit Presidential tenure.

Yes; there is much for which I am deeply grateful to you.

OUR APPROACH TONIGHT

In preparing my remarks, I have sought to place myself in your position and to bring to you information that I believe Wisconsin industrialists are interested in securing.

My information cannot be complete. In a sense it will be only cursory and some of it conjectural because it involves evaluating the future and because all of your legislative programs are concerned with human elements—men with different political views, different social outlooks, different education, different religious, economic, geographic backgrounds, and with different emotional reactions. All of this means that in our democratic system, it is impossible to foretell the outcome of legislation with any degree of certainty.

In seeking to penetrate our tomorrows, it is well for us to simplify our thinking, cast out fear and doubt, so that we can make an honest, objective appraisal, free from bias or prejudice or bigotry.

Part I. The challenging world of 1947

While we have been living in a period of tremendous change and challenge (and this is always the case after the world has gone on a war jag), this particular period is more dynamic than ever. Because of human invention and ingenuity, the world has been contracted, time and space eliminated, and we find ourselves neighbors to every other nation.

Businessmen in Wisconsin are interested in the foreign situation. The reason is apparent to us all. In one generation wars in Europe have precipitated us into two world conflicts. This foreign situation calls particularly for calm evaluation of the known factors. What are these factors? They are:

(a) America is sound at the core, with no depletion of her basic strength except in some of her vital materials.

(b) The United Nations organization is struggling for expression and vitality.

(c) A great hope abides in the common people of earth that not only the international peace mechanism may be perfected, but that the will of the nations will become dynamic to effectuate world peace.

(d) There are but two big powers on earth—America and Russia—with all nations still battered by the shock of war.

United States-Russian Conflict

(e) America is in opposition to Russian policy in Germany, in Greece, Turkey, and Korea, in fact, everywhere in the world, due, in turn, to three conditions:

1. A broad difference in political, religious, and economic ideology. Russia minimizing the individual and maximizing the state; America struggling to maintain and perfect the democratic way of life.

2. Russia not only desiring to extend her ideological influence, but to extend her territorial borders.

3. America awakening now to the need of seeing that natural resources, such as oil and minerals, will remain in sufficient supply.

Because of the contracted nature of the earth, our conflict (ordinarily called peaceful) requires to a certain degree the same weapons that we used in South America during the war. Our investment in dollars there kept Hitler out of South America. Our investment and our definite stand, we hope, will stop the Russian Bear from taking over all of Europe and the Near East.

Challenge to America

This is a quick analysis of our foreign policy. This much is certain. Somewhere up ahead, the world is still confronting a global Armageddon. The character and the extent of that Armageddon will to a large degree be determined by the kind of thinking and the kind of leadership which America brings to the immediate crucial problems in the field of foreign policy.

Part II. Our domestic policy

Now, what about our policies here at home? I do not propose this evening to attempt an analysis of the political situation. I do, however, believe that it is desirable to make a few comments on the sentiment throughout the country—because, of course, that sentiment very properly influences Congress.

Rise of Executive Popularity

It seems to be very evident at the present time that the Chief Executive and the administration, according to the latest polls, are gaining in strength. I hope that I will never become so partisan that I cannot join with all right-thinking Americans in being grateful for every evidence of increasing con-

fidence in Government—be it executive, legislative, or judicial.

Unfortunately, it is also apparent, however, that at the present time there is a definite decline in the confidence of some people in Congress.

I believe this is extremely unfortunate, for several reasons:

(A) In our system of government it is absolutely imperative for Congress to retain its legitimate stature and strength as the voice of the people.

(B) A dwindling respect for Congress is usually accompanied by an aggrandizement of Executive power.

Now, just what is the basis for criticism of Congress at the present time—and how valid is this basis?

Smear Propaganda Against GOP Leaders

(a) First of all, I believe some folks back home have been sold a false bill of goods by certain New Deal newspaper scribes. These few newsmen have supped so long at the New Deal table in Washington that their outlook and objectivity have been stunted. Accordingly, the New Deal columnists have attempted to smear the Eightieth Republican Congress.

Their efforts echo the unfair charges made by a few of my Democratic colleagues to the effect that every one of the 51 Republican Senators is an active Presidential or vice-presidential candidate, interested only in the outcome of 1948. I say there is no justification for that charge.

To be sure, there are numerous men in the Senate of outstanding caliber, but not one of them, I believe, wants to or will sacrifice the team success of the Eightieth Congress in order to realize personal ambitions. This is as it should be.

Congress must work as a team insofar as possible. There is no time for idle speculation about 1948. That is the sentiment of the Republican leadership in Congress, New Deal newsmen to the contrary.

I want to make it absolutely clear that I have the highest respect for the American press as a whole and for the able corps of Washington correspondents generally. But there are some among them, I regret, who have been infected with New Deal views.

Small GOP Margin of Power

(b) Next, let us observe that Republican control of the Congress is not as unchallenged as it is assumed to be. The margin of GOP strength is small in the Senate; 51 Republicans to 45 Democrats. In the House, there is a larger margin, 246 Republicans to 188 Democrats and 1 American Labor Party.

Let us remember, too, that not only is the GOP margin, particularly in the Senate, not numerically strong, but it has been out of power for 14 years. This is not an excuse for Republican "errors" or alleged slowness. It is simply a statement of fact. As I will point out, no apology is needed for the Republican record to date.

Let us remember that the seven Congresses preceding the Eightieth Congress, beginning with the Seventy-third Congress in 1933, were all Congresses where legislative speed was a relatively simple matter because there was an effective, well-organized, articulate majority. That tremendous legislative machine which began in the Seventy-third Congress steamrollered on almost without an interruption until 1937 when the court-packing bill came up and was defeated.

Then, for the first time, the machine slowed down, and in 1937, 1938, and into a part of 1939, the Seventy-fifth and Seventy-sixth Congresses started a return to orderly legislation as differentiated from the hurried "must" or "crisis" legislation which began in the Seventy-third Congress. In 1939, World War II forced a return to a more rapid legislative program. Basically, the last 14 years have been an era of speedy legislation, when Congress ran a $20,000,000,000 debt up to $260,000,000,000.

Reported Dissension in Congress

(c) Some of the public appears to be getting fed up with what looks like bickering and wrangling and dissension in Congress—yes, in the Republican Congress.

This criticism I do not feel is a valid one. I do feel that there is a certain amount of regrettable lost motion, a certain amount of emotional high tension which is unwarranted and unnecessary and thoroughly undesirable. It is not, however, a major legislative stumbling block. In many respects it is, in fact evidence of independent thinking.

I hold no brief for an intemperate individual legislative approach, but it cannot be denied that out of the crossfire of many personalities and many backgrounds and many approaches, there usually emerges a kind of legislation which to a large degree is representative of the best in American thinking.

Here again it is imperative for us to bear in mind that in the kind of a government we know and love, there is no dictator or legislative "boss." There isn't any one man on the Republican side of the aisle, for example, who can stifle vigorous and forthright opinions even from his own party members—and that is perhaps as it should be.

Reported Lack of Accomplishments

(d) It appears that the folks back home feel that Congress is not getting the job done quickly enough.

There is a limited amount of truth in this. Folks back home want to see an end to war controls, want to see adequate labor legislation, want to see bureaucracy slashed, want to see taxes cut, and want to see business back firmly on its feet. All of these things haven't been accomplished and so to that extent it is true. On the other hand, let us consider these significant facts:

Substantial Achievements

1. In the first 30 days of this session of the Eightieth Congress, this Congress accomplished the first major political policy revision in a decade and one-half—and that was a stupendous job.

2. In the first 30 days of this Congress, Congress accomplished the first major procedural and mechanical revision of its machinery in 150 years. This was a stupendous job as every industrialist knows who has ever attempted to reconvert or retool his plant in a period of 30 days.

In other words, these two jobs had to be done before any legislative program could be effectively undertaken.

3. Congress has passed legislation which would, if finally enacted into law, eliminate the tremendous economic threat inherent in the so-called portal-to-portal pay suits. I am happy to report that it was the Senate Judiciary Committee which wrote the legislation along with its companion committee in the House.

4. The Congress passed the first decontrol act of 1947 which seeks to delimit and define war time and emergency controls. I am proud to report that here again, this bill emerged from the Judiciary Committee of the Senate.

5. The Congress has also passed a resolution which would limit Presidential tenure for the future. This resolution likewise originated in the Judiciary Committee. Already, this constitutional amendment has been ratified in several States including our own. When it is ratified, we hope that never again will we be confronted by a 14-year reign with some results so damaging that they cannot be repaired except after a long period of time.

Labor Reform

6. At the present time far-reaching, consequential labor legislation—long overdue—is emerging from the congressional committees for consideration by Congress.

Through this legislation, I trust that we will be adequately curbing the racketeer element of labor. The labor bill will be passed, not with the idea of jeopardizing the rights of the public or of labor or of management, but of preserving them. As you know, I am not a member of the Senate Labor and Public Welfare Committee, which has gone thoroughly into this subject. But I recognize, as do the committee members, that on vital matters such as this, it is well to remember the old German proverb "Eile Mit Weile"—make haste slowly.

In this matter, as in all others, the public interest is paramount.

Tax and Budget Reduction

7. We have made substantial progress along the line of income-tax reduction. This progress has been delayed somewhat by the unsettled foreign conditions.

But I believe that tax reduction can be effectuated while making adequate payments on our staggering debt. The additional consumer and corporation income for spending, resulting from tax reduction, should help antidote those malicious influences that would like to plunge us into a depression.

8. Progress, as you know, has also been made along the line of budget reduction from the President's $37,500,000,000 figure.

We are cutting appropriations for certain Government departments which have ballooned in size during the New Deal administration. There may be someone hurt, but it is the only way that the thing can be done because there is a disease in Washington known as "political fungus." The legislative branch is going ahead to eradicate the fungus without injuring the tree itself.

Exposure of Reds

9. Thanks to Republican pressure, the executive branch is at last getting under way to purge Communists from the agencies through an Executive loyalty order, a mere 14 years overdue. Simultaneously, Red subversive is being pitilessly exposed in congressional committees.

I need hardly tell you gentlemen of the terrific damage that the disciplined Red minority can do in unions and elsewhere. Fortunately, we in America are becoming more realistic in relation to curbing the termite process of borers from within. That doesn't mean that we are going to limit freedom of the press and of speech.

It does mean, however, that we are conscious of the value of possessing American citizenship. Throughout the world, everywhere beyond our borders, the inhabitants of other countries wish that they were citizens of this great Nation. Countless numbers would seek homes here. Yet there are those within America who would destroy this thing we call American freedom, the American way of life.

We say, therefore, that if there are those in this Nation who are so dissatisfied with our form of government, that they owe allegiance to another government, and yet claim to be citizens of this great country, let us remove the right of citizenship from them and let them go to this other government. That is where they belong.

World Trade

10. Speaking of the foreign picture, hearings have been held in committee on our future world-trade program and on the international trade organization.

We must, of course, proceed slowly and carefully so that we do not damage the greatest market in the world for you producers. I refer to America. That does not mean that we are going to build needlessly high tariff barriers. As you know, there is too much "baloney" talk about that subject; too many generalities.

For months now the dollar value of United States exports has been, roughly, twice that of her imports. If the present trend continues, the United States, at the end of each

year, will have built up a total credit of over $7,000,000,000. Foreign countries cannot continue to run into debt at such a rate, and it is true that the United States cannot afford to lose the export trade. Therefore, there must be an honest effort made to reverse the present trend. Travel by our citizens in foreign countries would help, and, of course, contributions that we are making also tend to balance the situation. Our difficulties today are infinitely greater than after the First World War. Then, we looked toward an era of peace and plenty. Now, because of the Russian situation, we know not what we look at.

We expect a national income of $160,000,000,000. Yet, bear in mind that our total exports last year, including goods purchased with the money we furnished, didn't go over $10,000,000,000. We thus see that we must be sure that we don't kill the goose—our own market—that lays the golden egg in looking for the much smaller eggs of the distant geese.

America is in world affairs up to her ears, and I think to stay. We have taken trusteeship of the isles of the Pacific. We are helping the democratic nations of Europe with our loans and with our food and with our clothing.

We are the blessed nation of earth, and in a sense we are giving, giving, giving, and probably we are reaping from that great law, "it is more blessed to give than receive," the benefits that we do have—peace, our industries and homes intact.

But in this giving process now, we have to become still more realistic. Was it not Paul who said, "If any provide not for his own—is worse than the infidel." The time has come now that our gifts must be disassociated from our business enterprises. Those who handle our money in the International Bank and in the Export-Import Bank must not indulge in giving too much because giving weakens the receiver as well as the giver.

We must see that there is a quid pro quo when we do business. Now I believe that this idea is becoming more and more apparent in Congress and in Washington.

OVER-ALL OUTLOOK FOR CONGRESS

I have briefly reviewed 10 phases of congressional achievements. All of these actions have been taken thus far with a view toward making a stronger, safer, sounder America in this threatening atomic age—an America with modern military defense, economic and political defense.

I submit that while there may be ample reason for us to be concerned with what appears to be undue delay—the record of the Eightieth Congress thus far has by no stretch of the imagination been a bad record. There is every evidence that before the Eightieth Congress adjourns, it will have made good on its promises, so good that the Eightieth Congress will be considered as one of the most outstanding Congresses in American history—provided certain obstructionist tactics in the Congress by a small handful of men can be curbed.

Part III. What America needs

What does America need now, gentlemen? I submit she needs these things:

1. All-out production that will meet head-on the challenge of inflation. Production of the character of which I speak will cut costs and make prices more equitable.

2. Management-labor harmony: That is a job for all of us, not simply management and labor, but the public, which has such a great stake in the same.

3. Pro-American program on the labor front: Under this program, neither labor nor management, nor any other segment, will be made a privileged segment, with rights superior to those of any other segment. I have said many times that this job should be the job primarily of labor and management themselves. Each segment should police its own house and see that the racketeers—those who want to play the game only according to their own rules and not according to the rules of their country—that the racketeers are done away with.

We have seen that charges of racketeering have been applied of late to those in labor, but we cannot forget that in the past and even in the present, vicious greed exemplified through a few men, sometimes creates racketeers in management and capital. Monopoly, except in cases where the Government gives sanction thereto, may become racketeering in its function. We don't want a racketeering labor monopoly or any other type of monopoly.

4. A return to principles which made America great—work, thrift, and faith in God and man. To accomplish this, the drift to statism must be reversed.

5. Utilization of our inventive genius: We must see to it that the profit motive is maintained. It is an incentive for the expression of the American genius. Because this Second World War has drained us of so much of our strategic materials, it is necessary that the genius of men get into action and by the utilization of this genius and perhaps through the new atomic energy, we may bring about the dream of the alchemist. In fact, we are doing that right now in our alloys and our plastics, in our creation of new materials.

These are some of America's basic needs today as I see them.

Part IV. Conclusion

Wisconsin's Achievements

Gentlemen, in conclusion, may I say that we in our land have been singularly blessed, and we in Wisconsin have been particularly blessed. We can recall that in the opening days of the 1930's, the shock of the depression was cushioned here in Milwaukee by the variety of our industries. We can recall that in 1930, Milwaukee was still producing at the rate of $1,200 annually for each of its 578,000 residents, a higher rate than in any other American city. Throughout the Nation, it became known that Milwaukee was an island of prosperity in a national sea of depression, although ultimately, Milwaukee, too, was inundated.

I can think of few places in all America which afford as graphic an illustration of American achievement, American initiative, and American industry as Wisconsin.

In the span of a single century we in Wisconsin and here in Milwaukee have seen mighty industries grow from small, humble beginnings. We have seen them thrive on the solid, old-fashioned virtues of thrift and diligence. We have seen them grow to greatness, because this was a land where economic opportunity was never denied to industrious men who sought to build and to achieve.

Basically, gentlemen, all of the problems which confront our land can perhaps be reduced to this single fact: Our every effort must be dedicated to preserving the framework within which such achievement is possible.

If we can preserve a vigorous, growing economy, if we can provide an economic climate favorable to the growth of industry and business, if we can preserve the great American freedoms, the great American values, then we may be confident that labor and management, and what is more important than either—the general public—can continue to build. Yes, it can then build so virile and so vital a democracy here at home that our example and our influence can serve as a powerful force in establishing world order out of international chaos.

Congress, I am sure, will meet its challenges, as will all America.

Labor Legislation

EXTENSION OF REMARKS
OF

HON. EDWARD G. ROHRBOUGH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. ROHRBOUGH. Mr. Speaker, under leave to extend my remarks, I include herewith the following letter setting forth a series of recommendations made by the board of directors of the Charleston (W. Va.) Chamber of Commerce, concerning labor legislation:

CHARLESTON CHAMBER OF COMMERCE,
Charleston, W. Va., April 3, 1947.

Hon. E. G. ROHRBOUGH,
Member of Congress,
Third West Virginia District,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN ROHRBOUGH: Congress will shortly be called upon to consider new legislation, or amendments to existing legislation, dealing with employer-employee relations.

The board of directors of the Charleston Chamber of Commerce considers it appropriate that West Virginia representatives in Congress should have some expression on this subject from the organization representing business and industry of the great Kanawha Valley, an area which includes more than one-eighth of West Virginia's population and from one-fifth to one-sixth of all its business, industry, and employment.

These viewpoints have not been formulated in a punitive attitude toward organized labor. On the contrary, the board members believe that no labor organization, whose members have affiliated with it freely and voluntarily, and who control their union and its policies through democratic processes, has anything to fear from the legislative changes recommended here.

The board of directors of the Charleston chamber recommends the following seven legislative steps which it believes to constitute a sound governmental program designed to maintain a proper balance in employer-employee relationships:

1. PROHIBITION, BY LAW, OF THE CLOSED-SHOP CONTRACT

The closed-shop contract was devised and formerly used by labor leaders as a bargaining instrument with which to win, hold, and strengthen the right of employees to organize and bargain collectively. They wrested this concession from employers at a time when the right to organize and bargain collectively was not established by law.

Today the Wagner Act has established this right at law for every industrial employee in commerce. The law likewise protects this right against the caprice of an employer.

In consequence, what necessity or justification is there for a continuation of the closed shop by contract? It affords the employee no protection from his employer that is not now provided by law.

Instead, it gives the union a protection against the desire of an employee not to join, or to withdraw after he has joined—an unintended benefit to which the union is not entitled, now that it is fully sheltered and protected in its existence by law.

Why should Government permit a labor organization, or any other organization, to maintain its membership through a monopoly over employment? Why should not every union, now that its existence is fully protected by law, be required to maintain its membership on its merits as an organization?

Why should any union be permitted, by a closed shop contract, to exercise monopolistic control over the employment in any establishment when a mere majority of the employees are, by law, sufficient to win exclusive bargaining rights for that union?

To ask all these questions is to answer them.

Abolition of the closed-shop contract does not necessarily mean the end of the union shop. If all employees, attracted by the accomplishments, benefits, and opportunities of union membership, voluntarily join the union, a closed shop naturally follows.

But it is not one closed by contract. This latter is a vastly different status under which an employer is unable to employ the most competent person if he is not a union member, and, more importantly, no person may obtain employment unless he joins the union.

All the abuses of monopoly are inherent in a closed shop contract. It is violative of that individual freedom of action which every American citizen likes to think he possesses and which even the Wagner Act is supposed to guarantee. The protected right to join a union carries with it, by implication (and should carry with it by specific wording), the equal right and privilege to refrain from so doing without prejudice to employment opportunities. The closed shop contract makes this impossible.

Now that Congress has fully protected, by law, the existence of labor organizations, it is equally as obligated to protect the opportunity of every American citizen to be gainfully employed where and as his abilities qualify him for such employment.

This is fundamental. Yet the closed shop contract sharply curtails this opportunity for our citizens unless they will subject themselves to the monopoly over employment which government permits unions to impose. Discriminations against employees on account of race and color are fostered and protected under the closed shop contract. Prohibition, by law, of the closed shop contract would do more to establish free employment opportunities for all our citizens than all the FEPC bills and other devices so far proposed.

2. PROHIBITION, BY LAW, OF SECONDARY BOYCOTTS

This practice is so repugnant to fair play and is so universally criticized by press and public as to require no comment here. It penalizes innocent employers and workers and is another illustration of the extent to which labor leaders, insensitive of their responsibilities to the cause of labor, and to the public generally, will abuse a monopolistic control of the labor supply if permitted to do so. The secondary boycott can be, and has, in fact, been used to obstruct and to stop the free flow of commerce between the States.

3. A BROADER DEFINITION OF THE TERM "LABOR DISPUTE" IN THE NORRIS-LA GUARDIA ACT, SO AS NOT TO PREVENT THE USE OF INJUNCTIVE RELIEF IN ANY GIVEN SET OF CIRCUMSTANCES WHICH ARE NOT STRICTLY A PART OF ANY LABOR DISPUTE

This refers to instances of secondary boycott where employers and their services have been innocently victimized and persecuted because of labor disputes in which neither they nor their employees are directly involved.

There have been instances here, in the Kanawha Valley, in which organized labor has attempted, through its unions, to prevent goods and services from being handled by common and contract carriers to persons in business whose employees either were not organized at all or were not organized in a manner agreeable to the union attempting to impose such a penalty. This is an intolerable invasion of private rights and a bold subordination of the public interest. These injured in this manner are entitled to every possible form of relief under the law.

4. AMENDMENT OF THE WAGNER ACT SO AS TO DEFINE UNFAIR PRACTICES BY EMPLOYEES IN THE SAME MANNER AS THOSE BY EMPLOYERS ARE NOW DEFINED, AND TO IMPOSE UPON EMPLOYEE ORGANIZATIONS LIABILITY FOR THEIR ACTS AND UPON THEIR CONTRACTS, IN THE SAME MANNER AND TO THE SAME DEGREE, IN EVERY RESPECT, THAT THE LAW NOW IMPOSES THESE RESPONSIBILITIES UPON AN EMPLOYER

The fairness of this advocacy need no argument to support it nor any citation of abuses over the past decade to prove its need. This statutory deficiency has been a primary source of injustice to employers throughout a decade of legislative and administrative unbalance in the governmental treatment of employer-employee relations.

5. PROHIBITION, BY LAW, OF THE ORGANIZATION OF SUPERVISORY EMPLOYEES

It is the unanimous viewpoint of our board members that the attempt to organize supervisory employees, in the same manner and for the same purposes that other employees may be organized, violates a fundamental tenet of a successful business and industrial operation. Supervisory employees must, if they are to do their jobs efficiently and properly, be a part of management, and therefore cannot be a part of employees' organizations.

6. PROHIBITION, BY LAW, OF THE RIGHT TO STRIKE IN ALL EMPLOYMENT WHERE THE PUBLIC INTEREST IS OVERWHELMINGLY PARAMOUNT

This would include governmental and all those public utilities and services upon which the health and safety of the public depend.

7. PROHIBITION, BY LAW, OF INDUSTRY-WIDE COLLECTIVE BARGAINING

Wide variation in the cost of the same industrial and commercial processes over the national area, or even any substantial part of it, obviously causes an industry-wide labor contract, with its uniform wage scales and other terms affecting production costs, to penalize unfairly and severely many employers and the communities in which their industries are located.

Jefferson Day Address of Gov. Robert S. Kerr, of Oklahoma

EXTENSION OF REMARKS
OF
HON. ORVILLE ZIMMERMAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. ZIMMERMAN. Mr. Speaker, on the evening of April 12, 1947, more than a thousand Democrats of the Tenth Congressional District of Missouri—southeast Missouri—met at Sikeston, Mo., to do honor to the founder of our party, Thomas Jefferson. The dinner was attended by many distinguished Democrats from out State, including practically all of our State officials. Gov. Robert S. Kerr, of Oklahoma, was the guest speaker on this occasion and delivered a splendid address on the life and philosophy of Thomas Jefferson.

Under leave granted, I am inserting as a part of my remarks a copy of the address delivered by Governor Kerr, which is as follows:

Good friends and fellow Democrats of the great State of Missouri, it is a pleasure to visit a State whose people have contributed so much to the development of their own area, and to the Nation.

I am happy to be in the State where my father was born and grew to manhood.

I am happy to be in the State that has produced so many distinguished men and women.

I am happy to be in the State that has given my country and the world our most distinguished leader, President Harry S. Truman.

I am proud to be with you on this Jefferson Day occasion. As we think of its significance we are reminded of the last words of the great John Adams when he said, "Jefferson still lives."

In these words Adams found comfort, and through them he expressed undying hope as his immortal spirit released itself from the exhausted physical body that could no longer continue the unequal struggle to contain that spirit.

Even as the words were spoken the physical Jefferson was dead, but the spiritual Jefferson was vitally and tremendously alive.

"Thomas Jefferson still lives" was spoken as a present fact. The words still live as a prophetic truth and a truthful prophecy.

There were many personalities in one in the tall master of Monticello, sage, philosopher, architect, inventor, scientist, and statesman. For each of these he is justly famous. But his inviolate claim to immortality and the affection of all mankind springs from the fact that he, more than any other, symbolized, vitalized, and declared the precept and spirit of equality, liberty, and justice.

"We hold these truths to be self-evident; that all men are created equal; that they are endowed by their Creator with certain inalienable rights; among these are life, liberty, and the pursuit of happiness."

In these vivid phrases are contained a glowing picture of all men's hopes: Before Jefferson was, while he lived, today, tomorrow, and for all time.

"All men are created equal."

As much as Jefferson loved Virginia, and no man ever held a greater love for the soil from which he grew, he did not limit this concept to Virginians.

As much as he loved his own race, these words were not spoken of it nor of any limited portion of humanity. They were spoken of all men.

To better understand the impact of these words we must remember that when they were spoken by Jefferson there was not a nation of free people on the earth. He was then a British subject without full rights either of individual citizenship, or representation in the Government that exercised dominion over his person and his property.

Without being completely free himself, he was owner and master of others who were his slaves and he did not even have the power to give them that portion of freedom which he enjoyed.

He knew that human happiness and human freedom could not exist until humanity recognized and honored the eternal principle that "all men are created equal."

And yet, his declaration was so revolutionary that it was nearly 87 years afterward before Lincoln issued the proclamation emancipating native-born Americans from the bondage of slavery.

His declaration was so revolutionary that today, 171 years later, it is still in advance of the basic laws of any nation on the earth, including our own.

It is so revolutionary that at this good hour it is nearly as much a declaration of our

purposes yet to be achieved as a history of our accomplishments or a description of our status.

Thomas Jefferson still lives.

He developed a crusade for democracy into a reality of human rights. He caused human rights to ripen into human privileges.

We recognize that the struggle for equality among men started in the earliest dawn of the history of the human race, but we realize that it was the brilliant flashing mind, the burning words, and the flaming personality of Jefferson that gave the struggle its greatest impetus, and that is today its greatest inspiration.

He was inspired by a vision which he used as a light for the people's feet and a guide for their progress.

Nature knows no other force as powerful as the undying hope in the human heart for equality of opportunity and privilege.

By what he said and did Thomas Jefferson gave that hope the greatest encouragement it had ever known.

He feared and fought the centralization of power over human beings, whether that power emanated from government, wealth, or monopoly. He knew the danger was caused by the "power," regardless of the source from which it sprung, or the agency that wielded it.

He knew that citizens and wealth alike must be protected against excessive restriction by, and encroachment from, government. He was just as certain that government must be protected against the encroachment and power of wealth or of the citizen or group of citizens who possess it.

He declared the necessity of security for many freedoms—"freedom of religion, freedom of press, freedom from monopoly, freedom from unlawful imprisonment, and freedom from a permanent military."

He knew that monopoly is just as deadly an enemy of the people as tyranny, and that economic bondage is as intolerable as physical slavery.

He knew there could be no liberty without equality, nor equality without liberty, nor abiding peace without either.

But the United States of America is what it is because of the truth of his declaration and the declaration is truly proven by what America is.

We are of all nations, races, and creeds. We have been the melting pot of the world. It is here that the east and west have met. Here are the peasants from the Balkans; the happy, singing people of Bavaria; the dark-eyed Latins from Italy and Spain and southern France; the clear blue-eyed Anglo-Saxons; the rosy-cheeked and smiling-eyed people from Erin; the highlanders and the lowlanders from the hills and dales of Scotland; the tall Scandinavian; the powerful Cossack from the Steppes of Russia. They have come from around the world; from our neighboring lands across the Rio Grande and below the Isthmus; the black man from the Congo and the Sudan; the meditative and thoughtful orientals; the stalwart men from the north. The red man was here for thousands of years before Leif Ericson came, and is still a component part of our people. And all of us are a part of each other, and each of us is a part of the strongest, and certainly to us, the most blessed nation on the earth.

Each citizen has his own hopes, aims, ideals, and ambitions. Each has his individual personality, liberty, and freedom. But the greatest privilege and the greatest security of each is in the collective strength and power of all.

As I think of the United States, I am reminded of your great mountain forests. Many kinds and sizes of trees are there. Each has its own individual body and in the forest stands apart from all others. But deep-bedded in the soil the roots of all are mingled together, at the same time drawing sustenance from the earth and from the cohesive elements which hold them together, while above all, the boughs and leaves are mingled in a symphony of shades and colors, partaking of, sustained by, and reflecting the elements and the glory of the sun.

Americans—all Americans—strengthened individually in the rich soil of equality, and the sunshine of liberty and freedom, have united their vigor and power into one mighty continuing thunderbolt of strength for the security and safety of all.

We have not achieved perfection—far from it—but we have come a long way. The progress we have made is a warm and shining light in a world of cold shadows and fearsome darkness.

In the years past we have seen the Republican Party earn the right to be known as the Do-Nothing Party. They did nothing in the late twenties to stop the wild speculation that increased and expanded until it exploded into the economic collapse of 1929.

They did nothing about poverty and depression that followed inevitably in the wake of that explosion.

They did nothing in the danger-ridden days before Pearl Harbor to prepare our Nation against war.

They did nothing after the war to prevent inflation or hold in check the rising tide of excess cost of living to the average man and woman.

They did nothing to help make it possible to secure adequate housing by our veterans and for the rank and file of our people.

In the general campaign last year the Republican leaders made so many promises to provide so many benefits at so little cost to so many people that the voters elected a Republican majority in both Houses of the National Congress.

They have now been in session nearly 3½ months. Where is their performance?

Now, I would not say that they have done entirely nothing—that would be unfair. They had not been in session more than 2½ months until they had driven through both Houses and sent to the President a bill to change the name of Boulder Dam to Hoover Dam.

In the general election last fall the Republican leaders and a coalition of special interests convinced enough people that price control should have been abandoned sooner, to make the difference between a Republican and a Democratic victory in the November election.

They told the people that the elimination of price controls, after a short period for adjustment, would bring about prices below OPA levels. Republican leaders and manufacturers told the people that controls reduced production and created shortages. "Get rid of these restrictions," they said, "and rising production would soon bring prices down to a reasonable level."

"Give us a free market," they shouted, "and increased production and competition will check all rising price spirals."

The cold record of events from that time until now has proven conclusively that these Republican leaders either did not know anything about what they were saying or did not care, or worse.

The cost of living has steadily mounted for the past 10 months. Today, the general prive level stands at the highest peak we have ever known. Of course, the Republican Congress, now in session nearly 3½ months, is just as aware of these facts as you and I, but they have done nothing to correct them.

I know the American housewife—all of them—are thrilled and encouraged and comforted by the fact that the Republican Congress has changed the name of Boulder Dam to Hoover Dam, but I doubt if this knowledge can offset the 50-percent increase in the family budget for food.

I am sure that the GI's and their families, who cannot find a place to live at any price, are deeply gratified that the Republican Congress has changed the name of Boulder Dam to Hoover Dam.

But I sincerely doubt if those who voted for Republican Congressmen and Senators last November will soon, if ever, repeat their blunder.

The Republicans have been weighed on the scales and have been found wanting. Their old men live in the shadows of the past; their young men live in the shadows of their old men. They spend too little time thinking of the victory they won last November and its resulting responsibilities. They spend too much time thinking of the victory they hope to win a year from next November.

I say the people have given too much responsibility to men of too little realization of what their obligations are. They remind me of the story of the all-woman jury I once heard. For the first time in the history of a Federal court in a western State, an all-woman jury had been selected. They listened attentively to the trial of the case, the instructions from the judge, and the argument of counsel. They retired to consider their verdict.

As evening came on, they were called before the judge, who inquired if a verdict had been found. When they answered "No," he excused them until the following morning. At that time they returned and remained in the jury room throughout the day. Again that evening they reported: "No verdict." Again they were excused and returned the following morning. Late in the afternoon of the third day the judge called them in. "Have you reached a verdict?" he asked. "No," they replied. "Did you understand the evidence?" he asked. "Oh, yes. Quite well," they said. "Were my instructions clear?" he asked. "Yes. They were quite complete and simple," they told him. "It is not too complicated a case," the judge remarked. "When do you suppose you can bring in a verdict?" The women looked at each other. Finally, one turned to the judge and said: "Your Honor, we have not yet had time to consider the verdict." The judge, quite surprised but still courtcous, asked: "Would you mind telling me what you have been doing?" "Oh, yes. I will be glad to," the lady replied. "You see, we have been trying to elect a foreman."

There are so many candidates for the Republican Presidential nomination in 1948 that they will have to call their national convention at least a week ahead of the regular time in order to eliminate enough of the Presidential candidates to where there won't be more than one to each of the 48 States.

If they only knew how little difference it makes who their nominee is, they might not call it, for you and I know that the next President of the United States will be none other than Missouri's most distinguished son, Harry S. Truman.

Many Republican leaders do not know how much ground they have lost since last November, but some of them do. A few weeks ago the Republican national chairman, Carroll Reece, attempted to eliminate any thinking or planning by the rank and file of his party's membership in Congress by declaring: "Team play is the first essential of success."

Republican Senator WAYNE MORSE, of Oregon, lashed back at him by declaring: "It is Reece's fallacious contention that unless a Republican Member of Congress follows the Republican leadership he does not engage in team play. A more brazen demand for reactionary control of the Republican Party has not been suggested by a Republican spokesman for many years."

MORSE declared that "the group of Republicans for whom Carroll Reece serves as chore boy do not represent the views of rank-and-file Republicans."

"It is Reece and the machine politicians for whom he speaks," MORSE continued, "who would have us vote a tax program that would

sell the national defense program short, that would sell the value of the American dollar short, that would sell our international obligations short, and that would sell a sound Republican program short."

Reece and the party machine, MORSE added, would "take us back to the depression-causing policies of the Republican Party of the 1920's."

About a month ago Senator HARLAND J. BUSHFIELD, Republican, of South Dakota, frankly admitted: "We (the Republicans in Congress) have failed in everything which we promised the voters." Maybe Senator BUSHFIELD did not know that his Republican colleagues in the Congress had finally succeeded in driving through legislation to change the name of Boulder Dam to Hoover Dam.

The day has passed when the voters of the most powerful, the largest, and the greatest Nation on the earth can safely trust the future destiny of that Nation to a political leadership or party whose only record and only program is "do nothing."

The time has passed when the voters of this Republic can entrust its future to men who either fail or refuse to do anything other than play partisan politics with the fundamental girders upon which the security, the prosperity, and safety and future of the Nation rests.

I think the facts clearly demonstrate that the Republican leadership is playing partisan politics with reference to the control of atomic energy. I think their action clearly demonstrates that they would jeopardize the peace of the world and the very existence of this Nation by either permitting the control of atomic energy to become vested in the hands of a few private citizens, or that they could actually place it there.

Atomic energy, if properly handled, will lead the world into its greatest era of peace and progress. If unintelligently handled, or mishandled, it could lead to the destruction of the world.

The Republican leadership has played partisan politics with the Nation's security. They actually sought to reduce appropriations to the armed forces to a point that would have crippled the Nation's military power at a time when this Nation, and this Nation alone, can maintain its own security and lead the free people of the world into a lasting and abiding peace.

Their No. 1 bill (H. R. 1) seeks to bring about a reduction of taxes on the basis of 20 percent across the board. This would mean that tax relief would be given to the smaller taxpayer in the terms of pennies, while many who have the largest incomes would be given relief in the terms of tens of thousands of dollars.

American business last year, after all taxes were paid, earned more than two and one-half times as much net profit as in any other peacetime year in our history. Their net earnings thus far this year are at a still higher level.

The great national debt we owe was in the main incurred to pay the cost of winning the most terrible of all wars. The time to reduce our debt is when we are prosperous—and certainly, we have never been more prosperous than we are today. Yet Republican leaders in the national Congress would reduce taxes instead of reducing the national debt.

The Democratic Party, however, cannot go forward on the basis of the failures of the Republican Party. We must go forward on the basis of our record, and the program we have for the people. We are proud, and we are grateful for the record we have made.

We have been the party of progress.

We have been the party of production.

We have been the party of preparedness.

We have been the party of prosperity.

We have been the party of peace.

We must be all of these to and for all of the people of this Nation—today and tomorrow.

We are in the most important era our Nation has ever known. We stand at the crossroads of destiny—our own destiny with reference to progress, preparedness, production, prosperity, and peace. The people want to plan and build as individuals and as a Nation. They want political leadership that is dedicated to planning and to building.

The Democratic Party offers such leadership. We have never been satisfied either by re-telling what has been done or agreeing merely to hold what has been gained.

What the people want and what we must provide are daring architects for the future. They want a program that will make tomorrow better than today—that represents the vision of those who believe in going forward. They want a plan conceived in courage and dedicated to progress.

Therein is our best opportunity and our greatest challenge. We must have the vision and the daring and the courage of youth with the wisdom that comes from long and successful experience, and with all of the strength arising from the concept of going forward to the uttermost reaches of human capacity.

I know we have served the welfare of the Nation. I know that we have made strong the foundation and the girders of the only nation that today can lead us and the world into a lasting peace.

I am not a pessimist as to the future. I cannot agree with those who say that civilization is having its last chance, because I have too much faith in the Providence, in the God who made us, and I have too much faith in the integrity, the aggressiveness, and courage of 140,000,000 people to believe that we are on the threshold of civilization's last opportunity.

But I do know this—that we face what could be the gravest dangers our Nation has ever known.

And I believe that the Democratic Party of this Nation, under the leadership of one of the most courageous and enlightened men we have ever had in the White House, Harry S. Truman, has the responsibility of fighting the good fight, the valiant fight, for the future security of this Nation and the peace of the world.

One time the Master, with His disciples, had fed and talked to the multitude throughout the day, and as the evening came on the multitude left and only He and the disciples remained. He turned to them and said: "Will ye not also go away?" And old Peter, the impetuous, said: "Master, if we leave Thee, to whom shall we go?"

I say to you: If America cannot provide leadership in this day and hour, in this crucial time in the history of the world; I say and ask you, if the free peoples of this world wishing to improve their individual position, their opportunities, and their security cannot look to the United States of America for leadership to build and keep an era of peace, "to whom shall they go?"

And if the rank and file of Americans cannot look to the Democratic Party in this Nation for that leadership, to whom shall they go?

We have the opportunity to do anything that we dare to do. We have the privilege of accomplishing what we are willing to plan and dedicate ourselves in service to achieve. We have the inherent wisdom in the rank and file in this party to know the truth with reference to our position in the hearts and minds of the American people. We have the courage to meet the challenge of that knowledge.

We know that our cause is just. We know that our purpose is right. We know the cold test of time has proven in performance the purposes and the achievements of this party.

Therefore it is up to us, united with intelligence, with daring, with wisdom, with vision and unfaltering courage to give the people a program of greater progress and continued prosperity and peace. A program that will maintain the security of the individual citizen in the ranks of the people, and our Nation in the ranks of the nations of the earth.

And you, the fine Democrats of Missouri, with all the others throughout the land, can breathe the breath of progress and breathe the breath of strength and daring and courage into an ever stronger Democratic Party.

Give us your vision. Give us your dedication to the accomplishment of the purposes of this great party, and you will have fulfilled the destiny of free men and women.

I congratulate you upon the work you have done and upon your determination to see to it that the people of America may have tomorrow as they had yesterday, the benefit of the leadership—the benefit of the help—the benefit of the program of the party of Jefferson, the party of Jackson, the party of Wilson, the party of Roosevelt, and the party of Truman.

Pending Labor Legislation

EXTENSION OF REMARKS

OF

HON. SAMUEL K. McCONNELL, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. McCONNELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Hon. EDWARD MARTIN, United States Senator from Pennsylvania, to a delegation of 100 representatives of Pennsylvania CIO unions in the Senate reception room, Thursday, April 17, 1947. The meeting was at the request of the CIO group to present their views on pending labor legislation and to seek Senator MARTIN'S support:

I appreciate very much this opportunity to meet with you representatives of the CIO. This meeting is so important that I have written out what I want to say.

I cannot tell you in detail how I shall vote on the various provisions of the new labor bills, but I do want you to know where I stand on certain principles because my vote in the Senate will be guided by those principles.

First, these are the things I am for:

Your right to organize.

Your right to bargain collectively.

Your right to strike—because a strike is free speech in action—unless the greater right, the health and safety of the people, is endangered.

While, as I have said, I recognize labor's right to strike to obtain relief from grievances, I am opposed to jurisdictional strikes, to sit-down strikes, and secondary boycotts.

I maintain that the obligation to live up to their contracts should rest equally upon labor organizations as it does upon management.

I believe the American workingman should be protected in his right to work freely at the job of his choice.

I believe the union member should have the right of secret ballot, without coercion from any source, when voting in elections or to decide other matters affecting his welfare.

I believe that the success of our whole national economy is dependent upon the friendly cooperation of labor, management, and agriculture. Government must be the impartial friend of each group. It must not favor one above the other. It must not favor one faction of labor, management, or agriculture above the others. If the pendulum swings too far to one side—then the Government must do as it has done many times in the past—step in to restore the balance.

The argument of the CIO to Congress appears to be: Let the Government keep out. We are satisfied with things as they are. That is because you have special advantages today.

When big business monopolies threatened to push little business into oblivion and disregarded the interest of the public, Congress passed antitrust legislation. Labor cheered for that. It wanted Congress to get into it. When management grabbed every advantage and pushed labor around, Congress stepped in with laws to protect the workingman. Labor had no objection to the Government's intervention at that time. You will remember how labor descended upon Washington to demand votes for those bills just as, today, it comes to Washington in droves to demand votes against any change in the existing law. But today the pendulum has swung too far in the other direction. Some union leaders are pushing the individual workers around, taking advantage of every quirk and twist in the laws that Congress passed to help workers. Some unions are backing business into a corner and jeopardizing its very existence. Congress certainly never intended that.

As CIO representatives you have talked to me frankly and I am talking just as frankly to you.

The Republican candidates last November were elected by overwhelming majorities. In a heavily industrialized State like Pennsylvania, Republican candidates could not have received those great majorities without the vote of hundreds of thousands of our fine workers in organized labor. This was an indication that the rank and file of labor wanted an end to industrial strife and expects this Congress to enact fair and just laws which will bring this about.

I have always opposed racketeers, whether they be in labor organizations, business or in government. In the 1946 campaign, one of the main issues was racketeering and communism in labor—yes, and I mean the Political Action Committee of the CIO. I want to repeat here to you what I said all over Pennsylvania during the campaign: "Get rid of your Communists and your racketeers. If you don't the Government is going to do it for you."

Just how strong the new labor laws will finally be depends upon how well labor cleans up its own houses. The CIO has not made too much progress to date. Some moves by your leaders toward sweeping out the reds and the racketeers have been almost entirely a gesture—nothing more.

Finally, I believe that there is no more important domestic issue today than the maintenance of industrial peace. I hope that more leaders of labor and business will learn to preach the doctrine of fair play and goodwill instead of hate and distrust. Organized labor, as a whole, has shown little disposition to meet these issues with fairness and in a spirit of cooperation. But you're not alone in that. Neither has management. On both sides there has been selfishness and ruthless disregard for the common good—the good of that great third party to every dispute—the general public. Each side has wanted everything for itself and nothing for the other fellow.

Since you have failed to get together under existing laws, resulting in great loss to all concerned, I believe it is the responsibility of Government, as the impartial friend of labor and management, to step in and referee this thing for the good of all of the people.

I want it understood that I am going to vote for new labor legislation. I will not support legislation intended to punish labor—that is not justice. I want laws which will correct the glaring bad spots that have developed under the National Labor Relations Act. I will vote for legislation which I believe will correct these and other abuses and will move the pendulum back toward dead center where the rights of all are protected and industrial peace maintained.

Aid to Our Senior Citizens Is a Duty

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. McDONOUGH. Mr. Speaker, the American people are known throughout the world for their generosity and their willingness to lend a helping hand to the unfortunate and needy in every foreign land. Funds were appropriated to answer the distress calls from war-torn Europe and Asia. Supplies poured from America to bring food and clothing to sufferers abroad. But here in America we are not always so ready to come to the aid of our own who are deserving and in need.

In the United States we have failed to provide adequate measure of security for our senior citizens, in spite of the efforts of many Members of Congress and the introduction of bills which would grant a modest pension to these men and women who have contributed years of valuable service to the communities in which they live and to the Nation, and who have now reached an age when they can no longer find employment and are unable to earn the money necessary to supply food, shelter, and clothing.

It is the first duty of the Government to alleviate the suffering of its own citizens. Many of our senior citizens do not want charity, but they were not covered by the benefits of the Social Security Act during their productive years, and were unable to lay aside a sufficient sum to care for themselves in their declining years. Many who are faced with the choice of begging for help from relatives already overburdened in this day of high living costs and high taxes or with the humiliating search for charity prefer to face slow starvation from undernourishment and live in substandard rooming houses until failing health brings their pitiable condition to the attention of the local civil authorities.

Why do we tolerate this situation in the United States? Why have we not acted to provide uniform protection for our senior citizens? Some of the States have recognized the need of these people and have provided some old-age benefits, but for the most part these are inadequate in the face of the high cost of living.

Our senior citizens have earned the right to retire from their labor and to be assured of an income adequate to supply their modest needs. Such a pension would not be a gift of charity, but a retirement pay awarded by the Nation to senior citizens who have produced for the Nation and have contributed taxes for the maintenance of the Government over a long period of years.

H. R. 16 has been introduced in this Congress. I believe this bill presents a reasonable and practical plan to provide an annuity for our senior citizens. I am a member of the Steering Committee for H. R. 16, and I urge every Member of the House to study its provisions.

This bill will guarantee security to every American citizen when he reaches the age of 60, and I believe H. R. 16 should be brought before the House and passed during this session of Congress.

San Francisco Chamber Opposes Cut in Army-Navy Budget

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. HAVENNER. Mr. Speaker, the San Francisco Junior Chamber of Commerce has adopted a resolution strongly protesting against any reduction in the present budget for military and naval expenditures. The following is the letter which I have received from the president of the organization:

SAN FRANCISCO JUNIOR
CHAMBER OF COMMERCE,
San Francisco, Calif., April 8, 1947.

The Honorable FRANCK R. HAVENNER,
House of Representatives,
House Office Building,
Washington, D. C.

MY DEAR MR. HAVENNER: The Military and Naval Affairs Committee and the Board of Directors of the San Francisco Junior Chamber of Commerce in regular session Wednesday, April 2, 1947, went on record as opposing any proposed congressional action which will reduce the President's budget as related to military and naval expenditures during the coming fiscal year.

Sincerely,

HENRY B. KING,
President.

Dr. Francis E. Townsend on Free Enterprise Versus Communism

EXTENSION OF REMARKS

OF

HON. JOHN C. BUTLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. BUTLER. Mr. Speaker, a number of the Members of the House, including myself, have for many years supported the legislation sponsored by Dr. Francis E. Townsend and his organization, commonly referred to as the Townsend plan. I feel it was the purpose of my colleagues, and am sure it was my purpose, in supporting such legislation, to work for adequate, uniform old-age pensions. During the recent years, however, I have been more and more distressed by the inclusion of additional features in this so-called Townsend plan legislation. I

have also noted, and with considerable misgiving, that the Townsend National Weekly, a newspaper published by Dr. Francis E. Townsend, has changed from what I had considered an advocate of national old-age pensions, until now it seems to be, generally, as indicated on its masthead, America's leading liberal newspaper. Whether it is a leading newspaper is, I should say, questionable. That it is liberal, in the sense of being radical or left wing, is beyond question.

In the issue dated February 15, 1947, of this so-called leading liberal newspaper, and on pages 6 and 7, there is an editorial entitled "Free Enterprise versus Communism" by Dr. Francis E. Townsend. This editorial speaks perhaps more clearly than anything that I can say the real purposes or views of its author on this subject. Without taking the time and space to quote the entire editorial, I believe the following direct quotes will tell the full story. I feel they will be of considerable interest to my colleagues who have worked with me during the years in behalf of Townsend plan legislation. They will also be of special interest to all true Americans who have followed Dr. Townsend, thinking that they were supporting national uniform pensions. Excerpts from the editorial, which are direct quotes, follow:

ABOUT COMMUNISM

There is this to be said for a communistic system, a dictatorial system under a benevolent and all wise manager would probably be the most nearly efficient of any conceivable system. A ruler who loved humanity and who determined to do everything possible for the betterment and advancement of his people could, without doubt, do more for a people than they could ever do for themselves. Too many people under any governmental system are too much like "dumb, driven cattle" to know what is best for them.

ABOUT FREE ENTERPRISE

The free enterprise system as it exists today cannot last, for it is rapidly strangling itself to death for want of a market; so there is little use of our advocating its spread to the rest of the world. Free enterprise means freedom to exploit—freedom to rob legally. It is as un-American as anything that ever came out of Europe; and far indeed from the conception of a government as envisioned by those who gave us our Constitution. Can free enterprise be made to work? No. The enterprise of exploitation must be restricted and restriction is the very antithesis of freedom. Free enterprise must be replaced by a system of cooperation in which all will benefit as possible and avoid a total collapse of inproportionately from the activities of all. * * * The profit system as we have known it is near its end. Profit, in the near future, will mean profit for all, not aggrandizement of the few at the expense of the many.

Then let us make the transition as quickly dustry and a condition of chaos. The first step? National insurance for all citizens, à la the Townsend plan.

So, Dr. Townsend would have us make the transition as quickly as possible. From what, and to what, would this change be made? Obviously from our present form of government to the benevolent dictatorship which he states would be very efficient, and able to do so much more for the people than they can possibly do for themselves. Does the doctor not know that the benevolent dictatorship is merely a short stop on the road to absolutism, to tyranny? We are to believe that the good people in the Townsend Clubs of America agree with the doctor? I do not believe they do. Are those of my colleagues who have worked for old-age pensions à la the Townsend plan aware that now we are committed to be working instead for national insurance for all, as the medium by which this transition from the republic to dictatorship is to be accomplished? The purpose of this message, Mr. Speaker, is to assure the Congress, and the people of America, that I, for one, am not in sympathy with this proposition.

I still maintain that our form of government has proven itself by and large to be the best ever achieved by the mind of man. I submit that there is none on the earth, in my opinion, that will equal it. I am proud to defend and support it against any enemy without or within the country, and I find it difficult to express my contempt for any citizen who would even propose that we surrender it for any other form. I trust that there are many who share my views, and I pray God that there are few who disagree.

The British Budget

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. DIRKSEN. Mr. Speaker, Great Britain's Labor government has discovered that there is no escape from or substitute for sound fiscal policy. Despite any commitments which it may have made to the people of Great Britain, it has discovered that economy is spelled the same in any language and that sound fiscal policy is indispensable to survival.

It is of more than passing interest that this week the Labor government presented its budget for the fiscal year 1948 to the House of Commons. It is an expenditure budget and obviously relates only to Britain's sterling position and not directly to her problem of shortage of exchange.

Based on reports by Reuters Agency, the budget calls for an expenditure of £3,181,000,000 and represents a cut of £729,000,000 below 1947, or an average reduction of 19 percent.

Oddly enough, the greatest reduction is found, not in civil functions but in the military budget. Britain's military needs have been reduced from £1,653,000,000 in 1947 to £899,000,000 in 1948. This is a reduction of £754,000,000, or about 46 percent.

It is expected that Britain's budget will not only be balanced in fiscal year 1948 but will, in fact, show a surplus of about $1,000,000,000.

If equivalent percentages were applied to the President's budget for fiscal 1948, it would show a reduction in excess of $10,000,000,000. Congress has by comparison, therefore, been quite conservative in its proposal to reduce expenditures below the President's 1948 budget.

Newly Found Courage

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial which appeared in the Fort Wayne, Ind., News-Sentinel on Monday, April 14, 1947:

NEWLY FOUND COURAGE

The current flurry of activity which may culminate in the passage of restrictive labor legislation recalls that Congress has headed into such problems many times in the past, but never before with much success.

It has always steamed and sputtered when industrial disputes were threatened or continuing, always docile when the trouble subsided.

In June 1941, when the Nation was feverishly strengthening its military resources, a strike tied up a California aircraft factory. Thereupon the Senate voted for the Connally proposal to have the Government take over strike-bound defense plants, and by the overwhelming vote of 67 to 7. In the following months, when the legislation came before the House, there was no strike crisis; the House rejected the Connally proposal in two decisive votes, 220 to 149, and 255 to 114.

In October and November 1941, strikes shut down the captive coal mines. Thereupon the House passed, by the wide margin of 252 to 136, the drastic Smith antistrike bill. The measure not only required a 30-day postponement of projected strikes and a ballot vote on them, but also banned any change in open- or closed-shop status during the defense emergency, jurisdictional or sympathetic strikes, secondary boycotts, mass picketing, and criminals, Bundists, or Communists as union officials. Trade-unions were to register and disclose their finances and membership. When the bill came before the Senate, Japan had struck at Pearl Harbor and the administration was in the process of demanding a no-strike pledge from the unions. The Senate took no action on the Smith bill or any other antistrike measures.

Agitation for antistrike legislation died down during 1942, since very few serious strikes broke out. In the spring of 1943, however, three separate strikes were called in the coal fields, and John L. Lewis defied the War Labor Board. The Senate repassed the Connally bill by 63 to 16.

The House found the Senate's bill too mild, and proceeded to substitute, by a vote of 231 to 141, the Smith bill of 1941, with some of its more drastic provisions removed. The House added a ban on political contributions by trade unions to political parties. In the conference, more of the House bill's provisions were deleted, and the compromise Smith-Connally bill was passed by 219 to 129 in the House, and 55 to 22 in the Senate.

In the long run, it was a hodgepodge bill which proved to be almost wholly ineffective, as a great many close observers had predicted it would be.

After its passage, President Roosevelt vetoed it, claiming that he agreed with many of its provisions, but arguing that the 30-day strike notice and the strike balloting would encourage rather than discourage strikes. The bill was passed at once over his veto, receiving relatively more support from Republicans than Democrats.

The persistent timidity of the Congress where legislation to control the unions is concerned, has been a source of mystery. To some considerable extent, it has been due to

the loud-mouthed threats of the CIO-PAC, which claimed that it could deliver the labor vote in a bloc to defeat any Senator or Representative who even so much as dreamed of regulatory legislation. That myth has been repeatedly exploded—a fact which may now partially explain the Congress' new-found courage.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. POULSON. Mr. Speaker, inasmuch as I am flying home to attend the funeral of my dearest and closest personal friend, I find that I will not be on the floor when H. R. 3020 comes before the House for general debate. The bonds of friendship that bind men together in life seem to tighten when death comes. To absent myself from his funeral would sever in death a friendship of many years' standing. I cannot bring myself to do that.

Although I will not be here when H. R. 3020 comes up for debate, I feel it my duty to record my views on that measure as it now stands. To that end I am having the following remarks placed in the RECORD:

Gentlemen, I do not like the bill in its present form. I do not subscribe to the view of Philip Murray, president of the CIO, that the bill is "the first step toward fascism in the United States." On the other hand, I do not regard the bill as it now stands as a forthright and enlightened expression of our faith in the American system of free enterprise.

In our search for means of correcting the malpractices and excesses which have come to light during the recent years of postwar readjustment, let us be careful that we do not reduce organized labor to a position of impotence. Many of us agree that the National Labor Relations Act of 1935, which sought to guarantee labor's right to bargain collectively, and other legislation of the thirties may be unduly favorable to labor. While some of us agree that the National Labor Relations Board created by that act to deal with unfair labor practices by employers has been unduly weighted in favor of labor, it does not follow that we have lost faith in collective bargaining nor that we have come to the conclusion that labor no longer needs protection from unfair labor practices. Neither does it follow that we want to see the powers and functions of the Board so overweighted in the name of reform as to throw the balance past center and into the hands of management or Government.

If, in the sound judgment of the legal talent of this Congress, the National Labor Relations Board as presently constituted lacks the judicial attributes essential to fair enforcement of the National Labor Relations Act, I want to be among the first to suggest that it be properly and reasonably reformed. Similarly, if the legal talent of this Congress sincerely believes that union members are not adequately provided with either the means or the form for securing redress for the violation of their rights by union leaders, I want to be the first to urge that that situation also be remedied. Some of us who have had no formal training in the law have serious doubts that the remedy lies in creating another administrative board to do essentially the same kind of a job under this new legislation as was performed by its predecessor under the National Labor Relations Act. As a matter of general principle, we feel that the functions of law enforcement and the adjudication of disputes should be relegated to duly constituted courts of law and not placed in special boards which can be made susceptible to the will of a strong executive or powerful forces of industry and labor. Our views in this respect are further influenced by our conviction that achievement of the American people's desire for good and efficient government lies not in the creation of more boards and offices but in the abolition of unnecessary functions and the efficient functioning of those that remain.

I am one of those who believe in the basic principles of the Norris-LaGuardia Act of 1932, which forbids antilabor injunctions by the courts in private industrial disputes, but I do feel that in application this act has been greatly abused and I agree that we must do something to avoid the effects of strikes which endanger the public health, welfare, and safety and the proper functioning of the institutions of government. There is considerable merit, therefore, in the proposal to authorize the President to seek, and the courts to issue, injunctions in such strikes. It is important, however, that this power be used sparingly and that it be predicated solely on the public interest.

I doubt the wisdom of compulsory arbitration since we have found through experience that because Government arbiters are either prolabor or promanagement, neither management nor labor have found this to be a satisfactory method of concluding their controversies. Furthermore, because it depends on Government intervention or control, there is always the danger that it might become political in nature. I feel, however, that we should have some type of new arbitration service of assured competence and impartiality to exert a continuing influence to persuade employers and employees to settle their differences by peaceful methods, through voluntary arbitration as a substitute for interruptions of work. I think we should go slowly in curtailing industry-wide collective bargaining. In our anxiety to strike at certain overbearing and dictatorial labor leaders, we should not cripple or possibly destroy one of the fundamental rights of labor which often benefits management more than it does labor. The following few lines, quoted from a letter I have just received from a friend in the general contracting business, point out this feature of the bill insofar as it bears on construction work:

"There is some talk of forbidding area and group labor contracts. This matter should be carefully considered insofar as it deals with construction work. As you know, our master labor agreement in southern California is between the six basic trades and the San Diego chapter and the southern California chapter of the AGC and the Building Contractors' Association and it covers all of southern California. If such an agreement is made illegal a chaotic condition would prevail. If each contractor has to come to terms with each individual union local (I deal with from 20 to 80 locals each year), we employers will have to accept whatever the unions offer us."

We should go very slowly and very cautiously in the matter of company unions. Labor organizations which are subservient to management and which are employer-dominated lose their effectiveness as unions. Collective bargaining between management and management-dominated unions would be a farce.

Bossism and the dictatorial control of unions by power-drunk individuals and by groups and factions which use labor organizations in furtherance of their personal ambitions for political and economic power must be brought to an end. So-called labor leaders with size 12 ambitions and a size 5 sense of public responsibility must be made to realize that labor unions are not instruments of personal ambition. Labor dictators and bosses, like their counterparts in other walks of life, must be brought to heel. They must be made truly accountable to the will of the membership of their unions and to the public interest. They must become the servants of the unions, not their masters.

To these ends I favor those parts of section 8 of the bill which propose to democratize union elections and administrative procedures by designating certain union practices as unfair. To my mind there can be no argument with the proposition that it is an unfair labor practice when union leadership prescribes unreasonable or discriminatory financial demands on the membership. Any organization, whether it be a labor union or a trade association, which denies its members the right to freely express their views, either within or without the organiaztion, on any subject matter without being subjected to disciplinary action and which conducts its affairs in a manner that is not in conformity with the free will of a majority of the members is undemocratic and un-American.

I have no dispute with the proposition that initiation fees, dues, and assessments should be reasonable and uniform and in accordance with the will of the membership. I agree that taxes or assessments should not be levied by unions on the right of a man to work or to conduct his business free from interference. I agree that members should have the right to resign their membership at will and that they should not be subject to suspension or expulsion without an opportunity to be heard. I agree that members should be free from reprisal for failure to support issues or candidates for office. I agree that there should be secret ballots and open counting of ballots on questions of union policy and union action and that unions should not spy on their membership, intimidate their families or injure the person or property of members of their families. I agree that unions should report to the membership on the financial affairs of the union.

I am opposed, however, to section 8 (c) (3), which makes it an unfair labor practice for unions to require their membership to contribute to, or to participate in, union insurance and benefit plans. I also feel that it is not an unfair labor practice to require union members who have been ousted from their unions for cause to give up the jobs which they procured as union members.

The compulsory check-off system is of long standing and in my opinion is a proper subject of labor-management contract. The inclusion of the compulsory check-off in the list of unfair labor practices set out in this so-called labor reform measure is not based on legitimate complaint or on evidence of widespread abuse. In this respect it stands out as evidence of a desire to inconvenience unions and lay obstacles in the way of union existence.

I am of the opinion that if there are shortcomings in our present system which permit either unions or management to escape liability for violation of collective-bargaining contracts, remedial action should be taken without delay. I have no sympathy with mass picketing and slow-down and sit-down strike techniques. I am opposed to featherbedding practices. I would like to see an end of sympathy strikes and jurisdictional strikes. It would have been to the eternal credit of labor if the unions themselves could have abandoned these practices, but since they have not done so I feel that the time for legislative action is here.

I feel that breaches of the peace and strike violence in general should be handled by local authorities in local courts under local laws and ordinances. If these have failed and

local authorities can no longer maintain law and order on the local scene, we have indeed fallen i- to unhappy times.

Reasonable modification of the closed shop principle may be in order but it should not take the form of an absolute ban of the closed shop. Modification of the principle should not be of such nature nor of such severity as to reduce unions to impotence as instruments for collective bargaining. It is not consistent with a real desire to modify the principle of the closed shop to deprive unions of the power to discipline their members for cause or to deny them effective means for eliminating disloyal and anti-union elements from their membership. I believe that the union shop might be acceptable as a worthy substitute to the closed shop.

My position as an opponent to communism is consistent and of long standing. Communism should be exposed and uprooted from our society. We should seek it out with equal vigor no matter whether it be found among government employees, in labor unions, in trade associations, or in front organizations of intellectuals and professional people. I consider it folly, however, to hope to legislate it out of existence. If it exists in American labor unions to the extent that the exponents of this measure would have us believe, I suggest we have an honest-to-goodness investigation by which we may seek out and eliminate from our society those who seek its destruction. I do not think it proper that this body, by legislative enactment, point an accusing finger at labor unions or any other organization of Americans unless it has before it absolute and conclusive evidence based on first-hand information. If such information is at hand, it should be made available without delay to the leadership of such organizations and to proper police authorities for appropriate action under existing law.

I do not consider my election to this body as a mandate from the people of my district for the repeal of the great social and economic reforms which we have achieved. I feel that my constituents wanted an end of emergencies in government and a return to normalcy. I feel that they had lost patience with government controls and regulations and that they were anxious to do for themselves in an atmosphere of freedom. I feel that above all the people of my district who elected me to this body were utterly and completely fed up with industrial chaos, high taxes, deficit financing and extravagant government spending. They did not send me here to emasculate the social legislation which has given our people a degree of social and economic security totally unknown to man in all the ages of his existence.

In conclusion, I wish to state for the record that I doubt the wisdom of any measure which seeks to accomplish widespread reforms in our social, political, and economic systems by the "omnibus" technique. Invariably there are some sections of such bills worthy of treatment as separate bills. As a rule, there are other sections which are of doubtful merit and which should not ride through as parasites clinging to worthier legislation. Admittedly the bill has some good features which we might well enact into law. Those features I support. The bill also contains some features which are stringent and unduly repressive on labor and therefore contrary to the national interest. Those features I must oppose. Since I cannot both favor and oppose the same bill at the same time, there is no choice left to me—I must come out against the bill in its present form. But I should like to emphasize what we want, what we need, what we must strive to effect is a good labor bill—a bill that is predisposed neither to labor nor management—a bill that the President cannot afford to veto—or should he choose to do so—a bill that will be passed over his veto. The present bill could never be passed since we could not secure from the Senate necessary votes to override a Presidential veto. The welfare of the country is paramount to any political maneuvering over the labor-management bill. The public is not interested in political football, but in obtaining the passage of a bill that will remedy existing defects in labor-management relations. After all, as long as the vast majority of people are in favor of certain changes in our labor laws, let's proceed to accomplish those rather than take the chance of getting no bill at all and thereby allowing existing evils to continue.

I feel confident, however, that the labor bill which will come out of conference between the House and Senate will have remedied most of the evils of the present bill and will be one which we can all support.

Creating a Department of Peace Within the Framework of the National Government

EXTENSION OF REMARKS

OF

HON. EDWARD G. ROHRBOUGH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. ROHRBOUGH. Mr. Speaker, under leave to extend my remarks, I include herewith the following essay by Kenneth R. Kurtz, of the Weston (W. Va.) High School. The title of this essay is "Creating a Department of Peace Within the Framework of the National Government":

Peace is an elusive word. Generations upon generations have sought in vain to define this word; generations upon generations have tried in vain to secure the blessings of permanent peace. We of the present generation will also have a chance to secure a universal and workable peace among all nations.

It is up to the United States, as one of the great states of the world, to do everything possible to secure peace. We Americans must be in the forefront of the universal peace movements, and indeed many of us are. As Oswaldo Aranha, the former Foreign Minister of Brazil, said of this country recently, "The people who disintegrated the atom have now the mission of integrating humanity."

Let us then, with every weapon at our disposal, begin the crusade to bring downtrodden and oppressed people everywhere the sweet and noble blessings of world-wide peace.

In each generation of our great land, ideas have been pushed forth along the line of universal peace. William Ladd, of New Hampshire, in 1828 was perhaps one of the first in this land to advocate a world security organization. He founded the American Peace Society, anticipating by nearly 100 years Woodrow Wilson's League of Nations. Mr. Ladd urged then the formation of a congress of the nations and a world court. Each following generation has pushed this great ideal further. In 1918 and after, the idea of the League of Nations was pondered in men's minds. To my mind, the League failed because we Americans did not support and encourage it. In 1945, the United Nations actually came into being. America and Americans have so far seen fit to heartily support this organization. Let us pray that they will continue to do so.

Perhaps, however, the United Nations plan fails in one respect. The actual contact with this agency is only through diplomats and Government officials. But peace is the problem of every man, woman, and child on this entire globe, not alone those high in official circles. Therefore, what is now needed is some organization or agency that will bring the problems of peace into every American household and eventually, we hope, into every family in every land.

Mr. R. M. Davis' suggested Department of Peace seems to be one of the best methods of accomplishing this aim. As I understand it, this department, to be formed within the framework of our National Government and to be headed by a secretary of Cabinet rank, would have a threefold purpose. A, to formulate and publicize educational programs to promote better understanding between nations; B, to encourage interchange of ideas and persons between the United States and other lands; and C, to assist educational, civic, and religious organizations in formulating programs dealing with international relations, international cooperation, and the problems of peace.

The world is now at peace—at least we are laboring under that delusion. But there will never be any peace as long as peons in Mexico are paid subexistence wages or editors are executed in Poland for printing a denunciation of a government in which they do not believe. True, we have just won a gigantic struggle, but we have failed in the respect that there are countless problems all over the globe that we have not solved and which threaten the security of each and every one of us. As Norman Corwin has stated: "Peace has a mind of its own, and doesn't follow victory around."

We must therefore earnestly and wholeheartedly support some practical means of aiding the dove of peace in building her nest in war-torn and war-weary continents. Mr. Davis' practical proposal offers an excellent way of doing this. We must find some way of preserving peace. The alternative is total destruction.

This is by far the most important, the most gigantic, and the most back-breaking task that humanity has ever attempted to undertake. Again quoting Mr. Corwin: "To win is great; to learn from winning, greater; but to put the lessons learned from winning hard to work, that is the neatest trick of all."

The Department of Peace, as one of the executive departments of our Government, could be of inestimable value in furthering the cause of peace. Education, I insist, is the noblest and greatest force in the universe. This department's main duty would be the education of citizens to the blessings of peace, the prosperity of peace, the absolute necessity of peace.

"In vain we build the world, unless the builder grows," states Edwin Markham. It is high time the builder grew in stature and wisdom. Through the peace department our people would be educated for peace; they would see that the only salvation of humanity is to learn to live at peace.

Another activity of this agency would be the encouragement of interchanging ideas and individuals between this and other nations. Thus, the best ideas of one nation would be known to other nations. They could then adapt ideas to suit their own, individual needs. With all nations desperately trying to secure peace, some excellent suggestions are bound to come forward. Therefore, it is essential that some agency be set up to see that all good and workable suggestions are passed along to nations who can use them.

Thus, scientific, educational, and many other achievements would not be selfishly kept by one nation for its own advancement but would be available to all for the advancement of mankind.

But ideas are not the only commodity that this department would help interchange between nations. Individuals, too, would be interchanged—not only as gestures of good will, but for very practical reasons. For example, a nation which has a specialist in a certain disease could be sent to aid another country that is threatened by such a plague. Not only is good will increased between the two governments then, but a practical service has been rendered.

Not alone, however, should scientific and educational leaders be interchanged but common people, workers seeking advanced technical training which is best secured in another land, housewives, farmers, school children, and the like should also be interchanged. It has been aptly put: "Nations do not fight other nations they know well." Let the housewife of Duluth meet the mother of Paris, let the farmer of Melbourne know the mechanic of Warsaw, introduce the doctor of Hong Kong to the lawyer of Cairo—and international relations between their respective lands will be immeasurably improved. This would b a very worth-while service which the Department of Peace could support.

As this agency will come in direct contact with the public in fulfilling its third principal duty, the general public will begin to think and act for peace. If this department really helps civic clubs, educational organizations, and religious agencies in formulating peace programs and discussions on international problems vital to all, the Man in the Street will soon become acutely aware of the pressing problems of peace.

Long ago Virgil said, "The noblest motive is the public good." In fulfilling this third part of the Peace Department's platform the weight of public opinion could be brought to bear on vital issues of peace and the public interest would be aroused. Thus, the public good, which includes many items, would become the driving motive of Mr. Davis' planned department.

With the fulfillment of the three duties of the Department of Peace the following will have been accomplished:

A. The problems of peace will no longer be considered merely as concerning high government officials but the common man will think of these problems as vitally concerning him, as indeed they do.

B. The leaders of various fields will meet their counterparts in other lands and exchange their views and opinions, thus helping to form the basis for the settlement of vexing problems.

C. Figures and statistics would be made available to all to aid in the program of peace.

D. Educational programs for peace would be drawn up and available to all needing them;

E. Experts in various fields could be interchanged with nations needing technical assistance;

F. Support and belief in the United Nations would be increased among peoples in all walks of life;

G. The department could aid the United Nations in the setting up of international conferences and, if every nation sets up such a department, the United Nations could work directly with this department on world peace problems; and

H. The cause of democratic governments would be supported, thus helping many souls, wearily oppressed today by totalitarian governments, secure liberty, justice, and equality.

Mr. Davis is a visionary; his proposal for the creation of a peace department and his support of this contest show that. He is carrying out the old Biblical maxim: "Where there is no vision, the people perish." This department would clear the eyes of many people on peace issues and raise the sights of the human race toward the noble goal of peace.

By giving our unqualified support to this proposal and by doing everything in our power to further the idea (and ideal) of world peace we would be carrying out that famous tenet of Abraham Lincoln when he said: "With firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in * * * to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Address by Hon. W. Lee O'Daniel, of Texas, Before Rotary Club of Detroit, Mich.

EXTENSION OF REMARKS

OF

HON. W. LEE O'DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 17 (legislative day of Monday, March 24), 1947

Mr. O'DANIEL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a speech which I delivered before the Rotary Club in Detroit, Mich., yesterday.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BLIND STAGGERS IN WASHINGTON

Having been brought up on a large ranch, I learned as a boy many things from dumb animals which enable me to better understand the activities of some public officials in Washington. I have never been able to forget the funny antics of Old Bill, our faithful old plow horse, as he carelessly stumbled all over the barnyard one day, knocking down fences and trying to enter the barn where there was no door. Old Bill had blind staggers. He meant well, but had lost all sense of perspective. So, I caution you gentlemen to be tolerant when you hear of some unbelieveable things happening in Washington. Blind staggers is a terrible affliction. It comes on suddenly and the victim has no knowledge that he has done anything strange. Sometimes they recover—but seldom. Some cases have lasted about 14 years. Many new cases have developed since last November 5.

The health officers have been trying to find out what has brought on the blind staggers epidemic. They have discovered some kind of flower growing inside the iron fence around the White House. It seems that this special flower has an attractive fragrance which causes many people to want to climb over the fence and dwell within. The flower blooms every 4 years.

But seriously speaking, there was a time when I think we would all agree that we had in this Nation the greatest Government on the face of the earth. Through a system of free enterprise we built in America a nation where the average man enjoyed the highest standard of living in the world. Now we have a very low standard of living. There was a time when we looked into show windows and saw the things we wanted, but could not get them because we did not have enough money. Today we look into the show windows and, although we have plenty of money in our pockets and see the things we want, we cannot get them because the merchants have samples only, and nothing for delivery because manufacturers cannot operate their factories under New Deal communistic regimentation. The net result in both cases is identical—a lowered standard of living.

We built a nation where we could say with pride that the rights of the individual were sacred and that we had a Government in Washington committed to the maintenance of free enterprise, freedom of thought, and freedom of religion. We had reached the stage in this Nation where we believed we were secure in these freedoms. But I believe you will agree with me that these conditions have during the past 13 or 14 years all been changed. We no longer have in this Nation the original type of free private enterprise which transformed America from a wilderness to the greatest Nation on earth. What we have is simply a degree of freedom such as is permitted to us under the rule of the bureaucrats whose power has been established to reign over us.

A great industrial genius and world benefactor has just passed away here in your city. I am proud to have personally known Mr. Ford and to have been his guest at Dearborn. He typified the spirit of free private enterprise. His rise from lowly mechanic to the world's greatest industrialist demonstrated the unlimited possibilities that once existed in America. These possibilities no longer exist in America. They are gone. The next potential Henry Ford in overalls who comes along with a brilliant idea will forget what his idea was before his application to start manufacturing a new product runs the gauntlet of red tape in Washington and some bureaucrat sends him the usual disapproval notice. Or if he does get permission to start a new business, the bulk of his profits must be sent to Washington to maintain the bureaucrats, and his small share could not be pyramided into a very large industry during an ordinary lifetime.

I am convinced that the great rank and file of the American people are dissatisfied with the kind of government dished out to us during recent years. They endured this Government during the period of the depression on the theory which had been popularized, that the only way we could get out of the depression was by turning the job over to the Government to solve our problems for us. It was in this state of mind and under this condition that we were finally fenagled into entering World War II and the people of this country endured bureaucratic rule and governmental regimentation because they were told, and many believed, that this centralization of power was essential to the success of the war effort.

When the war was over about 2 years ago, the people expected these war controls to be lifted. The people expected they would be given an opportunity to again live as free-born American citizens, to meet and to solve their own problems and to actually direct and operate their own Government. But the Reds, the Communists, who had infested Washington for the past 15 years, had other ideas. It was their belief that the end of the war did not mean the end of governmental control and regimentation, but rather that it meant a change in the type of control and regimentation. There were a few of us in the Capitol who did all we could to do away with the war controls immediately and turn the country back to the people; however, we did not have enough votes to get the job done. The OPA, the XYZ, and all the other alphabetical agencies were maintained in power and operated at full blast. Now, if you recall, we had an election on the 5th of November 1946. During the campaign the leadership of the Republican Party, that is, the politicians, correctly sensed what the people wanted. They went to the people with a promise that if the Republican Party was returned to power, there would be a general housecleaning in Washington; they would get rid of these surplus boards and bureaus that plagued the people. They promised they would immediately proceed to give the people throughout this Nation a reduction in taxes, and most important of all, they promised that they would dethrone and re-

move from power these labor racketeers who for years have dominated the Government in Washington under the leadership of the Democratic politicians.

The Republican politicians were wise when they pitched their campaign on this basis. They correctly interpreted the desires and wishes of the great rank and file of the American people. The result was a landslide, the like of which this country had never before seen. It was a spontaneous, Nation-wide response of the American people to return to power in the political affairs of this Nation the party that expressed a belief in the principles of democratic government. I am frank to tell you that while I have always been a Democrat and a Jeffersonian Democrat, not a New Deal Democrat, I was greatly elated over the results of the election. It meant more to me to see the people of this Nation rise up and demand that true democratic government be reestablished than it did to me to see the Democratic Party returned to power because I, along with other Democrats, realized that the Democratic Party, as such, has long since departed from the principles upon which this party was established and it had grown to the point where it was the agent of the privileged few to oppress the many. And may I add here that there are also quite a few New Dealers who are wearing the Republican badge.

Now as I talk to you today, after having seen the Republican Party with their substantial majority in both Houses of Congress perform, I am disappointed with the results. Instead of giving this country real, honest-to-God labor legislation designed to protect the great rank and file of our people, we have seen the leadership of the Republican Party begin to pussyfoot, to hedge, and to dodge. This is not true of all of them, but it is true of many of them. Instead of this Congress proceeding immediately to give this Nation tax relief which had been promised and to which the Nation is justly entitled, we have seen the Republicans engage in a lot of technical discussion. We have seen them do a lot of hair-splitting, hedging, and dodging. We have seen a lot of shadow boxing between the politicians at the head of the Republican Party who are looking to the election in 1948 and the leadership of the Democratic Party who are also looking to the election in 1948, both apparently believing that they can still fool the American people.

Well, now, folks, I believe as firmly as I believe anything that the American people—if you will excuse the expression—are simply fed up on political promises that don't last after the election has been won. I think the American people are completely saturated with the doctrine that has been preached by these social uplifters who spend 90 percent of their time thinking about how they can produce some kind of legislation to take property away from the thrifty and pass it along to the thriftless, and, unless I miss my guess, the leadership of the Republican Party is today making a fatal mistake.

Let me talk to you about a few things which to my mind are very obvious. You know we held a great debate down there in Congress and the wheel horses of the Republican Party, that is, the most courageous of them, even went so far as to demand that the Federal budget be cut from thirty-seven billion to thirty-one billion dollars. Now, of course, the debate did not go on long before the compromisers started to work and then this six-billion-budget cut became a four-and-a-half-billion demand.

I tell you frankly that I believe either a four-and-a-half or a six-billion-dollar cut in the budget is so small that it is a reflection on the intelligence of the American people. During the days when the New Deal had brought into Washington all of the experts on how to spend money, during the time when they had their pipe lines running out from the Federal Treasury in every direction, the best they were ever able to do was to think up means by which they could spend in round figures only $9,000,000,000. And here we are today kidding ourselves and trying to kid the American people into believing that we are for economy in government when we advocate cutting the Federal budget only to $31,000,000,000. I tell you they have lost all perspective of money values; call it blind staggers, or anything you will.

It is true that we have to add to our normal spending now $5,000,000,000 to finance the public debt. It is true that we probably need $9,000,000,000 annually more than we spend to maintain our armed forces. It is true we must have probably $5,000,000,000 to care for our returning soldiers, but with all this, there is still no reason on earth why the Federal budget for the coming fiscal year could not be cut to $25,000,000,000 and then further reduced to twenty billions during the next year. Of course, you can't do this and maintain the whole army of politicians that we now have on the patronage pay rolls in Washington, D. C., and throughout the Nation. If there is any real economy in government it means we must retire these bureaucrats and their hirelings from loafing on Government pay and permit them to go back home and get an honest job producing something. It means that some Senators and some Representatives and some other folks in public life must give up some of their patronage pay rolls. I believe the citizens of this Nation voted last November to stop the New Deal gravy train. But the Republicans in Congress are acting like they think the people voted to only change the engineers and conductors who operate the New Deal gravy train.

When I first entered the United States Senate back in 1941, I submitted a series of labor bills designed to correct the then existing labor situation throughout this Nation. As governor of Texas, I sponsored and succeeded in getting enacted, a bill which became known as the "O'Daniel antiviolence strike law." It simply made it a felony for anybody during a labor dispute to use force or violence, or the threat of force or violence. After its enactment, we succeeded, under its terms, in promoting some labor leaders to cotton pickers on our State farms at Huntsville. After that, we did not have much labor trouble in Texas. I brought that bill with me to Washington in August 1941, and introduced it in the Senate. It has been hidden under the rug in some committee room ever since. I recommended then that both by statutory enactment and constitutional amendment that we guarantee in America the right to work and that we abolish the closed shop.

I have also spoken before some State legislatures on my "freedom to work" bill and have made many radio broadcasts about it. I am very proud to report that my State of Texas has just passed the "freedom to work" bill and a few other States have also passed it. But it has not yet been passed in Washington. I recommended that the Congress pass legislation that would modify the wage and hour law in a manner which would have made impossible these high-jacking portal-to-portal suits which the Nation faced in 1946. I recommended that legislation be enacted which would make labor unions responsible under our antitrust laws, the same as all other citizens. I recommended that the Constitution of the United States be amended so as to limit the term of the President of the United States and to limit the terms of Members of the House of Representatives and of Members of the United States Senate. We finally succeeded in submitting to the States a proposed constitutional amendment that will limit the tenure of office of the President, and I hope it will be ratified and made effective. And at that time I warned the Congress of the United States that unless they moved promptly to curb the power which by legislation they had placed in the hands of these labor racketeers, that unless they amended the Wagner labor law and passed these other measures to which I have referred, this country was headed for the greatest crisis it had ever faced within the field of labor relations.

But, my friends, both the leadership of the Republican Party and the leadership of the Democratic Party had their eyes fixed exclusively on the election board, each jockeying for position, each bidding for a place which would assure them the support of the labor racketeers, the Reds, and the Communists in the next election. The result was that my bills never got out of committee.

I am glad of one thing, however, and that is, the record speaks for itself. It was not necessary for me to wait until the war effort was tied up with strikes to see they were coming; it was not necessary for me to wait until the war was over and these labor racketeers commenced to exert the power which they had built up to strangle and throttle the industries throughout this Nation, for me to know that that condition was inevitable. I am gratified, however, that even though they were late in their conversion, it has been my privilege to live to see many of the leaders in both the Democratic Party and in the Republican Party come around to a realization of the fact that something has to be done and something is being done, even though enough has not yet been accomplished. Now, in light of all that has taken place up to the present time, and in light of the fact that the CONGRESSIONAL RECORD shows that I did accurately forecast what was ahead of us within the field of labor relations, I wish to make another prediction and that prediction is: The American people are not going to be satisfied until the right of the great rank and file of the people to rule this Nation is reestablished.

I think the great mass of our people would prefer to use either the Democratic Party or the Republican Party as the agency to accomplish this reformation, but unless we break the stranglehold on both the Democratic Party and the Republican Party of these pussyfooters and dodgers who are always afraid they will make some labor leaders mad, who are always afraid they might incur the displeasure of some would-be liberal who gets most of his information by long-distance telephone from Moscow, I predict the people will create a new party that will furnish the leadership; they will create a party which will bring under control all of these "isms" and selfish groups and that will reestablish a government for the great rank and file of all our citizens.

I will tell you something else that the people are going to do. They are going to put some party into power who will have enough vision and foresight to operate this Government on an annual budget of not more than sixteen to eighteen billion dollars a year. The people of this Nation are not going to be willing to spend the last of their days in abject servitude in order that they may pay high taxes for the benefit of the bureaucrats who want to operate a gravy train for their patronage-seeking henchmen.

In this Nation, the voting Republicans are about equal in numbers to the voting Democrats. The professional politicians in both parties realize this and they also know that either party, in order to win the election, must have the votes of the various small radical groups. Therefore, the leaders in both parties are continually catering to the radical minority groups of "reds," Communists, Socialists, labor-leader racketeers, and others. These politicians are sure of getting the votes of the regulars in their own respective parties, so they do not have to cater to those

honest, conservative voters, but they do have to do the things the radicals want or lose their votes. There is not a great deal of difference between the rank and file of Democrats and Republicans in this Nation as far as sound American governmental philosophy is concerned. Therefore, if the good, honest, conservative voting citizens in both the Democratic Party and in the Republican Party would only get together and consolidate their voting strength under a new party, this Nation, almost overnight, would swing back to the right, and serious crises facing us both at home and abroad would vanish as the morning dew before the hot rays of the rising sun. If that is not done, there remains little hope of our Nation surviving as a government of free and independent people.

There is another great question, and that is the question of foreign affairs, which is on the minds of all our people at this time. I doubt the propriety of my discussing that question here today, but I do want to say this: I am as strong as any man in the world can be for the maintenance of an Army and a Navy adequate to protect this country and to do our part to guarantee the peace of the world. Yes; I am in favor of stopping the expansion of the Communists in their drive to overrun Europe, but, listen, I am in favor of something more than that; I am even in favor of stopping the drive of the Communists to overrun this country; I am even in favor of running them out of Washington—now.

And, while on this subject of communism, let me call your attention to the fact that it is not necessary to have Communists in Congress to enact communistic laws. We have some of the most communistic laws in this country that were ever dreamed of by the most devoted Communists who ever lived in any other country, but they were passed by Democrats and Republicans. So, while we are running Communists out of our governmental bureaus, I advocate that we repeal all communistic legislation which has been placed on our statute books during the last 14 years. I can assure you, however, that this will never be done, regardless of whether you have a Republican or a Democratic majority in Congress. Both parties dare not repeal these communistic laws because they would make the various radical minority groups mad and they could not get themselves reelected.

No one has battled any harder than I have throughout my whole public life to do what I could within the field of social security and to promote the social welfare of the great rank and file of our people. I am as firmly committed to this idea now as I ever was, but here is one thought I wish to leave with you:

"One of the best ways on earth to promote the social welfare of the average man, one of the best ways on earth to promote the long-time financial security of the average citizen is for the Government to take the hand of Government out of the taxpayers' pockets. Taxpayers of this Nation will buy lots of social security for themselves if we will just simply stop robbing them of everything they make."

I would not be candid with you people here today if I did not tell you frankly that I am very much concerned about the future of this Nation. In making that statement, what I mean to say is, I am concerned and I have a deep fear that we are headed down the road that will ultimately lead to complete Government ownership and control of all lines of business in this country. And of course, Government control of the business affairs of this Nation, the centralization of the whole economic life of this country in the hands of the Government, inevitably means the end of all personal liberty. It means the end of all personal rights. It means the establishment finally of the corporate state as advocated by Mussolini or the Communist rule being carried out in Russia, or the rule of state socialism which was brought to power by Adolph Hitler.

The reason I am concerned about these things the reason I am fearful that they will come to America is based primarily on the fact that we have in this country so many citizens who seem to believe that we can still retain our personal liberty, that we can still retain our rights to own and control property, and at the same time continue to go deeper and deeper into a government controlled economy. I would not be the least bit fearful if I thought the only method by which this country would adopt communism and socialism would be by the voters going to the polls and voting the Communist or Socialist ticket straight. I do not believe the people of America would ever do that. Communism always crawls in under the tent. The reason I am fearful about conditions which face this Nation today is that we have in this country many sincere, honest people who do not want communism, who do not want socialism, but who actually, in fact, are doing everything it is possible for them to do to bring it about. They are, in my judgment, acting ignorantly and innocently.

The great banner under which this country is today being destroyed and the one that has the most popular appeal is that under which we go forth to battle every day to extract more and more money from the taxpaying public in order that these "do-gooders" may do something more to promote the welfare of the people. Under the guise of having the Government assume the obligation of taking care of the people, instead of having the people assume the obligation of taking care of the Government, we are, day by day, creating a situation in this country where the very volume of taxes is becoming so great that sooner or later the weight of this tax burden will absolutely destroy free enterprise in this Nation.

As an example, let me tell you that in the great State of Texas, large as it is, containing the almost limitless natural resources that it does, and with the most thrifty and hardest working people on earth, our share of the national public debt, based on our per capita share of the national income, is $10,000,000,000, while the total assessed valuation of all real and personal property in Texas as reported to our comptroller for this year is only $5,000,000,000.

Now, my friends, I am not concerned especially as to whether or not the leadership of this country intends to destroy free enterprise; what I am concerned about is, Will they, by the result of what they are undertaking, actually destroy it? In other words, what you are concerned about and what I am concerned about is, Will free enterprise be destroyed? If it is destroyed by people who do not intend to do it, but who do do it, the result is exactly the same.

When businessmen themselves begin to accept the philosophy that you can by a system of public taxation of the thrifty provide lifetime security for the thriftless, not only in America but throughout the whole wide world, I say to you that it is time for us to stop, look, and listen. The Federal Government in this Nation has for so long taken such a heavy toll in the form of taxes from our citizens that I feel we have become numbed to the dangers inherent in this process.

I am absolutely astounded when I find able men in Congress, both in the House and in the Senate, men who have for many years been regarded as sound conservatives, allowing themselves to be drawn into academic discussions about whether the budget for the future operation of this Government should be set up on a basis of thirty-two or thirty-three billion or whether the proper figure is thirty-seven billion. My friends, that to my mind is just like two great medical experts standing at the bedside of a patient trying to decide whether they should give him one or two teaspoonsful of strychnine.

Now, there is another thing I am concerned about. We have some businessmen in this country who seem to still believe that the Federal Government by some means may be allowed to continue to take in the form of taxation approximately one-third of the income of all our people and still we may have democratic government in this country. So far as I am concerned, I think the time is here now when the people of this Nation should rise up and demand that the Federal Government proceed immediately, now in 1947, to cut its operating expenses down to a reasonable basis.

My friends, there is nothing complicated about what this country needs. I tell you frankly if we would cut the Federal budget to twenty-five billion this year and proceed to cut it to twenty billion the next year, and at least to eighteen billion the following year; if we would cut income taxes at least in half; if we would pass labor legislation that would make the labor unions responsible under our antitrust laws the same as other citizens; if we would pass legislation to stop these industry-wide labor contracts; if we would have throughout this Nation strict enforcement of our antitrust laws, thereby maintaining competition in business and through abolition of the industry-wide labor contracts, secure competition in labor; if we would repeal the Norris-LaGuardia Act which bars our citizens from the court house to settle their labor disputes; if we would either repeal or substantially amend the Wagner labor law; if we would write into the Constitution of the United States a guaranty to protect the right of our citizens to work irrespective of membership or nonmembership in labor organizations; if we would amend the Constitution of the United States so as to limit the term of the President of the United States to 1 term of 6 years and to place similar limitations on the terms of Senators and Representatives; if we would write into this same constitutional amendment a prohibition against allowing Senators and Representatives to accept Presidential appointments until they have been out of office at least 5 years; then we would reestablish democratic government in America.

These are all fundamental things; they are not radical; they are constructive. They are all things that Congress ought to be able to do in 2 weeks' time. The trouble is we do not have the desire or the intention on the part of Congress to do them.

What would be the net effect of doing these things? I will tell you what it would be, it would simply be to return the control of the Government to the people. It would be to destroy the rule of the bureaucrats. It would be to junk now and for all time that philosophy which has become popular in this country, which says it is a badge of honor and statesmanship for any citizen to be broke and on the Government pay roll and it is a dishonor for any businessman to be successful, to meet his obligatons and to expand his business.

If we want to get rid of the Reds, if we want to reestablish democracy, I want to tell you frankly you are going to have to put folks down at Washington who want to see it happen. You have got to fill the National Capitol with people who look to the future of America and who in doing so look over and beyond the next Presidential election.

Address by Hon. Irving M. Ives, of New York, Before the Economic Club of New York

---

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Thursday, April 17 (legislative day of Monday, March 24), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered last night before the Economic Club of New York by our distinguished colleague the Senator from New York [Mr. IVES].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It was with real appreciation that I accepted the privilege of appearing on your program tonight. After my very interesting and pleasant experience with your distinguished president, I am not surprised to know that the Economic Club of New York is so successful. I congratulate both you and him upon the happy circumstance which may have brought about the fortunate relationship existing among you.

At the time I received your invitation to speak, I intended to talk on subjects of a governmental nature and dealing with fundamentally economic matters. I intended to speak on our tax structure in this country, not alone as it pertains to the Federal layer of government, but to all the lower layers, and to consider the interrelationship existing among these layers where problems of taxation are concerned. I feel very strongly that one of these days—and the sooner the better—this matter of taxation must be adjusted on a more equitable basis from the standpoint of the over-all burden upon the people of our country. Otherwise the lower layers of government may find themselves in a condition where they will become incapable of raising revenues or where, if they do raise revenues, they will be in effect confiscating the property of the private citizen.

Circumstances in the meantime have arisen which have caused me to change my plans in the selection of a subject for this evening. These circumstances are not the proposal now before the Congress to provide aid to Greece and Turkey. I might well devote these remarks to a consideration of that subject, but it has now been so thoroughly explored since it was unexpectedly thrust into our midst early in March that there is little I could add to the information and comment which have already been made concerning it.

Let it suffice that it seems to me that with the provisions safeguarding the integrity of the United Nations and protecting our own country, which have been offered by way of the Vandenberg amendments to the legislation now before us, the plan should be approved by the Congress and should become operative. I feel very strongly that both the world and ourselves stand to lose much more if we refuse to provide the aid which has been proposed and to accept the new role in world affairs which the British situation requires of us.

It seems to me that in resolving this question it is our own self-interest which is of first concern to us and to the world and which should receive our first consideration. I believe that what is best for us as a nation in the long run will prove best for the world. On the basis of the analysis submitted by Senator VANDENBERG and our State Department, it would appear that our greatest hope for avoiding future conflict and for preserving the peace of the world lies in our acceptance of this new responsibility. The alternative course would seem to lead inevitably to disaster for us and to the annihilation of freedom in the world. More or less along these lines the Congress appears now to be thinking and more or less along these lines it is probable that the Congress finally will act.

Tonight, however, I shall speak principally of a matter which is of immediate transcendant domestic importance and which is now squarely before the Congress. I refer to legislation dealing with labor relations.

All of you are acquainted with the conditions which have arisen during the past decade in connection with the relationship between labor and management. Most of you are aware of the circumstances which preceded the enactment of the National Labor Relations Act—circumstances which in themselves produced the National Labor Relations Act. You are aware of the chief purpose inherent in the enactment of this legislation which was to bring about equality of bargaining power between management and labor.

However, as so frequently happens in America and wherever free government exists in the world, in moving out of one unbalanced condition we move into another unbalanced condition. So it has been with the National Labor Relations Act. Whereas formerly the preponderance of power rested with management, as a result of the enactment of the National Labor Relations Act and through its administration, this preponderance has now come to rest with labor. Neither of these conditions is desirable and either of them leads to certain industrial strife. Of such is the story of labor relations in the more recent history of the United States.

All of you are familiar with the abuses which have arisen under our present statutes affecting labor relations, particularly as these statutes deal with collective bargaining. Most of you undoubtedly are acquainted with the real causes of these abuses. These causes may be divided into three main categories.

The first of these categories covers conditions now prevalent where the so-called "closed shop" is concerned. Immediately we are faced here with questions as to whether employees should be obliged to belong to organizations against their will in order to obtain work and whether employers should be obliged to hire only employees who are members of labor organizations. These restrictions would appear to violate basic American principles. The situation becomes aggravated further when in many instances the majority of employees themselves seem to have little or nothing to say about their status with respect to the "closed shop." In the light of these conditions there would appear to be no justification whatever for any institution known as the "closed shop."

However, in this instance we are confronted with more than a single set of principles. We are faced also with a compelling condition. The closed shop is an ancient institution in labor organization in the United States. It was first established almost a hundred years ago—generations before the New Deal or anything like modern labor legislation was even dreamed of. In asserting its right to the closed shop, labor has insisted—and not without real provocation—that those who are to benefit from the efforts and activities of a labor organization should belong to and support that organization and accept their full measure of responsibility, not only for the conduct of its affairs, but for the cost of its operation. Moreover, many employers who have dealt with their employees through the medium of a closed-shop contract have come to prefer this kind of arrangement and object to abandoning it. In other words, as an institution which in wide areas of industry is fundamental in the relationship between labor and management, the closed shop in the United States has attained an historical position where its banning by law would be an extremely dubious procedure.

On the other hand, abuses which have arisen where the closed shop exists can and should be eliminated. On this point there should be no difference of opinion among all who seek to help produce a satisfactory relationship between workers and employers. In seeking to prevent these abuses, men of good will differ only in the method by which they would remove them.

Again, in the matter of jurisdictional strikes and secondary boycotts, including the obnoxious practice of cross-picketing, which has sometimes been so evident in New York City, there is a strong feeling among all people, even among the labor organizations themselves, that these unhappy conditions should be corrected. Furthermore, inasmuch as labor itself thus far has shown no will to clean its own house, there has been a growing sentiment that this particular job must be done through the process of government. Here again the only difference among those seeking to prevent jurisdictional strife and other unwarranted conditions pertaining to it concerns the question of the method to be used by which to bring about corrective measures.

So also, in resolving the problem of industry-wide bargaining, concerning the undesirable quality of which there is general agreement among most people, it becomes a question of plan or method in applying corrective measures. Here we have a situation where the chief objections fall largely into two categories—one of which pertains to the spread of monopoly through industry-wide bargaining, the other of which is a sequel of the first and concerns that condition of serious strife in a whole industry resulting in national economic paralysis.

All of the legislation now before the Congress which deals with the undesirable conditions I have cited is intended to correct them. In the exercise of corrective measures, however, extreme caution should be taken to make sure that results which follow are not to be worse than the conditions which they are intended to cure. In our efforts to give to management additional prerogatives which would aid in establishing a balanced relationship with labor, we should be sure that the rights of labor are protected and preserved. It seems to me that here we are faced with a task not of taking from anyone, but of adding to someone.

For example, in the matter of the closed shop I am convinced that every employer should be granted the right to say whom he shall or shall not employ. Furthermore, I am equally convinced that no closed shop contractual relationship should be consummated unless a majority of all employees are in favor of it. Provision to guarantee these standards should be basic in any legislation which may be enacted. Even further safeguards may be required and if these can be imposed without incurring consequences as undesirable as the conditions to be corrected, they also should be incorporated in the legislation. The situation here is one involving collective bargaining and would seem obviously to entail amendment to the National Labor Relations Act.

Jurisdictional strikes and other controversies involving primarily the matter of representation in collective-bargaining agreements should also be corrected by amendment to the National Labor Relations Act. In fact, any unwarranted action or abuse on the part of the employers, employees, or labor organizations, where the matter of collective-bargaining representation is concerned, should be adjusted by amendment to this act. By this process this kind of

dispute or controversy would be outlawed by utilizing the machinery already established to insure the proper exercise of the collective-bargaining process. On the other hand, any action to cure these abuses which would allow direct court procedure and at the same time bypass the agencies of government I have mentioned or which would revive other abuses that the Norris-LaGuardia Act was intended to remove, would appear to offer no appropriate solution to the jurisdictional problem.

In seeking to answer the question of industry-wide bargaining there is insufficient information at the present time to permit of satisfactory legislation on this subject. No one is sure, for instance, what the appropriate bargaining unit should be. Presumably the company is the most natural unit and is subject generally to the least objection, but even here there are a number of important situations which cannot be handled on a company-unit basis.

All the legislation thus far proposed for the purpose of abolishing industry-wide bargaining contains some seriously objectionable features, aside from the dubious matter of the bargaining unit itself. One provision which might easily cause serious repercussions is that by which the international union in the labor organizational structure could be destroyed or at least made impotent. Although I recognize that the organizational structure of trade-unions is far from perfect in some respects and should be altered for the welfare of labor itself, I can see no profit for anyone in abolishing the international union or in attempting by statute to reorganize the structure of our trade-unions. To say the least, such an undertaking would very likely result in added strife and turmoil.

The complicated problems to which I have referred fall almost entirely within the purview of the National Labor Relations Act and should be corrected by amendment to that act. They should not be handled by new statutes bypassing the act or by establishing new governmental machinery which would either parallel or compete with the machinery already established by the provisions of the act.

There is, however, great need for other legislative action if we are comprehensively to meet the management-labor problem with which we seem now to be confronted. Insofar as strictly legal compulsion is concerned, further action would seem necessary to make certain that the contractual obligation, which is the foundation in the labor-management relationship, is fully supported and protected by law. Additional legislation of this nature is now proposed, and I am hopeful that it will be enacted. The sacredness of the contract is the keystone in the arch of collective bargaining.

At the same time let us remember that legal compulsion alone and of itself is no adequate answer to the problem of establishing happy labor relations. Unless we are able to make more effective the voluntary processes by which workers and employers can get together and reach agreement harmoniously, our efforts, no matter how lofty in purpose, must fail. To this end it is now proposed to reorganize and reorient our national mediation and conciliation services. This would be done under the direction of a single administrator, presumably with an advisory council or panel consisting of leading representatives from management and labor.

Heretofore in the field of mediation the chief emphasis has been placed on applying the remedy after the disease of industrial strife has taken hold. And yet, this is only half of the real function of mediation. Prevention of industrial strife is just as important as is its cure. So, in the proposals for a new and broader approach through mediation, emphasis is being placed just as much upon prevention as upon cure.

Furthermore, in the legislation before us, Nation-wide work stoppages in key industries affecting the health and safety of all the people are recognized as requiring special attention and provision is made in such cases for a possible 80-day delay through court injunction obtained by action of the Attorney General of the United States and beginning with the effective date of the strike or work stoppage. Before taking such drastic action, however, a board of inquiry would be appointed by the Attorney General to ascertain the facts and to report the facts to him and to the public—without recommendation. This board would collaborate with the mediation services and would act as an instrument in helping to reduce tension and to bring about peace even before the effective date of any strike.

Thus, before the exercise of the injunctive process, every possible means of utilizing all the voluntary processes would have been exhausted. In the course of the over-all procedure, moreover, it is altogether probable that nearly every situation of the kind I have described would be reconciled long before reaching strike proportions.

In view of the fact that it is probable that legislation providing for this kind of approach by mediation and special governmental intervention will be passed during the present session of the Congress, there would seem to be even less need for immediate direct legislative action against industry-wide bargaining. As I have stated, the most serious consequence of industry-wide bargaining is its potential for Nation-wide paralysis, and with this potential largely reduced through the operation of the procedures I have outlined, there remains for the most part only the question of dealing with its monopoly aspects. Here again the program which I hope will receive favorable consideration by the present Congress provides an answer.

This program, as presented in the United States Senate, provides for the creation of a joint congressional committee to make studies, surveys, and investigations into all aspects of the management-labor relationship. Furthermore, such a committee would investigate the industrial set-up in the United States and in this investigation would be able to determine on the plan or pattern which would seem most suitable for the effective solution of the industry-wide bargaining problem. Not only would this committee investigate the whole industrial field from the aspect of labor, management, and ownership, with the purpose of ascertaining what additional legislation might be needed, but it would have as its responsibility the checking of existing statutes and their operation through existing administrative machinery with the further purpose of ascertaining what amendment or changes might be advisable, either in the law or in its administration. Nine years ago this policy was adopted in the State of New York where it has met with extraordinary success. If it can be employed effectively in the Empire State, with all of our variations in population, in interests, and in activities, it should work with equal success in the Nation.

In this outline of proposed corrective measures to deal with present labor-management difficulties—an outline which is of necessity perfunctory—I have indicated a comprehensive approach to the solution of every major problem in the field of labor relations. If such a legislative program were to be enacted this year, it would largely overcome present difficulties and go far toward establishing industrial peace.

It seems to me vital that in our approach to this most important of all domestic problems we should be as nonpolitical as possible. I have always felt that the relationship between management and labor never should be permitted to become an issue in partisan politics, and during the major portion of my activity in public life I have sought to obtain as wide acceptance of this policy as possible. No good can come to management and no good can come to labor when either or both of them are made footballs in the game of politics. Nor do I believe that in the long run it is profitable for any political party or for any other group in our society to try to play politics with questions pertaining to the worker-employer relationship.

It seems to me most unfortunate, therefore, that some would now play politics with labor relations. In dealing with this subject, what the country needs right now is the enactment of sound corrective legislation and not an issue for a political campaign.

A great social and economic upheaval, such as that from which we are now emerging, is followed generally by a tendency toward reaction. There are some who would like to turn the course of progress backward and to revert to the so-called good old days. Obviously, such a course of reaction can never be long followed without leading to further complications and difficulties.

All of us know that we are living in a dynamic society. It is constantly on the move. When we try to hold it back, we are overwhelmed by conditions over which we can have no control and we are engulfed in consequences far more serious than those which we would at first avoid.

If during the years immediately ahead we shall strive blindly to deny great social and economic demands with which we may be faced, we shall lay in store for ourselves an even more evil day than any we would thus escape. The reaction of today must inevitably produce the counterreaction of tomorrow.

Moreover, in a world where popular government is more and more giving way to statism, we can survive only if we make of our own free society the great success which it can be in meeting and overcoming the problems and difficulties and obstacles which may confront our people. With good faith and good will and sympathetic understanding toward one another, accepting our mutual responsibilities with respect to one another, we can have here in America the kind of country we want. Working together harmoniously, helping one another, cooperating with one another, we can produce here in America among all our people an esprit de corps which will scorn the blandishments and defy the threats of every hostile ideology. We can move forward confidently toward the attainment of new goals in social and economic progress which are within our reach.

Jefferson Day Address by Hon. Spessard L. Holland, of Florida

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Thursday, April 17 (legislative day of Monday, March 24), 1947

Mr. BYRD. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very able address delivered by the junior Senator from Florida [Mr. HOLLAND] on the occasion of the Jefferson Day dinner, in the city of Richmond.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, Governor Tuck, Senator Byrd, Senator Robertson, Senator Burch,

Mayor Edwards, other distinguished guests, and fellow Democrats, I gratefully acknowledge the more than generous introduction which I have just received from your senior Senator, who has long been a distinguished national figure, particularly because of his unceasing insistence upon greater economy and sounder business practices in our National Government. I am proud of his friendship and the friendship of your distinguished junior Senator, who I confidently predict will also attain national fame as a worthy successor to his great predecessor, Senator Carter Glass.

I was greatly honored to receive some weeks ago, through your two distinguished Senators, the invitation of the Virginia Democrats to address the Jefferson day dinner in this great Commonwealth, which claims Thomas Jefferson with such peculiar pride and affection because of the fact that he was one of her own most illustrious sons. I come with humility to speak to Virginians about their Jefferson and our Democratic Party, which he founded, and of which he still remains the great philosopher and continuing inspiration. Inadequate as I am to measure up to such an occasion, I shall be, nevertheless, proud and happy always that you have conferred this honor upon me, for Virginia is the birthplace of my mother and the home of her family since the days of the Revolution—Jefferson's party has always been the chosen party of my people on both sides of my family—and my father and my two grandfathers all wore the Confederate gray under the command of that great and gallant Virginian, Robert E. Lee. So you may be sure that the soil of Virginia is to me almost holy ground and that I come here tonight with a feeling approaching reverence.

The biography of Jefferson is too well known for me to dwell upon it at length. Born in Virginia in 1743, he passed away in Virginia in 1826, singularly enough on July 4, a date which he had done so much to make immortal. In those 83 years he served so brilliantly in so many fields that he shall always be listed as one of the greatest Americans. In public office he served your Commonwealth in his young manhood as a member of the house of burgesses, as delegate to the Continental Congress, as governor, and as Delegate to the Congress during the troublous days under the Articles of Confederation. In his maturity he served the young Republic as Minister to our great ally, France, as Secretary of State, as Vice President, and as President. No other public figure in American history has been so versatile. Great office lawyer by profession, successful planter by choice, brilliant author, architect, musician, scholar, politician, diplomat, and statesman, this tall, graceful, eager, blue-eyed, red-headed Virginian is so colorful as to baffle description. In his own estimation, his three services which counted most were that he wrote the Declaration of Independence, that he was the author of the Virginia Ordinance of Religious Freedom, and that he founded the University of Virginia—that great school to whose presidency you have recently called your distinguished former governor, my friend, Hon. Colgate Darden. But many other specific accomplishments were his. Time does not allow my mention of many. I recall, in passing, the great part he played in helping to locate the National Capital on the banks of the Potomac. Likewise, he successfully put through the Louisiana Purchase, picking up a dozen States in one lot for eleven and a quarter million dollars—a bargain beyond compare—which in itself speaks eloquently of his ability in international affairs and of the vision with which he looked ahead to the time when his youn Republic would outgrow in strength the great nations of his own time.

I feel that as a Floridian I should tell you that while he had on his trading clothes in 1805, just 2 years after the Louisiana Purchase, Jefferson also tried to buy the Floridas from Spain, offering $5,000,000 as the opening bid in a trade that was not completed until 14 years later, in Monroe's administration. Five million dollars for Florida, eleven and a quarter million for a dozen States west of the Mississippi, I am sure that you Virginians will agree with me that the wondrous sense of values which your great Virginian showed so clearly throughout his career was never displayed to better advantage than in this offer which he made for Florida, eagerly but unsuccessfully.

But it was as a great liberal that he attained highest fame. He battled unceasingly in behalf of the rank and file of human beings, insisting on their right to have political independence, personal freedom, religious freedom, equal justice, and as nearly equal education and economic opportunity as could be attained. With a fervor and a devotion that would not be denied he fought for the realization of his vision—for the success of the young republic which to him existed but to serve its citizens and to make possible to them fuller and happier lives than had fallen to the lot of average men and women under other forms of government. We all remember his dramatic words in the Declaration of Independence: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness." These were not idle words used as a brave recital for a historic document. Over and over again he proclaimed this same sentiment and worked and fought that it might be realized. In 1809, speaking to Maryland members of his party, he said: "The care of human life and happiness, and not their destruction, is the first and only legitimate object of good government." In 1810, writing to a dear friend, he put the same thought this way: "The freedom and happiness of men * * * are the sole objective of all legitimate government." For this ideal he broke with the leaders of the State-supported church in the Virginia of long ago, with the landed gentry of his day, with those who believed in slavery, and those who did not believe in general public education.

For this ideal he battled ceaselessly with Hamilton and all those other Americans, many of them great patriots of high ability, whose plans for the infant Republic did not go so far as to build a place of equal dignity for the ordinary man and the average home. This ideal was the bedrock of his political philosophy, the rock upon which he built our political party, a party that was to have continuous existence, until now, always placing first human rights and needs, always insisting that our Government should be as Claude Bowers so aptly phrased it, "a democracy of men and not an aristocracy of money." He saw clearly that organized and constant effort throughout the life of the Nation would be required if his dream of democracy was to survive. Hence his insistence on the creation of our party as a living, vital political agency for the serving of the freedom and the happiness of men. Small wonder it is that Thomas Jefferson is the only American, other than George Washington himself, in whose memory there stand two statues in the halls of our Capitol Building at Washington.

I hope that we Democrats have lived up to his dream; I hope we are still serving and will continue to serve the ideal of Jefferson.

As we glance down the pages of our Nation's history we note that five of the seven great progressive national leaders have been Democrats—Jefferson, Jackson, Cleveland, Woodrow Wilson, and Franklin Roosevelt. To complete the roster of those who, following in the path of Jefferson, have been leaders in improving the lot of the average man, we find only two names of those who came from the ranks of the opposing party—**Abraham Lincoln and Theodore Roosevelt, both great Americans.**

In recent years, beginning with our call to accept responsibility in the hectic days of 1933, we have seen our greatest depression conquered and the world's greatest war won under the bold, inspiring, and effectively democratic leadership of Franklin Roosevelt, whose death saddened our Nation on April 12, 1945, just 2 years ago tonight. The history of his leadership is too recent in date to require long repetition here, but we should not for a moment forget it. Strength was supplied to our banking sinews, ordinary honesty required of our investment agencies, and public confidence in our prostrate financial structure was restored. Home owners and farmers were aided to save their homes and farms, agriculture was helped to meet new problems of production and marketing, labor was given new recognition. Sound conservation and power development projects added to our wealth and productive capacity. Forward looking social legislation brought new security to the aged, the blind, the dependent child, and new protection against unemployment to the wage earner and his home. An enlarged health program brought greater opportunity to the ill.

To claim that this great program of human betterment was accomplished without any mistakes would be absurd. There were mistakes, some of which were abandoned as we came back along the road to successful recovery, some of which still require correction. There was, of course, some waste of money, but who would weigh for a moment the increase of twenty billion in our national debt which took place from 1933 to 1940 against the restored and increased strength, confidence, and productive power which resulted and which existed in our Nation when the war clouds came in 1940 and the storm broke in 1941. That $20,000,000,000, about one-fourth of our national income in 1940 and about one-eighth of our national annual income now, probably counted more heavily in enabling us to win the war than any twenty billion of the three hundred and forty-one billion that we spent in the war effort itself. The national strength, confidence, and productive power which resulted from bold, aggressive Democratic leadership was great enough to make us the determining factor in the battle to save human freedom against organized autocracy at its strongest, cruel tyranny in its most vicious form.

The winning of the war on the battle front and on the home front was, of course, national, bipartisan, and nonpartisan. Yet, while giving equal credit to citizens of other political faiths than ours, I feel that we are entitled to peculiar satisfaction as Democrats because our leadership, too, was willing to prove itself clearly nonpartisan, to find high place in the great effort for Stimson, Knox, Patterson, Forrestal, MacArthur, and many others who were not Democrats. I think, too, we shall always be proud of the world leadership which our Democratic President assumed, through which, as the acknowledged world leader in the grim struggle for the democratic way of life, he attained a prestige throughout the world which was never attained before by any other American or by any other mere man. Two years ago tonight our Nation was joined in its sorrow by the mourning of all the other peoples of the earth who love freedom and believe in the dignity of the individual.

But our great party must base its claim to confidence and leadership now and in the future not upon what all of its great leaders from Jefferson to Roosevelt were able to do for the people of America but upon what we are now doing and upon our leadership and our planned course of action for the future.

I do not believe in trying to fool ourselves—in lulling ourselves into a sense of complacency and self-satisfaction which might cause us to do less than our best, as we approach the general election of November 1948. I strongly believe we can and will

win in 1948, but it will not be upon our laurels of the past, even of the impressive past of recent months, but upon what we shall do from now on through our leader, President Truman, and through our own continuous efforts in national and world affairs and in the State and local governments. I think we have made a sound beginning since the disappointing returns of last November, a beginning upon which we can, if we will but continue to work and fight in the thoroughly Democratic tradition, win back, on the merits of our record, full national responsibility in 1948.

First, as to the States. I am impressed with the record of good government which is being made, in general, in the States which have Democratic administrations. I shall not dwell upon the record elsewhere except to say with pride that my own State of Florida is steadily moving ahead in the path of sound and progressive Democratic government. But I think it proper to remind you Virginians that under the wise leadership of your great Governor Tuck, you of the Old Dominion State are continuing to advance in the traditions of Jefferson. During your recent special legislative session I read with great interest the story of the long strides which you made, following the leadership of your governor in improving your public school system, in placing the public interest first and protecting all of your people against the disastrous effects of work stoppages in the public utilities, in enlarging your health program, while at the same time keeping your State in sound fiscal condition. No objectives could be more truly in the pattern laid down by Thomas Jefferson. I congratulate you and I feel that such aggressive Democratic performance here and in other Democratic States will, of necessity, lend great emphasis to the national efforts of our party and contribute to Democratic success next year.

Next, as to the National Government. No man ever succeeded to the Presidency under such difficult circumstances as did Harry Truman. Projected in the twinkling of an eye into an unwanted responsibility at a time of great national and world crisis, and following a predecessor who was recognized as the great world leader of the forces of freedom, a small man would have been marked for sure and tragic failure. I know that all of us remember the apprehensions which were added to our poignant grief 2 years ago. It is understating the fact to say that President Truman has risen marvelously to the occasion, has rallied not only our party but most of the Nation to follow him as its leader because of his own proven qualities and his own peacetime program. Adopting without change the war program of his predecessor, he carried it through to successful conclusion, adhering not only to the war strategy which required, among other difficult things, that he make the hard decision to use the atomic bomb on the Japanese, but also following aggressively the Roosevelt plan for the organization and support of the United Nations.

And then, the war ended, there came upon him more quickly than anyone could have foretold the terrific task of readjustment to peace, a domestic and international task bigger by far than any set of problems which had ever before confronted a President in time of peace. At first he staggered under the impact, and then, gaining perspective, experience, and self-confidence, he called upon his sound common sense, his good humor, his knowledge of men, and his full storehouse of acquired governmental skill; and slowly but with certainty he began to master the problems and to call round him other sound citizens to help him bear the burdens. The degree to which he has gained popularity, confidence, and support is amazing and almost without precedent.

I mention first his key appointment which have been so sound as to show him to be a keen judge of men. Here is a partial list of the great Americans whom he has called to high responsibility. Warren Austin as our delegate to the United Nations, Bernard Baruch to handle before the United Nations the difficult problem of what to do with atomic energy, Fred Vinson as Chief Justice, "Jimmy" Byrnes and later General Marshall—a product of your own VMI—to serve as Secretary of State, Harriman as Secretary of Commerce, the late Max Gardner and then Lewis Douglas as Ambassador to Great Britain, Omar Bradley as Veterans' Administrator, General Eisenhower to head the Army, and Admiral Nimitz the Navy. These men and many others whom he has called to service command the high confidence of the American people and their selection has earned national confidence for their Chief, Harry Truman.

The strong and successful court action which the President directed against John L. Lewis—that widely known Republican—has given the people additional faith in their President. Furthermore, his actions in world affairs have, in general, impressed our people with his soundness. His recent visit to Mexico struck a cordial note in support of the good-neighbor policy. His recent leadership for affirmative action in aid of Greece and Turkey, small independent nations threatened by communism, has shown that he realizes that we can neither stand still nor practice appeasement and hope to have the respect of Russia or attain satisfactory steps for lasting peace. The soundness of his approach to foreign policy is best shown by the fact that he has retained strong bipartisan support in that field.

In the field of national affairs he has so far shown excellent ability to cooperate with the Republican Congress. He is fundamentally sound in his fiscal policy in insisting on balancing the budget for the current year which he has done not by Republican support but through Democratic efforts. The President now insists on keeping it balanced for the year ahead under the appropriations of the present Congress. Likewise, he has been sound in insisting on debt reduction before tax reduction. In many other ways he has shown that he realizes our Nation must make itself ever stronger on the home front, both for our own sake and so that our world prestige may be retained and enlarged. In short, he is making a record as a great and good President, winning the strong approval of his people as shown by the current public opinion polls, the reaction of press and radio, and other unmistakable indications such as the overwhelming Democratic victory in Chicago last week. His philosophy seems to be just the prescription that our Nation needs in these troublesome times of heavy postwar domestic problems and nervous strain in world affairs while we make the greatest effort of all time to work out with other nations a successful formula for world peace.

This being entirely a Democratic occasion, there is little need to discuss our friendly opponents, the Republicans. Last November they were throwing up their hats and making happy reckless promises right and left in a fashion which we had not seen for the last 14 years. I think it is fair comment to say that since Congress met their joy has largely abated. In the more than 3 months of the current session, they have not commended themselves to the people of our Nation by showing ability to work together on any construction program. Perhaps they will learn as the session grows older, and the Nation will be better off if they do. Up to this time, however, they have been split wide apart on such fundamental matters as the size of the national budget, on which subject their House and Senate leaders have been wrangling in conference for 6 weeks. Similarly, they have not been able to take common ground on whether to give first place to debt payment or tax reduction, or on whether to support the activities of the armed forces without material cuts or to cut them heavily. After some weeks they are still debating amongst themselves in conference as to what form the obviously necessary portal-to-portal bill will take. They are still laboring in committee to determine what their labor policy will be, or whether they will have a labor policy.

They have brought to the floor their serious disagreement regarding reciprocal-trade agreements and on the question whether they will go back to the isolationism with which many of them dallied until Pearl Harbor. They have, likewise, brought to the floor their disagreement as to whether they will stand by the wise decision of the last Congress to entrust the development of atomic energy to civilians. I think the good humored jibe of Senator TYDINGS, of Maryland, to the effect that the Republicans in Congress are like unto the army that marched up hill, and turned around, and marched right down again was a rather truthful description of what they have been doing this first 3 months and 10 days of the session.

As to what they will do from now on remains to be seen. Whatever they may do we should never expect to win on Republican blunders but on the merits of our own service. It is already crystal clear that between now and November of next year we Democrats have a glowing opportunity to keep President Truman in the White House and regain majority control of both Houses of Congress, provided we work hard together on behalf of our Nation and all its people, staying close to the traditional principles of Jeffersonian democracy. What a challenge and what an opportunity to all Democrats everywhere, particularly to you men and women of Virginia—and I am delighted to see here tonight so many ladies. A truly Jeffersonian program will always have special appeal for women.

It is my earnest hope that the Democrats of this great commonwealth, under the sound leadership of your splendid governor, your outstanding Senators and Representatives, and the efficient leaders of your State party organization, may fully throw the great weight of the democracy of Virginia into the fight to make such an unsurpassable showing of service for our country in these next 19 months that the Nation will joyfully and confidently return to full responsibility in the White House and in Congress our party, the progressive party, the Democratic Party founded by Thomas Jefferson.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. LEO F. RAYFIEL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. RAYFIEL. H. R. 3020, the so-called Hartley bill, now before this House for consideration, could not have been a more vicious bill if it had been prepared by the most notorious labor-baiters in the country. It nullifies the gains which labor has made, only after the most desperate battles, covering more than a generation. It is virtually a repeal of the Wagner Act.

Few, if any, of the Democratic Members of the House will condone some of the acts which have been committed by a few labor officials, and many would support a bill designed to eliminate

some of the abuses for which they were responsible. But this omnibus bill contains many provisions which are intended to destroy the effectiveness of trade-unions, if not the very unions themselves and not, as its supporters so piously claim, to promote improved relations between capital and labor.

Those in and out of this House who have long been listed as enemies of labor unions are the most ardent and vociferous supporters of the bill.

If it should become law it would set off a series of conflicts between labor and industry which would make some of our recent serious strikes appear like minor disturbances.

It is a pity indeed that the supporters of this bill are so short-sighted that they cannot see that the reduced earning and living standards of the workers of this Nation which would inevitably follow, would also affect the very people in whose behalf the bill was introduced. Business succeeds best when the American workingman is employed at fair wages and under decent conditions.

Mr. Baruch's Address to the South Carolina Legislature

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, April 17 (legislative day of Monday, March 24), 1947

Mr. MAYBANK. Mr. President, yesterday at Columbia, S. C., there was unveiled in the hall of the house of representatives a portrait of the Honorable Bernard M. Baruch, in recognition of his outstanding work in the war effort, and in recognition of his devotion to, and many charitable and gracious things he has done for, his native State of South Carolina. On that occasion, Mr. Baruch addressed the joint assembly. I ask unanimous consent to have his remarks printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

If this portrait could speak, it would be saying what lies so deeply in my heart—home again! Not from a foreign shore, for I have lived for nearly 70 years amidst that most generous, tolerant, kindly, patriotic people in the world's capital—New York City.

But you are my people. This is the land of my birth, where my forebears, together with yours, shared hardships that were bitter from the earliest days down through the lost cause. They fought and died for their principles with a bravery never exceeded anywhere.

Defeated, we accepted that defeat. Although the victors placed unnecessary hardships upon us, we rose from the ruins left by Sherman to a wider and widening life, economically and spiritually. There was no friendly government to give a helping hand or to lend us money. The scallywags and carpetbaggers saw to that. But nothing could conquer the spirit of our people. As we did then, we can do again. I believe the American people will rise to the responsibilities and dangers which face us now.

And this thought is true of other nations, too. England and the English people are not finished. A nation which stood magnificently the dreadful trials of war will not quail at what is necessary to be done in its aftermath. The vast opportunities offered to Britain by the elimination of the sweated labor of Germany and Japan will be grasped by her, to make the world an easier place in which to live.

From the time man appeared from the obscurity of earlier aeons to become the commanding figure among living things, his existence depended upon his ability to adapt natural laws—whether they be physical or economic—to his use. That is still the primal problem of our world—to prevail against animals and insects; starvation, disease, weather—and above all—his own incredible folly—war. Many advances have been made in science, but little headway in controlling economic factors. There is still the threat to our system of ups and downs—plenty and want—boom and bust.

Perhaps the First World War could not have been averted. Who is there to say that the Second World War—with all the danger signals shown—could not have been averted by adequate readiness and alertness of action, for war had indicated its coming as surely as that the day follows the night. Yet the world refused to face the inevitable. So, when the enemy struck, we were unprepared—militarily, economically, and spiritually. We had refused to learn the lessons of the preceding war. We fumbled and stumbled—industrially and financially—without taking heed of the mistakes we had made.

Someone has said that the only lesson history teaches us is that it teaches us no lesson. It seems to me that that is mostly because people do not read history. Particularly is it so in contemplating this second catastrophe into which we were thrust and the manner in which we are now handling the problems resulting from its aftermath.

On the martial side of World War II the spirit of America rose in a mighty effort. We fended for ourselves and provided for our friends. Nothing they needed was too much for us to give, for what we did for them we were doing for ourselves and for the common cause.

Our war was fought on fronts 15,000 miles away from each other. Never in the history of mankind have there been such military achievements. Marshall, MacArthur, Eisenhower, Arnold, Patton, Stillwell, King, Halsey, Nimitz, Mitscher, and all the young men and women in our armed forces added new and great glory to America. The civilians and workers at home did their magnificent share, showing that the greatest form of efficiency is the voluntary cooperation of a free people. You, in South Carolina, took a great part for you were always in the front with volunteers. Finally, the genius of our scientists, our engineers, our industrialists, produced the supreme weapon of all time—the atomic bomb. That we shall never give away, until and unless security for us and for the world is established. Until that time comes, the United States will remain the guardian of safety. We can be trusted with that solemn responsibility. Only two countries—really only one—have dissented from that declaration—Russia and its satellite, Poland, which abstained from supporting the American atomic plan.

So much for the past.

I wish I could say that the immediate future looks bright. But it is not entirely black. The future of ourselves, in fact of the world, lies within our grasp. The Nazis made a thorough job of scorching the earth physically, economically, and spiritually. They destroyed men's faith in their fellow men; in their governments; in their ability to do for themselves; and in the spiritual values of life.

There is no place left to which to turn for regeneration except to America. We must answer that call or we shall fail civilization in its most tragic moment, and thus fail ourselves. We cannot do it by loans, grants, subsidies, bonuses, or pious resolves. We can do it only by showing the real might of America—by justice; by helpfulness which insists upon self-help, and finally, by production and still more production. Then will come a respite in which the world may bind its wounds. Then man will find work so that he and those dear to him may live in a manner of his own choosing.

We are called upon from every direction. Can we answer all the calls? Not long ago I asked for an inventory of America's resources. I wanted this country to know what it has to give before it promises aid. If we find we haven't enough to help everybody, we then must help those who can most readily help themselves.

After the First World War, I urged that the peoples be helped to go back to work. Who, if left alone, is not eager to work, if through his labor, he lives under better conditions in body and spirit? That is the way to gain self-respect and regain human dignity—deliberately destroyed by totalitarianism, regardless of what label it wears.

Never has there been such schisms between segments of society. Never has labor been so powerful. And now it must use that power through leadership in cooperation, or lose that power.

Today, as 30 years ago, the need is present. The same call is heard. Let all of us go back to work—to work, not for war, but for peace—to work under a system that gives each a share of the wealth he produces.

We will find that work will solve many of the problems threatening security—the interrupted productivity in America; the lack of coal in Britain; the deficiency of the food and other life supplies in Europe. Even the spirit of the savage enemy countries will be bettered by bettering their economic conditions. And that can be done only by work.

One of the world's delusions is that the world can be set right by borrowing money. It can get going only if men work. If we accept the challenge to preserve civilization, it means greater effort—greater even than that exerted during the war. It will be without the fanfare of war. It means sweat and thrift to make the things the world needs to start anew, the physical things which it must have in order to feed, clothe and house the peoples—to educate, spiritualize, medicated, transport and entertain them. Work is the alchemist that changes drudgery into joy. That is every man's goal—that is every man's right.

But we might as well look facts in the face: We cannot achieve our purpose with the present hours and limitations on work. Men and women will have to work longer and harder for some time to come in order to catch up with the ravages of war, if we are to regain our heritage; if we are again to be the Missioners of Hope and be rewarded for effort.

During the war I always contended the 6 days a week and 8 hours a day was the fastest pace at which we could go in a long war. That, too, would be the limit for peace. But if we adopted, wholeheartedly a 5½-day, 44-hour week, with no strikes or lay-off, to January 1, 1949, the result would be electrifying.

Production would flow smoothly; a sense of security would return to worker and employer; and the reaction upon the economy of the world would be deep and lasting. Until we have unity; until we straighten out and solve our own problems of production, and have internal stability, there is no basis on which the world can renew itself physically or spiritually.

And upon this change in our material outlook, there would follow a change in our sense of security. Make no mistake; our

military lines are no stronger than the industry behind them. Unless we work, we shall see a vast inflation; unless we work, we shall not be able to maintain our claim to power. That would be the greatest blow we could receive, for it would strip us of our strength to preserve our way of life.

Let us not be deceived; we are today in the midst of a cold war. Our enemies are to be found abroad and at home. Let us never forget this.

Our unrest is the heart of their success. The peace of the world is the hope and the goal of our political system; it is the despair and defeat of those who stand against us.

We can depend only on ourselves. One by one our allies are—or they think they are—exhausted. That means they stop work. But usually we find that exhaustion is the result of stopping work and not the other way around. That can happen here. Don't let us be sucked into the maelstrom.

Be sure of this: Today we are on the brink of an engulfing inflation. There is only one way out. That is by work.

The more we produce, the less will be the cost of living; the more things we can buy; the easier will be the building up of our reserves, physical, financial, and spiritual, too, for we shall be free of worry, the absence of which is a sense of security.

As I say this, there comes to my mind, as support, the motto of our native State: Animals opibusque parati—ready in soul and resources.

And now I close by saying that no greater compliment could have been paid me than to hang my picture in the legislative chamber of my motherland. From her sprang men great in the beginnings of America—the Rutledges, the Pinckneys, the Lynches, Heywards, Middletons, Laurens. And in more recent days, a great Senator, Supreme Court Justice, and Secretary of State, James F. Byrnes, has added his name to the immortals.

South Carolina—I thrill at the name. Deserving her place in history, by her years and efforts, she remains forever young in her determination to do even better in the time to come. And to that, as one of her proud sons, I pledge, as did our forefathers, my life, my fortune, and my sacred honor.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 17 (legislative day of Monday, March 24), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the March 29 issue of America, which is a Catholic review of the week. The editorial, which supports the President's suggestions for aid to Greece, indicates the belief that this is the best means available of keeping us out of war.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUMMONS TO INTERVENTION

Why is there so much disturbance over the President's request for three perfectly obvious things? He asked that Greece and Turkey be assisted in a moment of extreme emergency; that trained American civilian and military men be sent to these countries to aid in reconstruction; and that the plan be put into operation as soon as possible. Furious congressional debates are prognosticated; though it is our guess that most of the debates will be merely for the sake of the record. No clear alternative to the President's demands has been proposed, for none is at hand. The bitter pill may be sugar-coated by a few amendments and restrictions, but there is nothing for it but to swallow the medicine.

The nub of the situation is that intervention has now definitely come to stay. The President has no illusions on this point; he realizes the implications of what he is doing. And the same is painfully evident to his isolationist critics, as it is to Pravda and Izvestia. Once more a frantic attempt will be made to ascribe an inevitably necessary intervention to any convenient scapegoat—to Fascist influence, to the New Deal, to Wall Street, to anything but the plain and evident truth. This truth is that a desperate emergency threatens the security and the very existence of our country. Delay in action is a fatal waste of opportunity. Much sooner than we imagine we may be bitterly reproaching ourselves for neglecting it, as the world reproached itself after Munich.

The President is not "dragging us into war," but is using the best means available here and now to keep us out of war. On the other hand, if prompt action is not taken to preserve the political independence of Greece and Turkey, and to provide some sort of first aid in an economic sense to Greece, we shall find arrayed against us a rejuvenated military machine, a huge accomplished fact of a Soviet-dominated and Soviet-occupied Europe, and a prostrate Britain. We are not seeking war, but taking the only possible step to keep war from seeking and annihilating us.

Equally futile is the argument that by aiding Greece and Turkey we are conferring approval upon a Fascist regime or a corrupt government. "The extension of aid by this country," says the President, "does not mean that the United States condones everything that the Greek Government has done or will do." We have always condemned extremists of right or left. But we are facing squarely the question whether free institutions of any sort can survive. "This is no more than a recognition that totalitarian regimes imposed on free peoples, by direct or indirect aggression, undermine the foundations of international peace and hence the security of the United States."

If the President's course is adopted, will there be further demands upon the money and the manpower of the United States to meet with kindred situations in Korea, in Hungary, or in other danger spots all over the world? Quite likely there will be, and these will continue so long as a certain amount of boasting and bluffing is allowed to have its way. But this is not "embarking upon imperialism," or any such fantastic notion. Nor have we been forced to "embark" upon intervention by any cunning schemes or ambitious administrations, past or present. The simple fact is that in the last 30 years the immense evolution of the modern world and the phenomenal rise of totalitarianism have placed the United States in a position of dominance and leadership where we now have only two courses open to us: to intervene actively—through economic aid and political power—in every region of the world where freedom is threatened, or be resigned to our own and the world's destruction.

The President's brusque unveiling of this stark alternative has thrown the pink liberals and the "muddled conservatives"—isolationists and reactionaries—into a common fellowship reminiscent of the Hitler-Stalin pact. But decision can no longer be postponed. Only when America faces her full duty in the present can she hope in the future to be part of a peaceful and law-abiding world.

Don't Delay: Speed Greek Aid Bill

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 17 (legislative day of Monday, March 24), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in today's issue of the Philadelphia Inquirer entitled "Don't Delay: Speed Greek Aid Bill."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DON'T DELAY: SPEED GREEK AID BILL

Prompt and unanimous approval by the House Foreign Affairs Committee of the $400,000,000 Greco-Turkish aid program stands as further heartening recognition of the urgency of this issue.

It is highly reassuring, from the standpoint of the need for affirmative action by this country to help stem the march of communism abroad, that the House committee, like the Senate Foreign Relations Committee a few days ago, has wasted no time on this imperative matter.

In addition, the House group's action represents an official answer to Henry Wallace, who has been denouncing President Truman's proposal—and the peaceful aims of the United States Government—to the British public.

The truth is, of course, that Attorney General Tom C. Clark, in his Philadelphia speech the other night, gave a substantial if indirect boost to the proposal for help for Greece and Turkey when he declared that anyone "who tells the people of Europe that the United States is committed to a ruthless imperialism and war with the Soviet Union tells a lie."

Thus, without mentioning names, the Attorney General handed a stinging rebuke not only to Wallace but to other Americans, in and out of Congress, who are trying to scuttle the Truman plan by charging that this country, in moving for political freedom in Europe, is following the pattern of aggression.

Nothing could be further from the facts. The plain question involved is whether preventive steps against a form of actual aggression—the imposing by a great and powerful nation of its will upon relatively weak countries—shall be taken now, while there is time and opportunity to make them count, or whether to await an indefinite future when the damage already done to the peace of Europe might be irreparable.

There is nothing to show, as of this date, that the Soviet Union has changed or even modified its expansionist policies. On the contrary, only within the last few days has come new evidence, through Associated Press dispatches, of a Moscow-directed superadministration of the Balkans which purportedly controls military operations beyond the Greek border and dominates political thought in Rumania, Bulgaria, Yugoslavia, and Albania.

There is nothing new about such charges as these. What is new, however, is the detailed disclosure of the organization of Moscow-trained men and women who allegedly get their orders from the Kremlin and have put in operation a superstate that functions with the approval of the Soviet Union.

That Marshal Tito, of Yugoslavia, is said to be a leader in this imperialist, pro-Communist set-up is no surprise to Americans.

But the point is that if neither the efforts of the United Nations to make a real start

for world stability nor the peace-striving meetings of the Council of Foreign Ministers have caused the Moscow Politburo to check its expansionist ambitions, there is need for the utmost speed if the United States hopes to accomplish anything whatever for the preservation of independence in eastern Europe.

The first requirement now is that the proposal in Congress to provide aid for Greece and Turkey should carry a connecting link to the United Nations. The amended Vandenberg plan, now in the Senate bill, but not yet incorporated in the House bill, would permit the United Nations to have a part in ending American aid if or when the need for aid passes. Such a link between American and United Nations procedures is essential.

The second requirement is for both House and Senate to push the aid program to enactment with all possible dispatch. This is not the time for dilatory tactics in the House or filibusters in the Senate. It is time for prompt, wholehearted action by Congress to promote, through this measure, the economic upbuilding of Europe and the maintenance of world peace.

Statement of Principles Dealing With Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 17 (legislative day of Monday, March 24), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial headed "The Chamber's Formula," published in the April 12 issue of the Pittsburgh Press. The editorial states that under the auspices of the Chamber of Commerce of Pittsburgh a group of leaders representing both management and labor unions have drafted a statement of principles dealing with labor-management relations.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CHAMBER'S FORMULA

Under the auspices of the chamber of commerce a group of leaders representing both management and labor unions have drafted a statement of principles dealing with labor-management relations.

This statement apparently is designed as a general document on which the sponsors hope all labor unions and all employers in this area will agree.

There is, as a matter of fact, nothing new in the statement. The principles it enunciates either are already accepted or should be generally accepted.

Only the most obsolete minds either in unions or in management could fail to agree on all of the 10 points set out in the chamber of commerce statement.

The significance of these principles does not lie in their originality. They have been standard objectives since labor-management relations began. And by now all hands at least give lip service to them. Hardly anyone dares eschew any of them.

Despite this, they are not universally respected.

For instance, violation of contracts is an old story. Both employers and unions have been accused of it. In many cases the breach has been all too obvious.

So, if the higher-ups of management and unions will adopt these principles in good faith, as suggested by the group which drafted them, it will be a long step toward more constructive industrial relations in this area.

Neither side need hesitate about accepting these principles. While they are spread out over 10 specific points, they all add up to one thing: The right of every man to free choice of his course and the dignity of his person.

Once such principles are instilled in the minds and hearts of the leaders on both sides, once it becomes possible to accept them honestly and trustfully, the way will be cleared to decency and sincerity in labor relations.

From then on the path of collective bargaining and the road to more abundant production will be relatively easy.

The Loyalty Order

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, April 17 (legislative day of Monday, March 24), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful and incisive critique of the recent loyalty order by four brilliant jurists on the faculty of the Harvard Law School. It appeared as a letter to the editor of the New York Times on Sunday, April 13, 1947. Because of the distinguished character of the writers, the editor of the Times prefaced the letter with an introductory note, which I also wish to insert.

There being no objection, the letter and introductory note were ordered to be printed in the RECORD, as follows:

THE LOYALTY ORDER—PROCEDURE TERMED INADEQUATE AND DEFECTS POINTED OUT

(Of the writers of the following letter, Mr. Griswold is dean of the Harvard Law School; Mr. Scott, an authority on the law of trusts; Mr. Katz and Mr. Chafee, who served as vice chairman of the Commission on Freedom of the Press, are professors of law at that school.)

To the EDITOR OF THE NEW YORK TIMES:

The moral and political validity of the Executive order "prescribing procedures for the administration of an employee's-loyalty program in the executive branch of the Government" will be measured by its efficacy in achieving its twin purposes. As stated, these are: to afford "maximum protection * * * [to] the United States against infiltration of disloyal persons into the ranks of its employees," and to afford "equal protection from unfounded accusations of disloyalty * * * [to] the loyal employees of the Government."

It is possible so to administer the order as to accomplish these ends. It is also possible so to administer the order as to miss genuine culprits, victimize innocent persons, discourage entry into the public service and leave both the Government and the American people with a hangover sense of futility and indignity.

The nature of the administration will hinge upon the procedures to be followed. This is the nub of the business. Here, as so often in our history, moral and political issues come to focus in a question of procedure. Although the order purports to prescribe a procedure, the prescription is shadowy and incomplete.

Conceivably, the silences of the draftsmen may be redeemed by wisdom in execution. At this time, however, we can only appraise the order according to its terms. The procedure actually described is quite inadequate. It fails to take due account of the gravity of the sanctions invoked against a person to whom the prohibitions of the order may be deemed to apply. It fails to draw upon the cumulative experience of courts and administrative agencies. It fails also to give effect to the conception of sound administrative procedure reflected in the very recently enacted Administrative Procedure Act.

MEANING OF DISMISSAL

It is imperative to keep clearly in mind what a dismissal under the order means. Far more is involved than the loss of job. It means that:

1. The person dismissed will be denied all opportunity for employment anywhere in the Federal Government.

2. As a practical consequence, he will also lose almost all possibility of finding employment within any State or municipal government.

3. Also, he will encounter special difficulties in obtaining employment in private organizations.

Consider the case of one who, for 20 or 30 years—his entire mature life—has worked in the Forestry Service, or the Bureau of Animal Industry of the Department of Agriculture, or the Postal Service, or the Bureau of Standards, or the Tennessee Valley Authority. To deny him all opportunity for employment in governmental service, Federal, State or municipal, is to deprive him of the only means of livelihood for which he has any training or experience.

The tested wisdom of our tradition and national experience dictate that no sanction so drastic shall be applied save after adjudication of wrongdoing based upon a full hearing before responsible and impartial public officers, who are not themselves in fear of losing their own jobs.

The Executive order provides for a hearing of sorts before a "loyalty board" in the particular department or agency, whose members are to be appointed by the departmental or agency head from the personnel of the department or agency. Since Cabinet officers and other senior personnel are unlikely to have either the time or the taste for such service, the membership will tend to be drawn from third or fourth line employees, who will themselves feel none too secure.

EVIDENCE AT HEARING

And the nature of the hearing? The suspected "officer or employe shall be served with a written notice of such hearing in sufficient time, and shall be informed therein of the nature of the charges against him in sufficient detail, so that he will be enabled to prepare his defense." So far, good. But—"The charges shall be stated as specifically and completely as, in the discretion of the employing department or agency, security considerations permit."

The accused is also given a "right to reply to such charges in writing," and a "right to appear before such board personally, to be accompanied by counsel or representatives of his own choosing, and to present evidence on his behalf. * * *" There the prescription ends. There is no provision that the accused shall be confronted by such evidence as there may be to support the charges against him, so that he may undertake to rebut it. Indeed, there is no requirement that the evidence against him shall be introduced at the hearing at all.

No provision is made for a detailed record of the hearing or, for that matter, for a record of any kind. There is no requirement that the findings of the loyalty board must be supported by the evidence. In fact, there is no requirement that the loyalty board make any findings whatever. After the

"hearing," the loyalty board makes its recommendation to the head of the department or agency. If the recommendation is for removal and is accepted by the departmental head, his decision is subject to an appeal to the Loyalty Review Board of the Civil Service Commission, which, after review, makes an advisory recommendation.

Since there is no provision for a record, it is by no means clear what the Loyalty Review Board of the Civil Service Commission will review or on what basis. The order is, moreover, wholly silent as to the procedure to be followed by the Loyalty Review Board upon such review. The membership of the Loyalty Review Board is to be appointed from "officers or employees of the Civil Service Commission," presumably by the Commission.

IMPALPABLE STANDARD

This tells its own tale, but the tale is not yet complete. The charges against the suspected public officer or employee will derive their significance from the standards of wrongdoing defined by the order. The governing standard is explicit. "The standard for the refusal of employment or the removal from employment * * * shall be that * * * reasonable grounds exist for belief that the person involved is disloyal to the Government of the United States." Even in the most mature and most careful and fairest of hearings, it would be sufficiently difficult for the defendant to come to grips with so impalpable a standard.

But even this is not all. The "activities and associations of an * * * employee which may be considered in connection with the determination of disloyalty may include one or more of the following: * * * Membership in affiliation with or sympathetic association with any foreign or domestic organization, association, movement, group, or combination of persons, designated by the Attorney General as totalitarian, Fascist, Communist, or subversive, or as having adopted a policy of advocating or approving the commission of acts of force or violence to deny other persons their rights under the Constitution of the United States, or as seeking to alter the form of government of the United States by unconstitutional means."

Here we swim in a sea of ambiguity. Is the Attorney General's designation to be taken as final? May the defendant undertake to show that a group with which he is sympathetically associated is not subversive, or must he limit his defense to an attempt to show that he has no connection with the organization? If he concedes his membership, and is foreclosed by the Attorney General's characterization of the organization, will this be taken as proof that he, as an individual, is likewise subversive, or at least as reasonable grounds for belief that he is disloyal? Where is the burden of proof? Is it on the accused?

ANSWERS TO QUESTIONS

These are questions which can be answered, and answered in such a way as to maintain both the integrity of our free institutions and realistic possibilities of control. The task is arduous, but does not lie beyond the reach of legal and administrative imagination and technique. There is an implication of surrender in the apparent abandonment of the elementary requirements that charges be supported, that issues be clearly defined, that the burden of proof be clearly assigned, and that an adjudication must be based upon evidence with which the defendant has been confronted.

As has already been indicated, the order embodies a novel variation of a familiar system of control—licensing. In effect, the public service is made a licensed activity, and a public officer or employee dismissed under the order is in the position of one whose license to pursue his calling has been revoked.

The settled practice of many administrative agencies, judicial decisions without number and a variety of Federal and State statutes have developed a well-established procedure for the revocation of licenses. There is a complaint, which specifies the charges; there is an opportunity to answer; on the issues thus defined there is a public hearing before the licensing authority; at the hearing the defendant is confronted by all the evidence against him and is given full opportunity to introduce evidence in his own behalf; the licensing authority must find that the charges have been sustained by the evidence in the proceeding, and no other evidence may be considered; a record of the proceeding must be kept; the order of the licensing authority must be supported by the findings, and the findings must be supported by the evidence; and the order of revocation, if issued, is subject to judicial review.

POSSIBILITIES OF ABUSE

The Department of Justice and the Congress have lately been much concerned about the possibilities of abuse in administrative procedure. Their concern has been given effect in the investigation and report of the Attorney General's Committee on Administrative Procedure and in the Administrative Procedure Act which became a law on June 11, 1946. These now stand as a somewhat ironic commentary on the misty procedure so indistinctly sketched in the Executive order.

The situation can be redeemed. The order does state that its expressed requirements as to procedure "shall be considered as providing minimum requirements," which may be supplemented by the heads of individual departments or agencies. This affords some possibilities for relief here and there, but is plainly inadequate.

It is for the President and his law officers to make the correction. In default of adjustment by Executive action, the correction may be imposed by the courts, but piecemeal, slowly and after much clamor and confusion.

CAMBRIDGE, MASS., *April 10, 1947.*

Will H. R. 3020 Bring Industrial Peace?

EXTENSION OF REMARKS
OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. BUFFETT. Mr. Speaker, my vote will be recorded in favor of H. R. 3020, for the correction of abuses in labor-management relations. Legislation to cure the various evils prevailing in this sector of our economy is long overdue. I am hopeful that this measure, representing long and earnest endeavors by the House Education and Labor Committee, will largely rectify the many faults of existing statutes on industrial relations.

However, I do not believe that this legislation will inaugurate a period of domestic economic peace and tranquillity.

This legislation comes at a time when humble people are feeling the long-delayed but cruel impact of 14 years of inflationary spending. The consequences of that inflation, familiarly labeled the "high cost of living" are a very real problem today to millions of workers.

During my terms in Congress I have carried on a persistent, but losing, fight against inflation. My second speech in the House, on May 20, 1943, anticipated, in part, the situation that confronts us now. I declared then:

For we are now nearing the crisis in our financial affairs. Strong measures to preserve the value of the frugal savings of the common people of America must be enacted or else the same formula that has produced dictatorship in other parts of the world will produce it here.

First would come social dissensions, resulting from the disruption of home life and skyrocketing of prices. These disorders would take the form of food riots, sectional strife, or recurrent labor disputes. Whatever their apparent nature, the underlying cause would be the protest of the people against destruction of the America they love by unsound economic practices.

I then overestimated the nearness of the consequences of years of inflation. But today those consequences are no remote danger. They have their foot in our front door. Wage earners and all people of modest income are being severely hurt by the deterioration of our money.

Again, a year ago, in my Washington report of May 15, 1946, I warned:

If the fight to stop this British raid (the British loan) is lost, prepare yourself for ruinous inflation—or the Nazi alternative, ruthless regimentation.

The $4,000,000,000 gift loan was passed last July. What has happened? On March 1, 1946, the Department of Labor yardstick on food commodities stood at 107.9. On March 1, 1947, it was 167.5. That is a rise of 59 points, or over 50 percent in 12 months.

What caused this dizzy price rise, which has only partially hit the family market basket? You remember UNRRA, the British loan, and other hand-outs? These schemes supplies foreign countries with almost a blank check against our production. These dollar hand-outs have taken gigantic quantities of American grain and other nonperishable foods. Inevitably, this excessive buying demand has skyrocketed prices—even though original supplies were large. On the other hand, fresh fruits and vegetables, largely nonexportable, are generally working lower in price despite the end of OPA regimentation.

The humble people of America will not quietly endure inflation that cruelly lowers their living standards, especially when they know they are not getting the truth about the causes of that situation.

So continued labor strife is not only possible, but probable, even though this bill corrects many evils.

Until Congress stops the Truman administration from playing Santa Claus of the world, we will have no permanent industrial peace.

Moreover, until the American people get the truth about how foreign hand-outs are raising their cost of living, we are not entitled to domestic tranquillity. Desirable as some of these hand-outs might be, no goal abroad justifies fooling the American people about its cost to them in inflation and monetary deterioration.

The Truman administration is loading the American people with the budget

deficits of unnumbered countries. That policy means continual economic stress and strife in America.

H. R. 3020 does not deal with this basic problem, upon the solution of which depends the future of the American people.

The Congressional Record

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, April 17 (legislative day of Monday, March 24), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in today's issue of the Philadelphia Bulletin, written by Mr. Paul Jones and published in his column which is entitled "Candid Shots." This column discusses the CONGRESSIONAL RECORD, and it is headed "A CONGRESSIONAL RECORD fan wonders how the snipers at Congress get that way."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CANDID SHOTS—A CONGRESSIONAL RECORD FAN WONDERS HOW THE SNIPERS AT CONGRESS GET THAT WAY

(By Paul Jones)

To rise to the defense of representative government seems so old-hat nowadays that we feel a bit embarrassed in pointing out that Congress may be, after all, a very sound institution.

This revolutionary idea came to us after we had leafed through the CONGRESSIONAL RECORD for the fifteenth consecutive day without finding anything with a crackpot angle loony enough to inspire a light paragraph or two.

We do not believe this condition will or can last. When you have 531 people from all over the country and of different ages or backgrounds, each entitled to leap to his feet and sound off on matters of public concern, somebody is bound to make a boob of himself sooner or later.

If we approached this whole thing from a scientific angle, we would judge the CONGRESSIONAL RECORD only after establishing what we research workers call control groups. That is, we would—during a given month—set up an executive record or stenographic transcript of everything said during White House or Cabinet conferences.

We would, also, decree that a strict report be kept of even the lightest words which fall from the lips of agency heads and bureau chiefs during their pow-wows with subordinates. These conversations would appear daily in the Bureaucratic Bugle.

Far from our thought is any wish to be cited for contempt of court, but in the interests of humanity, let all judges consent to publish the obiter dicta of their huddles, the byplay and banter which we suppose adorn even their august consultations. Let all be printed in the Judiciary Journal.

WHY BE FOR CONGRESS BUT "AGIN" CONGRESSMEN?

It would then be possible, each morning, to spread in front of you the four Government dailies—the CONGRESSIONAL RECORD, the Executive Eavesdropper, the Bureaucratic Bugle, and the Judiciary Journal. With all the evidence before us, we could then determine whether the debates in Congress are really on as low a level as the enemies of Congress claim.

If we had to make a guess beforehand, we should surmise that our Senators and Representatives would do at least as well as their opposite numbers in the other departments of Government. During our own sketchy experience in Washington, we used to sit in on regular conferences which we believe got through some useful work. But we would hate to have a record of all the false starts, the hums and haws, the thinking-out-louds, the poor jokes, and the hasty proposals which we contributed on occasion (as everybody else did) to the morning sessions.

We are not sure just how it is possible to be for representative government but against representatives whenever they attempt to govern. We can understand a slight sinking feeling when the visitor to the Capitol takes a gander from the gallery and examines the men and women on the floor of the Senate or House. But we contend that any group of people lifted from the 48 States and the 435 districts ought to inspire the same disquiet, because you are really looking at the essence of republican rule.

What we can't understand is the relief some people seem to find in turning to a little group of experts or to the single figure of a dictator.

This leads to another proposal. It is surely not beyond the capacity of our scientific workers to devise some sort of electronic skull cap which would fit over a fuehrer's skull, and make a record of his thoughts. This is the only way we can dream up to make a fair comparison between the debates of a democratic assembly and the cogitations of a superman.

A LOOK INTO A DICTATOR'S BRAIN

By a simple process of telephoto-communications (you work out the details in your spare time) the image of his pondering would be converted into light-impulses beamed into a printing plant. We won't bore you with the details, but the upshot of the whole thing would be the appearance on the breakfast table of the Superman Scimitar.

We will assume that he couldn't edit the sheet except for mechanical errors, so that the fascinated citizen could read something like this: "Shall I attack Russia or not? Well, it's a gamble. Napoleon flopped at Moscow. But then, what was Napoleon compared to me? Himmel, why did I eat that sauerkraut? I ought to know better. What was I thinking about? Oh, Russia. Hmmm. Of course, the general staff is against it. But what do those dummkopfs know about military science, compared to a corporal in the Bavarian line? What does anybody know, except me? Maybe it wasn't the sauerkraut, maybe it was that knackwurst. The economic minister wants me to leave Russia alone, too. But what does Schacht know about banking and finance, when you come right down to it? I mean, compared to me? Would the people stand for it? Bah, they'll stand for anything. Say, maybe it wasn't the knackwurst and sauerkraut. Maybe it was that acorn coffee.

On second thought, we'll settle for the CONGRESSIONAL RECORD.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. ANDREW L. SOMERS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. SOMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter sent by the Puerto Rican Commissioner, Dr. A. FERNÓS-ISERN, to the Secretary of the Interior, J. A. Krug, and Secretary Krug's reply thereto:

MY DEAR MR. SECRETARY: Allow me to congratulate and thank you on your statement before the Committee on Public Lands of the House of Representatives at the hearing held March 7, 1947, on statehood for Hawaii.

Representing, as I do, a community of 2,200,000 American citizens, who do not enjoy a fully democratic system of self-government, I can certainly appreciate the value of your recognition of the right to enjoy it, which you are advocating for the people of Hawaii, another offshore community of American citizens in a predicament similar to ours.

I realize that the historical background and the circumstances in the case of Puerto Rico are not identical with the historical background and the circumstances in the case of Hawaii. But I believe that, fundamentally, both cases offer an opportunity to apply in practice the principles of democracy in accordance with American principles of government. The philosophy presiding the approach to the Hawaiian problem is equally applicable to Puerto Rico. Governmental authority should emanate from the people. Of course, the form of partnership or relationship between the offshore communities and the mainland which in each case should prevail may offer a field for different opinions.

In the case of Hawaii I have no doubt that the answer is statehood. In the case of Puerto Rico I coincide with your statement: We must find out what the people of Puerto Rico actually want before we arrive at a final decision.

In the name of the people of Puerto Rico I dare say that our aspirations may be summed up in the following: Full democracy; freedom from want; adjustment of relationships with the mainland on the basis of common interests, common ideals, and common consent.

Sincerely yours,

A. FERNÓS-ISERN,
Resident Commissioner of Puerto Rico.

Hon. ANTONIO FERNÓS-ISERN,
Resident Commissioner for Puerto Rico, House of Representatives.

MY DEAR DR. FERNÓS-ISERN: Thank you for your kind comments on my statement on statehood for Hawaii before the Public Lands Committee.

I am sure you realize that I feel very strongly that the people of Puerto Rico should be given the opportunity to express their desires as to ultimate political status. In fairness to them, I think this can only be done after Congress has set forth in clear terms the alternatives which it is willing to extend to Puerto Rico. I will continue to press for such a measure at every opportunity.

Both you and I realize that because of the great divergence of opinion in Puerto Rico and in the United States as to what the ultimate solution should be, the problem is not a simple one, and I think that we must be realistic enough to face the fact that it may be impossible to get immediate action from Congress on a satisfactory plebiscite measure. Because I believe so strongly in the principles of democracy, I will vigorously support any measure which provides immediately for a greater degree of self-government in Puerto Rico. I hope that a bill will soon be introduced in Congress to provide for the election of the governor by the people of Puerto Rico and for the local appointment of all of the governmental officials. You can be assured that I will urge the immediate passage of such a measure.

Sincerely yours,

J. A. KRUG,
Secretary of the Interior.

Secret War Tools Found in Tulsan's Junk Boxes

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Tulsa Daily World of April 13, 1947:

SECRET WAR TOOLS FOUND IN TULSAN'S JUNK BOXES

When a Tulsa pipe and supply dealer offered to buy some sheet metal at Tulsa's WAA base they told him he would have to buy the bitter along with the sweet.

The bitter, apparently, was a pile of boxes and crates, some wooden, some steel, which had to be sold with the scrap metal.

So the dealer—Adolf Neuwald, 2623 East Thirteenth Place—agreed to take the whole lot, at a nominal figure.

Saturday there was some doubt which was the bitter and which was the sweet in the scrap metal deal.

Because the boxes and crates Neuwald was forced to haul away to get his metal were packed with bombsight stabilizers, Army Air Force flight gyros, a few complicated telescope sights and—hold your breath—Norden bombsight equipment.

A quick check late Saturday indicated the instruments, altogether, cost the Government something like $107,000.

"I didn't know what was in the boxes—in fact, I didn't know that anything was in them," said Neuwald. "They were just setting there with the sheet metal I wanted to buy and they told me I'd have to take bitter along with the sweet, if I wanted the metal.

"So I hauled away the boxes. I sold some of them without even opening them—don't know what was in them."

Among the boxes Neuwald sold were 50 small wooden containers, each approximately a foot high and 10 inches square. They were an ideal size for holding milk bottles and the Carnation Co., at 115 North Cheyenne Avenue, snapped them up for $1 each.

When the boxes were delivered, workmen at the Carnation plant opened one.

Inside they found an intricate piece of machinery—a United States Army Air Force glide bombing attachment, manufactured by Carl L. Norden, Inc.

The same thing was inside 48 of the 50 boxes.

"All we wanted were the boxes," explained William D. Ernie, manager of the Carnation plant in Tulsa and a World War II Navy veteran, "and we thought that was all we were buying.

"Now we've got 48 bombsight instruments on hand and don't have the least idea what they are. We're getting in touch with Army authorities to see what we should do. Perhaps they're obsolete or something—but it seems pretty strange to sell them for a dollar apiece."

Most complicated instrument found in the crates sold to Neuwald was a telescopic sighting device, a maze of mirrors, prisms, lenses, dials, wheels and gears.

"I've only found one of them in the boxes so far," the pipe dealer explained Saturday, "but there are a lot more boxes I haven't had time to open yet—might be some more. Thought I'd keep this one for myself."

Army Air Force veterans of Tulsa who viewed some of the equipment Saturday were unanimous in the belief that most of it, at least, is made up of obsolete instruments, already outmoded although they were manufactured only 2 years ago.

On the other hand, they were just as unanimous in pointing out that thousands of Army veterans would appreciate an opportunity to buy some equipment for souvenirs, if nothing more. WAA gave them no chance, however; it was sold only "sight unseen."

From the WAA side came word that that agency could not be held responsible for selling the thousands of dollars worth of instruments as junk.

Officials there explained that if the crates and boxes were declared surplus by the Army Air Force, they were immediately put up for sale. It was the responsibility of the Army either to remove contents of the boxes or permit their sale.

Meanwhile, the Carnation Co. officials still believe the 50 wooden boxes they bought will be ideal to put on customers' porches this summer to store milk when it is delivered.

But they're a little puzzled on how they can attach or use the glide-bomber sights on their milk trucks, and, at last reports, it was apparent the stack of instruments in the company's garage represents a dead loss as far as the dairy industry is concerned.

"We told the WAA about finding the instruments in the boxes," one Carnation man said, "and nobody out there seemed very interested. In fact, what they advised us to do was to throw 'em in the river. Seems kind of a shame; doesn't it?"

Price Fixing of Gas and Oil

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. THOMAS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

HOUSTON, TEX., *April 14, 1947.*
Hon. CHARLES A. WOLVERTON,
Washington, D. C.:

Respectfully urge that your committee favorably report Rizley bill, H. R. 2185. The Federal Power Commission's practice in fixing the price of gas at the well and regulating the end use of gas is disrupting the economy of the entire oil and gas producing industry. True conservation of oil and gas which the American people expect and demand cannot be attained under such governmental interference. Producers of oil and gas must operate under an economy free of Government price fixing. Presently they cannot build the necessary plants for the strippling of liquid hydrocarbons from gas and sale of the residue gas into interstate commerce. Building of such plants under the present interpretations of the law and regulations of the Federal Power Commission might result in their being declared a utility which would mean their ruin. This would cripple the oil and gas producing industry to an extent that reserves will be depleted instead of being built up resulting in shortages of petroleum products and having a bad effect on the entire economy and safety of this Nation.

It is just as practical and reasonable for the Interstate Commerce Commission to regulate the prices and uses of all commodities that move in interstate commerce as it is for the Federal Power Commission to exercise the authority it is presently usurping. Their agents are infesting the offices of oil and gas producers for the purpose of finding an excuse to classify such producers as a utility and bring them under their complete domination and regulation. Producers are withholding gas from the market for fear of being classified as a utility. If the Rizley bill becomes a law then the Federal Power Commission should be required to reduce the number of its employees and thereby effect a saving in governmental operating costs.

H. J. PORTER,
President, Texas Independent Producers and Royalty Owners' Association.

Henry Wallace Is Entitled to His Opinion

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to revise and extend my remarks in the RECORD, I include the following article by Mrs. Eleanor Roosevelt, on Henry Wallace, from the Washington Daily News of April 15, 1947:

MY DAY—HENRY WALLACE IS ENTITLED TO HIS OPINION

(By Eleanor Roosevelt)

WESTBROOK, CONN., Monday.—The front-page stories in one of our metropolitan newspapers the other day showed what a world of conflict we now live in.

In Moscow, Foreign Minister V. M. Molotov had refused to consider an agreement on the Saar until his proposal on four-power rule for the Ruhr was settled. In another column was an account of a speech made in London by Henry Wallace, in which he voiced his apprehension over the policy of lending money to anti-Soviet states just because they are anti-Soviet states rather than because they need money for rehabilitation.

Right next to that article was an accusation by a Democratic Senator that Mr. Wallace, by voicing these sentiments abroad was hurting his country's prestige. At home, the phone strike continued, the coal mines were slowly beginning to reopen, and the wisdom of certain Government loans to the Baltimore and Ohio Railroad was being questioned by the Republicans in a Senate committee.

This all looks like a good deal of dissension and more dissension, and yet it is part of the freedom under which we in the United States think the world should operate. When the right to strike is curbed, our free and independent citizens strike all the more readily; and when John L. Lewis is taken to task for his behavior, he tries to find some way of getting back at those who took him to task and turns against the people in general.

To me, some of us seem to be losing sight of certain vital things. What does it matter now whether the Baltimore and Ohio Railroad got a bigger loan than it should have had? It was done to win the war and we won the war.

And Mr. Wallace is entitled to his opinion. It is good for every citizen to realize that the responsibility for helping to rehabilitate countries throughout the world is going to be heavy for us, since we are the only people who can bear the main burden. In the end, it is to our interest that these countries should be rehabilitated. The discussion of how we shall do it is a perfectly good discussion for people in this country to engage in, and will probably be helpful to the Administration in the long run.

Labor Leaders Threaten To Nullify Law

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the enclosed letter from a patriotic member of organized labor, together with a copy of an editorial which recently appeared in a labor publication.

I believe that the author of this letter speaks for the great bulk of the membership in the American labor movement. He apparently does not speak for that type of union leadership which has chosen to place itself above the law.

The author of this letter has not requested that his name be omitted but, for fear the use of his name might bring about reprisals, I have deleted it.

The letter follows:

MARCH 29, 1947.

Congressman CLIFFORD R. HOPE,
Washington, D. C.

MY DEAR SIR: The attached article recently came to my attention. I feel that as a Representative of the people of our State you should have this article brought to your attention.

First let me state that I am a member of a union. Further, I am a member of a union which is affiliated with the National Federation of Telephone Workers (as is the Association of Communication Equipment Workers). However, when any group or individual of that group, will sit idly by and see such utterances put on record and fail to register a protest—then I believe that group or individual is not in complete sympathy with the principles of democracy.

It seems that all the various unions, mine included, scream to high heaven that they are all 100 percent democratic in their thoughts and actions and that every one else is against them and therefore nondemocratic.

Then in the next breath they seek to influence their members to forsake—indeed to rebel—against any law that is not to the liking of the select group or the leaders of the group.

When it gets to the point where the labor leaders instruct their members to violate the law it is high time some action was taken. Here they seek to influence the member to revolt against the democratic way of life by instructing him to violate a law which would be formulated and made into law through the democratic processes of our elected representatives. And they call their union democratic.

Further, they class all nonunion members of labor as scabs and undesirable characters and free riders. Let me tell you that if the laboring man felt assurance that the union leaders were truly democratic in their hearts and if these leaders would talk and act like they believed in our great country and its principles—there would be no free riders. The simple truth is this—the laboring man is not hesitating to join the union from a financial standpoint—he is just simply not completely satisfied with the leadership. He lacks confidence in them. Their actions leave a doubt in his mind as to the real intent and aim of the leaders.

Such articles as the attached most certainly do not tend to relieve that doubt. Others may see it in a different light, but to me it appears to be a direct challenge to the democratic way of life.

I wish I had the means to furnish a copy of this letter to all the Members of the House. But with my limited means I am unable to do this. I believe you would be furthering the cause of democracy if you would bring this letter to the attention of as many Members as you possibly can. I believe it is time that the people assert themselves. There is no excuse for such abusive attacks as this being leveled against the members of the Senate Labor Committee and the House Members. There is no reason for the closed shop. It is just simply not in accord with the principles of our democracy.

Let me beg of you to use all the influence your office affords to do all in your power to protect the rights of all men to work without allegiance to any union.

The following editorial appeared in the March 1947 issue of the Communicator, the official publication of the Association of Communication Equipment Workers, affiliated with the National Federation of Telephone Workers:

DEFY OPEN-SHOP LAW

There is one thing the agents of the National Association of Manufacturers in the House and Senate of the United States Congress will learn as they pursue their efforts to outlaw the closed shop and that is that labor never will obey any such law no matter how many lickspittles vote for it, or how many Presidential signatures may be scribbled upon it.

Long before there were protective laws for labor unions the principle of insisting that only members of a given union be employed in organized industry was made effective. And no amount of legislation can contrive a law that can compel union men to work with scabs, or to work with people who receive the benefits of organized effort of others and refuse to contribute their share.

* * * * *

Let them pass such laws if they dare. The action of the millions of organized workers will nullify them and thereby prove the utter futility of the frantic efforts of political lackeys to carry out the program of the strike-breaking, scab-bearding NAM.

United States and Greece

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine G. Yavis from the Washington Post of April 11, 1947:

UNITED STATES AND GREECE
(By Constantine G. Yavis)
AID FOR DEMOCRATIC FORCES

(EDITOR'S NOTE.—Dr. Yavis has spent 10 years in Greece and was in Athens during the year following liberation as chief of research and analysis for the Office of Strategic Services. He returned to Greece a year ago for the State Department on the mission to observe the Greek elections. He is now teaching at Catholic University and George Washington University.)

Hitherto the official American policy has been to refrain from any interference in Greek internal politics, and merely to issue occasional press releases expressing hope that political passions would moderate.

This policy is largely responsible for the development of the present situation. During the German occupation, the United States and Great Britain supplied arms and money to Greek guerrilla groups without any regard to the quality of the persons leading those groups, or their aims. The result was the creation of the Communist-led EAM with 50,000 to 100,000 armed fighters.

In its effort to dominate Greece, the EAM incited against itself undying passions, by perpetrating unspeakable excesses, and by plunging Greece into a destructive civil war, a month and a half after liberation. We are responsible for the arming of the EAM, and, therefore, for the excesses of which it was guilty. We are also considered responsible for the fact that we allowed a civil war to break out, while it was easily within our power to intervene and avert it.

Since this revolt was put down 27 months ago, the rightist governments in Greece have carried on a systematic campaign of oppression and intimidation, looking toward the political extermination of the left and the center. Leftist newspapers were until recently prevented from circulating in the countryside, and leftists were kept under arrest for long periods without trial or adequate cause. At the same time, the rowdyism of armed rightist gangs remained unchecked, and army officers and police who had collaborated with the Germans against the EAM are still retained in service. The right has claimed United States and British support in its program, and no one in Greece doubts this is true, because it is realized that a single word from the American Ambassador would be sufficient to restrain rightist excesses. This presumed American approval has encouraged the worst elements in the rightist camp, and thereby prevented the more moderate rightists from making their influence felt.

Our mission to observe the Greek elections was not empowered to check abuses. This was considered an encouraging gesture to the right. Our ultimate approval of the conduct of the elections was interpreted as full approval of the rightist oppression and intimidation which had been exercised before the arrival of the mission. Intimidation was not visible to our inexperienced Army officers who toured Greece for the mission, but the very essence of intimidation is that its effects are felt after the threatening force is removed.

Even our economic aid to Greece, which totals $187,000,000 to date, has unavoidably supported the rightist government by enabling them to remain in power. And, since we neglected to attach political conditions to our aid, it appeared that we were content with the rightist campaign to exterminate the left.

It is worth adding that the economic and political problems now plaguing us in Greece have to a great extent been aggravated by the widespread feeling there that Russian occupation was imminent. Until the President's speech of March 20, we had made no gesture to dispel that feeling. If we had maintained our ATC bases, or other token forces in Greece, this would have been considered sufficient guarantee against Russian aggression. Private capital would then not be in hiding, creating the present business paralysis, and the unhappy guerrilla movement would find it much more difficult to attract recruits.

It is clear that our policy of nonintervention has been largely responsible for a disastrous civil war in Greece, and for the depredations of the left which have embittered large segments of the Greek population. This same policy has strengthened and encouraged the right in its oppression of the left and the center. No policy could have served better to weaken the democratic forces in Greece

and to strengthen the two extremes, both of which are abhorrent to our political ideology, to the point where an explosion is now imminent.

This means that willy-nilly, we are already a force in Greek politics, and that we have already intervened in one manner. No one, therefore, can object to the Truman plan for aid to Greece on the grounds of intervention in Greek domestic affairs.

There are strong reasons for supporting the President's plan: we should offer aid to a war-tested friend, to prevent imminent economic collapse. Besides, collapse of Greek economy would have a depressing effect all over the world, and, worse, would be the signal for a Communist revolution in Greece. Even if this revolution did not bring on World War III, it would, if successful, install a government unfriendly to us.

But if we carry out the State Department plan and hand over to the present reactionary Government of Greece $250,000,000, while continuing our policy of nonintervention in Greek internal politics, it is clear that this will be a green light for worse rightist excesses. An explosion will then take place, which will embroil us beyond our worst fears. Besides, Russia will have good reason to complain that the State Department plan encourages the rightist persecution of all nonrightist elements in Greece. The whole world will so interpret the purpose of our aid.

We have no alternative, therefore, but to drop our hands-off policy, and to take steps to curb the right, repress its fascistic elements, and strengthen the democratic forces of Greece.

This is, of course, intervention in Greek internal affairs, but in practice it is less so than our present policy. This is the only way we can redeem ourselves before Greece and the world for having set up first a tyranny of the left and now a tyranny of right.

There have been objections against our becoming entangled in the maze of Greek politics. But a very simple means of strengthening democracy in Greece is at our disposal. Our Ambassador can be authorized to call the King's attention to undesirable actions and personalities of the Greek Government, and to insist that corrective measures be taken. This method involves neither entanglement nor American civil government of Greece. A whispered word—plus the threat of withholding aid—will be enough. It will be as simple as that. Or, rather, it will be simple, provided we take certain common sense measures.

1. We must try to formulate advance plans. Obvious as this may appear, past experience justifies the fear that American personnel will arrive in Greece, and money will be spent, without adequate advance planning. A full week after the President's speech on Greek aid, Secretary Patterson testified that no definite plans had been made yet.

2. We will need an adequate number of political experts, probably 10 to 20 times the present number. They will collect and prepare the information needed by our Ambassador.

3. Our technical experts must be assisted by political advisers. In many instances our technical advisers have worked without awareness of the elementary political considerations involved.

4. An effort must be made to recruit political and technical experts who have had previous experience in Greece. Obvious though this also may appear, past experience again makes one apprehensive that experts with previous experience in Greece will not be sought out.

5. The Greek Government must be informed in advance that we shall insist that our technical and political advice be followed.

6. The presence of our mission will be considered by the Greeks as a guaranty against Russian aggression for the 18 months it is there. This in itself will act as a tonic to business and as a deterrent to those who for good or ill reason take to the mountains as outlaws. Our economic and political problems in Greece would be further alleviated if we could give a direct or implied guaranty of Greek territorial integrity for a longer period.

We must not neglect to take steps to disperse suspicions abroad and at home as to our motives in Greece.

1. Frequent reports must be issued on our activities in Greece.

2. The size of our military mission must be clearly stated, and it must be made clear that our military aid will aim merely to make the Greek Army capable of fulfilling internal security functions, as, for example, against the guerrillas.

3. An advance commitment of some sort must be made as to the exact time and conditions under which the UN can begin to undertake our economic burden in Greece. Until that time UN observers must accompany our mission. We need not feel embarrassed about bypassing the UN politically because even if the UN were able to deal expeditiously with the political complexities, it would require a minimum of a year to acquire the requisite background, channels of communication, and sources of information. The explosion in Greece is more imminent than that.

4. It should be a matter of pride for the United States to set right the political picture, since the United States has such a large share of the responsibility for the present fiasco. We should, therefore, declare openly that we shall use our influence to moderate political passions in Greece and to eliminate undemocratic excesses of any kind.

A policy such as described above will serve as a stimulant to the democratic forces which throughout the world are on the defensive against totalitarian ideas. This encouragement is needed desperately at this critical point in world politics.

Henry Wallace and the Truman Doctrine

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to revise and extend my remarks in the RECORD, I include the following article by Thomas L. Stokes on Henry Wallace, dated April 15, 1947:

The noisy reaction here over Henry Wallace's adventure in free speech abroad has demonstrated how far we have strayed from the high idealism of the war and in creation of the United Nations.

This reaction, some of it absurd and ridiculous, shows how rapid has been the retreat into nationalism.

The United Nations was a start on something that we hoped, and still hope, eventually will become a world government, in which individual nations are subordinated in a world society and a common brotherhood of man. Lip service was given freely by our leaders to this ideal. None expressed it better than President Truman, who said in a message to Congress in January last year:

"It is important that the nations come together as states in the Assembly and in the Security Council and in the other specialized assemblies and councils that have been and will be arranged.

"But that is not enough. Our ultimate security requires more than a process of consultation and compromise. It requires that we begin now to develop the United Nations as the representative of the world as one society."

It is in entire accord with that ideal that Henry Wallace, a leading citizen of our country and the world, ventured beyond our borders to speak to people elsewhere as citizens of a common world in the interest of peace, and the utilization of the UN for its appointed purpose of keeping the peace.

Mr. Wallace does not happen to agree with the so-called Truman doctrine. Lots of people don't, here and in other parts of the world. He said so here, repeatedly. This is a matter of concern to people all over the world, not just here. What is wrong with his speaking to people elsewhere in the general debate that is going on all over the world?

He has a right to speak, however his wisdom may be questioned. He has as much right as Winston Churchill, who spoke at Fulton, Mo., in a speech virtually sponsored by the President of the United States. Many think that speech started the division of the world into two conflicting camps that Henry Wallace, among others, believes is dangerous to the peace of the world.

Few would question that Mr. Churchill was trying to influence the people of this country and thus its policy. Nor is he the only one. We have had others from Britain trying to influence the policy of this country. Anyone who covers Washington daily is conscious of that.

No; there's something else in the outcry against Henry Wallace, as there always is, more than meets the eye and ear. He accurately labeled the hullabaloo here "hysteria." And back of that is fear. It is the fear some interests in this country have of Mr. Wallace because he has the habit of speaking unpleasant truths about what goes on, and because he has a large following for that reason. They call him a "crackpot." If they really believed that, they would dismiss him. But they don't.

It is amusing to see how he stirs them up. They do not like it when Henry Wallace says both parties here are being captured by the conservatives, for they don't like to be caught at this game which goes on before our eyes. They do not like it when he says the way to combat communism is to have something like the New Deal all over the world, for they are working like fury here now, night and day, to destroy that.

Truman and Monroe

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann from the Washington Post of April 8, 1947:

TRUMAN AND MONROE

(By Walter Lippmann)

There is this most critical difference between President Monroe's message of December 2, 1823, and President Truman's of March 12, 1947: Monroe made his declaration only when he knew beyond a reasonable doubt how the commitment was to be met, indeed that there was virtually no chance whatever that he would be unable to meet it. The Monroe Doctrine, unlike the Truman, was preceded by negotiations abroad and by cool and studied consultation at home in which Jefferson, Madison, and John Quincy Adams played the leading parts.

They approved the declaration when they had before them the definite assurance, given in August to the American Minister Rush by Canning, that Great Britain, then in undisputed command of the sea, had decided to prevent the reconquest of the Spanish colonies in the Western Hemisphere. It was then, when Jefferson had read the dispatches from Rush about the British decision, that he approved what became the Monroe Doctrine, saying that "all Europe combined would not undertake such a war, for how could they propose to get at either enemy (Britain or the United States) without superior fleets." Madison was equally definite and practical in realizing that it was the assurance of overwhelming power which justified the commitment: "It is particularly fortunate," he wrote to President Monroe, "that the policy of Great Britain, though guided by calculations different from ours, has presented a cooperation for an object the same as ours. With that cooperation we have nothing to fear from the rest of Europe, and with it the best assurance of success to our laudable views."

The Truman doctrine expresses our laudable views. But unlike the Monroe Doctrine it has been declared to the world without the kind of careful calculation of the assurances of success, which were made by Jefferson, Madison, Adams, and Monroe before they announced their laudable views. The difference is a big one—between making a promise which you know you can carry out, and making a promise first, and then wondering how you are going to carry it out. It is the difference between bold but astute statesmanship and reckless rhetoric.

As a result Senator BYRD has asked the administration a question which is quite proper but, under the so-called Truman doctrine as it now stands, is quite unanswerable. Senator BYRD wants to know whether "we have the resources alone to pay the bill."

What bill? The immediate bill for Greece alone is nearly $300,000,000. But under the administration policy this can be only the first installment. The money is to be used to balance the Greek budget this year on behalf of a government which collected almost no taxes and is, with our approval, conducting a civil war. Conceivably this installment would pay the Greek bill if there were set up promptly in Athens a government which can collect taxes and can unite the bulk of the Greek people. But the deficits of this government, which protects the profiteers and is trying to crush the Republicans as well as the Communists, will continue as long as the Government, as now constituted and conducted, exists.

Yet Greece is only a pinpoint in the Truman global policy. There can be no end to the financial costs of that policy because adequate precautions have not been taken to see to it that the money will accomplish the purposes for which it is given. Unless the Greek Government is reformed, Greece will not be stabilized by our meeting the deficits of that Government.

The case of Greece illustrates concretely the basic fallacy of the Truman doctrine in its present uncorrected, unqualified, and unbalanced form. It is that the expansion of the Soviet Union and the spread of communism can be checked by subsidizing all the governments, parties, factions which are most undeniably anti-Communist. A policy of this kind is bound to fail because it commits us to an alliance with the most reactionary forces in the world and alienates the moderate and democratic forces.

It assumes that mankind is divided into totalitarian Communists and Jeffersonian Democrats. It is not. There are also Nazis. Fascists, feudal lords, war lords. There are also Republicans, enlightened conservatives, liberals, Progressives, Social Democrats, Socialists, Christian Democrats, cooperators, labor parties, democratic planners, and what not.

If we conduct the Truman policy on the principle that whoever is most vehemently against the Soviets is our friend and ally—and in his heart a Jeffersonian Democrat—we shall separate ourselves from the masses of the people almost everywhere. We shall have embraced the extremists of the right as against the extremists of the left, when it is our interest and our duty to aline ourselves with the middle and the moderate parties. They are our real friends in the struggle for freedom, and they will decide the issue.

Rich as we are, and powerful as we are capable of being, we are not rich enough to subsidize reaction all over the world or strong enough to maintain it in power. The American people and the Truman administration do not want to do that, of course, nor do they think they are doing it. But that is what we shall be doing, nevertheless, if we intrust the formulation and execution of the new policy to men whose zeal has gotten the better of their judgment.

Army Air Forces

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mrs. SMITH of Maine. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Washington Post reporting the timely observations of Gen. Carl Spaatz, Army Air Forces commander, of how delay on the decision on unification is undermining our national defense. General Spaatz echoes the point that I have been making repeatedly for many months—that we must make a decision on whether to adopt unification or not as a prerequisite to the planning and organization of our postwar armed services. He put it succinctly when he said:

The question of unification is the most important defense problem at the moment because, until it is disposed of, we can't have any permanent planning.

The article follows:

DEFENSE DELAYS, THREAT OF CUTS IN AIR POWER WORRY SPAATZ

(By John G. Norris)

Gen. Carl Spaatz, Army Air Forces commander, yesterday expressed concern over threatened cuts in American air power and delays in completing United States defense plans.

He told the Post that the AAF's striking power is now being rebuilt from the low point where left by demobilization a year ago. But he warned that enemy planes could "drop bombs on us" even when these defenses are complete.

The AAF Chief said that budget cut-backs already made—reducing Air Forces strength from 70 to 55 groups—represented an air power cut of 20 percent.

This reduction, Spaatz said in an interview, left the AAF with "not enough to do the jobs" and added that it "weakens us to the limit of elasticity." Asked about congressional proposals to slash an additional two and one-half billions from the Army, Navy, and Air Forces budgets, he replied:

"Any further reduction would weaken our posture before the world and should be of grave concern to everyone."

Further reduction beyond the 35-group strength provided in President Truman's budget, Spaatz added, will be "a challenge to someone to start something."

Some of the 55 groups now authorized have been entirely rebuilt in recent months, the AAF chief declared. He said that they now are "well trained" with combat and ground crews reestablished on an efficient, operating footing.

Some time in the future, he declared, all of the 55 groups will be similarly reorganized and ready, with jet fighters largely replacing wartime types and some huge, new B-36 and B-50 strategic bombers augmenting our B-29's. The B-36 is expected to have a range of close to 10,000 miles.

Could the reorganized Air Forces prevent enemy bombers from making a successful attack on the United States? Genera' Spaatz was asked.

"They could drop bombs on us," was the reply, "but they could not deliver a decisive attack."

The existence of a strategic United States Air Force "in being," capable of retaliatory attacks, would be the greatest deterrent against such raids, he added.

Spaatz declared that long-range bombers as we know them will continue to be the chief weapon of strategic bombardment for a "long time in the future." Guided missiles will be only a subsidiary for some time, he said.

The AAF Chief echoed the concern felt in high military circles about the delay in reaching a decision on Army-Navy unification.

"The question of unification is the most important defense problem at the moment," he declared, "because, until it is disposed of, we can't have any permanent planning."

Spaatz pointed out that, as the matter now stands, the AAF will revert to its old status of an Army branch 6 months after the war is officially ended. The old Air Corps—which the AAF would go back to legally—is limited to a strength of 6,000 planes, and otherwise does not fit modern conditions, aides declared.

The AAF commander said the Air Forces would go slow in making changes under the separate status proposed under the unification bill. Asked about plans for a new Air Forces uniform, Spaatz returned:

"I don't expect to change mine."

And the veteran airman made it plain that this did not mean he is contemplating retirement, as has been reported. He declared flatly that he had no present plans to this end and expects to stay on at least for the next year.

Spaatz added that the question of a new Air Forces uniform will not be considered officially until after the separate air force is an actuality. Then he plans a sort of Gallup poll on the subject.

How about substituting new ranks like those of the RAF for the AAF's Army titles? Spaatz said he was against it.

"I don't see any reason to change anything after the separation unless it's necessary," he added. "We don't want to be different just for the sake of being different."

A Weapon Against Communism

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mrs. SMITH of Maine. Mr. Speaker, under leave to extend my remarks in the RECORD, I include in the Appendix of the

RECORD an editorial taken from the Republican Journal, Belfast, Maine, A Weapon Against Communism:

A WEAPON AGAINST COMMUNISM

Until recently we thought that the 20-percent income tax reduction proposed by some Members of Congress was an admirable goal but that it should not be attained at the expense of our national defense—particularly in view of the critical situation in Greece and Turkey and our avowed opposition to the spread of communism. But we overlooked one vital factor—the factor that enabled us to provide the fighting material for our soldiers and their allies in World War II. That factor was production and this tremendous and speedy output could have been achieved only under a system based on free capital and private enterprise.

Let us face the plain fact that capitalism is one of the greatest weapons against communism.

And by "capitalism" we mean a system free from excessive profit grabbing—a system which enables the worker in America to earn more than he could in any other nation because he is benefiting from the private capital invested in modern plants, machinery, and research. This is clearly shown by some figures we found in the CONGRESSIONAL RECORD which states that an American railroad worker can be paid his high wages because there is an investment in plant and equipment of $25,000 per employee. The textile worker can draw over $7 a day because there is an investment in machinery and equipment of $6,000 per employee.

We no longer look askance at the proposed Federal income-tax cut. We believe that such a reduction must be made if we are to prevent the destruction of private enterprise and eventually the American form of government. The disastrous effect of a heavy, graduated income tax on individuals in England is now grimly apparent, and there a deteriorating democracy has all but succumbed to socialism.

It is clear that our present tax structure is gradually eliminating savings that would otherwise be invested. And if there is no capital available for productive enterprise, we will face unemployment, depression, and Government control of major industries.

If we are to combat communism, we must do more than give aid to democratic nations, more than purge the Government of subversive workers. We must protect our economy because it is a basic element in our way of life. Only a system that is sound to the very core can withstand the noxious effects of communism.

Labor Rights and the Public

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. MILLER of Nebraska. Mr. Speaker, the big job before this Congress is to pass labor legislation which will prevent the many crippling strikes which have in the past, paralyzed our country.

I am one of the Members of this Congress who had some conferences last December with Mr. William Green, of the AFL, and Mr. James Carey, of the CIO. I urged these gentlemen as representatives of these two large unions to invite several Members of Congress to a meeting with their legislative policy forming committee which was to meet early in January, with the thought in mind of trying to work out some legislation which would be in the interest of the public, the workingman and the unions themselves. I went over in great detail what I thought the elections of last November indicated. I asked them if they did not feel that jurisdictional strikes, sympathy strikes, and secondary boycotts should be outlawed. I must say to my colleagues that these men were not very agreeable. All suggestions for constructive approach to the problem were greeted with the thought that we are antilabor and are trying to stab labor in the back. That has always been the cry of the union leaders. If you will read the hearings before the Labor Committee, you will see that they carried this same theme all through their testimony.

After these conferences, which were futile, I introduced legislation to stop jurisdictional strikes, sympathy strikes, and secondary boycotts. I introduced legislation to outlaw the closed shop. I introduced legislation to provide for a cooling-off period and compulsory arbitration and for a judicial finding by a court in essential industries affecting the public, when labor and industry came to a terminal point. I also introduced legislation providing that labor and industry must keep their contracts.

The bill before the House now is an omnibus bill covering not only the principles of the bills which I introduced and supported before the Labor Committee, but covering the whole field of labor as we understand it under the Norris-LaGuardia Act and the Wagner labor law. The committee handling the bill is to be complimented because I know it has put in long hours of hearings and study in an effort to bring out a bill which would be in the interest of first the public and then labor and industry.

The two most controversial features of this bill are the ones on industry-wide bargaining and the use of the injunction in those industries vitally affecting the public health and welfare. These two procedures seem like major operations with the ultimate outcome somewhat in doubt. These two phases of the bill will be difficult to administer and will probably call for a review by the Supreme Court.

Now, as to industry-wide bargaining, I do feel that if labor is to be prohibited from this phase of bargaining, then the same rules must apply to industry. I am not sure that it does so apply in the bill we are considering. I do understand that the prohibiting of industry-wide bargaining would stop such men as John L. Lewis. It would not have permitted a telephone strike or a near railroad strike. It would probably have the effect of stopping labor czars like Caesar Petrillo and his outrageous activities.

There has been a great deal of talk about the right of a man to quit his job. There has been a great deal of confusion about involuntary servitude. It seems to me that in our society there are no absolute human rights. You and I may have the right of free speech, but it gives us no right to commit libel. Our Constitution permits us the right to bear arms, but it does not give us the right to go out and engage in a duel or to kill someone. We have limited our private rights in the name of public welfare many times—so we have limited rights.

I think the worker should have the right to quit a job; that right does not carry the right to conspire with others to help paralyze an essential public service as is being done in the telephone and the coal industry. Is there any reason why a union leader should have the right to conspire with others and actually cut off telephones, the light, or the heat. It does not give a group the right to deprive a city of police protection or the essential services for public health.

It seems that we have used these words, "involuntary servitude," as a cloak to cover up some actual abuses and have tried to use it as a license to permit acts which if done by the individual would be unlawful. Certainly we must circumscribe the right of a union or any industry to hold a city or a Nation for ransom. This right of unions to keep others from working is wrong. Let the man quit, but he should not conspire to prohibit others from working.

The section of the bill dealing with a cooling-off period and use of the injunction should be circumscribed to apply to those industries where the Government fixes rates, wages and hours of labor. They should apply only to those industries vitally affecting the health, safety and welfare of the public. I have always felt that there should be some machinery of a judicial nature which could settle these disputes when they arise. A terminal point is reached and, at the present time, a strike is called. The public must have some protection. All of us, Mr. Speaker, when we have differences have access to the courts. It is necessary that we do present our problems for a final determination. We may not like the decision, but we must abide by the findings of the court. Labor should have a right to strike under due process of the law.

As I read the bill, the injunction can last for 75 days and then a terminal point may be reached. A strike can be called. I do feel that some judicial court must make a finding in settling strikes in those industries which so vitally affect our Nation. Strikes cannot be permitted in those industries and businesses which are carefully controlled by Government. As an example of this, we have the present telephone strike. The telephone business is a huge monopoly, carefully controlled by the Government acting in the public interest. The unions are also a monopoly, but they are without control by Government. It seems certain that the public must be protected from the excesses of any unregulated party to a monopoly. Certainly, if we are to regulate business in the public interest, we must also have some regulations upon unions and the workmen in those industries.

The Wagner labor law and the Norris-LaGuardia Act were needed when passed because industry was taking undue ad-

vantages of the laboring man. He needed protection, but in the last quarter of a century labor has grown so large that it is now bigger than the Government.

I am certain that there is a great desire on the part of the public not to have vindictive legislation which would cripple the proper activities of organized labor or industry, but they do feel that there are a great many unfair labor practices which must be regulated.

The law this Congress will pass must follow justice and common sense. It must have the support of the public or it will be to no avail.

The bill outlaws the closed shop. It does permit the union shop. There is a distinct difference between the closed shop and the union shop. In the closed shop a man must be a member of the union before he can be hired. The union really hires the man. In the union shop, the employer will hire the man and then in 30 days he must become a member of the union. The bill does not permit a union shop unless there is a majority vote of all members of the union for that purpose. It also requires consent by the employer. Several agencies in the country have conducted polls on the closed shop. Every poll indicates that the people want it outlawed. The citizens of Nebraska voted to outlaw the closed shop. Many States have outlawed the closed shop. The laboring man is against it. I believe it is a wise provision to permit the union shop as set up in the bill. It is a democratic procedure.

Mr. Speaker, as I read this bill, I feel it will give to the American laboring man, much needed protection from some of the present unfair practices of many labor unions. This will give the union back to the working man. It is truly his "bill of rights." The American people expect—yes; are demanding—that the Congress pass legislation which will protect them from unscrupulous labor leaders. This Congress must recognize that the public interest is paramount in disputes which affect the public health, safety, and welfare of the Nation.

I can understand why the labor czars and racketeers hit the ceiling when this bill came to Congress because it strips them of their great power over the American laboring man. It cuts them down to a size where they belong. They will no longer be more powerful than the Government itself. The bill spells out their legal responsibility; it circumscribes their activities.

I am delighted that the bill does favor the laboring man—the fellow in the ranks who up to this time has had very little to say about how his union is to be run. Certainly this bill cannot be called anti-labor, when it protects the laboring man. The bill will bring better wages and working conditions for the man who labors. He has protection and rights in this bill such as he has never before enjoyed.

Mr. Speaker, I expect to vote for this bill. I believe it is a step in the right direction in trying to solve some of the difficult problems affecting labor and industry.

The House Labor Bill

EXTENSION OF REMARKS
OF
HON. THOMAS D'ALESANDRO, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. D'ALESANDRO. Mr. Speaker, the main objective of all legislation should be to maintain and encourage a prosperous, peaceful economy. I would support the Hartley bill if it aided such an objective. However, it will only increase industrial strife and thereby impair America's opportunity for continued prosperity. This bill is unfair to management and labor and would not prevent strikes, but will provoke more strikes.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Baltimore morning Sun of April 14, 1947:

THE HOUSE LABOR BILL

When President Truman vetoed the Case bill last summer, he explained that, in his opinion, it would not "help to stop strikes and work stoppages and prevent other practices which adversely affect our economy." Unless the President has changed his thinking meanwhile, he is hardly likely to accept the labor bill which the House may pass this week.

The Case bill, like the present House bill, was an all-inclusive one. It would have created a new labor-management mediation board, which would inject in strikes and lockouts a cooling-off period, within which an attempt at settlement would be made. It would have made contracts equally binding on labor and management. It outlawed violence in strikes. It banned the organization of supervisory employees. It prohibited secondary boycotts, sympathy strikes, jurisdictional strikes, union racketeering, and welfare funds.

The new bill which the House Labor Committee has prepared does all that the Case bill did. In addition, it prohibits industry-wide bargaining. It rewrites the Wagner Labor Relatons Act to restrict the rights of employees and to give rights to employers which the law now denies to them. The House bill would abolish the National Labor Relations Board and replace it with two agencies, one administrative and the other quasi judicial. It would remove the United States Conciliation Service from the Department of Labor and establish a new independent agency to perform its functions.

One of the most important aspects of labor relations which the two bills treat is the use of injunctions in strikes. The Case bill provided for limited use of injunctions to maintain the status quo during the 30-day cooling-off period which it required in strikes or lock-outs over which the Mediation Board assumed jurisdiction. The new House bill makes it possible for the Government to enjoin strikes for as long as 75 days, and in some cases longer, if the public health, safety, or welfare is sufficiently affected. It also extends to private employers the right to seek injunctions as protection against unfair labor practices outlined in the bill.

The Senate Labor Committee also is considering an omnibus labor bill which stops short of the drastic provisions in the House measure. Some modification of the House bill, then, is most probable in any law which Congress may pass at this session. But even the Senate bill may go further than the President wants to go.

The Truman Price Policy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, the Chicago Daily News carried a most interesting editorial on April 11, entitled "Truman on Prices." It points out very clearly that unless the Government cuts its own spending the Truman program is bound to defeat its own policy. Under leave to extend my remarks, I include the editorial as part of my comment:

TRUMAN ON PRICES—GOVERNMENT SHOULD CUT ITS OWN EXPENSE

Big price rises have generally been followed by steep drops not only in prices but in business activity.

Second guessers and hind-seers have often remarked afterward that a moderate voluntary price cut in time would have prevented the severe one that actually took place.

The theory is that the moderate cut in time would have kept buyers buying. If prices get too high, they quit buying, either because they run out of money or get sore and go on strike.

President Truman yesterday repeated his expression of hope that American industry will find a way to check the rise of prices in time.

We share that hope, as every thoughtful person must.

When OPA controls were lifted, believers in the free-market system predicted that production would increase and that competition would finally check the rise of prices and reverse it.

The first prediction has come true. Production has greatly increased. It would not have increased to the same degree if OPA had still been operative. For one thing, it took too long to get decisions.

But competition has not yet reached the point where prices have turned down. Some weeks ago, the commodity index passed the highest point reached after World War I.

Today the managers of industry are not entirely free to do what President Truman asks of them. Many corporations made huge profits in the first quarter of the year. One reason was that they were safeguarding against uncertainties—the possibility of big new wage demands, a decline in the value of inventories, or a business slump.

Yet these profits they put away, defended as precautionary, are now being cited as the justification of higher wage demands.

At some point the spiral must stop. It ought to stop before the public quits buying. It ought to stop while the higher wage demanders are still wage earners, and before the profits turn into losses.

In basic industries, including steel, wage negotiations are now going on. This industry, because it is basic, has been specifically exhorted to lead the rest of industry by reducing the price of its product. To do this, it should have some assurances from the leaders of its unions that they will collaborate in making this possible.

Little purpose will be served by recriminations between President Truman and Republican Congressmen as to which of them is to blame for the present difficulty.

Fundamentally, the war is to blame, and the spending policies that preceded it and have followed it. No system of price control could do more than palliate the inflationary effects of so gigantic a spending spree. With

the spending, we destroyed enormous quantities of goods all over the world and much of the equipment for replacing it. The world is wallowing in cheap money and is short of everything else.

But we are not living by ourselves. We are making domestic shortages even out of great surpluses by shipping wheat and flour to the hungry abroad.

The President is equally unrealistic in failing to harmonize his price policy with his budget. Surely he is in no position to lecture industry about cutting costs and prices when he refuses to admit the possibility of cutting $1 off his $37,500,000,000 budget proposal.

David Lawrence pointed out on this page the other day that instead of a $1,000,000,000 deficit, the Government will have a $2,000,000,000 surplus at the end of this fiscal year. That is a net change of $3,000,000,000 in the prospect since the budget was prepared; it is half the whole $6,000,000,000 tax cut proposed by the House, and bitterly opposed by the President.

President Truman is also urging on us a program of foreign assistance that goes far beyond the relief of destitution, that goes beyond economic rehabilitation. It aims to build up weak nations like Greece and Turkey into military bulwarks against Russia.

Senator VANDENBERG is more candid than the President in conceding that this program will not be confined to these countries alone. Nobody knows the limits or the end.

President Truman's price program is bound in the long run to be defeated by his foreign program, if he carries it to its logical conclusion.

Federal Assistance for Airports

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a letter from the department commander of the Iowa department of the American Legion, Mr. Jesse W. Halden. He expresses the concern of himself and others in the Iowa department of the Legion about the amount of money being spent to improve the big airports in the larger cities while the smaller communities, which are equally in need of assistance in constructing and maintaining their airports, are not provided for, and he urges Federal assistance in the establishment of adequate airports in the smaller towns. Commander Halden's letter follows:

IOWA DEPARTMENT,
THE AMERICAN LEGION,
April 12, 1947.

Hon. KARL M. LECOMPTE,
Congressman, Fourth District,
State of Iowa,
Washington, D. C.

DEAR KARL: I wish to call your attention to the fact that Congress has passed an airport law and has made an appropriation to be spent in different communities throughout the country, similar to the money spent on our national highways. Now, it seems they want to revert themselves and spend this money on the big airports in the big cities so as to improve them further for the trunk lines.

After consultation with others in the Iowa Department we feel that the money should be spent in the smaller communities to build up their little airports. It is my personal opinion that with adequate airports in our smaller towns the feeder lines thus established will furnish plenty of business for the trunk lines and that their facilities will develop to adequately meet the needs in any eventuality.

The Iowa Department is interested in your calling to the attention of all of our Representatives the above facts as an expression of our opinion. I will write our two Senators direct. I will be glad to learn of the reaction of our Representatives relative to this communication.

Sincerely,

JESSE W. HALDEN,
Department Commander.

Time Runs Short

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. JAVITS. Mr. Speaker, the following editorial on the problem of the DP's, the displaced persons, from the New York Herald Tribune of April 11, 1947, truly reflects the current situation. Time does run short. The problem of these DP's cries out for solution to the heart and conscience of all the United Nations.

TIME RUNS SHORT

Time for effective action in behalf of the million displaced persons in Europe runs short. All UNRRA operations cease at the end of June. It is now April and a functioning International Refugee Organization does not yet exist. Twelve nations have signed its constitution. There must be 15, and they must guarantee 75 percent of a $151,000,000 budget, before the IRO can go to work. Only two of the signers, Great Britain and New Zealand, are ready with funds. The others, like the United States, must appropriate them. The Senate passed the measure authorizing this country's participation on March 25. It is important that the House pass it forthwith. For participation by the United States, whose contribution will be 45 percent of the budget, is essential if there is to be an IRO.

Participation in the IRO presupposes this Nation's interest in finding a solution of the refugees' problem. That problem is eventual resettlement of most of the 850,000 who remain in the camps. Only 20 percent of these are Jews, who may look, however despairingly, to Palestine as the land of opportunity. The rest are chiefly Balts, Poles, Yugoslavs, and Ukrainians who are unwilling or afraid to return to their homelands under the present regimes. If they do not find haven abroad the United States will have to continue to support those in its occupation areas.

Again, United States leadership in securing homes and opportunity for them is important. This Nation has in the past prided itself on giving haven to downtrodden and persecuted peoples. It proposes at the moment a vast program to give the peoples of Greece and Turkey a fair break against authoritarian forces. If the hundreds of thousands of individual refugees from totalitarianism are also to have a fair break this country must permit a reasonable number to come here.

Proposed legislation to this end may take one of two forms. Congress can authorize utilization of quotas or parts of quotas which were unfilled during the war period. Or Congress can pass temporary legislation to admit a prescribed number annually over a prescribed period. There will be opposition to either plan. The still potent forces of isolationism may be trusted to focus upon preventing any relaxation of the immigration laws. But we can hardly hope to persuade other nations to practice what we preach unless we also practice. The practical measures now required of us are to make funds available to the IRO and to permit entry of a fair share of the displaced here.

"Keep America a Free Land for Free Men"—By Eddie Rickenbacker

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1947

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an address delivered in New York on April 14, 1947, by Capt. Eddie Rickenbacker.

As everybody knows, Eddie Rickenbacker is one of our leading Americans, and one of the outstanding heroes of all times.

I hope every Member of the House, and everyone else who scans this RECORD, will read what he has to say and join in this fight to save our country, our way of life, and our civilization from destruction at the hands of those communistic elements that are working to destroy everything for which we stand and for which our heroes have fought and died.

The matter referred to follows:

KEEP AMERICA A FREE LAND FOR FREE MEN

(Address by Capt. Eddie Rickenbacker to Notre Dame Club of New York, Commodore Hotel, New York City, April 14, 1947)

Ladies and gentlemen, on the eve of this land's greatest gamble in international relations for world peace through the Greek and Turkish loans, let us reevaluate the penalties of the past and the prospects of the future.

Instead of waiting until world conflicts decimated nations, bringing disaster and exhaustion to many, would not a conference of the leaders and statesmen of the world powers have reasoned more calmly and in a more friendly atmosphere had they met on the problems of the people in the early thirties on the enterprises of peace with the same energy that they prepared to squander in the futility and frightfulness of war?

This thought, in my opinion, must be broadcast daily throughout the world as the sign posts indicate now unless we guide new history with a firm hand, old history may well repeat itself.

If there ever was a time in the annals of man where men must act with clear-eyed thought, without blind emotion, that time is now. Our main salvation—and by that I mean the salvation of mankind—is to think things through.

I am neither a historian nor a strategist, a statesman, nor a world observer. Like most of you, all I know is what I hear over the radio or see in the newspapers—read in print or between the lines.

But reading up and down the columns—and thinking things through, as my eyes travel from left to right—anyone, who has eyes to see with, and a head to think with, can easily appreciate that we are heading into a situation that may destroy us.

That we face the loss of the things we hold dear unless we stop fumbling—unless we prepare for action now, and take our battle stations in the war of nerves that is now being waged by Red and reactionary Russia to test the strength of the structure of peace, and the durability of our belief that all men are born free and equal.

So, in 1947, we ask why can't treaty talks and peace conferences be made to produce the peace? I am afraid that the answer is that even as it takes more than one to start a fight, so it takes more than one to keep the peace.

Neither America, England, nor the other western nations want war. In fact, they have gone far—some observers think, even too far—to prevent war.

On the other hand, Communists and their sympathizers seem to feel that every Russian claim is decreed by human destiny and that any opposition is an act of vandalism.

I read last fall, and with intense approval, the statement issued by Cardinal Spellman and other Catholic bishops of the United States. It was entitled "Man and the Peace." It declared that, at the bottom of all problems of the world today, is the problem of man and his right to enjoy spiritual, physical, and intellectual freedom.

I sincerely hope that this statement by Cardinal Spellman and his associates will be republished and given wide circulation. In my opinion, it summarizes the reasons why we are fighting communism.

If you gentlemen haven't read it, you should. It reveals, in few words and without subterfuge, that questions of human freedom stand in the background of the conflict between Russia and the West. That it is the inability of Communists to see human rights as we see them which is really delaying the winning of the peace.

Let us look the facts in the face and see what Russia wants. It seeks a made-in-Moscow peace that will give Russia a czar-like feudal power that is above criticism, comment, or correction, a power that would strangle world freedom; a power that would return human society to the bleak misery of the Middle Ages.

Those, to put the point bluntly, are Russia's terms for peace. But are they our terms? Are they the set of standards we will knuckle down to in abject surrender in order to live in one world of slavery?

Or are they to be the terms that will drive us into a Third World War to save ourselves and those who follow us? I have no doubt that such a war would end in Russian defeat.

But I have grave doubt that such a war is necessary if we only can convince Russia that we mean what we say. If we only can awaken Stalin and his henchmen to the realization that our chips are down and that we are ready to call the cards.

In 1917 we went to war to save democracy. We won the war. But because of our failure to remain strong and vigilant in the interest of democracy, dictators rose to power in Europe and other parts of the world, created military dictatorships and totalitarian states. Thus we lost the peace.

In 1941 we went to war to destroy totalitarian dictators in Europe and in Asia. We won the war.

But now, after the great sacrifices of combat, we find ourselves confronted by a Red reactionary dictatorship that seeks to inflict its will wherever it can in the old world from the Middle East to the Baltic.

Not only that, but Red reactionaries are planting seeds of discontent, turmoil, and distrust in the hearts and minds of men in every corner of the world.

They are doing this for the outspoken purpose of destroying human rights, human dignity, and human freedom as practiced and promised by spokesmen for democracy.

And mainly because freedom-loving people have failed to oppose them, the Pied Pipers of Kremlin have created a world-wide following.

Thus, again, we face the prospect of losing the peace.

In saying this, I am not forgetting the programs now started and the plans now pending to support the crumbling democratic structure with a new type of super-duper dollar democracy—a policy that plans to buy our way to world-wide peace and progress.

Up to a certain point, this policy is sound and desirable. But let us not fool ourselves into the belief that mere money will keep freedom and independence alive when the will to survive has gone the way of the softest flesh.

You can't make moral fiber out of money—you can make it only out of men. There is not wealth enough on earth to provide the mountains of cash and resources such a program would demand once it rolled into the inevitable avalanche proportion.

It is futile to think that by giving our material wealth to the rest of the peoples of the world, that we can raise their standard of living to equal ours.

But it is a positive fact that if we try, we will find ourselves lowered to the standard of living of the rest of the world—in one generation—and thereby lose our God-given opportunity of spiritual and material leadership as an example for other peoples of the world to follow and strive to equal.

To be powerful to oppose world communism, this Nation must remain strong. From the standpoint of strength, we stand alone. England and our other allies have little to contribute beyond moral support.

To be sure, money might has its place in the scheme of things, but so has military might. The Red Napoleons understand and respect but one thing—and that one thing is force.

The best peace insurance we can carry is a policy of strength on land and sea and in the air—a strong Army, Navy, and Air Force on hand and in being, backed by intense research in laboratories and actual experiments.

The Russians know, as well as we do, that if there is a next war, it will be known as the War of Know-How. Let us be so far ahead of the rest of the world in new-weapon development and ready striking power that any nation that pulled the trigger of aggression would only aim bullets at its own head.

There are millions of people throughout the world today who believe that a Third World War is inevitable. Well, that all depends upon what kind of war they mean. First, there is the old-fashioned kind of war, where men go out to wage war with bullets, bombs, and bayonets.

And then there is another and newer kind of war—a warfare of conflicting ideals and ideologies—the so-called war of nerves.

Up to now it must be admitted that Russia has held the upper hand in the war of nerves she has been waging with increasing pressure since the conquests of Germany and Japan.

And when I speak about manning our battle stations, as I did a moment ago, I express the belief that it is high time for Uncle Sam to begin his counteroffensive against the Red reactionary pressures from within the United States and from across the seas. We have in this country, ready for instant use—if we only employed them—the greatest weapons for winning wars of nerves the world has ever known, namely, the various organizations and mediums for making and molding public opinion.

I refer to our great advertising agencies, our vast public-relations organizations, our numerous industrial advertising units, our motion-picture industry, our radio industry, our newspapers, periodicals, and book publishers.

Before I submit any plan for combating communism here at home and around the world, let me first analyze, in terms of geographical spread and organized numbers, the ideological army we have to fight and defeat.

According to figures recently made public in England, there are in the world today about 17,000,000 declared Communists, members of Communist fronts, and fellow travelers.

This includes the 6,000,000 Russian Communist Party members who have a death grip on the remainder of Russia's 200,000,000 population.

In other words, outside Russia the Communist organization amounts to about 11,000,000 people. This is about the population of the State of New York.

I thought it would be interesting to divide this Communist army into geographical units and to use population centers with which we are familiar, as means of giving a graphic picture of the world-wide Communist line-up and here it is.

In Germany there are almost 2,000,000 Reds—a group that is slightly larger than Los Angeles.

In all of Asia, the 2,175,000 known Reds are less than the population of Brooklyn.

In Scandinavia, the 191,000 Reds would fill Atlanta, Ga.

In northern Europe—not including Germany—a total of 1,500,000 Reds falls slightly short of equaling the population of Philadelphia.

In southern Europe, 3,500,000 Reds would barely top the inhabitants of Chicago.

In the Balkans, 1,480,000 Reds almost equal the population of Detroit.

In the whole Western Hemisphere, the known 587,000 Reds are less than the population of San Francisco. Of these, about 95,000 live in the United States, plus their several hundred thousand fellow travelers.

Just for good measure all of the 6,000,000 Communist Party members in Russia fail to reach the population of New York City.

Thus, if you consolidated all Communists, their termite fronts and tumble-weed followers—you have a total of some 17,000,000 and they would barely equal the populations of Ohio, Illinois, and Texas.

These are startling figures, gentlemen, because they reveal that the Communist forces are much smaller in number than most of us are inclined to believe.

But let us not commit the fatal mistake of letting those small numbers misguide us.

Communists have long ago learned that the quality of effort by well organized, thoroughly regimented and aggressive minorities is far superior to mere numbers of indifferent, unorganized and undirected majorities.

Many people are mystified—even frightened—by the almost fantastic success of communistic minorities in sabotaging public opinion and political morale in various sections of the world, and in various stratifications of society from Government officials to college professors—from labor unions to artists and writers.

And yet, there is no mystery, there is no magic, there are no mirrors. It is all done by hard, relentless work. The enemies of Democracy have no 8-hour day or 5-day week. They work around the clock and they work around the calendar.

If we who oppose them would work as aggressively and as intelligently to preserve our freedom, as Red reactionaries work to undermine and destroy it, there would be no communistic problems.

Gentlemen, the day is here when we must forget not only time clocks and holidays, but we must be prepared to take our battle stations for a knock-down, drag-out fight against forces who have nothing to offer but slavery and shackles, whose goal is not to improve mankind but to imprison it.

We must fight this war on two fronts—the home front and the global front.

We should have started this battle in the open a long time ago. But our leadership was either too timid, too blind, or too selfish to call a spade a spade.

True, there were some organizations like the Vatican and the Catholic Church that dared to fight the Reds in the open.

A handful of individuals—and I'm proud to say that I served among those—had the courage to speak up and stand up against communism in the days when Washington looked and talked like a suburb of Moscow.

To people like myself it is a wonderful thing to be at a meeting like this and be able to stand up and speak through love of God and truth and country without fear of any kind of reprisal, except that which will come from the scuministic communistic smear artists. In fact, it is this new freedom to speak that surges from coast to coast—in this land of free speech—that encourages me to believe that the battle against Red reactionaries will be won by waging a vigorous war of nerves and without the employment of military strength.

Up to the time President Truman announced the so-called Truman doctrine, the American war of nerves against communism was an undeclared one. President Truman's statement was a declaration of ideological hostility. Although he did not name Russia, it was a flat declaration of active opposition to Moscow and its world-wide aims.

In brief—although no bombs are dropping or cannons roaring—we are, for all practical purposes, at war. The war of nerves.

That being the case, it is imperative that we muster and send into action our vast civilian and commercial propaganda machine. And I predict right here and now that once it swings into action, it can outthink and out-talk any ideological barrage the Red brain trust in the Kremlin ever will be able to produce.

The plan of the campaign to be employed by our propaganda machine is very simple. All we have to do is to spread the truth about the Russian way of life and the American way of life to the four corners of the earth. For the battle is not what it is labeled. It is not a contest between Red dictatorship and democracy, nor is it a line-up of communism against capitalism.

It is a battle between lies to enslave mankind and truth to set men free.

Over the years, within Russia and beyond its borders power-thirsty dictators in the Kremlin have tried to capture the world with a lasso of lies. I admit, with regret, that they have made considerable headway in that direction. And, as I said before, they have succeeded mainly because they met with no opposition.

Let us look at ourselves. Where we should have employed forceful determination, we offered weak appeasement.

Where we should have shown the mailed fist, we used the velvet glove. The time for those things has passed.

We must be militant and uncompromising in our stand for human rights. We must let our opponents know that we are prepared to fight, if necessary, for human freedom.

Even as Abraham Lincoln said that you cannot have a nation that is half free and half slave, so you cannot have a world that is half in the daylight of free democracy and the other half in the dark night of enslaving tyranny.

It has been said, and rightly so, that freedom is the only thing in the world you cannot have and cannot keep unless you share it with others.

So, for the sake of our own freedom we must continue our effort to set all men free. That is the destiny of America in the making of the world as the Lord intended it to be.

Freedom is the God-given birthright of mankind, but too many of us are so short-sighted that we are willing to trade our heritage of freedom for the mess of pottage called security.

There are, so far as I know, only three places in civilian society where a man can find complete security, including three meals a day, clothing on his back and a roof over his head:

One is behind the bars of a prison.

The second is within the walls of an insane asy·um.

The third is in the poorhouse.

In those places you have security, true enough, but think of what you pay for it—your freedom and opportunity.

Russia baits its freedom-killing trap with sweet-sounding slogans like security, equality and opportunity. Its spokesmen in this country mouth fine-sounding phrases about the utopia Stalin and his henchmen in Russia and Communist controlled Europe will bring to mankind.

It seems rather strange to me that nobody, not even the American Communists, their friends and fellow travelers, are crowding our airports and steamship piers in a mad rush to leave this country of the down-trodden proletariat for the glorious freedom of Russia, Poland, Yugoslavia, and other salve-ias.

I also notice that the Red brothers and sisters who go to Europe always buy round-trip tickets and never stay away for long.

On the other hand, ships and planes from nearly all European ports and airports are crowded with Europeans who are only too glad to breathe the air of this new world of democratic thought.

Speaking of trans-Atlantic travel, I hope that the anti-Communist house cleaning ordered in Washington, and which seems to extend into labor unions and other private fields, will increase the traffic trail from here to Europe.

The pressure that must be brought to bear to open the communistic carbuncle on our body politic should produce a healthy effect. I am not at all sure that it would be either necessary or wise to go to the length of outlawing the Communist Party and putting the Red brand on Communists. It might tend to turn them into martyrs, which is precisely what they feed on and use to attract the tumbleweed thinkers who follow them.

Let us shy a brickbat at communism whenever it lifts its ugly head and let us laugh a. the stupid stooges who are brainless enough to follow them. The kind of Red egomaniacs who thrive on sneers would be destroyed by laughter. Expose them to ridicule and watch them run.

I am told that there are almost 4,000 Russian agents under State Department visa in this country, and that nearly 1,000 of those are honor graduates of the Red spy and sabotage school in Moscow, known as the Lenin Institute. Let us send them back where they belong.

It is also revealed that about 400 American Reds hold key jobs in the Federal Government. If that can be proven, every one of them should be turned out. How many thousands more there are in less conspicuous positions time alone can tell.

Don't think for a moment that this stiffening of our attitude has not had its effect in Moscow.

And the more we do to show the Red leaders that we are in this contest to win, the sooner you may expect a softening in the Russian attitude. They are not people with whom you can argue points of right and wrong.

So far as they are concerned, no principles are involved—only their will to master the world. There are no moral issues, for with them truths and untruths are mere tools to serve their needs.

The only way to deal with them is to expose them and lay their sinister aims before the world—to break their power and explode their prestige with the power of truth—a greater power than any devised by man, including the atom bomb.

I propose that the most effective way of staging this campaign would be to ask the directing and producing heads of advertising, public relations, the press, periodicals, screen, books, and radio to formulate a global campaign employing the use of every medium to spread the truth about the champions of spiritual, mental, and physical freedom—the trinity of human rights—which the Red reactionaries hate as deeply as the Devil hates holy water.

In my wartime missions around the globe I found an amazing lack of information about the United States—and an even more amazing amount of misinformation.

One way of clearing up that situation would be for every American exporter to enclose with every item a brief history of America and its aims, printed, of course, in the language of the country to which it is going.

True, many would be destroyed by Reds, but some of those pamphlets would survive and spread their important messages.

Let us set up the machinery for global infiltration into Communist-controlled countries—over, under, around, and through their iron curtains of thought control, truth control, and firing squads.

Let us start, fifth, sixth, and seventh columns overground and underground, and show the Reds that what is gravy for the Russian bear is sauce for the American eagle.

One of the most straightforward indictments of communistic aims that I have read is contained in the statement entitled "Man and the Peace," issued by the Catholic bishops of the United States following their meeting in Washington last fall. I referred to that statement before. And I repeat—read it. Here is an excerpt that hits the nail on the head, and states the entire case in a few, carefully selected words. I quote:

"Throughout the war our battle cry was the defense of native freedoms against Nazi and Fascist totalitarianism. The aftermath of war has revealed victorious Soviet totalitarianism no less aggressive against these freedoms in the countries it has occupied.

"Totalitarianism does not acknowledge and respect these freedoms. It persecutes the citizen who dares assert his native rights. It imposes on peoples its philosophy of life, in which there is no authority above the state, and in which all values in life are derived from human conventions.

"The corollary of such philosophy is the police state, which terrorizes its citizens and dominates them in all fields of human behavior. Before we can hope for a good peace there must come an agreement among the peace makers on the basic question of man as man."

That type of concession never will be won from the Reds unless we stand firm and unified in our demands. Unless we have the strength in a military and moral sense to back them up.

The stronger we are, the less chance there is that we ever will be called upon to use our strength. Meanwhile, the war of nerves is on.

Let us plan and act with clear-eyed thought, without blind emotion—let us think things through.

Let us fight communism wherever it lifts its ugly head, here at home. Let us combat it all over the world where it threatens to rob men of their freedom. For that task we need no new or secret weapon—only the bright and shining sword of truth.

Let us take our battle order from the eighth chapter of the Book of St. John in the Bible: "Ye shall know the Truth—and the Truth shall make you free."

The Mandate of Big Business

EXTENSION OF REMARKS
OF

HON. JOHN LESINSKI
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of George Meany, secretary-treasurer, American Federation of Labor, over the Mutual Broadcasting System, Station WOL, Washington, D. C., Wednesday, April 16, 1947:

Our Nation is the strongest in the world. We are strong for a number of reasons, but the No. 1 reason for our strength is that we are a nation of free men.

America's strength and the fact that we are the symbol of liberty to the peoples of the whole world have combined to give us a position of world leadership. We have served notice that we stand not only for freedom here at home but also for liberty, democracy, and the rights of governments and peoples everywhere to be protected against the enslavement of totalitarianism.

Today there is serious danger of America's position, as the champion and bulwark of freedom, being undermined through action of our own Congress. This would be the inevitable effect if Congress were to pass the labor legislation now proposed by the majority party in the House of Representatives.

The bill I refer to is one which has been approved by the Republican Policy Committee of the House. This measure emanates from the House Labor Committee and is being called the Hartley bill. The bill should be known as the National Association of Manufacturers bill, which in fact it is.

The Hartley-NAM bill now before the House of Representatives is designed to bring about the destruction of free trade unionism in our country. It proposes to achieve this nefarious purpose by enacting into law the program adopted by the National Association of Manufacturers last December.

The Hartley bill would definitely effectuate the NAM program. For example, the NAM urged that "the protection of law should be extended to strikers only when the majority of employees in the bargaining unit, by secret ballot under impartial supervision, have voted for a strike in preference to acceptance of the latest offer of the employer." The Hartley bill accepts this proposal in toto—in fact, almost word for word.

This situation prevails all through the bill. Throughout the 68 pages of the Hartley bill we find the ideas and the very language of the NAM's antilabor program lifted bodily and incorporated into the bill. There can be no doubt on this score. The committee minority has stated quite definitely, and I quote, "During the period of the hearings the representatives of the NAM, working behind the scenes, were writing the legislation." This quote refers to the so-called Hartley bill now fraudulently offered as the brain child of Mr. HARTLEY himself and his fellow committeemen of the majority.

The NAM is evidently not concerned with the world position of the United States of America. The NAM is clearly not disturbed that enslavement of the plain citizens of America would destroy our Nation's position as the standard bearer of freedom in the effort to halt further expansion of communism. The NAM doesn't seem to care about anything except profits, more profits, and still more profits. Last year the corporations of America as a whole made far more money than in the highly profitable war years, but the NAM wants more, and this bill is designed to achieve that greedy objective at the expense of the Nation's workers.

Our Government has adopted a policy of preventing the spread of Communist influence abroad and at home. It has been announced and reiterated that the administration is determined to carry this policy out in an effective manner. The overwhelming majority of the American people are in complete sympathy with this program of the Government. Most Americans have no use whatsoever for the hateful tenets of communism or any other form of totalitarianism.

This anti-Communist program will be torpedoed if the Hartley bill is enacted into law. American workers will not cheerfully accept any statute which compels them to work against their will. They will resent and resist such a flagrant violation by Congress of the Constitution of the United States, in particular the thirteenth amendment, which forbids involuntary servitude.

This bill will bring more recruits into the ranks of those opposed to the American way of life than the Communist Party of the United States has been able to enroll in 30 years. Communism thrives on chaos, disorder and oppression, and this bill sponsored and written by attorneys for greedy antilabor employers, will surely bring about chaos, disorder and oppression.

At a time when our nonpartisan foreign policy is directed toward making America a vital influence on the side of human liberty in world affairs, it is little short of criminal to create a condition here at home that will render our Nation completely impotent as a world power. A Nation torn asunder by internal strife cannot exercise leadership in world affairs.

This measure if enacted into law will weaken our internal economy to the point where America can no longer command respect in its dealings with the other nations of the world. This would no doubt please Molotov and Stalin. This is what the Communist Party and the actual and mental foreigners who are associated with it would most ardently desire. Henry Wallace would giggle with glee.

Mr. HARTLEY and many of our big-business newspapers state that antilabor legislation must be enacted by this Congress because of a so-called mandate from the people. It is claimed that the November election results constituted a mandate to clamp handcuffs and a strait-jacket on the American wage-earner.

There is not a particle of truth to any such claim. The fact is that last year's election mandate was to eliminate bureaucracy, to wipe out regimentation. It was a protest against high prices and administrative failures in price control. It was a protest against the very bureaucracy and regimentation that this legislation would bring about. It was a protest against the failure of Congress to pass bipartisan housing legislation so people could have a roof over their heads. It was a protest against the complete inability of Congress and the OPA to do anything when the country's meat producers went on strike against the American people. Those were the issues involved in the election last November.

It seems strange to see leaders of a party which has been assailing regimentation for fourteen long years now advocating regimentation for the 40,000,000 wage earners of the Nation.

Those who are now attempting to put America's workers in a straitjacket of legal restrictions that would virtually chain them to the work bench forget one very important thing—the American workers' love of liberty. They forget that the free workers of our Nation outproduced the slaves of totalitarianism. They forget, above all, that even if this NAM bill was enforceable, it still would not help production.

Perhaps the NAM and its congressional agents might even succeed, through the brutal methods of totalitarianism in making slaves of America's workers.

But what good would that do for the NAM and its constituent corporations, interested as they are solely in greater and ever greater profits? They would find their profits not enhanced but reduced. The American worker would not produce much if he were deprived of his freedom. The NAM and its agents would find out, as the directors have found out, that forced labor is not productive labor.

The results that the authors of this bill desire to achieve are best described by a statement issued by Congressman LESINSKI speaking for the minority:

"This bill would return us to the dark ages of labor exploitation. It is only the beginning. After the unions are broken and split and formed into a labor front for exploitation, then we will see the return of child labor. Small boys will once more be fed into the mines, young girls will sweat in the garment shops. Cheap labor will be achieved. The 'yellow-dog contract' will reappear. The black list will once more become a weapon against the livelihood of the worker."

Thus states a group of Congressmen who are quite evidently aware of the real purposes behind the program of Mr. HARTLEY and those whose interests he represents.

If it were possible for American labor on the one side and the profit-greedy employers and their spokesmen in Congress on the other side to battle this out for the next two or three years, we could perhaps afford to suffer the chaos and disorder that would result. It would perhaps be worth while, in the long run, to let this internal battle take place, even with all the suffering it might entail, in order to clear up once and for all in the minds of the employers and their agents the question of whether or not American workers are by right entitled to maintain free trade-unions for their own benefit and protection.

But unfortunately we cannot build a wall around America for the next two or three years and indulge in a private fight of this kind. The world in 1947 is looking to America for leadership. America can furnish that leadership only by remaining strong. America cannot remain strong if it is torn asunder by the bitter strife which will surely ensue if the Hartley bill becomes law.

The legislative theory behind this measure, if it can be dignified by conceding that it is the result of any legislative theory, seems to be that the key to industrial peace in this country is the weakening and ultimate destruction of trade-unions. Unions are all right if they can be rendered so weak that they can no longer carry out their obligations to the worker. The worker is to be protected in this bill by the destruction of his union. Well, I am sure the American worker is not going to suffer his union to be destroyed. He knows that the high standard of life enjoyed by the wage earners of America did not come as a gift from the employer. He knows that he is the best-paid, best-housed and best-clothed worker in the world because of his right to maintain free trade-unions as an instrument to achieving a better life. I am sure America's workers will fight to retain these rights because in the final analysis their destruction means the destruction of our form of free society.

There is one aspect of this antilabor proposal that is perhaps more disturbing than any other. This is the political aspect.

The American wage earner has been told over and over again down through the years that the Republican Party was the party of privilege, of profit, the party of Wall Street and the big corporations. The American worker has hesitated to believe these charges because he was convinced that this was the one country in the world where the class struggle could not be a national political issue. But when we scrutinize the origin of this vicious antilabor proposal, when we hear the paid spokesmen for big business strongly urging its passage on the air, when we see the large corporations using the power that comes with a swollen treasury proposing its restrictions through full-page advertisements in our daily press, when we see and hear all these things and then in addition hear the official spokesmen for the Republican membership in the House of Representatives, not only endorsing this bill but boasting of their ability to enact it into law, we wonder if the class struggle is about to shift from the economic to the political field.

For nearly three-quarters of a century the American Federation of Labor has maintained itself as a strictly nonpartisan organization representing workers as workers, not as pawns in a political game. I am sure that our organization desires to continue as such. In the face of the political aspects of this proposal to destroy trade unionism, the question arises as to whether or not we will be compelled by force of circumstances to revise our basic position in order to protect the future of the wage earners of our country who in themselves constitute the vast national wealth of which Americans so often boast.

Appropriation for the Department of Labor

EXTENSION OF REMARKS

OF

HON. CLYDE H. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 18 (legislative day of Monday, March 24), 1947

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement which I submitted to the subcommittee of the Committee on Appropriations regarding the appropriation for the Labor Department, to be considered in connection with the hearings being held on that matter.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I am not unmindful of the desire and necessity for reducing expenses in Government and for practicing economy in all departments. I am thoroughly sympathetic with this purpose, but in reducing appropriations for the various Government departments we must have a care to see that we do not render ineffective and inefficient any essential governmental agency. In my opinion the action of the House in the drastic reduction it has made in the appropriation to the Labor Department does just this and I do not believe that your committee should approve this action on the part of the House.

I shall not contend that no reduction should be made in the appropriation to the Labor Department as recommended by the President's budget, but such reduction as is made should be carefully studied and discriminatingly applied, rather than a mere slashing of the appropriation by which important phases of the work and activity would be altogether abolished, or desperately crippled.

As former chief executive of a State, I have had some experience in the balancing of immediate money savings against necessary public services and the holding together of staff and morale required to discharge those services efficiently in the public interest. It has been my experience that the saving of dollars may cost many times the immediate amount, in both the cutting off of services and the eventual reconstruction of the service and the personnel that must do the job. My experience was gained during the difficult prewar years when there was even more reason for the strictest economy than exists today—I am not minimizing in the least the need for economy to balance the budget, reduce the public debt, and as soon as possible to reduce taxes. I want to make the point clear, however, that we will harm our economy and the public welfare irreparably by permitting the proposed cuts in the 1948 budget for the Department of Labor.

In discussing the budget for the Department of Labor, I have in mind the services which the various bureaus and divisions of the Department have rendered and are rendering to the employers as well as to the wage earners of this country and of my own State.

In this connection it should be borne in mind that the Labor Department is currently operating on a budget of approximately $113,000,000. In view of the President's determination to balance the National Budget, that Department as all other executive departments, pared to the quick its operations in submitting its request for 1948 funds. The Department has asked for $103,000,000 to carry out its minimum essential functions—of which amount $72,000,000 is for grants to the States for the operations by the States of local employment offices. Thus, funds requested for operation of the entire Department of Labor itself was actually $32,000,000. This indeed is a modest sum for the executive department which performs the services of the Federal Government in the important field of labor, labor-management relations, and employment.

It is being proposed, however, that those requested funds of $31,000,000 be slashed by nearly $14,000,000, and thus leave the Department of Labor with only about $18,000,000 with which to conduct its activities through 1948.

This proposed action, I submit is not in keeping with our national postwar needs and our postwar determinations, or with the law which established the Department of Labor.

I am opposed to the action proposed to this body in H. R. 2700, because the facts indicate that such action would emasculate the Department of Labor. I wish briefly to point out just how complete the emasculation would be:

The Division of Labor Standards would be cut 100 percent.

It would be liquidated, except for the function of child-labor inspection, which, with its funds severely cut, would be transferred to another division of the Department.

The United States Employment Service would be cut 77 percent.

In addition to this cut, the Veterans' Employment Service in the USES would be cut 34 percent, and, furthermore, this appropriation bill proposes to direct the internal organization of the USES by eliminating field offices.

The Bureau of Labor Statistics would be cut 60 percent.

The Solicitor's Office would be cut 50 percent.

The Conciliation Service would be cut 25 percent.

In addition to the cut, this appropriation bill proposes to control the internal organizational structure of this Service in such a fantastic fashion as to eliminate permanently the 102 top administrative positions of the Service.

Wage and Hour and Public Contracts Divisions would be cut 25 percent.

These cuts total in all a 43 percent slash in the 1948 funds that have been requested for the Department of Labor, and requested funds are below the current budget of operations.

Providing adequate funds for the running of the Federal Government should never be a partisan matter, regardless of which of the political parties is represented by the majority of Members in Congress. I am taking the time of my colleagues today to make an appeal for action which should transcend party affiliation. In so doing, however, I should like to point out that in 1944 the Republican platform stated: "The Department of Labor has been emasculated by the New Deal." Mr. President, in all earnestness, I say that if the present budget of the Department is emasculation, the proposed budget is an attempt to destroy the corpus delicti.

To protest the proposed action in H. R. 2700, the commissioner of labor of my State of North Carolina, Mr. Forrest H. Shuford, felt compelled to appear before the subcommittee considering the appropriation for the Department of Labor. He protested as president of the International Association of Governmental Labor Officials whose members are labor commissioners of the various States, and he protested personally the services and assistance which would be lost to the State of North Carolina, if H. R. 2700 should become law.

To the subcommittee, Mr. Shuford said:

"As president of the International Association of Governmental Labor Officials—an organization which has been functioning for the past 60 years—I wish to present to you the viewpoint of the association concerning the need for adequate appropriations for the Department of Labor. * * *

"But we are concerned about the serious cuts which have been made in the work of all branches of the Department of Labor. * * *

"The Federal Department of Labor, in our opinion, has never had sufficient funds with which to operate. This Department has always had much smaller appropriations than many other Federal agencies which are devoted to the interests of other segments of our population. This is difficult to understand, when we realize that the Labor Department renders invaluable services to both industrial management and industrial workers in the many areas in which its responsibilities lie. In my judgment, the interests of workers and of management are so interrelated that they cannot be segregated. Any action which is crippling to either labor or management will affect the other adversely, and will seriously affect our entire national economy. We hope that this Congress will not make drastic cuts in all Labor Department appropriations."

I wish, Mr. Chairman, to comment briefly on the proposed cuts for the several divisions and services of the Department of Labor.

1. THE DIVISION OF LABOR STANDARDS

This Division of the Labor Department was founded by the Secretary of Labor in 1934, by virtue of the executive powers lodged in the Secretary by section 161 of the Revised Statutes, to carry out statutory requirements in the organic act of the Department, that, among other things, it improve the working conditions of the working people of the United States. The Division carries out this purpose through advisory assistance rendered to the States, particularly in the field of industrial safety and the removal and elimination of the hazards of employment. It is in a very real sense a service agency, which recognizes that the problem of working conditions is primarily a local matter of State

concern. This Division makes its services, standards, and assistance available to the appropriate State authorities for their use. I should like to quote what the labor commissioner of North Carolina came to Washington to say about this Division, and the proposal to liquidate it.

"As an association of State labor commissioners, we are greatly concerned over the House action in abolishing the Division of Labor Standards. This Division was created at the request of the State labor commissioners so that we might have machinery within the Federal Government to strengthen our hands in dealing with the difficult problems of labor-law administration that face us. We wanted a friend at court—someone familiar with the strengths and weaknesses of the State labor departments, sympathetic with their programs and with an understanding of their needs—an agency that would be genuinely interested in strengthening State labor departments instead of whittling away their functions. We have had that kind of agency in the Division of Labor Standards. It has served us well. The staff has been largely recruited from persons who have served their apprenticeship in one or another State labor department.

"Time and again, without the Division's assistance, we as State representatives would have found ourselves in a position where we could not move. When the war broke out, for example, one of the first thoughts of the Army and Navy was to lay aside the State labor laws affecting hours of work. The Secretaries of War and Navy sent telegrams to various governors requesting immediate action to permit wholesale lengthening of hours of work for women and children. No one governor would have been able to determine whether increased production would have resulted from such a move. We appealed to the United States Labor Department for assistance. At conferences arranged by the Division of Labor Standards, officials of the Army, the Navy, and the Maritime Commission conferred with a group of State labor commissioners from important industrial States. As a result of these conferences, and with the assistance of the Division of Labor Standards, reasonably uniform and satisfactory standards were worked out for the temporary relaxation of State labor laws during the war period. The production of war materials achieved during the years which followed was of such magnitude that it appears evident that such a solution was the logical one. The labor laws were saved and now are again operative.

"The conferences which the Division has arranged for discussion of current problems and the larger national conferences that have been held each year have done a great deal to stimulate more harmonious relations between the States and to better administrative practices.

"We need the continuing watchfulness and service of the Division in the postwar years ahead. We believe we have a right to ask this sort of assistance from the Federal Government. Our departments receive no Federal financial aid of any kind. Yet we probably have one of the toughest assignments in all of State government. We are not asking for Federal funds. But we do ask for a minimum of assistance such as we have received from the Division in improving our safety and health programs and our labor law administration.

"I am sure other witnesses have told you of the terrific cost of industrial accidents. We in the States have responsibility for reducing this toll. We want to do a good job. But most of us have neither enough funds nor trained personnel to carry the load unaided. And we know full well that if we fail to bring the accident rates down, irresistible pressure will develop for the Federal Government to take over the job. * * * If the States can continue to receive assistance from the Division of Labor Standards in training factory inspectors, in preparing safety codes, and in planning and developing State safety programs, we believe that Federal intervention in this field will not become necessary. * * *

"The advisory and technical services of the Division have been of much practical value to the North Carolina Department of Labor during the past 12 years. Following its reorganization in 1933, our Department has undergone a gradual expansion in keeping with the growing needs of labor and industry. * * * Much of this development and improvement is the direct result of the technical assistance which we have received from the Division of Labor Standards in the training of inspectors, development of codes, and through the informational and educational services which it has made available. * * *

"We have gone over the House committee's report with care. Based upon our experience, we can see no economy which will result from the elimination of the services of the Division of Labor Standards. It is hard for us to understand why an Appropriations Committee should eliminate this small accident prevention service and at the same time grant $18,000,000 of Federal funds to rehabilitate workers after they are injured. Yet that appropriation is carried in the same report in which the Division of Labor Standards is abolished. Similarly, we cannot see why the United States Public Health Service should be granted millions for building up State health departments—particularly in the field of industrial hygiene—when we in the State labor departments are denied all assistance."

2. THE UNITED STATES EMPLOYMENT SERVICE

The 77 percent proposed cut in funds to operate the United States Employment Service—the national office of our public employment service system—would completely incapacitate the Federal Government in discharging responsibilities placed upon it in the law which established our Federal-State system of public employment offices. Just why H. R. 2700 proposes to cut the funds requested for operations of the national office 77 percent—from $3,912,000 to $900,000—yet proposes to grant the full amount of funds requested to operate the State and local offices—$72,000,000—is difficult to understand, as all of the money to run the USES and the State employment services comes out of the Federal Treasury, 100 percent.

The committee report accompanying H. R. 2700 leads me to believe that there are some who do not understand that the public employment service system which was created in 1933 was created as a Federal-State system—not as a Federal or a State system, but as a Federal-State system with nonduplicating and nonoverlapping responsibilities delegated to the Federal and to the State governments. That is the system that was in operation prior to federalization of the employment service for the war job, the system by which we have seen a basic democratic institution come into being and mature. Unless we repeal the Wagner-Peyser Act the Federal-State cooperative system should remain in operation now that we have returned the running of the State services back to the States. Because the report accompanying H. R. 2700 seems to reveal that the committee felt it was taking care of the operations of our public employment service by providing all the funds requested for State operations but cutting the national office 77 percent, I wish to point out the protest to the proposed cut in requested funds for the USES which has been made by Col. Henry E. Kendall, the chairman of the Unemployment Compensation Commission of North Carolina. He has appealed to the chairman of the Senate subcommittee to restore requested funds, and to me, he has written:

"It is my opinion that this cut has been such that it may seriously endanger the entire developmental program of the USES and that the amount allowed by the House of Representatives is insufficient for the USES to provide the various States with the services the States would like to have. * * *

"I think one of the most important technical services the national office should be able to provide is in the field of occupational information. It seems to me that if the employment services in the States are to do an adequate job and to continue to develop that some central group will have to provide revisions for the dictionary, trade questions which cover additional occupations and are revised to meet technological changes, aptitude and performance tests which are one of our most valuable services to industry, interviewing aids and job descriptions to be used as devices for improving the efficiency of our local office personnel, particularly in interviewing and placing applicants. While some of this work could possibly be done by the various States it seems to me that a well administered national program should be able to provide this for the various States at a lesser cost and with better coverage than any individual State could possibly do.

"In addition to this technical assistance in the way of occupational information and occupational tools, we feel that it is worth while for the United States Employment Service to continue within reason their work on manual preparation and manual revision. While all of these manuals do not exactly meet the needs in this State I find that with minor revisions we have been able to issue these manuals and have not been required to maintain a procedures section of any consequence.

"In the field of labor-market information we feel that the requirement and requests from the USES have been a great many times too burdensome and that in many instances they established requirements which has required the expenditure of too much staff time for the results achieved. I feel that a portion of their work should be continued so that the various States may be provided with over-all information on labor-market trends for their consideration in planning the program for their individual State.

"In addition to these things which I have mentioned, I think it would be wise for a reasonable staff to be maintained by the USES to provide for the interchange of information on Employment Service operations among the various States. It is not anticipated that this group would have direct supervisory responsibilities with regard to any State but where good practices are found in States this information could be passed on to other States for their use.

"In regard to the regional offices, I cannot argue that we [North Carolina] would have any great difficulty in our relationship with the USES if the regional office was discontinued, because of our geographical proximity to Washington. However, it would seem to me that in those States which are at a distance from Washington it would be wise to continue the regional offices so that the States would have assistance in their problems without the necessity of traveling to or corresponding with the officials in Washington. This presupposes, of course, that the regional office people would be given sufficient authority to take necessary action with regard to the problem the States might present and, if given such authority, the regional office would be valuable to the States near Washington since there would be a small staff of persons assigned to work with a group of States and would be more cognizant of the peculiar problems of the State."

Mr. Chairman, concerning the appropriations for the USES, Mr. Kendall has said to me:

"I would like to urge that you take any action which you may deem advisable in securing the restoration of sufficient funds

for the USES to carry out a program which can be beneficial to the States which are attempting to operate a most satisfactory employment-service program."

3. BUREAU OF LABOR STATISTICS

The Bureau of Labor Statistics is a fact-finding arm of the Department of Labor. Its activities, developed in response to congressional mandate in the course of the years, have become an essential part of the functioning, not only of the Federal Government, but also of State governments, which owe much to the Bureau for technical and financial assistance. The proposed curtailment of the budget will mean the severe limitation, if not the abolition, of at least six specific activities in North Carolina, which may be grouped under these specific titles:

(a) Occupational wage-rate surveys.
(b) Consumer price indexes.
(c) City workers' family budgets.
(d) Building materials price indexes.
(e) Employment statistics.
(f) Services to the States.

4. OFFICE OF THE SOLICITOR

The Office of the Solicitor is chiefly responsible for the enforcement of the laws that are administered in the Department of Labor. It has been erroneously assumed that because of the decrease in the Department's over-all budget the responsibilities of the Solicitor's Office will be correspondingly less, but this is not the case. The duty to prosecute violations of minimum-wage, maximum-hour, and child-labor statutory requirements will continue mandatory until those laws are repealed. The duty to respond to public inquiries concerning the application of those laws will continue so long as the public continues to inquire. The duty to make predeterminations of prevailing wages under the Davis-Bacon Act, the National Housing Act, the Federal Airport Act, and the Hospital Survey and Construction Act is not only required to be performed under these acts, but affects the operations of all the agencies of the Federal Government which contract for or are interested in construction under these acts.

In the State of North Carolina alone, for example, through the end of March in the present fiscal year, 99 requests for wage predeterminations have been made. Much of the construction involved in these requests closely affects veterans: Educational facilities are being constructed at Raleigh, Louisburg, Black Mountain, and Holly Ridge; and construction on Veterans' Administration buildings is taking place at Fayetteville and Charlotte. Improvements to the airport are being made at Charlotte by the Civil Aeronautics Administration. The Navy is engaged in extensive construction in many locations: Greensboro, Wilmington, Raleigh, Winston-Salem, Durham, Asheville, and Charlotte. These are only a few examples of the type of work which would be delayed and hampered, to the detriment of the prosperity of North Carolina, by reduction of the Solicitor's Office budget.

5. UNITED STATES CONCILIATION SERVICE

I am very concerned about the proposed budget cut for the United States Conciliation Service which is the only agency aside from the National Mediation Board charged with the responsibility for settlement of industrial disputes.

I agree with President Truman when he said in his Jefferson Day speech that it is false economy to reduce the budget of the agency responsible for the maintenance of industrial peace. If facilities are not available for the prompt handling of labor disputes, we will have more strikes with consequent economic disruption to the country. That economic disruption of the economy will inevitably affect everyone and will affect the people of my State of North Carolina.

In the calendar year 1946, the United States Conciliation Service in conjunction with the State service, handled a total of 176 labor disputes in North Carolina, involving 46,796 employees all told. Thirty-nine of these were work stoppages, involving 8,221 workers. Fifty-seven were threatened work stoppages, in which 22,871 workers were involved, settled by the Conciliation Service without a strike. In addition, 47 disputes involving 10,150 workers were settled by the Service before any threat of a strike. In 8 cases involving 237 employees, an arbitrator was appointed. Twelve were handled by the appointment of technical commissioners to make work-load surveys and other kinds of technical studies in the affected plants, to settle issues in the disputes. Four thousand, nine hundred and seven employees were involved in these cases.

One of the most important steps taken by the Conciliation Service since Director Warren assumed office was the establishment of a Labor-Management Advisory Committee. This committee consisting of representatives nominated by the NAM, Chamber of Commerce, AFL, and CIO was established pursuant to the unanimous recommendation of the President's Labor-Management Conference on Industrial Relations in November 1945. The Labor-Management Advisory Committee meets regularly with the Secretary of Labor and the Director of Conciliation to provide advice and guidance on the operations of the Service. The establishment of the committee is particularly significant in that it marks the first time in the history of the Department of Labor that management has had a voice in the functioning of that Department. No major reorganizational step taken by the Conciliation Service was taken unless it was made upon the recommendation of or with the approval of the committee. One of the most important recommendations made by the committee was for the establishment of a panel of 26 special conciliators. These special conciliators are the outstanding people in the field of labor relations in the country who have agreed to keep themselves available for assignments to particularly important cases affecting the national welfare and economy. They are the type of people that could not ordinarily be attracted to regular government service, but who are willing to serve from time to time to assist their country in the peaceful settlement of major disputes. North Carolina is particularly proud of the fact that it has contributed two of its native sons to the list of 26—Dr. Frank P. Graham, president of the University of North Carolina at Chapel Hill, and Professor Harry D. Wolf, of the University of North Carolina.

In addition to the above, Hon. Walter P. Stacy, chief justice of the Supreme Court of North Carolina, was Chairman of the President's Labor-Management Conference in 1945 and served on the fact-finding board and filled other special assignments of national importance in conection with the administration of the labor conciliation program, in which he reflected great credit upon himself and made a fine contribution to the Conciliation Service.

The Conciliation Service, in addition to the National Labor-Management Advisory Committee, has established regional advisory committees, composed of representatives of the same organizations, who advise the regional directors on a local level on problems affecting the regional offices. North Carolina has contributed two representatives to the Regional Labor-Management Committee for the southern area—Mr. Roy Lawrence, southern director of the Textile Workers' Union (CIO), and Mr. T. G. Moore, secretary and general counsel of the T. H. Hanes Knitting Co., represeting the NAM.

In talking about the Conciliation Service I would like to refer briefly to an incident that has come to my personal attention, whereby that Service was particularly helpful in assisting labor, management, and agricultural interests in resolving a dispute which affected all of them. It did so in a competent and fair manner that won the applause of all three groups. I refer to a letter addressed to the Secretary of Labor from the executive secretary of the State Farm Bureau Federation relating to a threatened strike in tobacco redrying plants. The letter is appended at the end of this statement. It would certainly seem to be false economy to reduce the effectiveness of an agency which in a single case makes such a tremendous saving to the industrial, agricultural, and laboring people of this country. Particular praise for the handling of this one dispute was paid to Commissioner of Conciliation Yates Heafner. I am proud to say that I know Mr. Heafner personally, as well as Mr. Seth Brewer, the other commissioner assigned to the North Carolina area. Both of these men have a general reputation for a high degree of competence and impartiality and they have the confidence of all the people with whom they deal. I am sure that they are typical of the Commissioners assigned to other States. They are the kind of men we need to help solve our industrial disputes. We certainly should do nothing to reduce the budget in such a way as to limit their effectiveness.

The President's Labor-Management Conference unanimously recommended not only that the Conciliation Service be strengthened and improved, but that sufficient funds be made available to retain and attract the highest type of personnel to perform the duties assigned to it. I believe that that recommendation is entitled to great weight.

6. WAGE AND HOUR DIVISION

There are 10,840 establishments in North Carolina subject to this legislation. It had originally been planned to inspect about 10 percent of these for compliance. Under the proposed budget reduction, only about 7 percent or less than 700 of the covered plants can be inspected since the State will be left with only 8 of its present 12 inspectors.

The foregoing is a brief outline of the services rendered by the Labor Department, with special reference to the cooperative service with the States.

I recognize the advisability and necessity of reducing expenses and contracting Government services wherever it is possible to do so without causing serious detriment to the public service. However, it is a short-sighted policy and one I do not believe the American people will commend, to cripple a Department that has been so long established and that carries forward a broad program of service to the large and ever-increasing number who constitute the workers of America.

This Department is entitled to that same fair and just consideration which should be given to all agencies ministering to the public service and I trust that this committee will see to it that an adequate amount is provided in the appropriation for the Labor Department.

The letter referred to in the above follows:

NORTH CAROLINA
FARM BUREAU FEDERATION,
Greensboro, N. C., September 24, 1946.

Hon. LEWIS B. SCHWELLENBACH,
Secretary of Labor,
Washington, D. C.

DEAR MR. SCHWELLENBACH: I am very happy to inform you that the strikes have been settled in the tobacco redrying plants of the Winston Leaf and Piedmont Tobacco Cos. of Winston-Salem, N. C. The redrying industry will begin on September 24 to operate at 100-percent capacity.

The other day when I wired you, the tobacco farmers of our State were very fearful that these strikes were going to spread throughout the entire industry, and leave them with approximately $500,000,000 worth of tobacco, which is highly perishable, in their hands.

I want to take this opportunity to express to you our sincere appreciation for the fine cooperation of the Department of Labor in terminating these two strikes. I want to pay special tribute to Mr. Yates Heafner of the United States Conciliation Service for the fine service that he rendered to the farmers of our State by his untiring efforts to bring about a settlement in these two plants. We were not only impressed by his ability to grasp the issues involved but his determination to maintain a strict neutrality through the deliberations. He brought about a settlement that leaves the industry, labor, and farmers in a very happy mood. We hope that we do not have any further trouble in the redrying industry this year, but in case we do, the farmers of this State will appreciate very much your assigning Mr. Heafner to these cases. In the meantime, you might assign him to arbitrate the dispute between Mr. Wallace and Mr. Byrnes.

Yours very truly,

R. FLAKE SHAW,
Executive Secretary.

Jefferson Day Dinner Address by Hon. Tom Connally, of Texas

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Friday, April 18 (legislative day of Monday, March 24), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very able speech delivered by the Senator from Texas [Mr. CONNALLY] at the Jefferson Day dinner held in New York City last night.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster and fellow Democrats, it is with a deep sense of appreciation that I respond to the invitation to join in honoring Thomas Jefferson, the profound political philosopher and founder of the Democratic Party.

He gave inspiration and leadership to the period of the revolution and the foundation of our Government. In the Continental Congress in 1776 he gave to the world that flaming declaration that stirred the colonists to the high resolve to pledge their lives and fortunes to the cause of freedom and independence. He served as Minister to France. He was Secretary of State under the great Washington, and Vice President under John Adams.

The American people called him to the high station of President. For eight dramatic years he guided the Republic with patriotism and wisdom.

Though Jefferson filled many distinguished offices, he directed that his epitaph should simply state that he was the author of the Declaration of Independence and the Virginia Statute of Religious Freedom and the father of the University of Virginia. The pomp and circumstance of office were ignored. He desired to be remembered by his countrymen as the champion of liberty, religious freedom, and as the sponsor of education for our people. He urged the adoption of the first 10 amendments to the Constitution, known as the Bill of Rights.

As President of the United States, with a vision that looked down through the years—yea, through the centuries—he consummated the Louisiana Purchase in 1803. This courageous stroke brought under the flag the magnificent territory of the Northwest. Jefferson was abused and denounced by political enemies, but he thought of America and the millions who were to come after him. He was dreaming of the future and of the destiny of the American Republic.

Tonight we are interested in Jefferson's philosophy of government and his founding of the Democratic Party. He made it a living force among the people of the United States. The Democratic Party has survived its antagonists. During Jefferson's time the Federalists disintegrated. The Whig Party was vanquished by Andrew Jackson and those who followed his banner of militant democracy. The Democratic Party has contributed more to the development of free government and to the rights of the body of our people than any other force in our history.

There stands in Washington a handsome memorial to Jefferson. I frequently observe it and reflect that, magnificent as it is in design, and constructed of gleaming marble, Jefferson will be remembered and revered and will influence the world when this monument shall have turned to dust.

In 1948 the American electorate will select a President, a Senate, and a House of Representatives. We face that contest with confidence.

In the backwash of war, in the confusion and uncertainties which beset our people, the Republicans by a narrow margin in 1946 elected a Senate and a House of Representatives. We are not discouraged. Our swords have not been dulled. Our strength has not been dissipated. We are ready for 1948. We are ready for battle.

What is the Democratic record during the years it was in power? They are known from 1933 to 1947.

The farmers know what has been done for agriculture. The depositors in banks remember the guaranty of bank deposits that protects their savings and prevents panic. Bank depositors can never forget the heroic action of the great and beloved President Franklin D. Roosevelt and his superb leadership in closing the banks to save them from collapse and ruin. The candid industrialist knows what has happened to factory production and the tremendous volume of wealth that has been created and distributed among our people.

The unemployed will remember that their ranks were reduced and those who toil have received increased comforts and conveniences of life.

Men and women of advanced years will never forget that old-age legislation has relieved their necessities. The whole country will never forget tremendous advances in liberal and social legislation.

The owners of insurance policies and stockholders of railroads, trust companies, mortgage and loan companies and other business concerns should never forget that these interests were guided to successful operation instead of being plunged into bankruptcy and ruin. Millions of businessmen everywhere in America are enjoying an increased volume of business and security in their investments which resulted from lifting the Nation out of the ruin and wreckage of 1932.

Nor will the world ever forget that under the leadership and direction of President Roosevelt, the most colossal war in all of the annals of time ended in complete triumph for American arms.

They will not forget that under Democratic leadership our heroic soldiers and sailors and marines are receiving aid, and education, and hospitalization.

It will never be forgotten that the Democratic administration championed the cause of world peace and was instrumental in establishing the United Nations. Our program was so compelling that it has had the approval and cooperation of the Republican Party. We accord to the Republicans our recognition for their nonpartisan cooperation and we know that under the leadership of President Harry S. Truman, our voice will have a mighty appeal in the cause of peace and in the rights of men and of nations.

The national income for 1932 was $39,900,000,000. In 1933 it was $42,000,000,000 and it grew under the Democratic administration until in 1946 it reached the astronomical figure of $165,000,000,000. Can there be any doubt that this reflects increased business activity, increased earnings to the masses of the American people and increased prosperity throughout our broad land. These are the facts that cannot be ignored. They cannot be dismissed by a shrug. They stand out in vivid contrast to the ruin and devastation and panic which we faced in March 1933 like Washington's monument when it greets the rising sun.

The Republicans in the campaign of 1946 made wild and extravagant pledges to the American people. They agitated against war controls necessary in the prosecution of the war. Some of them were irritating to the people. This irritation was exaggerated and magnified. The country ought to know that a majority of the Republicans in both House and Senate had voted for most of these restrictions. They dared not do otherwise during war, but with wild shoutings, they denounced them. President Truman has already ended nearly all of the controls. He will end them all when circumstances warrant.

The Republicans promised a 20 percent reduction of taxes across the board. They promised a balancing of the budget and payments on the national debt. They ought to know and the country now knows that they cannot reduce taxes by 20 percent and also make any substantial payment on the public debt. President Truman has stated that according to the most reliable estimates, the budget will be balanced in the present year.

The Republicans are now in power in both the Senate and the House. What have they achieved? They have been spending too much time thinking about the campaign of 1948 and the prospective Republican candidates for President. Too much maneuvering over politics has prevented the performance of their promises, advanced in the heat and hope of securing place and power.

The Gallup poll of April 8, 1947, reported that the following question had been propounded according to its system: "If hard times come again would you rather have the Republicans or Democrats in office?" The answer was: Republicans, 30 percent; Democrats, 51 percent.

A second question was as follows: "As you feel today, what political party—the Democratic or Republican—can better handle the problem of keeping wages high?" The answer: Republicans, 22 percent; Democrats, 54 percent.

Dr. Gallup reports: "Other polls in the past have found that the voters believe the Democratic Party is best for people of below average income, while the Republicans are the party which look after the interests of the more well-to-do."

The American people, prefer the Democrats to be in power in times of crises because they know we led them out of the greatest depression within a hundred years.

The recent election of a mayor in Chicago gave victory to the Democrats by an overwhelming majority. This is a symbol of what the people are thinking and of what they intend to do in 1948. President Harry S. Truman assumed the Presidency amidst the gloom and grief that followed the death of the beloved and gallant Franklin D. Roosevelt. Mighty tasks faced the new President both at home and abroad. He faced them with courage and patience and patriotism. He faced them with a sincere desire to serve the interests of the whole

people of the United States. The responsibilities of the Presidency are heavy and difficult. They challenge all of the abilities of the wisest and best. Harry Truman has grown in the affections, the admiration, and the respect of the American people. His increasing popularity is proof that the people trust him and are ready to follow him. Both in domestic and international affairs he has demonstrated rare leadership. Domestic, as well as foreign problems, have been difficult but he has met them with marked success. The slanders spread in Europe by an American that he is an imperialist fall harmless at his feet. Domestic detractions rebound on their authors.

President Truman will lead our party in 1948. Upon the record of achievement of the party since March 1933 and upon the record of Harry S. Truman, the people of the United States will triumphantly elect him in 1948. His arm is long enough to reach the humblest citizen in the land. His vision is clear enough to encompass all of the people of the United States. His heart and head are patriotically devoted to world peace and to his country's welfare and prosperity. Inspired by Jefferson's philosophy and democracy, he will meet the mighty problems of the future with lofty patriotism and will justify the trust and confidence of his people.

Address by Hon. Alexander Wiley, of Wisconsin, Before the Kiwanis Club of Kenosha, Wis.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, April 18 (legislative day of Monday, March 24), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address which I delivered in Kenosha, Wis., on Wednesday, April 16, 1947, before the Kiwanis Club of Kenosha.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SERVICE SPIRIT IN THE ATOMIC AGE

Last night I had the privilege of speaking before the Wisconsin Manufacturers Association in Milwaukee. As I stood before this group of men, there flashed in my mind the difference between the Milwaukee of today and the Milwaukee of 50 years ago, and for that matter the difference between Wisconsin of 1947 and of a half a century ago. Wisconsin is the result of that typical American quality known as American ingenuity, a combination of work, thrift, and enterprise.

Last week, as you know, a great American passed on—Henry Ford. He was typical of this American quality—a quality which is also evidenced in another great automotive industry—the Nash plant of this city. In a lesser degree we have had countless immigrants and sons of immigrants from Europe who have builded vast enterprises in our own State. I trust that we who are the beneficiaries of their enterprise will not forget in the days that are up ahead the lessons that their lives have taught.

KIWANIS' ENTERPRISE

We Kiwanians know that the great material advancements that have come to our country have come because on this blessed soil; we Americans have largely given primacy to a combination of the human and spiritual values of life, because we have encouraged the daily living of the Golden Rule in all economic relationships.

Kiwanis has blazed countless new trails along this very line.

But we also know that we've got a long road to travel before we arrive at the place where we, as Americans, can be satisfied. We Kiwanians will carry on our job of personal service, of service to underprivileged children, of creating intelligent and serviceable citizens, of building friendly understanding among all classes of our citizenry.

THE MEANING OF OUR SUBJECT

It is on this subject that I want to chat with you at this time. I want to express to you, first, my deep appreciation for the opportunity to do so—this opportunity to meet old friends and make new ones.

My subject is The Service Spirit in the Atomic Age, the Kiwanis spirit, we may call it, the warm, friendly, honest spirit of sympathy, understanding, and aid.

NEED FOR HONEST SPIRIT

We need this spirit now more than ever before in this complex technological era—this era of machines, of speed.

We might recall an interesting incident in this matter.

On one occasion, back before the Civil War, when there was a question of whether or not Illinois should default on some of her bonds, Stephen Douglas, in the State legislature, introduced a resolution which read, "*Resolved*, That Illinois be honest." The resolution carried, and Illinois made good on her bonds.

I sometimes think that a simple resolution such as Douglas introduced 's what we need, each and everyone of us, to keep ever before us in our minds.

AREAS FOR SERVICE ACTION

In our own minds and in countless other spheres there is need for more and more of the friendly service spirit. Let us list some of these areas:

1. Friendly service in the labor-management field.

2. Friendly service in helping the underprivileged old folks, widows, and orphans.

3. Friendly service between Federal, State, and local governments in cooperating with harmony for our free enterprise system.

4. Friendly service in that most challenging sphere of all—the international sphere—between nations in this war-torn world.

1. Friendly service in industry

There is vast need for more of this service spirit in industry, for more of management sympathy with the problems of labor and vice versa—each putting itself in the other fellow's shoes, each seeking areas of agreement rather than areas of conflict, each seeking not to dominate and bind the other into submission, but to work together as a team like a captain and his crew.

But we know that although the primary harmony job must be done by labor and management in the grass roots, there is a job for Congress to do also.

In Washington, we must meet what I call the pro-American issue, or what some call the labor issue.

This cannot be met with anger or hate or fear. It has to be met head-on, having in mind principally the public interest, the interest of all of us in full, uninterrupted production, particularly in public utilities.

I have long stated my own personal conclusions on this subject, and I have been called a few harsh names. But, as a result thereof, I have not been convinced that I am wrong. I listen to facts, not name calling. I will, however, give earnest heed to the opinions of all economic segments when this subject is thrown into the lap of the Senate, after the bill is reported from the Labor and Public Welfare Committee, of which I am not a member.

I do insist, however, that the public interest, and by that I mean the economic health, the social health of our society as a whole, must be borne in mind in the legislation that is to be passed. Whatever legislation is passed, it should be adequate to curb any racketeering element which would absolutely trample the rights of the public.

2. Friendly service in Social Security

Now, for a second area, I recently reintroduced a resolution in the Senate, Concurrent Resolution 13, for creating a 14-member Joint Committee for Social Security. The purpose of this resolution is to create a group that would thoroughly study this whole subject and then report back to the Congress. It is obvious in this period when prices have gotten far out of line and the purchasing power of the dollar has declined, that our present system of old-age compensation, of unemployment insurance, of aid to widows and orphans, of aid to the blind needs overhauling.

After all, we Kiwanians preach the doctrine that "We do not live unto ourselves alone." Throughout the country, there is an average of social-security aid of only $33.67 per month to 60,000 blind persons. There is also an average payment per family per month of $55.42 for 887,000 dependent children.

The fraternal spirit calls out to us to reevaluate the adequacy of such aid.

We in Kiwanis recognize the value of work and know that it is not our purpose to make loafers of our citizenry. We recall, too, what Grover Cleveland said: "It is the purpose of the people to support the Government rather than of the Government to support the people." But we recognize that there are many in our land, old folks who have retired on meager incomes, widows and orphans, and others who need the helping hand that is offered in friendship and understanding.

3. Friendly service in intergovernment groups

There is a vast need for the service spirit to be displayed between governments in our land—between Washington, D. C., and Madison and Kenosha governments, for example, to solve common problems, primarily at the grass-roots level.

Last year I introduced a resolution to create a Joint Federal State Relations Committee in order to encourage harmony of work between all units of government in order to curb the tendency toward centralization in our society, in order to encourage fiscal independence of State governments in place of more and more Federal aid.

It is time that Washington, D. C., recognized that neither legislation nor Executive orders can bring about the millenium, but that it must cooperate with the States and localities to meet common issues.

4. Friendly service in the world

But the biggest challenge to friendly service in this world today is at the international level. Here we have nations in different strata of development; nations with different economic, social, political, racial, and religious backgrounds; nations in Europe, for example, which have known only centuries of war and invasion.

And the biggest specific issue here is for meeting of minds and understanding so that the people of Russia and the United States can meet to head off any conflict between them.

The fact that we have different approaches does not mean that we are doomed to failure. In the Senate of the United States we have 96 men, no 2 of whom are alike economically, politically, socially, racially, geographically; and yet out of this diversity we succeed, I believe, in a common effort in the public interest. With diversity of approach, men have to reason their way through to a conclusion, and that is what is needed in the solution of most problems; an honest desire to get at the best solution.

CONCLUSION

I have spoken, gentlemen, of the service spirit in four areas. You and I know that there are many other fields for the Kiwanis spiri' to shine forth. In all of them, we must create that solid public opinion and idealism which makes for an increase of righteousness, of justice, of patriotism, and good will.

Tribute to Former Senator William H. King

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, April 18 (legislative day of Monday, March 24), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter addressed to me under date of April 14, 1947, by Mr. T. Odon Mathews, president of the Utah State Society, together with enclosure, which is a copy of a resolution adopted by the society as a tribute to William H. King, for many years our colleague in the Senate, on the occasion of his return to Utah.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

UTAH STATE SOCIETY,
Washington, D. C., April 14, 1947.

Hon. ELBERT D. THOMAS,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR THOMAS: Fulfilling the desire of all Utahans in Washington, I am enclosing a copy of a resolution prepared as a tribute to the Honorable William H. King on the occasion of his return to Utah.

I have been instructed to forward this resolution to the United States Senate. I believe that all Senator King's friends and fellow Utahans would deem it most appropriate and appreciate it greatly if you could present this resolution on the floor of the Senate and have it printed in the CONGRESSIONAL RECORD.

Sincerely yours,
T. ODON MATHEWS,
President.

To the Honorable William H. King, Utah's elder statesman, a servant of the people, who through the eminence of his service to State and country has gained international renown:

Whereas 1947 is the year of Utah's centennial and thus a milestone where all Utahans pause to give thanks for the guidance of men who have led the State so safely and surely through its first 100 years; and

Whereas you, by virtue of your outstanding leadership, intelligence, and energetic ability, have played so vital a part in guiding Utah's destiny for more than three score of these 100 years; and

Whereas you have so generously given of your time and talents to all the citizens of Washington, D. C., but more especially to your fellow Utahans, since the date of your first arrival in 1897 as a Member of the House of Representatives, through your four terms as United States Senator, and in various other capacities to this day; and

Whereas you have so earnestly and wisely promoted the principles of freedom and righteousness for all peoples in such a manner as to bring honor to the State of Utah and its citizens; and

Whereas you have been so untiring and unselfish in your devotion to the needs and wants of your manifold friends and fellow citizens: Now, therefore, be it

Resolved, That all your friends and fellow Utahans in Washington, D. C., take this occasion to express to you heartfelt thanks and appreciation and send with you warm good wishes as you journey once again to the valleys of the mountains; be it further

Resolved, That, as a tribute to your distinguished record, all your fellow Utahans in the District of Columbia request that the Utah State Society send a copy of this resolution to the President of the United States, the United States Senate, the United States House of Representatives, the Governor of the State of Utah, the Utah State Senate, and the Utah State House of Representatives.

Dated this 11th day of April in the year of our Lord 1947, in the city of Washington, District of Columbia.

UTAH STATE SOCIETY.

Jefferson Day Address by Hon. Hugh Mitchell

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Friday, April 18 (legislative day of Monday, March 24), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Jefferson Day address delivered by Hon. Hugh Mitchell, former Senator from the State of Washington, at Wenatchee, Wash., April 10, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One hundred and forty years ago a great President of the United States, Thomas Jefferson, delivered his sixth annual message to Congress. He reported that Lewis and Clark had, in his words, "descended the Columbia to the Pacific Ocean."

The men who came down the Columbia to the Pacific were scientists, not foot-loose adventurers. They were seeking facts and making studies for the development of new country. This was Jefferson's plan. Capt. Meriwether Lewis was Jefferson's own secretary. Following the President's detailed instructions, he and Clark made careful and painstaking reports on plant and animal life, on the nature of the country and its people, and on the possibilities for trade.

These possibilities attracted great interest back East. Popular editions of the Lewis and Clark journals were widely read in America. Their fascinating stories fired the imagination and speeded westward migration.

Estimating that in 1805 half a million Americans went West from the States, Jefferson predicted "about one-half the number of our increase will migrate westward annually."

The opening of the Pacific Northwest for American settlers and American enterprise is due in large measure to the pioneering vision and active interest of Thomas Jefferson.

Jefferson was the son of a pioneer father, and as the historian tells us, "a product of the first West in American history." Even as a youth in college at Williamsburg Jefferson's sympathies were enlisted for the growing Democratic movement of the small farmers among the upper rivers, the tobacco growers, the hunters and trappers of the Allegheny slopes.

He kept his eyes toward the West and dreamed of a great commercial empire on the Columbia River. When he became President he took steps to make this dream a reality. A scientific mind and a steadfast Democratic faith enabled him to see clearly that the West was vital to American life. His determination to use the power and the resources of the Federal Government for promoting western development was unyielding.

In his confidential message to Congress outlining his plans for a western expedition Jefferson said: "The interests of commerce place the principal object (of the expedition) within the constitutional power and care of Congress." Suppose an economy-minded Congress had struck down his modest request for $2,500 to finance the expedition. Because Jefferson saw fit to explain so small an appropriation we know there must have been opposition. So we know that even then there was opposition to a principle we are still fighting for—the principle that western development is national development.

Today many people in high places, lacking the courage and vision of Jefferson, seem to be turning their eyes away from the West. Our welfare and progress hang on the whim of Republican Congressmen who do the bidding of eastern masters. They place a heavy discount on our aspirations.

The budget debates in Congress have given us an exhibition of Republican intentions. Senator TAFT, chairman of the Republican steering committee and commander in chief of congressional budget cuts, speaks nobly of the need "to maintain a stable and expanding economy." Then he shows how reductions can be made by cutting down on what he terms "popular projects." We have some very popular projects here in the West, wealth-creating, self-liquidating projects essential to the growth of the western economy.

Those are projects which would be abolished or curtailed by the commander in chief of congressional budget cuts. He finds his justification in an alleged mandate of the American people. By some twisted logic, we are told that the American people have exacted a promise to curtail their own welfare. On the floor of the Senate TAFT said:

"I shall do everything in my power to see that, regardless of where the chips fall, the promise is carried out and the appropriations are held down, and that even essential services be eliminated, if that be necessary, in order to keep the promise that we here, I believe, are making to the people of the United States."

Mark what he said: "That even essential services be eliminated." Does anyone doubt where the chips will fall most heavily, if this Republican axe is applied to the budget? Only the big, "popular" projects can add up to billions of dollars. Columbia Basin is a big project.

And what are we to say about the so-called mandate? Was there any mandate to cut Columbia Basin funds? It is not necessary to be a Democrat to come up with the answer. Senator AIKEN, a statesman and a Republican who has seen fit to vote against his party on 72 percent of the Eightieth Congress issues said in eloquent reply to Republican budget policy:

"Their imaginary mandate does not come from the people * * * They speak only for a little group of blind, selfish, ruthless men whose voices are loud and persistent and whose influence is far out of proportion to their numbers."

A great noise and a shouting rang through the halls of Congress during those days of budget debate. Some said that three or four billions should be pared, others said six billions. One young Republican Senator, carried away by the enthusiasm of the moment, let his voice be heard above the clamor and ventured to say that ten billions could be lopped off—"without injury to anyone."

This particular Senator purported to speak for the State of Washington and for the

Pacific Northwest. He went on record in favor of the $6,000,000,000 cut, and expressed his gratitude to those who had recommended it, and his willingness to be guided by their advice. On the floor of the Senate he said:

"That such a figure is concretely attainable, I do not know and I do not particularly care. That it cannot be too far away from what can be accomplished is certain because of the men, both Senators and Representatives, who have said that the figure, from their point of view, is reasonable and possible."

Mark those words, "That such a figure is concretely attainable, I do not know and I do not particularly care." And mark those words: "from their point of view." From whose point of view? Certainly not from Washington State's point of view. We are fighting to sustain the economy of the West. The Republican policy-makers and committee chieftains stand drawn up in a phalanx of reaction against the legitimate demands of this great western area.

Oregon's Senator MORSE will want to remember what his colleague from Washington said, because Senator MORSE is testing Republicans for the future. He has put his own Republican colleagues on notice that he will support them in 1948 only if their stand on western development is right. In the budget debates he said:

"In my judgment * * * the people of the West * * * will want an answer to the question, 'What was your position when it was proposed blindly, by guesswork, to cut $6,000,000,000 out of the budget, when you did not have one iota of factual information showing what effect that cut would have on the great projects of the Western States?'"

The Republican Senator from our State also has a test for Republicans. During the budget debates he complained vehemently that certain Senators were not impressed, as he put it, "with the imperative need for Federal retrenchments." Then he went on to say:

"In my American eyes these gentlemen are recognized for what they stand for, and I shall fight to stay here long enough to see them eliminated one by one."

Thus we see that the Republican Senator from Washington takes his stand with the budget-slashers, and the Republican Senator from Oregon takes his stand for prudent expenditures, and each would excommunicate the other.

Were the welfare of this area not at stake, were today's events not so tragic, there would be humor in the contest between two Republican Senators from neighboring States in the Pacific Northwest. It is humorous, yet tragic that each is trying to establish political loyalty tests for a party in which neither can effectively influence a single major policy decision.

Because there is so much double talk, it is important to get a straight answer to this question:

Does the northwest delegation present a solid front of opposition to eastern maneuvers that would rob us of our potential for industrial and agricultural growth?

Personalities aside, the question must be asked, and it must be answered to make the issue of western development clear to all in Congress.

It seems to me that our Republican Senator has left Congress misinformed as to our essential needs when, in the budget debates, he said: "all regions and areas are expected to make the same kind of sacrifices. I lay particular stress on the need for an equality of sacrifice because I am a western Senator, and as such I have a greater selfish interest in continuing Federal expenditures than do most Senators. The West is a going and a growing concern. Its destiny continues to lie beyond the horizon. Billions of dollars can be invested out there, and there will long be need for billions more. Were I a Senator only from my State of Washington, I might care little for the state of the Nation, or for the rights and needs of others. I might only insist on getting more and more from the Federal trough. * * * If in being a Senator from Washington State I got for that State everything it wanted, but in getting things it could get along without at this time, I helped, along with other Senators who were doing the same thing, to bring financial ruin and a valueless dollar to the Nation of which all States are a blessed part, I should have done my State no favor; I should have betrayed my public trust."

It will be for the people of the West to judge whether that public trust is safeguarded or betrayed. But what do you suppose that statement meant to the House committee which cut western reclamation appropriations—Columbia Basin included—to the bone?

The policy expressed in the above language is not equality of sacrifice but a policy of mutual impoverishment.

Whoever says that providing Federal funds for great self-liquidating Federal projects which reclaim farm land and generate industrial power, would bring financial ruin and a valueless dollar, has learned his economics poorly. He speaks as the political branch manager for vested corporations that dictate the livelihood of the Nation from their private offices in Wall Street and Chicago.

We in Wenatchee, in Washington State, in the West, know the meaning of the reclamation dollar to the West and to the Nation.

But let us recall the words of a great easterner which are appropriate to the budget debates of today. I am quoting this great man:

"The great Columbia Basin project in the Northwest, the projects in the Missouri River Basin, and others of equal significance, will * * * be golden opportunities for returning veterans. Such projects constitute great increases in national wealth and income. * * * Full enjoyment of the great productive resources of this Nation by all of the people requires that all have an opportunity to engage in productive labor. The purchasing power created by reclamation projects is a stimulus to industry and commerce, thus promoting full employment throughout the Nation."

These are the words of Franklin Delano Roosevelt which he put in a letter to the House Committee on Irrigation and Reclamation exactly 2 days before he died. These words of a great President express the philosophy of western development to which we subscribe. We repudiate the concept of mutual impoverishment which would indeed put our destiny beyond the horizon.

Men like Rufus Woods started fighting 40 or more years ago to bring our destiny within the horizon. The Democratic administration, with Grand Coulee, Bonneville, and plans for Columbia Basin and Foster Creek brought destiny over the horizon. Is it now going to recede again into the dim future?

Senator MORSE has given clear and unequivocal warning of the danger we face today. On the floor of the Senate he said:

"I feel that as a result of the action taken in the Eightieth Congress great projects which are needed for the development of that section of the country and, for that matter, for the benefit of the economy of the entire Nation are being thwarted.

"The responsibility in the last analysis must rest upon the majority party in the Eightieth Congress, which happens to be the Republican Party. I want the people of the Pacific Northwest to know that as the campaign of 1948 starts, because if my party becomes responsible for stifling and preventing the development of needed and wealth-producing projects, then it is not entitled to the votes of the people of the Northwest in the 1948 campaign, and, in my judgment, it will not win the campaign in 1948 without the votes of the Northwest."

Let us pursue the logic of Mr. MORSE'S position. He is an able and distinguished Senator whose fidelity to the Pacific Northwest is not in question. Not so many months ago he campaigned diligently for the Republican Party and now he sharply reprimands his colleagues for their indifference to western welfare. He is to be commended for his consistency and candor and acknowledgement of the majority party's responsibility. But what does this position add up to? I say it adds up to one thing and one thing only—Mr. MORSE is embarked on a course of political futility.

To suppose that 1 man from the West, or even 20 men from the West, can rejuvenate and liberalize the Republican Party is to disregard the character of Republican leadership, to disregard the lessons of 12 years of Harding, Coolidge, and Hoover, and, more pointedly, 3 months of Taft, Taber, and Reece. In the 1920's great western Republicans attempted this herculean task without success. Today the eastern leaders of the Republican Party have an even tighter grip on Republican policy making.

Mr. MORSE himself has publicly acknowledged that his party "perpetrated those depression-causing policies on the American people" during the 1920's. Does he think that by raising his lone voice in the barren wilderness of Republican economic policy, the Republicans will desert the gloomy caverns of Wall Street and walk with him in the sun? The big mastiffs of the Republican Party do not change their course simply because they hear a barking at the heels.

Mr. MORSE now struggles in the Republican fold to preserve what 14 years of Democratic administration have secured. By trying to make the Republican Party a vehicle of progressive policy, Mr. MORSE makes himself a martyr to a hopeless cause. Again I say, he pursues a course of political futility.

There are indications that Mr. MORSE himself is coming to that realization. He has spent many long hours on the Senate floor and consumed page upon page in the CONGRESSIONAL RECORD admonishing his Republican colleagues. Fifty-six percent of his votes in the Eightieth Congress were cast against his party majority.

Day after day he tries to convince himself that the Republican Party is progressive. He promises to campaign for the party in 1948. He pleads with the party to give him something to work on, to show to the people. And each time he tastes the bitter fruit of defeat as the majority goes about its business of undoing what is good and essential to a prosperous, developing economy.

A man of Mr. MORSE'S understanding ought not to expect the impossible. His eloquent pleas to his Republican colleagues are wasted. I am reminded of the ostrich story in this connection. Strolling into a field where other ostriches stand with their heads buried in the sand, the one bird whose head is in the air looks around and asks: "Where is everybody?"

The talent and energies of the Senator from Oregon will be more truly helpful to the Pacific Northwest when he refuses to dissipate them in fruitless endeavor. When he gives up his course of political futility. In short, when he joins the party that has demonstrated its capacity and performance for the West and for the Nation. To Mr. MORSE I extend an invitation to join the Democratic Party.

The heritage of Jefferson is the monopoly of no party, but both parties have been tested in the hard school of performance. With the Democratic Party, which has laid the groundwork for the development of this great region, we can build for a prosperous future.

A Labor Policy Needed

EXTENSION OF REMARKS
OF
HON. ALBERT W. HAWKES
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, April 18 (legislative day of Monday, March 24), 1947

Mr. HAWKES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very remarkable editorial under the title, "A Labor Policy Needed," by James Kerney, Jr., of the Trenton Times newspapers, Trenton, N. J.

This editorial, in my opinion, is about as sane as any expression I have seen on the labor problem, and shows a proper respect for the rights of both the employer and the employee, with the objective of finding a fair balance in equity between all groups in American life.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A LABOR POLICY NEEDED

Congress has fumbled with new labor laws for months. There seems to be no idea in Washington of what is needed by labor and management and the whole country.

Some Congressmen seem to have forgotten that as industry has grown and new business practices developed, it is necessary to protect the individual workman by giving him the right to join a union. Part of this privilege of collective bargaining is the right to strike. But just as freedom of the press is not the right to libel any citizen and freedom of speech is not the right to demand the overthrow of our Government by violence, so the right to strike needs to be restrained from abuses. In this matter, there has been a lack of responsibility on the part of some unions and some union leaders.

We must recognize that big labor monopolies are as dangerous as big business monopolies. Our kind of economy creates both kinds of bigness. The restrictions on labor, like the restrictions on business, should not be on their rights, but on the way they conduct themselves. Any changes in our labor laws must protect labor's right to organize and bargain collectively.

Most of the labor bills in Congress put the Government in the business of regulating labor relations. It's time we got away from overregulation by the Government. Cooling-off periods and arbitration are good things only if both sides of the argument agree to them. We need only look at the mess Government has made of the coal and telephone strikes to see how basically ineffective is Government interference in labor relations.

There are other Congressmen who want to outlaw the closed shop. Yet plant after plant in America has had closed shops and happy relations with responsible unions for years. Difficulty only arises when a union closes its mind to any settlement short of its full demands or closes its doors to the basic principles of democracy. The trouble is not with the closed shop but with the closed unions.

Of course, there are faults in the way labor conducts itself. Some of them can be corrected by law. The carpenters' union, for instance, boycotted a beer because of a dispute they had with the machinists' union at the brewery. This boycott hurt workers and employers as well as consumers all over the country. It was foolish, like all jurisdictional strikes. It is not unfair to labor to abolish by law sympathy strikes and secondary boycotts, and to insist that the one place where labor injunctions be allowed is to settle jurisdictional strikes.

On the financial side, unions must have treasuries. It is impossible to organize and manage so large an institution as a national union without a sizable treasury. But unions should be as liable for a breach of contract as is management. And there is no reason why there should not be a public accounting of union funds so that the workmen of America can understand where their contributions go.

There are other aspects of labor that need correction by law. The practice of featherbedding—the creation of unnecessary work—is complete nonsense. The musicians' union, for instance, is a prime example of a union demanding the employment of unnecessary manpower to do unnecessary jobs. This kind of nonsense can contribute to the downfall of capitalistic democracy.

There will be labor representatives who will denounce these suggestions as an effort to return labor to the bitter past. On the other hand some management may prefer to outlaw the closed shop and limit more severely the right to strike. Nevertheless, we believe Congress should pass no law to punish whatever sins may have been committed. We believe our need is a law which preserves for labor its right to organize and bargain collectively but which also brings to labor a sense of responsibility in America.

Labor, Management, and the American People Have Rights That Must Be Respected and Protected—Neither Should Ask for More nor Receive Less

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

H. R. 3020, THE LABOR-MANAGEMENT BILL

Mr. ROBSION. Mr. Speaker, on yesterday the House, by a vote of 308 to 107 passed H. R. 3020, the labor-management bill. This bill was reported favorably to the House from the Committee on Education and Labor by a vote of 18 to 4. This committee had been investigating and holding hearings on this bill for about 3 months. A great many witnesses appeared and testified, some for and some against the bill. Everyone who desired to be heard either for or against the bill were given an opportunity to do so. Few bills have been given more thorough hearings and consideration than this bill. The House spent 3 days in consideration of the bill. Every word and every line was read. Many amendments were offered and discussed. Some of the amendments were agreed to and some were rejected and at the end on a roll call, 308 voted for the bill and 107 against the bill.

LEGISLATION URGED

This legislation was urged by groups and individuals in all walks of life. In fact, many labor leaders and individual union men and other workers urged that a number of the important provisions of this bill should be enacted into law. An overwhelming majority of the Members of the House, after having spent many weeks in their districts and States last summer and fall, and after having made a careful study of the whole question, realized that there was great necessity for legislation on labor-management relations, and in supporting this legislation they felt that they were carrying out the mandate of the American people and serving the best interests not only of labor and management but the best interests of the American people as a whole. There has been, for a number of years now, growing unrest between management and labor, as is indicated by a constant increase in the number of strikes, number of workers involved, and the man-days lost.

It is shown by the records that during the 6 years preceding the enactment of the National Industrial Recovery Act—NRA—of 1933, the United States had an average of 733 strikes a year involving a yearly average of 297,000 workers; during the next 6 years there was an average of 2,541 strikes per year involving an average of 1,181,000 workers, and during the next 5 years, from 1939 through 1944, there was a yearly average of 3,514 strikes involving an average of 1,508,000 workers per year. The number of strikes and workers increased during 1945, and there were 38,000,000 man-days lost of labor as a direct result of those strikes. It remained, however, for the year of 1946 to reach the high-water mark in strikes and man-days lost. In 1946 there were 4,985 strikes, and the man-days lost reached the amazing total of 116,000,000 as the direct result of these strikes. As I pointed out in my speech on the floor of the House, in discussing this bill on April 16, these figures do not include the number of strikes in the various years, the number of workers involved, or the man-days lost by reason of sympathy strikes in other plants or the closing down of thousands of plants by rea on of the lack of supplies caused by strikes in other plants, mills, and mines. The last coal strike caused 27 daily trains in the State of Kentucky to be taken out of the service, and 85 percent of the trainmen in my particular section that handled a great deal of coal were laid off.

Beginning with the NRA in 1933 up to and including 1946, there was an increase in the number of strikes on an average annually of 800 percent and the number of workers involved and the number of man-days lost greatly exceeded 800 percent. All of these strikes, directly and indirectly, caused a loss in wages, in business amounting to several billions of dollars. During that period of time many laws have been passed by Congress to correct these conditions, but instead of bringing about more peaceful relations between management and labor, conditions have grown worse and, therefore, an overwhelming majority of the Members of Congress have indicated, by their votes yesterday, and in our opinion a great majority of the American people definitely have reached the conclusion that Congress should make a thorough study of this whole subject and, if possible, amend our labor-management laws to bring about a more peaceful relationship between them so as to

avoid as nearly as it could be reasonably done this tremendous loss to labor, business, and great inconvenience to the American people. The American people, for a number of years, have been denied almost everything in the way of necessities, also homes, furniture, and so forth. They have the money, and they need quantities in everything that can be produced in our factories, shops, plants, mills, and mines, and if a more happy relationship could be established between labor and management, it would result in great benefit to each and a period of great prosperity to the American people as a whole. I am sure that the average Member of the House, like myself, had no purpose in mind except to do the right thing and the very best thing for labor, management, and the American people as a whole. Inasmuch as under our present set-up, strikes with their bitterness, loss of wages, profits, and increased hardships to the American people are on the increase, it seems to me that we must modify our laws in the hope that such action will slow down this progressive increase in the number of strikes and the millions and millions of man-days lost.

MANY PROVISIONS AGREED UPON

Let me say here that the provisions of H. R. 3020 expressly exempt railroad management and railroad workers. Their labor-management relations are covered by other acts of Congress. This bill does not disturb them, and I might say here that under the railroad labor acts they do not have closed shops or even a union shop. No railroad worker can be required to join any labor union. However, they have the right to do so if they choose. Railroad management cannot require them to belong to any union and neither can they discriminate against them because they do belong. The railroad workers, as a rule, under the railway labor acts, have left it entirely up to the workers themselves as to whether or not they will join any union. They strive to make their union so attractive so as to secure their membership through voluntary action.

Management and labor, coming under the provisions of this bill, have agreed generally that the following practices should be outlawed:

First. Jurisdictional strikes.

Second. Sympathy strikes.

Third. Violence and lawlessness in strikes.

Fourth. The right of workers to organize and bargain collectively.

Fifth. Responsibility not only of management but also of labor for violation of the provisions of collective-bargaining contracts with the right of the persons suffering damages to recover from the party violating the contract. It is only fair to say that the purpose of collective bargaining between management and labor is to reach a contract. It would be a waste of time and effort to enter into a contract and then one party or the other disregard the provisions of the contract or refuse in good faith to carry it out.

It has always been the rule among honorable men to carry out their contracts. I repeat, if contracts are not to be carried out in good faith by the parties, there is little reason for the making of the contracts. I stated the other day in my speech that Chief Justice Taft in a celebrated case wrote a very able opinion as Chief Justice of the Supreme Court of the United States in which he declared that the workers of this country, under our United States Constitution, had the right to organize and he further said that it was necessary that workers have this right as a single worker could not combat organized brains and capital. In order for the worker to have protection where he must deal, as a rule, with great aggregations of capital and brains, he and his fellow workers must have the right to organize brains and brawn to place them on an equal footing with their employers, but it must be said, however, that those who invest their money in enterprises in this country also have rights that should be and must be respected. This is true as to workers and it also must be said that the American people as a whole have rights that must be protected and respected. The proponents of this bill urge that this measure will protect the rights of the workers as well as the investors and the rights of the American people as a whole. This bill undertakes to protect the rights of all of these and protect the rights of the individual worker against wrongs that might be committed against him by some officers or members of his own union.

Sixth. Labor and management generally agree, as I understand, that we should encourage and strengthen mediation and conciliation in the settlement of disputes, and where the parties cannot agree to do everything possible to have them arbitrate their matters before unbiased arbitrators. The hard problem to solve in management and labor relations is where one or both parties fail to settle their matters through mediation, conciliation, or arbitration. Machinery is set up in this bill seeking to meet a situation of that kind especially where the dispute endangers the public health, safety, or welfare of the Nation itself. It must be conceded by all that no individual or group, however powerful, has the right to endanger the national public health, safety, or welfare, and if the parties themselves to the dispute cannot agree between themselves, then some agency of the Government must step in so as to prevent national disaster to the health, safety, and welfare of the Nation.

It seems to me that every fair-minded person must subscribe to this principle. The American people and their elected officials cannot stand idly by and see the sick and disabled in the hospitals of the Nation as a whole suffer or perish, or to deny to the people heat, light, water, and other everyday necessities, or cause many people of our great cities to perish because of lack of transportation facilities to provide food and other necessities for the people; or to see thousands of factories, mills, shops, and mines closed down, and millions of workers thrown out of employment, and the Nation threatened with disaster because one or two groups fail to settle their differences.

I am one of those who want to avoid, as far as is possible, the interference of Government in the lives and activities of the American people. However, when the Government does take a hand it should be as an impartial umpire and seek to do only the just thing and the fair thing for both parties and protect the people as a whole in their health, as well as safety and security of the Nation.

The powerful, whatever group it may be, should be restrained when attempting to do that which is wrong and defy the rights of individuals and the welfare of the Nation and protect the weak and defenseless in their rights.

THE FIRST STEP IN LEGISLATIVE PROCESS

Of course, many managers of business as well as leaders of workers are not satisfied with each and every provision of this bill. If I were writing the bill, there are provisions that I would omit. In the process of the consideration of the bill on the floor of the House I voted for a number of amendments, and some of these amendments that I voted for were defeated. If I thought that every line and word of this bill should become law, I would be constrained to vote against it.

The bill will now go to the Senate and there it will be considered at great length, and perhaps some of the objections that I have to the bill will be eliminated, and after the Senate has considered the bill and passed it with changes, the House bill and the Senate bill will go to a committee of conferees, made up of five Members of the House and five Members of the Senate. They will review all of the matters involved in this proposed legislation. All of the important and especially complex and complicated legislation like this that is covering millions of industries and affecting tens of millions of workers and 140,000,000 American people, is the result, more or less, of compromise. No one can get the very exact thing that he wants, and these conferees then will no doubt, in a number of respects, revise the bill and arrive on an agreed bill. They will make their report to the House and Senate. The Senate and House can adopt or reject the conference report, which contains the completed legislative proposal. If either House rejects it, then we must review the whole process and get a bill on which the conferees of the House and Senate can agree, and if they do agree and the House and Senate accept their compromise bill, then that becomes the bill that goes to the President for his approval or disapproval. If he vetoes the bill, it will come back to the House and Senate where efforts will be made to pass the bill over the President's veto. If they fail to pass it over his veto then the whole process must be gone over again. Therefore, no one can say what the act will contain when it is finally approved by the House and Senate and by the President or his veto is overridden.

The bill that we voted on yesterday is the first step in the legislative process and no group should be too much elated or too much disturbed until all the steps have been taken. I am hopeful that in these subsequent steps that it may be

found possible to improve the bill, as I am sure that every Member of this House wants to see a bill adopted that will be fair, both to labor and management, and also fair to the American people as a whole.

I stated the other day in my speech that I had only received two telegrams and a letter in opposition to this bill, and a larger number in favor of the bill. Since we voted and passed the bill yesterday, I have received a number of telegrams in opposition and others in favor of it. It appears that a number of persons had the impression that we would not vote on the bill until today.

Let us indulge the hope that when this legislation is completed, it will bring about more peaceful relations between management and labor, and that strikes, lock-outs, and stoppage of our industries and the loss of hundreds of millions of man-days and billions of dollars may be greatly diminished.

Washington Daily News Questions Soundness of Hartley Labor Bill

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. HAYS. Mr. Speaker, under leave to extend my remarks I wish to include the following editorial from the Washington Daily News:

The House of Representatives has passed—308 to 107—an omnibus labor bill which should not, and will not, become law in its present form.

It is a huge conglomeration of proposals aimed at practically every fault that has been found with organized labor in the last 14 years. Some of its provisions are sound. Others are of most questionable wisdom. Still others, in our opinion, would be almost certain to create resentment and strife that this country is in no condition to afford.

The overwhelming vote for this bill is conclusive evidence that a great majority of the American people want corrective labor legislation. Members of the House are keenly sensitive to public feelings in their home districts. They have to be. When nearly three-fourths of them vote for a measure, defying such threats as union leaders have made against all who might dare to support this one there's a compelling reason.

What the American people want, in our opinion, is a law to hold unions and their leaders responsible for proper use of the great power the Government has helped them to attain; to correct the Wagner Act's bias; to protect workers, employers and the public against abuses that have become flagrant and habitual under the present system.

We do not believe they want a law to go as far as the House bill goes. We know that many of the Representatives who voted for this measure would have preferred, and that a number who voted against it would have supported, something less drastic. But the Republican leadership's strategy permitted no choice. It was this bill or nothing.

We hope the Senate will pass a more temperate bill, that the House will agree to modify its stand, and that the final result will be a measure in which President Truman can find no convincing cause for a veto.

Obviously, there are more than enough votes in the House to override any veto. But that is not likely to be true in the Senate—not if what goes to Mr. Truman is as extreme as what came out of the House yesterday. We do not believe the reports that the President will try to kill whatever labor legislation Congress finally sends him. He, too, is well aware of public opinion.

Congress should send him legislation that is fair and wise. That is the only kind that should be enacted—and under the circumstances, we think, the only kind that has a chance to be enacted this year.

Jefferson Day Address by Secretary of Agriculture

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1947

Mr. LUCAS. Mr. President, I ask unanimous consent to incorporate in the Appendix of the RECORD an address made by Hon. Clinton P. Anderson, Secretary of Agriculture, at a Jefferson Day meeting in Indianapolis, Ind., on April 15, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FIRST HUNDRED DAYS

My task tonight has been made difficult by the splendid Jefferson Day talks of 10 days ago. But I wanted to come here just the same. It is always in order for a nation to honor its great men. It is especially fitting for the Secretary of Agriculture to pay tribute to the memory of Thomas Jefferson, who was a farmer not only by the grants of circumstance but by his own choice—a man who displayed in his agricultural toil the same genius with which he served the Nation as its Chief Executive.

The name of Jefferson at this precise moment has a new significance to the American people. He believed that a nation must grow in spirit and in substance as the workings of time and fate brought to it the responsibilities of leadership. He saw a little confederation of States hemmed in by great powers—by Great Britain to the north; by France and Spain on the south and west; and even by Russia from the Columbi River to San Francisco Bay. Thus restricted, the future of the tiny republic was not hopeful. But when the hour struck—when Napoleon, on the verge of war with England, offered to sell the Louisiana Territory, Jefferson moved boldly to acquire a huge empire that stretched from the Mississippi River to the Rocky Mountains and from the Gulf of Mexico to Canada.

To this day men debate the constitutional authority for his action—but they love him for his courage and vision. He set the stage for the growth of this Nation to the stature of a world power and a leader in world affairs.

Thus, we see how men make history and how we today are privileged to live in the tradition of great leaders like Jefferson, the patron saint of our party. The era of Thomas Jefferson was one of the most important periods in the history of this Nation.

But you and I have been privileged to live through another great era. We have seen at first-hand how another man made history in his generation. We saw in his lifetime how the spirit of the people and their leaders can make a nation great; how the lack of spirit and vision can allow a nation to fall into decay.

I want to talk of that man and his first hundred days as President of the United States. I want you to refresh your memories—to think again of the American scene when the Nation called into the White House Franklin D. Roosevelt.

In this day of unprecedented prosperity and activity in every walk of life, it is difficult to visualize again the almost unbelievable misery and despondency of that time; the cold smokestacks of the closed factories; the bread lines and the bank lines; the farm strikes and the sheriffs' foreclosure sales; the suicides and the general distress.

Let me paint a picture of one typical scene on an American farm. A mortgage is being foreclosed and a great crowd of farmers is assembled. They are grim and determined. A noose hangs in the open barn door. It will be another penny auction, and heaven help the auctioneer if he fails to sell to the penny bidders who seek to protect their neighbor.

The day before Roosevelt was inaugurated, in Wall Street and in the Loop of Chicago, howling mobs surged around the great pillars of the banks and the police were hard put to keep them in check. That was Friday, March 3, 1933.

That night, after a conversation with Roosevelt, Governor Lehman, of New York, declared a 2-day banking holiday and by morning all banks were suspended or severely restricted in operation in every State of the Union.

Thus on March 4—Inauguration Day—the financial life of the country had come to a dead stop and the American people were tortured by a sense of blind fright.

But see what happens. A magnetic personality—a great leader—takes a place of dominance on the American stage—a man who cannot even walk unaided, but who possesses in his heart a wealth of courage and human understanding comparable to that of any man in history.

"This," he says, "is preeminently the time to speak the truth, the whole truth, frankly and boldly. * * * This great Nation will endure as it has endured, will revive, and will prosper. So, first of all, let me assert my firm belief that the only thing we have to fear is fear itself—nameless, unreasoning, unjustified terror which paralyzes needed efforts to convert retreat into advance."

The logic is so clear, the voice so reassuring, that almost at once the people take heart. The clammy fingers of fear are loosened, distraught nerves are quieted, and some faces even wear a smile again.

Thus we see, on Inauguration Day, the rebirth of a people's faith in America—a faith which they had almost lost.

On that very day the President asks the Senate to confirm his Cabinet at once. The Cabinet members are sworn in and they take over their departments.

The next day, Sunday, is traditionally one of rest. But congressional leaders meet with the President and a proclamation goes out calling Congress into extraordinary session on March 9, the earliest date upon which Members from the far West can be expected to reach Washington. Meantime, frightened officials of the great banks of America had streamed into the Capital, the Cabinet convenes, and the President decides to use a lingering power from World War I to declare a 4-day bank holiday.

The next day—Monday, March 6—a conference of governors is held at the White House.

On Thursday the Seventy-third Congress convenes. Before nightfall the emergency banking bill is passed by both Houses and is signed by the President.

Six days later the economy bill becomes law.

One day later the President sends his farm-relief measure to Congress.

That was the pace of things throughout the first hundred days of Franklin D. Roosevelt.

In that short span the Seventy-third Congress enacted many items of major legislation. Let me call a partial roll:

The emergency banking acts that restored confidence in the banks and made the entire system sounder than it had ever been—sound to this day.

The Economy Act, creating a new pension system and bringing the budget under control.

The Agricultural Adjustment Act that aimed to restore and stabilize farm income.

The National Industrial Recovery Act, designed to provide jobs for the unemployed, to improve wages and working conditions, and to eliminate unfair competitive practices in business.

The Tennessee Valley Authority Act which provided an example of long-range planning and use of natural resources of soil and water.

The Civilian Conservation Corps Act which took hundreds of thousands of boys off the street and out of the hobo "jungles" and gave them opportunity to do useful work.

The Home Owners' Loan Act that enabled people to save more than a million homes from foreclosure—and it is worth our while today to remember that the $3,000,000 loaned on frozen assets has all been repaid to the Treasury.

The Railroad Coordinator Act which helped keep the great railroad systems in operation.

The Glass-Steagall Bank Act, establishing the Federal Deposit Insurance program which protects our dollars to this day.

The Emergency Relief Act, to furnish food and clothing to the hungry and destitute—to wipe out the bread lines in America.

The Securities Act, to safeguard legitimate investors from sharp dealing in stock promotion.

The Wagner Employment Exchange Act, to help men and women finds jobs again.

Here was action—quick, confident, far-reaching—and the country loved it. The mood of the people changed from fear to faith. Nothing like it had ever been seen before.

And at the end of it the President calmly set off on a cruise up the New England coast. His first hundred days had turned the tide—and the people knew it, and loved him for it.

The guiding principles that activated that first hundred days and the years that were to follow were faith in the people and a conviction that prosperity cannot be siphoned down from the top but must be built from the bottom up.

Here was demonstrated adherence to the principle that the chief responsibility of government is people—their happiness, their well-being. Like Jefferson and Jackson of the past, Roosevelt was a humanitarian, convinced that government exists for the whole people, not just for special interests.

For, in the words of Jefferson, he believed—as Democrats over this Nation believe—that "the mass of mankind was not born with saddles on their backs."

Government for the whole people makes sense. It works. Look at the record of the last 15 years. Back in 1932 national income was down to about $42,000,000,000. Last year it was up to one hundred and sixty-four billions.

Farm net income in 1932 was only two and three-tenths billion dollars—less than $400 per farm, just about a dollar a day.

Last year farm net income hit an all-time peak of sixteen and a quarter billions—not twice, not three times, but seven times that of 1932.

In 1931 nearly 2,300 banks suspended operations and in 1932 over 1,450 more. But in 1934, the first full year of Democratic administration, only 57 banks suspended operations, and since then the number has been negligible.

Yes; government for the people makes sense.

But last November the people forgot some of these things. Some of the same farmers who had helped to prevent sheriffs' sales in 1932 had in more recent years paid off their mortgages and were irked by price controls. People who once had borrowed from the Home Owners' Loan Corporation got out of debt later, bought the house next door—and didn't like rent control. Some people who needed work from emergency relief agencies in the early thirties now had good jobs with fat pay checks, and they wanted sirloin steaks and weren't getting them.

Over the land went hordes of Republican speakers, crying to a people worn out by the sacrifices of war: "Have you had enough?" Many people did not vote. Many thought it was time for a change. The Republicans won both branches of the Congress.

Like an old fire horse going to the fire, I was on Capitol Hill January 3 when they took over. I saw SAM RAYBURN hand the gavel to JOE MARTIN in the House. The Senate was a little delayed, but the Republicans took over, appointed some new doorkeepers—and settled down.

At noon, day before yesterday, on April 13, they had had full control and legislative responsibility for 100 days. And now the people are beginning to admit that they have had enough. The contrast of this hundred days with the first hundred days of Franklin D. Roosevelt is just too pronounced.

To appreciate how the people feel, we have to remember what they had been promised. The campaign of 1946 was no pink tea. It was a hammer-and-tongs brawl.

The Republicans were going to balance the budget, end controls, reduce taxes, cut the war debt, and fire the bureaucrats. It was as easy as that—just like shooting fish in a rain barrel.

Everywhere the sky was full of swords. Republican speakers, whenever they saw a Federal employee, cried, like the Queen in Alice in Wonderland, "Off with his head." A million public servants were to go—and the swords were sharpened at Republican rallies from one ocean to the other.

Expenses must come down. The President's budget, paring expenditures to the bone, had been prepared, but the swords were swinging at it. "We'll chop six billions off the budget." That was the cry.

Taxes must be cut—and the Republicans had the swords to do it. "Twenty percent across the board"—that was the program. It wasn't the most discriminating plan, but when you carve with a sword you take things off in chunks.

They won the election. They got control—and responsibility—in both Houses. The Republicans have had their hundred days. What has the harvest been?

Have they repealed the Roosevelt legislation? No, indeed. This Nation still has social security, the Federal insurance of bank deposits, a Security and Exchange Commission, an agricultural conservation program, and a Tennessee Valley Authority. No one has challenged the soundness of the Roosevelt reforms.

But, in fairness, I must report some progress. They have proposed an amendment to the Constitution limiting future Presidents to two terms. In effect, they are saying to the American people, "We don't trust you." They fail to see that poor administration will be its own limitation, but that the American people have a right to depart from traditional patterns in time of great emergency. Washington wrote to Lafayette on this very point: "I can see no propriety," he said, "in precluding ourselves from the services of any man who on some great emergency shall be deemed universally most capable of serving the public."

The American people agreed with Washington. In the emergency of economic depression, then the threat of war, and finally in the struggle for survival of democracy, they followed his advice. They deemed Franklin Roosevelt most capable of serving the public in 1932, in 1936, in 1940, and in 1944. The American people have said to many Presidents: "We take you for better, for worse, for richer, for poorer," but only in the case of Franklin D. Roosevelt did they add "in sickness and in health, to love and to cherish, until death do us part."

Now, I would not have you think that the proposal of a constitutional amendment limiting future Presidents to two terms is the only progress of the Republicans in their first hundred days. They have extended some of the legislation already in force—the act to continue rationing of sugar, the act to continue collection of luxury taxes, and some of the still-needed provisions of the Second War Powers Act.

But these are virtually all of the accomplishments of the first hundred days of the Eightieth Congress under Republican control. Instead of a dynamic program, we have seen controversies between the two branches of the Congress, arguments between leaders in the same branch, disputes and bickering, delays of essential legislation.

Meanwhile, the Republican campaign promises on tax and budget reduction have boomeranged. They now have the Republicans divided against themselves. Did not one of their great leaders predict that a house divided against itself cannot stand?

The House of Representatives pulls out of thin air a proposed budget cut of $6,000,000,000. Senate leaders jigsaw the figures and come up with their own goal—a four-and-a-half-billion cut.

The House leaders push through their tax bill. They estimate it will reduce Treasury collections by three and eight-tenths billion dollars. Senate leaders estimate that it will reduce Treasury collections by five and seven-tenths billions.

The House slashes the appropriation of the Bureau of Labor Statistics, wipes out the salaries of the top officials of the Conciliation Service, and strikes hard at the National Labor Relations Board. Dismayed at such tactics, Republican Senator MORSE, of Oregon, cries out: "This is not fiscal therapy; this is not surgery. I think it is butchery of the welfare of the workers of this country."

Have the Republicans forgotten the statement in their own party platform in 1944? "The Department of Labor," they said, "has been emasculated by the New Deal." Have they forgotten their promises to the American laborer that if they were elected they would strengthen this Department?

No wonder the boys sing, "The GOP she ain't what she used to be."

Senator AIKEN, the Republican Senator from Vermont, suggests that his Republican colleagues have forgotten more than their campaign promises; that they have forgotten reality and are living in a dream world. Let me read you a few sentences from his indictment:

"The people," he says, "gave the Republican Party no mandate to take from the American workingman his high standards of living and his right to organize effectively to maintain that standard.

"They gave no mandate to repudiate the agreements which the United States has made in good faith with other countries.

"They gave no mandate to set the railroads of America and other businesses controlled by financial interests above the provisions of the antitrust laws.

"They gave no mandate to take away the milk and other nourishing food which millions of little children are now receiving through the school-lunch program."

Such are the words of one aroused Republican.

For years the Republican Party has clamored for a balanced budget. And now they find that it is balanced—balanced by President Truman and balanced much sooner than most people had thought possible.

For years Republicans have clamored for debt reduction. Harry Truman has proposed to reduce the debt, and now the Republicans would jeopardize debt reduction by lowering taxes at a time when we are better able to pay taxes for debt reduction than ever before in our history.

The Republicans know they cannot put the sword to President Truman's budget without destroying essential public services. The action of the House on the Labor Department budget illustrates the point. What is there left against which they can wield the sword? The Atomic Energy Commission? The housing program? The day-to-day services of Government to its citizens?

During the first hundred days of the Republicans in 1947, even as during the first hundred days of President Roosevelt back in 1933, we find the spirit of the people changing. But it is not the kind of change that the Republicans were counting on.

When you pick up a newspaper these days or start through the columns of a magazine, you are almost certain to find some comment about the rising popularity of the leader of the Democratic Party—Harry S. Truman. If you like to measure these things in terms of the Gallup poll, it is comforting to realize that his popularity, which stood at 32 percent during the campaign and sword-swinging exhibition of the Republicans, rose to 35 percent in January, 51 percent by early March, and now has reached 60 percent. This is one of the most painful political reversals the Republican Party has ever encountered. Harry Truman has earned the confidence and respect of the American people, not by swinging swords around their heads, but by displaying the kind of spirit that has made America great.

As a member of his Cabinet, I could easily go too far in praise of him, impelled not only by my respect for his performance as President, but also by my friendship for him as a man. But I have never seen a public servant more honest and sincere than he. At Cabinet meetings and private conferences, he sits in judgment on our plans. He displayed, while head of the Truman committee, an instinct for honesty and fair dealing—and it serves him well now.

He made no boast that this fiscal year the budget might be balanced—but only a few days ago there was complaint that he had done too well and might have three billions of tax dollars left. Wasn't that too bad?

He made no heroics out of his plan for Greece and Turkey—and possibly in his modest and cooperative conduct lies the explanation of its legislative success.

You can sense the trouble with me: I am a prejudiced witness—prejudiced because I have found Harry Truman to be the most honest public official I have ever known. So let me give you an unbiased appraisal in the terms of an editorial from the Washington Post, a great independent newspaper that has had a chance through the generations to observe public men and their conduct:

"Mr. Truman," says the Post editorial, "has made his remarkable headway in the people's estimation by his own contribution. He took the defeat of his party last November in a spirit of sportsmanship that won instant recognition. His head was bloody but quite unbowed. He demonstrated a quality that could be revealed only by adversity. Some men thrive on adversity, and Mr. Truman proved he is one of them. He refused to stop being the people's President simply because the country had elected a Republican Congress.

"It is this sense of responsibility to his office that has marked his conduct of affairs since November.

"Not a single issue has he ducked, and some issues he has anticipated, as, for instance, when he headed off the witch hunt for Communists in administrative offices that sadistic Congressmen were itching to lead.

"The straightforwardness and statesmanship of his approach to our domestic problems is matched in the President's attitude to world problems. The Truman doctrine summed up our duty no less than our policy.

"The doctrine, far from being novel and irresponsible, is in the grand American tradition."

Only a week ago another great Washington newspaper—the Washington Star—recalled the President's goal, which he stated after the November election: "To do in all cases, from day to day, without regard to narrow political considerations, what seems to me to be best for the welfare of all our people."

"The record," says the Star, "will show that he has adhered to this guiding principle. And to the consternation of his political opponents, the record will show also that there has been a favorable public response to this quality of leadership. * * *

"What the future will bring is uncertain," the Star continues. "But as long as Mr. Truman keeps his sights trained on that objective he deserves the support of his fellow Americans."

So where do we go from here? What does the future hold for our party? Can we, will we, receive from the people of this land another call to leadership in the election of 1948?

I'm going to let you in on a little crystal gazing. You know there was an election held in Chicago just a few days ago. It happens to be a most peculiar trait of Chicago elections that they usually give a very accurate indication of the strength of a Democratic Presidential candidate in the following election.

For example, in 1931 Mayor Cermak received 59 percent of the Chicago vote. In 1932 Roosevelt received 59 percent of the national vote.

In 1939 Mayor Kelly received 56 percent of the Chicago vote. In 1940 Roosevelt received 55 percent of the national vote. In 1943 Kelly got 54 percent of the Chicago vote. In 1944 Roosevelt picked up 54 percent of the national vote.

And just a couple of weeks ago what happened? Mayor Kennelly, the Democratic candidate, polled 59 percent of the Chicago vote.

I don't want to make a forecast, but if as Chicago goes so goes the Nation, then President Truman would carry nearly 60 percent of the popular vote next year and along with it two-thirds of the States.

I say this to bring hope to those millions in an anxious world who look to the United States for continued, and now expanded, leadership. While governments rise and fall, swing to and from political ideals, change character sometimes overnight, our land retains its eternal strength. We emerged from the war with industry going at a great pace, with farmers enjoying the highest income they have ever known, with employment at record highs. Tonight, 2 years after the German surrender, business still booms. Employment figures show 56,000,000 civilians gainfully employed with less than 2,500,000 out of work, and most of these are only engaged in moving from one job to another. National income is running at the annual rate of $177,000,000,000, an all-time record. Farm income during the first quarter of 1947 averaged 28 percent above last year. The steel industry, usually regarded as an index, is operating at 97 percent of capacity, a peacetime record. And the people of this country have $150,000,000,000 tucked away in liquid assets to buy consumer goods if their earnings are not sufficient. That is the story of the present-day American leadership of Harry S. Truman.

The world looks with hope at America as one great economic pumping plant that has not shut down. People may have become tired of wartime controls, and while tired they may have kicked our party around a little bit, but they have not lost faith. Though swords may be brandished from a thousand hilts, America still loves the spirit that Thomas Jefferson knew as he moved the loose confederation of tiny States toward the path of empire; the spirit that Woodrow Wilson cherished as he fought to bring into being a league of nations strong enough to stop aggression before it could again endanger the peace of the world; the spirit that Franklin Roosevelt exalted as he made his Government so responsive to the public will that neither precedents nor political pirates could stand before him; yes, the spirit that Harry Truman trusts to guide him as he dares to expand the Monroe Doctrine into humanity for the oppressed who still cling to that love of democracy that our own example may have nourished within them.

I have no fear of the swords. Do you recall the impressive paragraph with which Sholem Asch concludes his remarkable book The Apostle?

The old Rabbi stands up before his congregation and says:

"See you not what has happened to Rome? The more they burn the believers in the Messiah, the more they fling them to the beasts, the mightier grow their numbers. Behold! Rome went forth against Jerusalem with the sword, and Jerusalem went forth against Rome with the spirit. The sword conquered for a while, but the spirit conquers forever."

Accomplishments of the Democratic Party

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1947

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement by Hon. Gael Sullivan, executive director of the Democratic National Committee, regarding accomplishments of the Democratic Party, broadcast over the facilities of the National Broadcasting Co., April 18, 1947.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Two years ago a great city fell in battle. In an underground cell below the shattered streets of that city a man vanished from the sight and knowledge of his fellow men.

What happened to the man nobody knows. But with him there was canceled out, once and for all time, an evil dream of conquest—the dream of a world, America included,

brought to its knees and doing the bidding of the gauleiter and the Gestapo. The Hitler myth was smashed.

We crushed that myth. We Americans, with the peoples of many other nations, stamped into the dust of history that foul design of a Nazi west, a Japanese east, and a slave world in between.

In those years we fought hard. We gave our all. And we worked together, in the face of a common danger, as one. Our political differences we sank before a patriotic urge that made everything else look very unimportant. And when we won our fight, we hoped for peace and we looked for peace.

We built for peace, too, and we asked our neighbor nations to join us in the task, for it was a work not for one nation but for all. We knew it was to be a mighty task—the fulfillment of 1,900 years of hopes and prayers. We knew there was no magic, no shortcut to the end of war.

Yet, even so, the way has been harder than any of us could foresee. It has drawn again, and drawn deeply, on the reservoir of our fortitude. We see now that the winning of the peace means a renewal of great effort. It means, once again, the unshaken resolve of a unified people. It means working together, once again sinking our political differences before a higher assignment.

Looking back now over the years of war and the years that we have tried to call peace, we are aware of a profound change in our thinking. World crisis is prolonged. The menacing shadow darkens great expanses of the earth. And the dread of new and terrible weapons is in men's hearts.

Under this stress old accents have shifted. No longer do we think of ourselves first as Democrats or first as Republicans. Those differences between us are secondary. We think of ourselves first as fellow citizens of the United States.

In our dealings with other nations this is reflected in a nonpartisan foreign policy. In the steps we have taken toward world peace, we have made a bipartisan effort.

But at home, in our own life as a people, we also feel this pull toward one another, this need for a new unity. We live our political lives under a two-party system. But today the accent is on one Nation. The accent is on the United States.

We have learned this lesson through the 2 years of our struggle for peace. We have learned, through the inspiring example of Harry S. Truman, that the President of the United States is the President of all the people.

Our political differences remain sharp and clear, as they should. But we have a President who sees, in this stretch-out of crisis, the need of a strong Nation—strong morally, physically, spiritually. And to make America strong, and keep her so, he has risen above party politics.

Under President Truman's leadership we have labored to make ourselves physically strong in the health of our young men and women; in the striving for economic betterment that will follow in the wake of physical well-being and the elimination of the slums and conditions that breed fear and want.

In times like these there is no place for name calling in the political arena. There is no room for political oratory without political performance. The only valid debate in American politics today is the America that we are for, not the Americans that we are against.

The only valid claim a political party can make is its performance for the strengthening of this Nation.

The Republican Party holds majority control—and with it the major responsibility—for the performance of our Congress.

There has already developed a gap of more than a hundred days between Republican promise and Republican performance.

For 14 years the Republican Party sat on the sidelines, sniping while, under the leadership of Franklin D. Roosevelt, great problems of our country were faced and won.

During the time when the social and economic structure of the Nation was revitalized, the Democratic Party sought to balance the human budget. It strove to better the lot of the many who had little rather than to give more to the few who had much.

During those years while the Democratic Party fought the battles of the people, the GOP watched and found fault. There was no need for statesmanship on their part.

Now with the responsibility of exhibiting statesmanship, the Republicans are confronted with the problem of resolving the differences between their own leaders.

Grave problems of national policy lie waiting while Presidential candidates angle for position.

In this atomic age when the world cries for leadership—a leadership that only a vital, living America can give—the time has come for a reaffirmation—a rededication to the principles of democracy. Only thus can we live in peace—live in a world without fear.

The Democratic Party is the liberal party. It represents the people. It seeks always to balance against the forces of reaction a positive program for the betterment of conditions that affect us all, high and low, rich and poor.

Tonight, for the Democratic Party I wish to reaffirm its traditional stand. I wish to emphasize in doing so that the Democratic Party is a positive force—it is for things—not passively in opposition.

Our foreign policy: By aiding other peoples to restore their hope, by restoring their ability to produce, we make our concept of freedom strong.

Only thus can we strengthen our kind of life and secure for ourselves peace and an era of abundance.

Security at home: The Democratic Party stands squarely in support of the President's efforts to secure our Government from subversive elements that may be present within the ranks of those who administer this Nation for us. Any subversive—any disloyal person on the Government rolls—must be sought out and discharged. At the same time, this must be done in such a way as not to endanger our democratic processes.

Prices: In his Jefferson Day speech, President Truman pointedly said:

"In further evaluating the strength of our domestic economy, I must express to you my deep concern over the level of prices prevailing today. A system of free enterprise does not automatically work out its own adjustments without our giving thought to the process.

"The main factor that can weaken our economy at this time is our own selfishness—the kind of selfishness which is now expressed in the form of unnecessarily high prices for many commodities and for many manufactured articles. These prices must be brought down if our entire economy is not to suffer.

"With the exceptions of a very few items, all price controls have been removed. But freedom from such controls, like other freedoms, cannot be abused with impunity. A profound moral responsibility rests upon those citizens whose decisions have widespread effect on our markets—to put it simply, the responsibility of playing fair, of not going whole hog for profits. The alternative is inflation, industry priced out of the market, and, eventually, men priced out of their jobs."

No words of mine could make our duty more clear.

A balanced budget: The Democratic Party stands behind the President in his financial program to balance the budget and reduce the debt.

The Democratic Party does not stand for a type of economy that would save a dollar today at a cost of thousands of dollars in the future, when through senseless economies we have wasted our natural resources, cut back the reclamation projects, the public-power enterprises, and the labor and agricultural aids which mean so much to this Nation.

Surely no man can believe that a program of economy which cuts off the exploration for new sources of oil and other vital raw materials can be successful.

Social security: The social-security plank in the 1944 platform of the Democratic Party and the economic report of the President to the Congress both outline our position on this important issue.

The Democratic Party still stands for the revision of payments of benefits to relieve hardship arising from the rise in the cost of living.

Housing: The President has repeatedly urged enactment of a housing program. In his economic report to the Congress, he stressed the need for legislation to bring about at least 1,000,000 housing starts this year. No such legislation has been forthcoming.

Utilization of the labor force: The Democratic Party stands firmly on President Truman's program for preserving the Nation's labor force as its greatest productive asset.

This program must embody a formula for labor peace. Most essential is the safeguarding of the right of collective bargaining. The formula must protect the Nation from abuses. At the same time it must not imperil the gains achieved during the years of Democratic progress.

In the time available to me on this radio program it is impossible to cover the many problems that now face the Nation. But on every national policy, on every question as to the future welfare of our great body of citizens, the Democratic Party stands firmly for progressive, liberal thought—for progressive, liberal action.

And it stands for the rights of all the people, not just for the rights of some of them. The Democratic Party is not a reactionary party. It must be the party that moves forward to create, through the techniques of abundance, an era of prosperity and well-being. The Democratic Party will be the party of the Nation in the time of the Nation's need.

Is There an Absolute Right To Strike?

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1947

Mr. SMITH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an article on the subject, Is There an Absolute Right To Strike? which appeared in the April number of the Republican, and which I wrote at the request of Mr. Richard Nowinson, editor of that magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS THERE AN ABSOLUTE RIGHT TO STRIKE?

(By Senator H. ALEXANDER SMITH, New Jersey member of the Senate Labor and Public Welfare Committee)

In all the hearings before the Senate Committee on Labor and Public Welfare involving legislation to cure some of the obvious abuses

that recently have been threatening the welfare of our country, the stone wall that we run up against continuously is the so-called absolute right to strike.

IS A STRIKE SACRED?

At a time when our labor leaders should be in the forefront of those who are trying to correct the existing evils we find them saying: "We regret we can make no suggestions, because anything that would tend to correct labor evils might impair the right to strike." They say that any impairment, even the so-called cooling-off period, creates involuntary servitude. The apparent complete vacuum of ideas of William Green and Philip Murray, for example, is profoundly distressing. To them the right to strike, as they define it, is more sacred than the health, safety, and welfare of 141,000,000 Americans. They even feel compelled, in their public statements at least, to imply support of the defiance of the Government by John L. Lewis.

I am one of those who has tried sincerely to support the labor-union movement. I believe in it profoundly. I believe our workers should have the right to organize and to have representatives of their own choosing; I believe in the collective-bargaining process; I believe that management and labor can and should settle their differences without the intervention of government. But this great country of ours is doomed the minute we admit that the Government can be defied by any individual or by any group, or that any minority seeking its own ends, however worthy they may be, can place those ends above the welfare of all the people. The very purpose of government is to protect all our people from monopolistic privileges, vested interests, or the uncontrolled power of any groups in our midst.

As for the so-called absolute or unconditional right to strike—there are no absolute rights that do not have their corresponding responsibilities. Under our American Anglo-Saxon system, each individual is entitled to the maximum of freedom, provided however (and this proviso is of first importance), his freedom has due regard for the rights and freedoms of others. The very safeguard of our freedoms is the recognition of this fundamental principle. I take issue very definitely with the suggestion that there is an absolute and unconditional right to concerted action (which after all is what the strike is), which endangers the health and welfare of our people in order to attain a selfish end.

ANYONE HAS THE RIGHT TO WORK

Nor can we leave the matter there. We may agree that no man should be compelled to work under conditions to which he has not voluntarily agreed. Any individual has the right to quit his job at any time. But this is a very different matter from his quitting with his fellows under a concerted arrangement to force his demands on others, irrespective of the rightness or wrongness of thore demands. This distinction is especially important since, under the Wagner Act, he has the right, after the battle is over, to insist on his status as a continuing employee.

Under the Wagner Act as it now stands, the collective-bargaining process was legalized and a Labor Relations Board set up. It is that Board's duty to see to it, first, that the worker is protected in the bargaining process and, second, that the employer does not use his economic strength to exploit the worker. Under the act, we have recognized that when management and labor come to the end of the road of the bargaining process, a stoppage of work may be preferable to compelling either party to continue a relationship that is not voluntarily entered into.

This was a necessary step in the evolution of management-labor relations. It was necessary because we have not been able to invent any form of judicial procedure which would do justice to both parties in a labor dispute, and would bring about what both parties would look upon as a satisfactory settlement without a work stoppage. If we are honest with ourselves, however, we must frankly admit that in recognizing the strike at all, we are approving a medieval system for the adjustment of disputes.

WE STRUGGLE OVER FREEDOM VERSUS JUSTICE

Mankind has struggled through the ages over this principle of freedom and justice. As far back as Biblical times we find the principle of retaliation—"an eye for an eye, a tooth for a tooth"—which permitted the aggrieved party to retaliate in kind for an injustice done to him. In our Anglo-Saxon law, the principle of self-help was permitted until a fairly recent date. Self-help recognized the power of might; if between two individuals there was a difference, it was a crude way of permitting that difference to be settled so long as the interests of a third party were not affected. Illustrating this great principle is the history of our West, where once contending parties "shot it out."

Unfortunately, in all disputes of this kind, which become violent before they are settled, innocent bystanders were injured and it was recognized that certain kinds of disputes might lead to a breach of the peace and might damage whole communities. In the course of time, the Anglo-Saxon people, following principles laid down in early Roman law, developed tribunals of justice where disputes could be heard, and where parties were compelled to submit their disputes for determination in what came to be courts of law. After the judgments of such courts were announced, the parties were compelled to accept them and were not allowed any longer to rely on the earlier principles of retaliation and self-help.

I have gone into this detail to emphasize the point that in management-labor relationships, we still admit the self-help principle. When free bargaining comes to the end of the road, we insist that the dispute be left to the disputants. We say to them, to use a slang expression: "Now you can slug it out—may the better man win." We have permitted the rule of force and might to determine the issue with no reference to the more fundamental question: What is right and what is just?

When employers were strong economically—when they could oppress and exploit their employees—we did not try to determine the principles on which the disputes might be settled on the basis of right and justice. Through the Wagner Act, we gave the workers a stronger position at the bargaining table. Then we let them slug it out. Now many of us feel that the strength given to workers through their unions overshadows the strength of the employer-management group, and there is much sentiment for equalizing the weight of the brass knuckles on both side. (I use the expression brass knuckles advisedly instead of boxing gloves.) We delude ourselves that if there is an equality of armaments, there will be labor peace. This is like saying that if every nation in the world could be absolutely equally armed there would be no more international disputes. It is the balance-of-power principle.

EQUALIZING ARMAMENTS DOESN'T MEAN PEACE

But we have been struggling with this principle for some time in the international field, and we know that equalizing armaments or limiting armaments does not and cannot bring peace. The issues are far deeper and we are obliged to find some way in any dispute, no matter what its nature, to answer the question, "What is right and what is just, especially to protect the weak?" rather than, "Who can be strong enough to win in a death struggle?"

That is one reason we voted recently for optional adherence to the World Court, surrendering a measure of sovereignty—so that international disputes which are justifiable may be settled by judicial procedures and not by resort to arms. In labor-management disputes, on the other hand, we still function under the so-called Wagner Act, the National Labor Relations Act. Well-meaning as it was, its effect has been to intensify the conflict—to raise barriers between employers and employees and make them contending parties where they should be partners in a common enterprise to produce the necessities and luxuries of life for our Nation and the world. If we attempt further to equalize the brass knuckles instead of going to the heart of the matter, which is to bring about understanding human relationships, we only extend the days of these difficulties and conflicts and ally ourselves with those insidious forces in our country which are aiming to divide us on the basis of class.

So today American statesmanship finds itself challenged—challenged to establish tribunals, call them labor courts or what you will, to which persons aggrieved can go, where their cases can be heard and justice done. We still can perfect and develop the voluntary collective bargaining process; we still can support the mediation and conciliation service of the Labor Department; we still can call on the parties to the dispute to settle their differences between themselves. But suppose when we come to the end of that road, we find that the inability of the parties themselves to settle their difficulties is going to lead to the impairment of the health and safety of our whole population, or large segments of it—is going to lead to a national paralysis of our economic life as in the case of a transportation strike or a coal strike or a steel strike? Then, are we not justified in saying that this is a matter that concerns the public interest? Are we not justified in saying that the parties must settle this dispute among themselves without stopping production and threatening our national life?

I believe we are. I believe that if they decline to do so within a reasonable time, on the initiative of the Government of the United States they should be brought before some properly composed tribunal. That tribunal would have jurisdiction definitely to say that concerted work stoppages would not be tolerated, and that, for at least a limited period, the parties must continue under such and such terms and be obligated within that period to come to an agreement. If they still were unable to agree, there should be a heavy penalty imposed on whichever party the court found to be at fault and whichever declined to cooperate with the award made. The court must have power to cite for contempt those who fail to obey its judgment, and to inflict such penalty as should be inflicted on any of our citizens when they defy the power of government to protect all the people.

WE AVOID THE REAL QUESTION

The whole issue can be summed up this way: We are confused because we do not courageously face the answer to a very simple question. We try to answer the question: Who is right or who is economically strongest in a life and death struggle? We should be trying to answer: What is right and how can we do substantial justice under these conditions?

Many students of these matters are already developing criteria and formulas which properly could be applied in management-labor disputes where the parties cannot agree. These criteria and formulas can be developed, in my judgment, in the course of time into

a code to govern management-labor relations. I strongly favor the recommendation of President Truman that a committee be set up, composed of leaders of management, leaders of labor, and Members of the Congress, who would explore the specific question of how we can develop such a labor code, to be applied only in cases where the parties are unable to get together themselves, and where a national paralysis threatens in consequence.

However, I would oppose the appointment of a commission that would simply go on a fishing expedition to review again the myriad of possible regulations that could be imposed on one party or the other. Neither am I desirous of developing further the equalization of brass knuckles.

On a broader basis, I am profoundly interested in developing the right kind of environment for the worker and his family in our American life; in the way he can receive a proper reward for his contribution to national production; in the way he can be stimulated to be a part of the enterprise in which he is engaged by proper incentives, either for him individually or for his group of workers; in profit-sharing plans; in a satisfactory solution of the annual wage issue; in a proper handling of health and welfare funds—whether by individual industrial taking care of their own people, or by an expansion of our social-security system; the whole question of profits; the question of lower prices so that all our people may participate in the fruits of our production and gain a higher standard of living; and similar suggestions which can be brought out in the consideration of our American free-enterprise system.

This is a matter that comes down to the simple but important problem of human relationships. The size of our industrial establishments has broken down the personal family relationships of the smaller industries of bygone days. In dealing with people in the mass, we unfortunately have been tending to treat labor as a commodity to be bought and sold for a price, a commodity which, under the Wagner Act, is cold-bloodedly bargained for. We must find some way to correct this atmosphere of antagonism and come back to recognition of the principle that in order to attain the production we will need, for both the prosperity of our country and of other countries, there must be a happy environment in which the individual works, and where he becomes enthusiastic about the quality and quantity of his industry's output. It must be a partnership principle; we must in some way see to it that management takes a more personal interest in the welfare and prosperity of the workers, while the workers have a more personal understanding of the problems of management.

WE CAN PROGRESS

These considerations may look a long way ahead and will, perhaps, be characterized as too idealistic and seeking the millennium. I am willing to accept that challenge because progress always has come from the leadership of those who "hitched their wagon to a star." We can progress even though we cannot attain immediate perfection. But first, we must put ourselves on the right road. All our legislation must be directed toward establishing ways and means of determining what is right in these controversies and putting an end to this continuing struggle of might.

America cannot afford the luxury of division among her people. The world looks to us for leadership because we have been the land of the free and as a free people we must maintain the principles of unity and equality of opportunity. Unless we lead, the other nations of the world are going to falter. Should we fail in a crisis such as the present, civilization may well be doomed.

Proposed Antidiscrimination Legislation

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1947

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent statement by Mr. William Green, president of the American Federation of Labor, which has a direct bearing on important legislation now before the Congress. The statement has great significance, and it is brief, and it is for that reason that I ask that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a real privilege to take part in this gathering held in the Capital City of the United States, the city which stands today before the peoples of the whole world as the stronghold of democracy and freedom, and as a symbol of free and equal opportunity.

Equal opportunity for all men in a community to enjoy the full fruits of their labor and through their productive contribution to earn a better standard of living, without regard to race, religion, color, or national origin, is a sacred principle, inseparable from the true practice of democracy in a free society.

It is a principle which America has affirmed to the nations of the world in the midst of the clash and thunder of a devastating war.

It is a principle which America has reasserted in proclaming its dedication to a lasting peace.

It is a principle which has given us, as Americans, dignity and stature in our own eyes and in the eyes of others.

It is a principle which has given both hope and faith to men and women oppressed by economic discrimination and political dictatorship.

As a principle, and as a way of living and working, equality of economic opportunity cannot become a reality through mere affirmation. A national policy to which Americans have been dedicated from the early days of our Republic calls for more than affirmation. It must be put to practice.

Too many of us, while firmly believing in the deep injustice of economic discrimination, have given little more than lip service to the need for firm and unequivocal action for the eradication of intolerance, hatred, and blatant discrimination against minorities.

The need to deal effectively with discrimination in employment has long been realized. It is by no means easy to devise effective means whereby the community can prevent economic discrimination and yet safeguard the rights of individuals against undue invasion through Government intervention.

Legislation designed to prevent discrimination, which is written without exhaustive study and thorough consideration, would be only ill-conceived and unrealistic. But during the past 6 years the Government of the United States has given careful thought and thorough investigation to discriminatory employment practices in private industry mobilized for war, as well as in the Government itself. Extensive private studies have been conducted by national organizations, welfare, religious, and labor groups determined to further the attainment of the goal of fair employment opportunity for everyone. In addition, Congress itself has conducted lengthy hearings on a variety of legislative proposals concerned with the implementation of the fair employment policy of the Nation. And finally, and of equal importance, has been the experience built up under the enactments of the several States translating the fair-employment practice policy into reality.

The Ives-Chavez bill in the Senate, and the Fulton and Norton bills in the House are based on a firm foundation of both study and experience. They constitute not only a true effective instrument of national policy, but also accord with the ideals and freedoms proclaimed and guarded by our Constitution.

The enactment of this legislation is more urgent than it has ever been before. The future prosperity and strength of our Nation depend on economic unity. There can be no prosperity for some without a firm assurance of a full and equal opportunity to share in that prosperity extended to all.

Our economic transition to a peacetime pace has not yet been completed. Full production and full employment have not yet been assured. The signs are multiplying that minority groups, and especially the Negro, are being dealt out of the deck in the reshuffle of jobs throughout our industry and trade. Those who have acquired skills and have been given special training and who could make an important contribution to the production and economic progress of the Nation find themselves left out altogether or offered jobs only at the lowest paid and most menial occupations. That is a threat to our economic strength as a nation. It is a threat which we cannot afford to let go unheeded when the economic reconstruction of the whole world and the survival of freedom in it depend in such a large measure on the economic stability and power of the United States.

More than 800,000 members of the American Federation of Labor are Negroes. Among more than 50,000 of our local unions banded together in our great national federation there have been in the past, and are today, those who have violated the principle of nondiscrimination. As a great federation, made up of men and women living and working across the length and breadth of the land, we have many among us who are not without sin. Yet our federation is unswervingly and decisively dedicated to the principle of equal employment opportunity open to all without regard to race, creed, color, or national origin. Our sixty-fifth annual convention, held in Chicago, reaffirmed its urgent call for congressional enactment of fair employment practice legislation at the earliest possible date. The American Federation of Labor has also given its unqualified endorsement and support to the National Council for a Permanent FEPC as the proper agency for the coordination of the great citizens' effort toward the enactment of this legislation.

With the active support of the national council and with the counsel of representatives of the American Federation of Labor, the Ives-Chavez bill has been drawn. It is my impression based upon an examination of an analysis of the bill that the proposed statute is as effective as has been drawn. I believe that bill is far superior to previous legislative proposals in its effectiveness and its realism. It provides a procedure which affords the fullest opportunity to be heard to all parties concerned and completely safeguards any final action of the national commission with fullest judicial review. It provides, as it properly should, for conciliation and mediation in any situation where those concerned refuse to cooperate in making nondiscrimination effective. And above all it encourages the effective exercise of the voluntary processes, so that out of that use can come the understanding which will enable all of us to work together.

The Ives-Chavez bill is fair and reasonable in every respect. While it rejects oppressive intervention, it makes effective enforcement certain. Its enactment can be opposed only on the grounds of dark prejudice or hate. I know that the final enactment of this bill will not be easy. It calls for the vocal support of millions of Americans to whom the Congress must be responsive. On behalf of 800,000 Negro wage earners of every skill and calling and on behalf of hundreds of thousands of Catholics and Jews whom I have the honor to represent as a spokesman of a great brotherhood, the American Federation of Labor, I call on every American, through his active support, to contribute to the utmost of his resources to the speedy passage of the Ives-Chavez antidiscrimination bill.

Concentration in Agriculture

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the April 19, 1947, issue of the magazine America. The editorial discusses the problem of concentration in this country, with special reference to concentration in agriculture.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CENTRAL VALLEY PROJECT AND UNITED STATES LAND POLICY

Current congressional bills proposing to modify laws governing the Central Valley project have more than local significance. Others than Californians have interests at stake in this latest threat to our traditional land policy. Interest should grow as more and more citizens come to realize that millions of dollars appropriated for the betterment of agriculture and protection of the family-farm principle are now in danger of being diverted to the purposes of large commercial landowners. These individuals want all the benefits of the project but none of its restrictions. Wherefore they propose to change the law which regulates excess holdings in land.

A question of principle is involved. Hence some reflection on the historical basis for United States land policy is called for. History, recent and ancient, demonstrates that private ownership of productive property can be effectively destroyed or unnecessarily abridged in either of 2 ways. One lies along the road of communistic collectivization; the other along that of progressive concentration of wealth in the hands of a few. Both methods are severely condemned in the writings of the Popes; both are rejected in the traditional American concept of private enterprise.

Unfortunately, much of our American campaign in behalf of the dignity of the person and in defense of his rights has been directed against the communist menace alone. Our norms and practice in regard to monopoly are by no means clear. In fact, for reasons difficult to understand, we choose to shut our eyes to the growing threat of concentrated wealth which progressively reduces American citizens to proletarian status. With what approaches childish naivete we allow our attention to be diverted from the capitalistic collectivists as we look in all directions for allies in the fight against communism. A calm consideration of the facts should lead us to realize that the desire for productive ownership can be frustrated in other ways than by nationalization.

Different degrees of concentration are required for rational and efficient production in various industries. Railroads are hardly a family-sized project, nor are some of our manufacturing and service industries. But agriculture has long been and can remain a family-type enterprise. Periodically in the world's history it is menaced by the commercial collectivists, who threaten to overthrow the family-farm pattern and proceed to reduce as many farmers as possible to the status of underpaid, propertyless wage-slaves who till the broad acres of prosperous landowners.

Europe and Latin America, as well as Asia, have seen much of their land thus concentrated in earlier generations. This concentration, combined with under-industrialization and lack of technical know-how, contributed materially to the pauperization of the peasants. Let those who can read look at the record. When it comes to land and its tilling, the threat to private property and the family comes as much from selfish landholders as it does from government ownership. Lenin knew this well, and opportunistically exploited the grievances of the dispossessed in persuading peasants to the Revolution.

History is repeating itself in the Central Valley of California, as elsewhere throughout the West. The article of Bishop Armstrong of Sacramento in this issue tells the story. Land monopolies grow and the ranks of the migrant agricultural workers are swelled as farms of thousands of acres come to depend upon cheap labor.

To prevent just such abuses our Government in the nineteenth century put acreage restrictions on homestead projects. Later, with the passage of the Reclamation Acts in this century, ownership limitations were laid down as conditions for participation in the benefits of irrigation. When the Central Valley irrigation project was planned in the thirties such limitations were included.

Today the owners of our native latifundia are displeased that they cannot get cheap government irrigation water for limitless acres. Through Senate bill 66 (introduced by Senator DOWNEY) they would have all "excess land provisions" made inapplicable. In House bill 655 (introduced by Representative ELLIOTT) we read: "No benefit of the Federal reclamation laws shall ever be denied because of the size of any holding of private lands within or served by said projects." Was land greed ever more blatant in denying to the Government its right and duty to regulate ownership of private property for the common good?"

The So-Called Truman Doctrine

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject The So-Called Truman Doctrine, by a distinguished citizen of my State, Alfred Baker Lewis.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The policy of giving effective aid to Greece and Turkey so as to enable them to resist aggression is one that true liberals and peace lovers should support.

We should, in my opinion, aid democratic nations if we can afford it even when they are not the victims of aggression. But in the case of nations faced with the fact or the threat of aggression, I do not believe that the test of democracy should apply.

In regard to Greece, where the Communists are in revolt against the Greek Government, the EAM was part of the coalition government which welcomed the British troops when they first landed in Greece. About that time the Bulgarian Government, which had been at war with England and America but not with Russia, surrendered to us. This did not please the Russians so they declared war on Bulgaria, and since their armies were at the border of Bulgaria, the Bulgarian Government which had surrendered to us was overthrown and replaced y a Communist-dominated government, which surrendered to Russia. This Communist-controlled government, a Russian puppet, then made demands on Greece for Greek territory including Salonika, bordering the northern shores of the Aegean Sea.

The discipline and in fact the very reason for existence of Communist Parties is to follov and support Russia's foreign policy, as I showed in detail in my pamphlet on Liberalism and Sovietism. Consequently, the Greek Communists had to support the demands of the Bulgarians for Greek territory. Once the Bulgarians were hated by the Greeks because Bulgaria had helped the Nazis, the Greek Communists knew that no Greek government except one completely controlled by them would surrender Greek territory to Bulgaria. They therefore withdrew from the coalition government and started a revolt against it to seize complete control of it by force. This revolt was put down with the aid of British troops.

Since then the Communist bands have been suppressed everywhere in Greece except in the northern part, where they slip across the border into Greece's Communist-controlled neighbors' territory and they get protection, more arms and equipment, and possibly reinforcements, and come back to fight again. Thus Greece is the victim of aggression by Communists, Greek and foreign, seeking to dismember her on behalf of a foreign government controlled by Communists.

The Communists obviously hope that the attacks of these bands will help to prevent Greece's economic recovery long enough so that the desperate Greek people will turn to communism unless help comes from us.

In the case of Turkey, Russia denounced her friendship pact with Turkey and then made demands for surrender of the Turkish territory known as Kars and Ardahan, and also demanded military control of the Dardanelles, although her ships are now guaranteed full use of the Dardanelles in peacetime by treaty, and the same treaty closes the Dardanelles to warships of all powers during war. Russia also insisted when making these demands that the matter be settled by direct negotiations between Russia and Turkey.

Thus Turkey is faced with the threat, though not yet with the fact, of aggression, and has mobilized her army to prevent a Russian sneak attack against her such as was made by Russia on Finland.

Frankly, I think genuine liberals should end the double standard of morality which totalitarian liberals so often apply in dealing with Russian foreign policy. If the United States, for example, demanded from Mexico the parts of her territory bordering our country plus control of the Tehuantepec Peninsula so that we could dig a canal from the Caribbean Sea to the Pacific and greatly shorten the present distance from our east to our west coast through the Panama Canal, every liberal would denounce such American imperialist aggression. Russia has done a precisely comparable thing in the case of

Turkey, yet the totalitarian liberals object not to Russia's demands but to Turkey's resistance to them.

If the United States Government, on behalf of the oil companies which hold the so-called Barco concession in Columbia, took over the government of Columbia and then our puppet Columbian Government demanded from Venezuela the surrender of part of her territory, that would be analogous to what is being done to Greece by Russia. Genuine liberals would certainly denounce our Government in that case. But when Russia makes, through her puppet, Bulgaria, similar demands on Greece, the totalitarian liberals denounce the Greek Government, not Russian imperialism. I submit that that is a clear case of a double standard of mortality. I believe we should judge a totalitarian dictatorship like Russia as harshly and as gently as we would judge our own Government in similar circumstances.

Surely it is not right to claim that only those nations which are democracies are entitled to freedom from fear of attack. Russia is certainly entitled to freedom from fear of attack, in my opinion, although she is not democratic. When Poland was attacked, those of us who were not isolationists denounced the Nazis for attacking and praised the British for supporting the Poles, regardless of whether Poland was at that time a real democracy. Genuine liberals were opposed to Mussolini's attack on Ethiopia, although Ethiopia was not a democracy; and were also opposed to Axis attack on Greece, although the Greek Government was an ironclad dictatorship. We opposed the Nazis' attack on Russia and gave her lend-lease aid, although Russia is a dictatorship. If we are ever going to have a warless world, aggression must be opposed and stopped because it is aggression, just as we would not justify A in maiming B because B was accused of shady financial dealings.

As a matter of fact, the best way to make a nondemocratic nation democratic is to make it free from the fear of foreign attack, for often the denial of democracy is due to the attempt to gird a nation against a foreign aggression. In the case of Greece the Government is certainly not democratic, but it is far more democratic than the totalitarian dictatorship of Communist Russia. Communist papers are being published in Greece and a parliamentary opposition exists and speaks up. The EAM was urged to participate in the election which resulted in the Greek Government. Strikes have taken place under the present Government, including a successful strike of civil servants, which means that Greece is less totalitarian than New York State, where such strikes today are forbidden by law.

There is evidence that the process of further democratizing the Greek Government has begun. The Greek Premier Tsaldaris has officially offered amnesty to the EAM if they will lay down their arms, with a new election to be held if necessary under international supervision, after a reasonable period, plus the use of Salonika as a free port by Greece's Communist neighbors. This seems to me a reasonable and statesmanlike proposal.

Instead of bypassing the United Nations by our proposing aid to Greece and Turkey, we are supplementing the UN in a situation where it cannot act. The ultimate purpose of the UN is to prevent aggression and war. But as it is at present constituted, the UN is unable to prevent aggressive war when committed or threatened by any member of the Big Five or any ally of the Big Five because of the veto in the Security Council. The UN could not prevent our attacking Mexico, for example, if we had a Government which was imperialist enough to do that, because any action against us by the Security Council would be vetoed by such an American Government. This veto as insisted on by Russia and agreed to rather reluctantly by Roosevelt probably because he thought that it should and could be removed after a while and because having it in the Charter would avoid opposition by one-third of the Senate to ratification of the United Nations Charter. But the veto makes the UN useless in preventing certain kinds of aggression.

The policy which the ADA favors is to strengthen the UN so that it can provide economic aid where needed, which it cannot, in fact, do now, and also prevent all aggression, and meanwhile have the United States act to prevent aggression where the UN is powerless because the aggressor is a nation possessing a veto or a puppet or ally of such a nation.

Needless to say, public opinion cannot be relied on to prevent aggression by a totalitarian dictatorship such as Russia because public opinion cannot function inside Russia and world opinion cannot reach the Russian masses. Their Government may, if it wishes, tell them, without contradiction, that Russia is in danger of attack by Turkey and Greece, just as they were told that Finland was about to attack them, and were told that England and France were the aggressors in the war against the Nazis. (This was the official opinion of the Russian Government at the time, as propounded by Molotov and repeated by the Communist Parties throughout the world.)

In any case, any charge that the proposed Greek and Turkish policy bypasses the UN is answered fully by the Vandenberg amendment, which, I understand, has been accepted substantially by the Senate Foreign Relations Committee, to the effect that the UN by a majority vote may take over aid to Greece and Turkey and stop unilateral American aid.

What the so-called Truman doctrine amounts to is an end to appeasement of totalitarian aggression. We are not proposing to oppose Communist influence on governments such as France where the influence is the result of free elections. We are opposing aggression, and that means opposing communism, only because and insofar as the Russian Communist dictatorship and its satellites are guilty of aggression. Naturally, there are dangers to peace in such policy, for peace is not easy to achieve with any totalitarian dictatorship, since the foreign policy of such a government is independent of any internal opposition. We know from experience with the Nazis that appeasement of a totalitarian dictatorship certainly leads to war. A policy of firmness which will stop aggression before it snowballs into a world war offers a very much better chance of lasting peace. We can then work out reasonable relations with Russia on the basis of security for her neighbors, as well as for her, if we recognize the principle that nondemocratic countries also are entitled to freedom from the fear of aggression.

The Italian Peace Treaty

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix an advertisement entitled "Why We Are Opposed to the Ratification of the Italian Peace Treaty," which appeared in the Washington Post on April 16 last.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

WHY WE ARE OPPOSED TO THE RATIFICATION OF THE ITALIAN PEACE TREATY

The proposed Italian peace treaty shortly coming up for ratification in the Senate does not square with our new policy toward Greece and Turkey. It renders helpless before aggression the country with the third largest population in Europe; the country with the most strategic position in southern Europe. Who controls Italy controls the Mediterranean.

DOES IT MAKE SENSE TO TRY TO SAVE GREECE AND TURKEY FROM COMMUNIST INFILTRATION AND AGGRESSION WHILE WE LEAVE ITALY TO ITS MERCY?

The treaty is already obsolete because it was negotiated when we were still trying to appease Stalin, before the Truman doctrine was announced, before America was fully aroused to the totalitarian danger. Former Assistant Secretary of State A. A. Berle, Jr., says:

"The only certainty resulting from immediate ratification of this treaty would be that Italy would be disarmed, that American and British troops would be withdrawn; that a disarmed Italy and Adriatic would be left facing Yugoslavia with an army estimated at 600,000 men, maintained at war strength, and backed by a militarist Government which has proclaimed its desire to seize more Italian territory and dominate or, if possible, annex the proposed free territory of Trieste; and to strengthen its position in the Adriatic and the Balkans by every possible means, including use of force short of war.

"It follows that the wise and prudent course, in the point of view of the United States (and, I think, of the rest of Europe), would be to delay ratification of this treaty until we know with reasonable clearness, what else is going to happen."

AMERICA WILL PAY ITALY'S REPARATIONS

The treaty makes a nearly bankrupt Italy agree to pay $365,000,000 in reparations. Italy cannot pay this unless the United States puts up most of the money.

The treaty gives Tito's Communist government all but one of Italy's coal mines.

The treaty also give to Tito all of Italy's bauxite mines in Istria and nearly all of the great hydroelectric plants developed by Italy in Istria since the last world war.

Secretary Byrnes admitted that the treaty was a compromise, unsatisfactory in several respects.

The American delegation went to Paris with a proposal for a boundary line between Italy and Yugoslavia based on an attempt to leave the smallest number of Italians under Yugoslav control and vice versa, but Tito, with the help of his Russian masters, got what he wanted.

Trieste and the area internationalized by the proposed treaty are admitted by both sides to be overwhelmingly Italian in population.

ITALY DESERVES BETTER AT OUR HANDS THAN THIS TREATY

Did you know:

That more than 100,000 Italian partisans died fighting against the Germans?

That both Field Marshal Alexander and our own Gen. Mark Clark called the Italian resistance movement, the partisans, "the most effective in Europe"?

That the Italian resistance, and the six regular divisions which went into combat on our side, saved many thousands of American and British lives?

That since the Italian armistice in September 1943 Italian casualties in the common cause exceeded the combined casualties of the American and British Armies in Italy?

That the overwhelming majority of Italians were on our side when it was dangerous to be so? That at the risk of their lives they protected tens of thousands of escaped Allied prisoners of war through their powerful underground movement?

That all the members of the present Italian Government were anti-Fascist when to be so meant financial ruin, risk of prison or death, or exile?

WHAT KIND OF A WORLD ARE WE BUILDING FOR OUR CHILDREN?

The United States is working for a world based on justice. How are we removing the causes of war and fascism if the peace treaties are to follow the pattern of this treaty based on looting the weak and dividing the spoils, without regard for the right of all peoples to decent standards of living, equitable access to natural resources, emigration or elimination of economic monopolies?

MEN AND NATIONS PAY, IN THE END, IF THEY FORGET THE THING CALLED MORAL RIGHTEOUSNESS: IF THEY SELL OUT JUSTICE FOR EXPEDIENCY

It is crystal clear, now, that the Italian treaty which sacrificed justice for a supposed expediency, failed even to achieve expediency, and has instead become a grave threat to our country's own interest. It is not too late to avoid the danger and dishonor which a hasty ratification of this treaty will involve. Under our Constitution the Senate has the final word. It will heed the voice of the American people. Write or wire Senator VANDENBERG, chairman of the Foreign Relations Committee, and your own Senators at the Senate Office Building, Washington, D. C. Urge them not to ratify these treaties before the pattern of the European peace has been set, before the German and Austrian treaties have been negotiated or before every effort has been made to renegotiate more just and more workable treaty terms. Meanwhile, let Congress by appropriate resolution declare officially the end of the war with Italy, and pass such special legislation as may be necessary, as was done in the case of Germany after World War I.

Committee for a Just Peace With Italy, Inc., New York, N. Y.; Charles Poletti, Chairman of General Committee; Edward Corsi, Chairman of Executive Committee; John B. Salterini, Treasurer; John J. Lamula, National Organizer; Joseph Di Fede, Executive Secretary; Prof. Paul Shipman Andrews, Rev. Robert W. Anthony, Luigi Antonini, George Baldanzi, Roger N. Baldwin, Harry Lorin Binsse, Dr. L. M. Philip Simms, Sterling Spero, Chauncey Stillman, Benjamin Stolberg, Norman Thomas, Dorothy Thompson, Frank Trager, Judge Matthew J. Troy, James N. Vaughan, Oswald Garrison Villard, Robert J. Watt, William L. White, Samuel Wolchak, Bertram D. Wolfe.

The Alarming Merger Trend

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Washington Post of April 12, 1947. The editorial deals with the necessity of amending the Clayton Act so as to prevent the accelerated trend toward monopolistic mergers. The editorial is as follows:

POST-1940 MERGERS

Under the Clayton Act the Federal Trade Commission has the power to prevent a company from acquiring the stock of another company if the purchase would lessen competition or tend to create a monopoly. However, owing to various Supreme Court decisions the FTC cannot prevent a company from purchasing outright the assets of another company, unless the resultant merger creates a monopoly. Consequently the agency is handicapped in its efforts to enforce antitrust law prohibitions against collusion among competitors and against practices that result in the suppression of competition and tend to monopoly. Because of this loophole in the law, the FTC states that "a powerful impetus was given to the growth of giant corporations, by accretion, at the expense of small independent firms." The evidence to support this contention is found in an extremely interesting survey of the merger developments of the last few years.

Since 1940, over 1800 independent manufacturing and mining concerns, with assets in excess of $4,000,000,000, have been bought up and have disappeared. A unique feature of this concentration movement is that a large number of mergers have occurred in the food, nonelectrical equipment, and textiles and apparel industries—all regarded as the strongholds of small business. According to the FTC, fully 90 percent of all the firms acquired since 1940 held assets of less than $5,000,000, while 70 percent had less than $1,000,000 of assets. Moreover, nearly 75 percent of these firms have been absorbed by corporations with assets in excess of $5,000,000, and 27 percent have been taken over by 120 concerns ranked among the top 200 manufacturing corporations of the country.

The character of this merger movement is also noteworthy in some respects. While 60 percent of the concerns purchased have been so-called horizontal acquisitions—that is, firms engaged in similar lines of production—17 percent are vertical acquisitions—i. e., the purchasers have reached backward to obtain supplying firms or forward to secure further fabricating facilities. Another 22 percent of purchases are classified as conglomerate—i. e., the acquired businesses are unrelated to those of the purchasing companies. A typical example of the backward vertical merger is afforded by wartime purchases of Safeway Stores—the country's second largest grocery chain. It not only absorbed other grocery chains but acquired 12 independent meat packers, a gelatin-dessert manfacturer, a biscuit-and-cracker factory, a butter plant, and a cheese-processing company. The big steel producing companies, on the other hand, have been acquiring new fabricating facilities, mostly by absorbing small independent companies. Thus large steel producers now own 87 percent of the country's heavy steel drum fabricating capacity, and 10 tight cooperage firms, representing virtually all the country's production capacity, have been taken over by large distillers during the last year and a half.

The adverse effect of these acquisitions on small business competitors is grave, especially during a period when industrial supplies are hard to obtain. If large companies succeed in buying up most of the concerns that supply them with scarce materials or equipment needed for their business, the small independent business is seriously handicapped and may be squeezed out entirely. Moreover, both the vertical merger and the conglomerate merger have competitive advantages over small-unit establishments, because they can offset low prices at one level where competition is strong by charging more for other products.

Since the country is committed to the policy of fostering small business, the FTC's appeal for revision of the antitrust laws to permit it to proceed against corporate mergers that unduly restrain trade or tend to monopoly is, in our opinion, well taken. That does not mean that we regard all the mergers cited in the FTC report as against public interest. On the contrary, the vertical combination often results in great gains in efficiency that are shared by the integrated companies with the public in the form of lower prices. However, it is open to debate whether the gains from mergers do not in numerous cases outweigh the losses suffered by weaker competitors. There is certainly no hard-and-fast rule by which to determine where the balance lies. At the same time there is neither rhyme nor reason in authorizing the FTC to proceed against combinations effected by means of stock purchases, while permitting mergers of the same type to be consummated without interference. The rapid growth of the movement is a danger signal that calls for a strengthening of the law so that the FTC will be able to take corrective action when and if particular mergers constitute a threat to free competitive enterprise.

Labor-Management Relations Act, 1947

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. MILLER of Connecticut. Mr. Speaker, within the next hour we will be called upon to vote on two separate propositions. One will be a motion made to recommit this bill to the House Committee on Education and Labor, with instructions that House Joint Resolution 83 be reported back forthwith. This resolution provides for the creation of a Commission composed of Members of the House, Senate, and others to be appointed by the President to make a complete and comprehensive study of all labor-management relations. The second vote will come on the passage of H. R. 3020 which we have been debating for the past 3 days.

May I as briefly as possible outline the history of this legislative proposal. In 1935 Congress passed an act known as the Wagner Act, intended to promote economic peace and security. Unfortunately, as administered, the Wagner Act failed to carry out its declared purposes. Certainly it has not given us the desired results. It has not been a panacea for the existing evils. It has

not lessened strikes but on the other hand seems to have caused an increase in both the number of strikes and the man-hours lost annually. Last year for example, this country witnessed 4,985 strikes resulting in 116,000,000 man-days lost. Unhappily my own State of Connecticut lost 3,160,000 man-days or 2.7 percent of this total.

Particularly during the past 6 years there has been an increased demand from all over the country that Congress amend the Wagner Act. I recall that during the Seventy-eighth Congress, 4 years ago, we debated and considered legislation dealing with labor-management relations. I recall the debate on the Connally-Smith bill. I voted against passage of the Connally-Smith bill, not because I failed to realize that there were abuses that needed correction but because I was confident then that the great mass of laboring men and women would, when the facts were brought to their attention, clean up the abuses and the racketeering that had developed in the so-called high command of some labor organizations.

During last fall's campaign on at least two occasions I discussed over the radio the necessity for new legislation to give to the Federal Government power and authority to deal with strikes that were, in fact, menacing the life, health, or safety of the American people. In addition to those broadcasts, I circulated several thousand copies of a Statement of Principles, Policies, and Objectives of Republican Members of Congress. That document contained the Republican Party's position on future labor legislation. I publicly accepted that document as my platform. May I quote from that document the paragraphs referring to labor legislation.

> We reaffirm our belief in the right of labor to organize and bargain collectively with employers as one of the cornerstones of competitive enterprise. The processes of such bargaining must be protected and strengthened if we are to have real jobs and prosperity for all.
>
> For that purpose we believe that governmental decision must not be substituted for free agreement, but governmental machinery to promote peaceful settlement of disputes should be improved.
>
> Demands by either side must be kept within the bounds of reason and fairness and both sides must recognize the rights of the general public.
>
> The desired end of bargaining between management and men is a contract. Once that contract is made, it should and must be equally binding on both parties as to agreements made.
>
> Free collective bargaining and contracts resulting therefrom must not be nullified or destroyed by resort on either side to willful violence of unlawful destruction of property.

Soon after the present Congress convened a great many bills dealing with labor-management relations were introduced by individual Members of the House, both Democrats and Republicans. All of these bills were referred to the House Committee on Education and Labor. In due time this committee commenced hearings on the general subject of labor legislation. Representatives of both labor and management were invited to present their views to the committee. No citizen was denied an opportunity to present his views as fully and as freely as he desired to present them. Several national leaders of organized labor appeared before the committee and without exception took the arbitrary stand that no new legislation was needed and they had no constructive suggestions to offer the committee. That attitude was most unfortunate. I believe we might have a better bill before us today if men who have devoted their lifetime to studying labor relations had been willing to assist in the preparation of needed legislation. For whatever defects may become apparent in this legislation, leaders of organized labor will have to assume at least a part of the responsibility.

Now as to the provisions of H. R. 3020, upon which we will soon vote. This bill was written by members of the House Committee on Education and Labor following the lengthy hearings to which I have referred. It was approved by this committee by a vote of 18 to 4, and it is interesting to note that those members of the committee who have been most vocal in their opposition to this bill attended very few of the lengthy hearings that were held. One member of the Labor Committee now opposing this legislation stated that he attended the first day's hearings and absented himself from then on. The ranking Democratic member of the Labor Committee, the gentleman from Michigan [Mr. LESINSKI], stands before the House today wearing a beautiful sun tan acquired in Florida while his colleagues on the committee were conscientiously striving to write a good bill.

It may be interesting to recall that President Truman in his message on the state of the Union last January asked for several specific things that are in this bill. The President characterized jurisdictional strikes and secondary boycotts as an abuse, and he referred to the sanctity of obligation of contracts. He said we needed a strengthening of the conciliation processes. This bill contains the provisions of law asked for by the President.

Some of the opponents of this bill base their opposition on the fact that it destroys the Norris-LaGuardia Act. I do not believe that making use of the injunctive procedure is the way to settle strikes, but I do believe, as President Truman evidently believes, that any constitutional method must be invoked when the health, safety, and lives of the American people are threatened or when our whole economy is either threatened or has been brought to a standstill. I say that President Truman believes as I do because he made use of an injunction to bring the recent coal strike to an end.

Some of those who are today opposing this bill might well recall that back in 1940, when there were only 150 or 160 Republicans in the House of Representatives, the House voted for a great many of the things that are in this bill—amendments to the Wagner Act, the separation of the prosecuting from the judicial functions, the right of an employee to petition for an election, the free-speech amendment; all of those have been approved by previous votes here in the House of Representatives, and they passed here by votes of 2 to 1 or better.

There are two new provisions in this bill, generally speaking. One of them is the closed-shop and union-shop provision and the other is the attempt to deal with industry-wide bargaining. I think that the right-thinking people of the country by an overwhelming majority insist that Congress undertake to deal with these two propositions. These two sections of the bill are not written exactly as I would write them if I had the opportunity, but legislation cannot be written just the way each individual would like to have it written. On the whole, there is no question in the minds of a substantial majority of Members of this House on both sides of the aisle that this bill is fair; that it is an honest, sincere effort to solve the problem of bringing about some sort of equity and fairness and peace into industrial relations throughout the United States.

This is but the first step in a long legislative process. After we pass this bill here in the House it will go to the Senate. It will be debated and discussed in the Senate. It will undoubtedly be revised in the Senate. At that point the Senate version and the House version of this legislation will go to a committee of conference. They will try to work out the differences in the two bills. We then will have another opportunity to vote on the revised version, and when in final form it secures the approval of a majority of the Members of the House and Senate it will go to the President of the United States for his approval. Those who will vote to send this bill back to the committee are taking the position that they just do not want any labor legislation at all. And if we fail to pass this legislation we leave the country open to attack by those who in the past have shown no regard for the welfare of the rank and file of labor nor for the protection of the American people as a whole.

There are those who insist that strikes should be outlawed. I do not agree with that view. There are those who insist that no legislation should be passed, although designed to assist in curing some of the evils of our industrial relations. I do not agree with that extreme view, either. The fact is that various mistakes in the administration of our labor laws have occurred. The fact is that some abuses have arisen under our labor laws. The fact is that a national policy can be developed which will permit our industrial workers to organize their strength collectively under beneficial Federal legislation for the improvement of their status in American life. We believe that any such national policy devised and extended under Federal law which confers rights upon our workers, so organized, will carry with it certain duties. If a citizen has the right to own property, for example, it is the duty of every other citizen to respect his right of ownership and the duty of government to safeguard the rights of all parties.

Similarly, if the National Government is to sponsor the right of workers to organize and bargain collectively, it must protect the worker so organized against

a dictated domination by those at the head of any such organization. It must protect the workers, whether organized or not, against abuses by their employers. It must protect all other citizens against abuses by both the labor organizations and the employers, for all are an essential and indispensable element of our whole national economy. Thus, the public has a definite interest in labor disputes, particularly when they shall be carried to the point of unduly interfering with the productivity of the whole Nation whose collapse would result in anarchy, the elimination of our most treasured institutions, and the destruction of whatever rights are held by any of us, whether organized or not. Surely with the experience of other nations before our very eyes, it cannot be denied that misery and misfortune for all are the end result. Perhaps the Hartley bill is not the final answer. If, in any respect, it shall not succeed, Congress will be here again in 1948.

Wild, irresponsible statements that this is a Fascist bill; that it destroys labor's rights; that it will destroy unions and set us back a hundred years will not be accepted by the millions of dues-paying union members who know what has been going on in labor organizations throughout the United States.

I have talked with many, many constituents who belong to unions, some because they believe in unions and others who stay in the union to keep their jobs. They want this legislation enacted into law now. A few months from now the great masses of our citizens who toil in our industries will commend the Members of this Congress who refuse to yield to the threats and demands of the very men who have brought about the situation that makes the passage of this bill necessary in the public interest.

Tribute to Wiley O. Couch, of Hamilton County, Tenn.

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1947

Mr. STEWART. Mr. President, I ask unanimous consent to print in the CONGRESSIONAL RECORD an editorial from the South Pittsburg Hustler, a newspaper published in South Pittsburg, Tenn., concerning the work of the late Judge Wiley O. Couch, recently deceased, a very prominent man in Tennessee who was county judge of Hamilton County, and who lived in Chattanooga. In the interest of time, I shall refrain from making further comment.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUDGE COUCH WORKED, LIVED FOR OTHERS

In this period of our Nation's history when governments, large and small, are tottering under the strain of taxation, and when a national bonded indebtedness that will be handed down to an innocent generation causes the wisest financier to wonder, there was great need of public officials like Judge Wiley O. Couch, of Hamilton County, who passed away at his home on Duane Road Friday. It is said of Judge Couch that as chairman of the court in Hamilton, he paid something like $1,000,000 of the county's indebtedness and when his health forced his resignation his wise policies had resulted in the accumulation of a surplus of equal amount if not more. Not a single bond was issued under his leadership.

Judge Couch possessed three great qualifications: One, to make friends among all classes of people. Another secret of his success was the fact that he was a man of outstanding ability, and still another was that he made use of that ability by putting it into practical use—by working. He went to Chattanooga from his birthplace near Guntersville, Ala., when only 17 years of age, and well do we remember the story as told by himself upon a recent visit to this office. "I worked the first day I landed in Chattanooga and I have worked ever since."

The accomplishments of this man have well been told by the daily press, but this newspaper, serving so many of the deceased's friends here in Marion County as well as those in Hamilton, feels to add its word. Much has been said about his businesslike administration of his home county's affairs. His accomplishments in this field speak for themselves. Wisely he guarded the people's funds during the war years in anticipation of the demands for improvements that would confront the county government when the war was over. In order that the county would have funds with which to meet the postwar needs, he decided the best thing to do would be to save. This policy paid big dividends.

Judge Couch did not have his heart set on dollars and cents, either, as was brought out by one citizen who had lost his grocery store and everything he possessed in the way of household goods. He had lost all and had no insurance. He said the next morning after he and his faithful wife had spent a sleepless night, "Wiley Couch poked his head in the door and said, 'How much will it take to set you up in business again'," and added, "the money was forthcoming."

In his funeral oration, Dr. Bachman G. Hodge told the assembly that Judge Couch had the welfare of his county at heart throughout his administration, and even on his deathbed. There was something better in his heart as demonstrated in the story of how, in his delirium, he arose in bed and said, "We must help that man." Asked, "What man?" he replied, "You know." It was Wiley Couch's big heart crying out for the less fortunate as it had all along the line. And lastly, as he came face to face with the One who admonished that we visit the widow and the orphan, give help to the poor and hungry, we can imagine none other than the blessing so anxiously bestowed by Him who one day walked the same paths, had like compassions, and finally went back to His Father to intercede for those whose gracious hearts commend them to the everlasting throne of God.

Family Farm Versus Factory Farm

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the magazine America entitled "Family Farm Versus Factory Farm," by Bishop Robert J. Armstrong, of Sacramento, discussing the campaign to remove the acreage limitation from the reclamation law.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FAMILY FARM VERSUS FACTORY FARM

(By Most Rev. Robert J. Armstrong)

Psalm 106: "He turned rivers into what was a desert and fountains of water into a thirsty land; and there He made the hungry dwell and they founded a city in which to live; and they sowed fields and planted vineyards and obtained the harvest of fruits."

The problem of California in its efforts to secure water for its parched lands is not without interest to every American by reason of the magnitude of the project and the issues that are involved therein.

Surrounded by the snow-capped Sierras in the east and separated from the Pacific Ocean by the Coast Range on the west, the Central Valley of California is a great basin—an area larger than the State of Illinois—oval shaped, more than 500 miles long and 100 miles wide, extending from Mount Shasta in the north and Tehachapi Mountains in the south, comprising an area of 60,000 square miles. In it are approximately 1,500,000 people. It contains about 9,000,000 acres of irrigable land. Because of deficient rainfall, the land must be irrigated for the successful growing of the fruit and vegetable crops for which the valley is world famous. Only one-third of the land is now watered.

The Sacramento River, which drains the north portion of this valley, flows to the south, where it joins the San Joaquin and empties into the ocean. The latter river draining the southern two-thirds of the valley gets but one-third of the total rainfall. As no rain falls from spring to autumn, the rivers either dry up or run very low.

Particularly for the southern valley has it been necessary for the farmers to pump water from wells. These were once shallow, but through excessive need of water the wells have had to be deepened, and in recent years the need has become acute.

To meet this problem, and also to bring the entire area under cultivation, the Federal Reclamation Bureau was asked by California to undertake a vast engineering enterprise. It has to build dams at various places in the mountains, and there balance the available water supply for the whole valley. This would add thousands of acres of irrigated land for the creation of prosperous farms and communities. These reservoirs of water would also supply hydroelectric power. Releasing the water in the summer months, they would not only insure navigation in the Sacramento River, but also maintain a flow of fresh water which can serve as a barrier to keep the salt water from backing up into both the Sacramento and San Joaquin Rivers. This is a tremendous project, one of the greatest in the world, and these incidental benefits play a great part in justifying the cost of its construction and maintenance.

More important than the physical features of this master plan, however, is the question of the policies and principles under which these costly works are built and operated.

The Reclamation Bureau was established in 1902 to reclaim the arid West. When President Theodore Roosevelt urged the passage of the act authorizing it, he said prophetically: "Our people as a whole will profit, for successful homemaking is but another means of upbuilding the Nation."

The Bureau's ideal has always been to establish family-owned and operated farms and therefore it set a limit of 320 acres for husband and wife. This principle of limiting acreage in single ownership to be served by

water from a Federal reclamation project was clearly laid down in the Federal Reclamation Act of 1902. It was signed by President Roosevelt and hailed at the time as a great Republican measure. In fact, the policy was supported by both parties, and this endorsement has been renewed since by each party when in power.

The purpose of acreage limitation is to promote sound communities of independent farmers who will make homes on the land. It controls speculation. Those who own more than this limit can receive project water for 320 acres, but for no more unless they agree to sell their excess lands at fair, appraised prices.

These provisions have been successfuly applied in many areas and have given the Nation such outstanding communities as those in the Yakima Valley in Washington, the Boise Valley in Idaho, the Salt River Valley in Arizona, and many others. The same rule applies to the present Columbia Basin project, where, in fact, the limit is 80 acres per family; so those who own thousands of acres will only obtain water for 80 of them. Thus the law encourages small acreage and is the enemy of monopoly and speculation.

Conditions in the California Basin are somewhat different than in other reclamation projects, for there already exist large land holdings in this territory. In one section of the valley to the south, large landed estates are numerous. It has been computed that in the southern section alone 1,183,000 acres are owned by 376 individuals or corporations. In four counties, the 13 largest owners possess 20 percent of the land. There are four who own 447,000 acres; three who own 54,000; six who own 68,000. In recent years a great investment has been made by liquor interests in the purchase of vineyards thousands of acres in extent. It must be borne in mind, however, that these holders of vast possessions are not directly penalized by reason of their landed wealth. Their present private systems of irrigation remain their own; in fact, they may be benefited if the underground waters are restored.

When in 1937 the project was authorized by Congress, State and congressional leaders from California were conspicuous at the hearings in urging passage of legislation which specifically states that the usual provisions of the Reclamation Bureau will apply. They knew that interest-free money meant a handsome subsidy to California water users. Perhaps they thought the law could be ignored or might be changed after the project was built with Federal funds, thus ignoring the fact that this project is an investment by the Nation's taxpayers for the establishment of family-sized farms.

Oblivious of the terms of the contract which was entered into with the Bureau of Reclamation and which California landowners should and must have understood at the time, a determined effort is now being made in Congress for repeal of the acreage limitation. It can readily be seen that the great benefits which are supposed to follow upon this repeal would accrue solely to owners of large acreages. The present heavy pumping charges they must pay and which serve as some restraint would be removed and cheap water would be theirs.

There is another danger, also. Following the introduction of bills to repeal the family farm and antispeculation provisions of the reclamation law as applied to California similar bills were introduced to repeal the law governing the Colorado and Texas projects. Thus it becomes apparent that should the repeal movement succeed for California, it would constitute an opening wedge for lifting the acreage-limitation law for the entire 17 Western States wherein irrigation is practiced.

To those who own and cultivate lands this could mean immense profit, for the difference between dry and watered land is considerable. This profit would come from Federal tax-free money appropriated for the purpose of developing family-sized farms. It would, indeed, give further encouragement to the corporate land monopoly in California and add impetus to the present trend toward industrialized agriculture and absentee farming. At the time of writing, almost 50 percent of the land to be benefited by water from the Central Valley project is held by less than 10 percent of the owners.

"The National Catholic Rural Life Conference has always advocated the better use of America's precious soil. It has always opposed factory farming and advocated more families living on the land, using the best and latest machinery which they would own cooperatively," says Monsignor Ligutti, executive secretary of the conference.

There exists a heavy demand for land in the country simultaneously with the dangerous national trend toward corporate farming and absentee ownership. This was demonstrated in the recent opening of 86 farm units on the Klamath reclamation project in northern California. Fifteen thousand veterans sent inquiries to the Bureau in the hope that they might obtain one of the available units, which consist of approximately 100 acres each. Unfortunately, there were only 86.

There has developed in California a sad situation that stems directly from the prevalence of large farms. It touches the heart of every priest or sympathetic observer. The situation is the condition of the migratory farm workers, who number over 300,000 and who make large farms and commercialized agriculture economically feasible. A fundamental principle in our American tradition has always been that farm workers should have the hope of someday owning their own little acre of land.

The Senate's Small Business Committee in its December 1946 report pointed out the social implications of corporate farming and industrialized agriculture in the detailed study of two California towns of about the same size. They were Arvin, a town surrounded by large absentee-owned farms, and Dinuba, the community trade center for an area of small family-type farms. In pointing out the better social conditions in Dinuba, the report states: "The social poverty of the great bulk of the Arvin population is more evident than their material poverty."

In releasing this report to the Senate committee, Senator MURRAY, of Montana, said:

"In manufacturing and commercial life the rapidly growing concentration of economic power in great corporations is a menacing threat to our whole economy, but when it takes hold of our farm areas in the form of great acreages of intensively cultivated tracts using hired labor and machines, veritable factories in the field, then that threat takes on a new and awful form. Our most cherished traditions are at stake."

The very existence of the migrant farm labor required by large farms is a basic problem in the establishment of a Christian social order. The migratory workers of the California farms are not to be excluded from among those whom Pope Pius XI referred to when in his encyclical Quadragesimo Anno he said:

"The number of the nonowning working poor has increased enormously, and their groans cry to God from the earth. Added to them is the huge army of rural wage workers pushed to the lowest levels of existence and deprived of all hope of ever acquiring some property in land and, therefore, permanently bound to the status of nonowning workers, unless suitable and effective remedies are applied."

In the encyclical Rerum Novarum, of 1891, Pope Leo XIII was thinking along similar lines when he declared: "Men not only should possess the fruits of the earth, but also the very soil. The law should favor ownership, and its policy should be to induce as many people as possible to become owners."

The latest attempt, therefore, to change our national land policy is a challenge which cannot be lightly laid aside by those who have faith in the liberty-loving independent American farmers who cultivate the soil. They rear the families that support and people America's large cities. The fight against the political power of corporate monopoly demands an extra effort from the unorganized majority of American cities. The same fight must be waged on the land.

The proposed legislation to repeal acreage limitation does not reflect the majority viewpoint of the residents of California's Central Valley or of the Nation. Indeed, protests have risen loud and long from many societies—religious, civic, and labor, in the hope that Congress will adhere to the established policies of the Reclamation Bureau that have brought homes and people into what were once the arid plains of the West.

Oregon Legislature Joint Memorials on Health of United States Livestock, Federal Social Security, United States Crab Industry

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. ANGELL. Mr. Speaker, pursuant to leave heretofore granted, I include in my remarks the following joint memorials adopted by the legislature in the State of Oregon:

Senate Joint Memorial 5

To the Honorable Senate and House of Representatives of the United States of America in Congress Assembled:

We, your memorialists, the Senate and House of Representatives of the State of Oregon, in legislative session assembled, most respectfully represent and petition as follows:

Whereas it is possible to maintain livestock in health in the United States only by exercising vigilance to prevent the incidence and spread of communicable diseases of such livestock; and

Whereas there is now prevalent in Mexico a highly contagious, infectious, and injurious disease of cattle and other livestock known as epizootic aphtha, or more commonly hoof-and-mouth disease; and

Whereas there is urgent necessity for preventing the spread of such disease across the international boundary line to livestock in the United States: Now, therefore, be it

Resolved by the Senate of the State of Oregon (the house of representatives jointly concurring therein), That the Congress of the United States be, and it hereby is, memorialized to enact legislation authorizing and enabling the United States to cooperate with the Republic of Mexico in checking the spread of said disease of livestock and authorizing the Department of Agriculture of the United States through its Bureau of Animal Industry, and other appropriate Federal departments and bureaus, to render expert advice and practical assistance to the Republic of Mexico for the purpose of controlling and eradicating communicable diseases of cattle and other livestock; be it further

Resolved, That the secretary of state of the State of Oregon be, and he hereby is, directed to send copies of this memorial to the President of the United States, to the President

and the Chief Clerk of the United States Senate, to the Speaker and the Chief Clerk of the House of Representatives of the United States, and to each of the Senators and Representatives in the Congress from the State of Oregon.

Adopted by senate March 20, 1947.
M. E. CORNETT,
President of Senate.
Concurred in by house March 27, 1947.
JOHN H. HALL,
Speaker of House.

House Joint Memorial 18

To the Honorable Senate and House of Representatives of the United States of America in Congress Assembled:

We, your memorialists, the Forty-fourth Legislative Assembly of the State of Oregon, convened in regular session, respectfully represent that:

Whereas the State of Oregon by extending public assistance on the basis of individual need bears more than 50 percent of the cost in many instances, especially for recipients of blind assistance and aid to dependent children, because of existing Federal maximums for purposes of matching funds; and

Whereas the Federal Social Security Act contains no provision for Federal matching funds for the aid of the parent or other related person assuming responsibility for children receiving aid to dependent children; and

Whereas the State of Oregon, in order to extend assistance to all needy persons in accordance with their needs, irrespective of cause, is providing general assistance and to the extent of 85 percent of such total expenditures, there being no Federal financial participation through grants-in-aid for general assistance; and

Whereas the State of Oregon, through general assistance, is expending large sums of money for medical care for persons who are receiving old-age assistance, aid to the blind, and aid to dependent children as well as medical care for other needy persons who are not eligible for old-age assistance, aid to the blind, or aid to dependent children; and

Whereas foster family home care is provided to a large number of dependent and neglected children and children in danger of becoming delinquent by the State of Oregon at a considerable cost from general assistance funds; and

Whereas the State of Oregon carries sole financial responsibility for the administration of general assistance; and

Whereas the present limitations in the Federal matching maximums particularly with respect to aid to the blind and aid to dependent children and the lack of Federal financial participation in the assistance of all other needy persons and dependent children as well as in the administration and expenditures of general assistance place excessive demands upon general taxpayers of Oregon, and constitute an increasingly serious financial burden for the State of Oregon and its political subdivisions: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the senate jointly concurring therein), That we, your memorialists, the Forty-fourth Legislative Assembly of the State of Oregon, do hereby most respectfully petition and request that the Congress of the United States, during the present session thereof, do enact appropriate amendments to the grants-in-aid programs of the Federal Social Security Act providing: (1) For the elimination of Federal matching maximums for individual payments of aid to dependent children and the deletion or increase of such maximums for old-age assistance and aid to the blind; (2) for Federal financial participation in assistance to a parent or other related person assuming responsibility for children who are recipients of aid to dependent children; (3) for Federal grants-in-aid to States for general assistance to any needy person as well as for old-age assistance, aid to the blind, and aid to dependent children; (4) for Federal financial participation in the costs of medical services made available to needy persons under State public assistance programs and in assistance payments to needy sick persons who reside in public or private medical institutions other than mental hospitals and tuberculosis sanitaria; (5) for Federal grants-in-aid or other appropriate provision of Federal aid to States in providing foster family home care for children in accordance with their individual needs; (6) for Federal financial participation in the administration of general assistance, including such welfare services as the States provide through the staff of the public welfare agency to help persons become self-supporting or avoid becoming dependent, and to contribute to their general welfare.

Adopted by house March 13, 1947.
JOHN H. HALL,
Speaker of House.
Adopted by senate Marcl 28, 1947.
M. E. CORNETT,
President of Senate.

House Joint Memorial 19

To the Honorable Senate and House of Representatives of the United States of America in Congress Assembled:

We, your memorialists, the Senate and House of Representatives of the State of Oregon, in legislative session assembled, most respectfully represent and petition as follows:

Whereas the processing and marketing of crab meat is an important industry of the Pacific coast States and Alaska that is capable of supplying the needs of the United States for such product, if given a fair opportunity so to do; and

Whereas the importation of foreign crab meat has hampered the development of this industry and will, if unrestricted, seriously curtail and impede the growth and development of an important industry of the Pacific coast States and Alaska: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the senate jointly concurring therein), That the Congress of the United States be, and it hereby is, memorialized to enact legislation reasonably restricting the importation into the United States of foreign crab meat, and defining that term to include not only crab meat produced in foreign waters, but also crab meat produced, processed, canned, marketed, or distributed by foreign nationals outside the United States and Alaska; be it further

Resolved, That the secretary of state of the State of Oregon be, and he hereby is, directed to send copies of this memorial to the President of the United States, to the President and the Chief Clerk of the United States Senate, to the Speaker and the Clerk of the House of Representatives of the United States, and to each Member of Congress from the State of Oregon.

Adopted by house, March 15, 1947.
Readopted by house, March 29, 1947.
JOHN H. HALL,
Speaker of House.
Adopted by senate, March 29, 1947.
M. E. CORNETT,
President of Senate.

Divided Loyalties

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1947

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD a very fine editorial entitled "Divided Loyalties."

This editorial appeared in the Chattanooga News-Free Press of April 7, 1947. The editorial is well worth the reading of every person who enjoys the freedom and liberty of our American democracy.

Specifically, the editorial refers to a protest made by Americans of Armenian extraction against President Truman's plan to aid Turkey in the stop-communism program, and, as the editorial points out, such a protest on the part of these Armenian-Americans is a reminder that all too often immigrant groups in this country are prone to put bitter hatreds and other prejudices that they and their forebears brought with them from the Old World ahead of the welfare of the United States.

Mr. President, regardless of the matter of lending money to Turkey, Greece, or any other nation, the chief consideration for doing such a thing should be the welfare and the security of our democratic form of government and of our people, the citizens of the United States of America.

Of course, consideration should be given to the welfare of the world as a whole. The important question raised by this editorial, however, is that these Armenians who have become American citizens are thinking more of their homeland overseas than they are of the home of their adoption. It emphasizes a thing, Mr. President, with which we have been confronted daily in recent years, and that is pressure brought by so-called foreign nationals and racial groups who are making this country their home, yet are apparently more interested in persuading America to do this, that, or the other, in the interest of their home across the seas.

In these matters too often the welfare of our democracy is wholly a secondary consideration. Those who are citizens in this United States of America and enjoy the privileges, protection, and advantages which are given to all American citizens should not take these privileges so lightly. It seems to me that throughout the recent years we have permitted too many hundreds of thousands of these foreigners to become citizens without impressing upon them what it really means to be an American.

We give our citizenship away too cheaply and, too often, I fear, to unworthy persons: if not unworthy, indifferent to the blessings which come with such citizenship. Too much of the free giving of citizenship rights can and will destroy our country.

It seems to me that it would be a very good time now to begin to review the background, and indeed the recent activities, of many of those who have been granted naturalization, with a view of taking away from them the rights of citizenship where they appear to be more interested in the welfare of other lands or other people. That which is given easily is often cherished indifferently.

To be an American citizen is the greatest material privilege that can be extended to any human being. There is not another nation on the face of the earth which gives to its people the things that America gives to them. From childhood they are given a free education in

every State of the Union, and after completing their education they are afforded business opportunities which defy comparison in any land.

They enjoy the right of freedom of religious worship and the right of freedom of speech. When they are imposed upon or injured to their damage, they have full and complete recourse in the courts of the greatest government on the face of the earth. Their case may be passed upon by a jury of their peers in a court that is honest, and the right of appeal to the highest court of the land is always possible. There is no sham and dishonest trial in the name of justice, but their rights of all kinds are protected in competent and honest tribunals.

They enjoy the right to own property in their own name. They have the privilege of casting a free and honest ballot in the elections throughout the land. They have a voice in their Government and of its citizenship they are considered a component part. They are employed at work in industry, or by their Government, without discrimination, and their success is limited only by their ability. They are paid the highest wage received by any citizens of any land upon the globe, and they enjoy the highest standard of living afforded anywhere.

Here they are out of reach of secret spies and they can lie down and rest under a roof of their own when night time comes, without fear of invasion of their homes. Here they are not molested by the gestapo or by so-called SS troops, and they may live in peace and quiet and happiness with full and complete individual protection. They may rear their families under the good influences of fine communities built up by honest, fearless, God-loving citizens of a great land, and when old age with its infirmities finally overtakes them, they are cared for by a grateful government and protected throughout the years that be ahead of them, until the end of their mortal existence.

Mr. President, we should turn our serious attention to improving the conditions of our own people in this country in time of stress and teach these comparative newcomers that the price of citizenship in the greatest Christian government in the world does not come cheap.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIVIDED LOYALTIES

Announcement that an organization claiming to speak for 150,000 Americans of Armenian extraction wants to be heard in Washington in protest against President Truman's plan to aid Turkey in the stop-communism program is a reminder that all too often immigrant groups in this country are prone to put hatreds, loyalties, and other prejudices that they bring with them from the Old World ahead of the welfare of this country.

No one can blame the Armenians for hating the Turks. The history of Turkish treatment of Armenians is a dark chapter indeed.

But we do not propose to help the Turks because we love or admire them. We plan to strengthen them against Communist aggression because they occupy a strategic position in the Middle East and we do not want Russia to take over control of this strategic position. If we do not help the Turks, Russia will probably take them, and the Dardanelles with them.

The Armenians say they do not object to this country helping the "heroic Greeks," but that it would be very bad for us to help the Turks.

In the interest of the safety of the United States and of freedom in every part of the world where it still survives, however, it is just as important for us to help the Turks as it is for us to help the Greeks. It doesn't make a bit of difference how bad the Turks have been or now may be.

Because of their ancient hatred of the Turks the Armenians who are protesting the Truman program do not understand this.

These Armenians are now Americans, or at least they should be. They and all other immigrant groups should put the welfare of their new home—the land that has given them the priceless blessings of freedom—first in their thoughts and should welcome that which is best for this country, even if it means something advantageous for people they hated over there.

The Armenians in this country are relatively few and are not strong enough to do much harm.

There are, however, a great many other newcomers in the United States, and far too many of them cling to old world prejudices, ideologies, and ways of thinking to a degree that makes it impossible for them to be desirable Americans. In the aggregate, they are capable of exerting influences that could be—and some that are—definitely harmful to the America that is loved by those who have been here longer. Communism, and other forms of radicalism, for examples.

VITO MARCANTONIO, the most un-American of all the men who have ever gone to Congress, who follows the Communist Party line on many issues, although he denies being a Communist, is kept in Washington by a hodgepodge of foreign groups in Harlem.

Perhaps a congressional immigration committee, as well as that on foreign affairs, could find food for thought in the protest of anti-Truman policy Armenians.

The Price Problem

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article discussing the trend of prices, the causes of that trend, its significance, and what should be done about it. Since the preparation of this article prices have gone up 2.1 percent further. This is a careful analysis of the most important problem confronting the country, and should have our serious study if we are to avoid disastrous consequences.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times magazine of April 20, 1947]

THE PRICE PROBLEM: AN ANALYSIS BY BOWLES—"SETTING STRAIGHT" THE RECORD OF WHAT HAS HAPPENED, HE PROPOSES A SEVEN-POINT PROGRAM

(By Chester Bowles)

(The upward trend of prices is now being widely debated. Here is one view of the significance and causes of that trend. The author was head of the Office of Price Administration from July 1943 to February 1946, and Director of Economic Stabilization from then until his resignation last June.)

In the last few months I have frequently been asked to express my views on the upward rush of prices which has now been in full swing since last July.

I have refused these past requests for one reason. Like most other people, I am bored by ex-Government employees who spend their time explaining how much better things would be if only their advice had been followed.

Last week, however, I changed my mind. Some recent explanations for the price increases of the last 10 months simply cannot go unchallenged. Here are a few of the most serious:

1. "Certainly, prices are too high. But incomes are high, too, and so there's no great burden on anyone. In addition, our people have plenty of savings to fall back on."

2. "Of course, this inflation is dangerous. But it was the only possible way that we could get production rolling."

3. "Our businessmen and farmers could cut these high prices quickly enough if they really wanted to."

4. "The whole trouble lies with labor, with its constant strikes and incessant demands for higher wages."

None of these explanations can stand up under close examination. Each one does some group in our economy a grave injustice. If we are to learn anything from this unhappy experience we should set the record straight without delay.

First, let's see what has actually happened to prices since Congress decided to abandon over-all price controls last June. How do the increases of the last 10 months compare with the action of prices when effective over-all price control was in operation

Between Hitler's invasion of Poland in September 1939 and February 1942, prices in general rose with increasing rapidity. The passage of the Price Control Act in February 1942, enabled the Government to check the rate of increase. But it was not until President Roosevelt's "hold-the-line" program began operating in May 1943 that price control really became effective.

Between May 1943 and VJ-day in August 1945, average prices were held almost completely stable, while production zoomed to higher and higher levels. (The prices of some things, of course—such as apparel—went up. But the prices of others—such as fresh vegetables, fruits, and fish—came down.)

Between VJ-day and last June price increases were necessary on some manufactured products to smooth out the adjustment from war to peacetime production. But even with these post-VJ-day adjustments, the increase in the cost of living between May 1943 and June 1946, according to the Department of Labor, was only 6.6 percent, while the official index of wholesale prices rose only 8.5 percent in this entire 37-month period of heavy inflationary pressures.

When effective over-all price controls were abandoned by Congress last June 30, prices immediately shot upward. In July alone the increase in living costs equaled the accumulated increases of the last 3 years.

In the last 10 months wholesale prices have risen 31 percent—that's almost as much as in the previous 7 years, and nearly four times more than in the previous 37 months of effective price controls. Moody's index of general commodity prices shows an increase of 63 percent since a year ago, while Moody's index of raw industrial material prices shows an increase of 61 percent. Food at retail, which had increased only 1 percent in the 37-month period between May 1943 and June 1946, has increased 31 percent in 10 months.

How about the prices that our 40,000,000 families are now being asked to pay for

individual items? Since last June drug and pharmaceutical products are up 67 percent. That alone put a big dent in many family budgets—particularly those of our older people who can afford it least.

Fats and oils have doubled. Soap has increased 62 percent. Lard 72 percent. Oleomargarine 73 percent. Milk is up 32 percent. Coffee 49 percent. Wheat, which last June was selling at $1.60 a bushel, recently hit $3, with a resulting 25-percent increase in the prices which Mrs. Housewife now pays for bread.

Meat for the average family is up 60 percent. Pork chops, which cost you 38 cents a pound last June under price control, now average 63 cents. Veal cutlets have risen from 45 cents to 75 cents. Sirloin steak from 55 cents to 73 cents.

And you had better think twice before you say "Let 'em eat fish." Cod steaks, which cost Mrs. Housewife 27 cents last June under price control, are now selling for 45 cents. Flounder has risen from 16 cents to 35 cents. Boston mackerel, 18½ cents at the June OPA ceiling, has also hit 35 cents, with Spanish mackerel 10 cents higher.

We who were responsible for price control thought that apparel prices were too high last June. And yet, in the last 10 months, cotton goods have shot up 39 percent, with other apparel rising from 10 percent to 50 percent. Leather prices are up 63 percent.

In the building material field price rises in the last 10 months have been equally startling. Take paint, for an example. Since last June pig lead has increased 60 percent. Cottonseed oil has more than doubled. So has linseed oil. Copper has gone from 14 to 21 cents a pound.

These increases have inevitably led to price rises of 60 percent in household paints. Lumber, which was high-priced even under price controls, has shot up an additional 50 percent since then, according to the Department of Labor.

So much for the dismal inflationary record of the last 10 months. How about the so-called explanations which I listed earlier in this article? Let's take them in order and see to what extent each may be valid.

1. "Certainly, prices are too high. But incomes are high, too, and so there's no great burden on anyone. In addition, our people have plenty of savings to fall back on."

If you are tempted to offer this suggestion to an average American family, you had better smile when you do it.

In spite of our widely heralded prosperity, more than half the families in the country are still living today on less than $2,000 a year; and, according to the Bureau of Labor Statistics, 40 percent of their incomes must go for food. Because of the price increases of the last 10 months the standard of living of tens of millions of our people has been sharply reduced.

"But," you may ask, "why don't people dip into their savings in order to tide them over a temporarily rough period?" For the simple reason that most people do not have any real savings into which to dip.

Our total savings during the war period were admittedly great. But the Federal Reserve Board has established that 65 percent of these savings are held by the third of all our families with the highest incomes. The average savings of the lower-income half is only $700 for each family.

But these figures are already 9 months old. By now the savings of the majority of our people have sunk to still lower levels.

How about explanation No. 2? "Of course, this inflation is dangerous. But it was the only possible way that we could get production rolling."

This argument will not stand examination any better than the first. As prices have moved up, the purchasing power of millions of families has been reduced. As a result, production in many fields is actually less than a year ago. The actual unit volume (not inflated dollar value) of food sold today is roughly 8 percent below that of a year ago. The increase of 30 percent in milk prices in the last 10 months has resulted in a 10 to 15 percent drop in fluid milk consumption (that's the technical term for the milk you give the kids).

There's about 8 percent more meat available for civilians than a year ago, largely because of lower Army requirements. The increase seems much greater to our upper-income and middle-income families. Why? Because tens of millions of lower-income families have been forced to reduce their meat purchases sharply. The well-to-do may be eating half again more meat; but our less fortunate citizens are eating less.

Restaurants on the average are showing a reduction in business. Drug store business for the country as a whole is 5 percent less than a year ago.

Each week the newspapers still herald an increase in department store volume over the previous year. But an examination shows that this increase in recent months has been the result of inflated dollars. The actual volume of goods moving across the counters is less today than a year ago under the price controls which were said to make production impossible (remember?).

Nondurable goods are off 15 percent. Durable goods production is, of course, higher than a year ago. In the Federal Reserve Board index civilian production (which excludes foods) is up about 8 percent, although the monthly rate of increase has been far less than in the price control period between VJ-day and June 1946.

Automobile production has climbed steadily. So has the production of washing machines, radios, and vacuum cleaners. There are still many people who can afford them even at the present high prices (40 percent to 70 percent above 1940).

The record in housing offers additional proof that inflation tends to diminish total production rather than to increase it. The immediate emergency demand for new housing has been estimated at not fewer than 5,000,000 units. In 1946, during the better part of which price controls on building materials were effective, we started to build roughly 1,000,000 new units.

As the distortions of the war period dropped further behind us, we might have expected to increase this figure in 1947 to a million and a quarter new homes, or perhaps even to 1,400,000.

How much new housing are we likely actually to get? The experts estimate a maximum of only about 800,000 units. Very few of our GI Joes can pay the present high prices, and not many have rich fathers-in-law. The building industry is pricing itself right out of the market in the face of the greatest housing demand that the country has ever seen.

How about explanation No. 3? "Businessmen and the farmers could cut these high prices quickly enough if they really wanted to."

There have been many efforts to talk prices down by appealing to the better nature of our businessmen and our farmers. These efforts have been notably unsuccessful, and for two excellent reasons:

In the first place, no individual businessman is wholly the master of his own decisions as far as prices are concerned. One businessman's price is the next businessman's cost. No one businessman, no matter how enlightened or public-spirited he may be, can do much by himself to control what happens to the final price that we consumers pay.

A second reason why price control by entreaty has proved ineffective lies in the basic nature of the profit system. In the free-enterprise system most prices will adjust themselves to reasonable levels under normal conditions. When the supply of goods and the money available to pay for them are in balance competition will tend to bring prices down, and, by and large, to assure the public improved values.

Since 1941, however, conditions of civilian supply and demand have been badly distorted by the war and its aftermath. We have been in a seller's market—a market in which supply and demand on most products have been unbalanced to the advantage of the producer and the distributor.

It's all right to talk glibly about the public duty of our businessmen and our farmers to sell only at reasonable prices in a period in which they can, for the most part, get whatever they ask. But, human nature being what it is, can we really expect the individual farmer to sell his wheat at $1.60 a bushel when his neighbors are selling theirs at $3 a bushel? Or the businessman to cut his prices 30 percent or 40 percent below what he knows he can get? Businessmen and farmers, for the most part, are no more selfish than the rest of us. But what would you do under such circumstances?

How about the fourth explanation? "The whole trouble lies with labor, with its constant strikes and incessant demands for higher wages."

The claim that higher wages since last June are the basic cause for the sharp increase in prices is simply untrue. Average wholesale prices for all industrial products have risen 26 percent in the last 10 months. Wages in this same period are up only 5 percent. In most industries—thanks to rapidly increasing volume and lower overhead costs—this 5-percent increase could, in all probability, have been absorbed under price control with no increase in the final price at all.

Nor can we explain away the sharp price increases or the slackening of production in some industries since last June on the basis of strikes and work stoppages. During the last 10 months the number of hours lost by strikes has been at much the lowest point since VJ-day.

The myth that our working people are reveling in fat incomes and luxury living dies hard. Our average wage earner is worse off today than he was 3 years ago. It's true that his hourly wage rate on the average is 20 percent higher. But because he is working fewer hours his weekly pay check has risen only 3.6 percent.

Figure in the increased prices that he and his wife have had to pay since last June and you find that his weekly pay check will buy 16 percent less today than in 1944. Add on the fact that our working people are clearly conscious that business profits after taxes and net farm income are running at a rate 30 percent to 40 percent above the wartime peaks, and you will understand their rapidly growing bitterness.

If it is unfair to blame the individual businessman, the individual farmer, or the workers in our plants for what has happened since last June, whom should we blame?

Price control for the average businessman was a headache. In the vast OPA pricing operation, there were often delays and occasionally some stupid mistakes.

With only 1 year to go, many business-association leaders rejected the counsel of such seasoned businessmen as Eric Johnston, George Meade, Jack Straus, of Macy's, and the heads of the Committee for Economic Development, and impatiently went all-out for a "free economy"—in the face of conditions that made the normal working of a free economy impossible.

In one of their anti-price-control advertisements last June the National Association of Manufacturers assured us:

"If OPA is permanently discontinued, the production of goods will mount rapidly, and through free competition prices will quickly adjust themselves to levels that consumers are willing to pay. * * * Supply will

quickly catch up with demand. Prices will be fair and reasonable to all. Quality will be improved. * * * Send for a booklet that explains how price controls cause inflation."

Some of our leading politicians who should have known better must also bear their share of the blame. Senator ROBERT TAFT was one. Senator KENNETH WHERRY was another. On June 12, 1946, Senator WHERRY said: "Mr. Bowles has said that if price controls were eliminated, the price of meat would go up 50 percent. Mr. Bowles is trying to scare us. My prediction is that without price control meat will cost less than today." If Mrs. Wherry keeps a budget, the Senator will find that meat is now up 60 percent.

Last June, in the face of weeks of skilled anti-price-control propaganda, three out of four Americans—according to Gallup—were still solidly in favor of the OPA in its fight to hold down prices. But a majority in both Houses of Congress chose to listen instead to the lobbyists who represented vested interests.

It's easy to blame our elected Representatives for folding up under pressure. But, in all fairness, we should recognize that never in our recent history had any Congress been faced with so much pressure applied with such finesse.

Some competent economists have figured that the resulting price increases which American families had had to pay since last June (that is, the price increases which would have been avoided if price controls had been continued for another year) have already totaled $8,000,000,000.

What is likely to happen in the next few months? Will prices continue upward? Will they soon start down? When they drop, will they drop with a bang?

Clearly, no one really knows, and the wisest are the least inclined to prophesy.

Many economists feel that prices will continue to rise in an increasingly erratic fashion until late spring or early summer; that a sharp decrease will occur then in farm prices, which will be the signal for a general break in all prices.

Some of them expect that the drop will be sharp; that production will be curtailed; that we shall be faced with unemployment ranging from four to seven million, accompanied by a flurry of bankruptcies and foreclosures; and that recovery will take place in 1948.

It may be that the drop-off in prices will be much sharper and that unemployment will be substantially increased above the guesses of the economists.

Or it may be that shipments of food and other economic aid overseas will tend to cushion the adjustment. While many prices may move sharply downward, with some accompanying economic pain, the adjustment in general may be made without too much damage.

Let's hope and pray that we'll be let down relatively lightly.

There are, of course, certain steps that we can take in the next 60 days which will cushion whatever economic shock may lie ahead. None of them could be called radical by any stretch of the imagination. If we are wise, we will join together, Republicans and Democrats, liberals and conservatives, eliminate the political maneuvering, and promptly put them into effect:

1. We can continue rent control for one more year from June 30, 1947. A sharp increase in rents right now, added to the sharply increased cost of living since last June, would be disastrous for the 18,000,000 families who live in rented dwellings.

2. We can pass the Taft-Wagner-Ellender bill promptly. (Senator TAFT deserves full credit on this one.) This bill, vigorously administered, can put our housing program back into high gear. Not only will it assist veterans and others in getting decent homes but it will help materially in maintaining employment.

3. We can broaden social-security payments to include farmers and self-employed.

4. We can raise minimum wages from 40 cents an hour (the figure set in 1938) at least to 65 cents an hour, to make up for the increased cost of living.

5. We can assure our farmers permanent protection against disastrously low prices. (The legislation is now on the books; but they need to know that it will be renewed in 1948.)

6. In the international field we can adopt a bold program of economic aid to the war-torn peoples of western Europe and Asia.

7. We can forget the optimistic political promises of last fall and pass a really adequate tax program, predicated on a reasonable Federal budget, with a reduction in the national debt.

Such measures will not neutralize our mistakes of the last 10 months. They will not restore our $8,000,000,000 of lost purchasing power. But, if we act promptly, they will help. They might even turn a potential smash-up into a modest readjustment of the cream puff variety.

Hunger, Canals, and Oil Fields in the Near East

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1947

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered recently by Samuel Guy Inman on the subject Hunger, Canals, and Oil Fields in the Near East. This splendid address deals with the pending measure and should be in the hands of all Members of Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HUNGER, CANALS, AND OIL FIELDS IN THE NEAR EAST

(By Samuel Guy Inman, guest professor of international relations, Ohio Wesleyan University)

President Truman warned Congress, in his epoch-making speech of March 12, that he was making a proposal that would profoundly affect the foreign policy and the national security of our country. It is this section of his proposal, and with full approval of aid to the suffering people of Greece and a full recognition of the difficulty of the problem which the President and his advisors are seeking to meet, that I respectfully challenge, what is being called the "Truman doctrine."

When we talk about a doctrine as a basis for a foreign policy of a great nation, we get into serious business. First and foremost is the Monroe Doctrine. This was announced after years of discussion, and months of correspondence between President Monroe and some of the wisest statesmen the world has known, including Thomas Jefferson, John Q. Adams, ex-President Madison. Because it was so carefully and patiently worked out, it became the rock on which our foreign policy has rested for a century and on which the greatest democracy in the world has been built. A substitute for the Monroe Doctrine cannot be composed in a cabinet meeting or two and a few days debate in the Congress.

Another doctrine, the Coolidge doctrine was much discussed in 1927. It proposed that wherever there was an American citizen or American property, there was likewise a part of American territory. It was backed by the President's statement that "the legions which she (United States) sends out are armed not with the sword, but with the cross—we have no purpose save to merit the favors of Almighty God."

Another famous pronouncement was made by President Theodore Roosevelt. It was called, probably because of the modesty of the author, "The Roosevelt Corollary of the Monroe Doctrine." The central point in the Roosevelt corollary was that disorder in any nation would require intervention by some outside power. In the American continent, such police power, because of the Monroe Doctrine, should be exercised by the United States. The United States Senate refused to endorse the doctrine. But President Roosevelt carried it out anyway. It led the United States into a series of interventions in Nicaragua, Panama, Dominican Republic, Haiti, and other Caribbean countries. From 1900 to 1932, there were forty such armed interventions in the affairs of our neighbors. In those days the Latin Americans called the Pan American Union "the colonial section of the Department of State."

Every one of these 40 interferences was undertaken under the same formula—there was disorder; if the United States did not stop it, some other nation would. Major interventions were accompanied by loans and United States experts, who were to aid, it was said, the suffering people. We now know that the people who were actually aided, as President Taft bluntly stated, were our businessmen.

INTERVENTION OUTLAWED

Finally we realized that what we were actually doing was to lose trade, alienate our neighbors, and build up suspicion and hatred around the world. The United States Senate made a thorough investigation of the whole mess. President Hoover sent an investigating committee to Haiti and withdrew the marines from Nicaragua. (Most significant is the fact that Nicaragua, where our reforming soldiers were there the longest, from 1912 to 1932, conditions today are the worst.)

Under the wise leadership of Cordell Hull at the Montevideo Conference the United States signed a solemn treaty we would never again intervene in the affairs of other American Republics. The new good neighbor policy won the Latin American Republics to our side during the Second World War.

Only 3 weeks go in Mexico City, President Truman told the Latin Americans we would always keep not only the letter but the spirit of this pledge. It was Mr. Truman also who made a solemn appeal to all the nations at the close of the San Francisco Conference to keep their word to settle all disputes according to the United Nations Charter.

Unilateral intervention by this country was about to destroy the Pan American Union, when we right-about-faced, and saved that institution. Unilateral intervention in Greece and Turkey would kill an effective United Nations.

It would also start driving the nails in the coffin of the Pan American Union. Already we have begun to show indifference to inter-American affairs because of our interest in far-away places. Two years ago we signed the Act of Chapultepec, which was hailed as a great step toward peace. But we have failed to do anything about implementing that pact. This inaction is raising the old suspicions south of the Rio Grande.

Gentlemen of the Senate, let me pose a question: If we take on Turkey as our partner, who remained neutral and played with the Nazis during the war, how will we explain our policy in Argentina, where we work against the Government because it remained neutral and played with the Nazis?

A GLANCE AT THE MAP

"It is only necessary to glance at the map," says President Truman, "to realize the impor-

tance of Greece and Turkey." That is exactly what the Senate should do—take a look at the map—and what do you see? You see not only the suffering Greeks, whom we all want to help; you see the Suez Canal, the Dardanelles, and the oil fields of Saudi Arabia, Iraq, and Iran, announced by American oil companies last week as the richest in the world. "We floated to victory on a sea of oil," said Winston Churchill when referring to the First World War. Let us be careful that we do not also float into the third world war on a sea of oil.

"Look at the map," said Henry Cabot Lodge to the Senate, which had an immense map before it at that session, which showed the rich oil fields of South America recently discovered. Stay out of the League of Nations, the Senator appealed, and make a deal with Colombia, near home, for oil. So we stayed out of the League and went into the South American oil fields.

"Look at the map," said President Theodore Roosevelt, when explaining his statement, "I took the Canal Zone," and his interventions in the nearby Caribbean countries.

One week after President Truman addressed the Congress on the Greek question, the Navy announced the sending of a task force to the Dardanelles. By its name that force of battleships must have a task to perform.

THE DARDANELLES

In all honesty, the Congress and the people of the United States must not allow themselves to be drawn in the question of the Dardanelles without recalling what this country did in a similar situation in regard to the Panama Canal. Colombia originally held the potential Canal Zone, as Turkey now holds the straits which connect the Black Sea and the Mediterranean. When Colombia would not accept our terms for the Canal Zone we encouraged a revolt in a part of her territory, Panama, and sent battle cruisers to keep Colombian troops from landing to suppress the revolution. We then arranged a quick lease with Panama. We justified it on the grounds of not allowing a backward country to hold up the progress of a world power.

As early as 1850, when Great Britain was strong in Central America, we signed the Clayton-Bullwer Treaty, which stipulated that the United States and Great Britain should build and fortify the Isthmian Canal. After the Spanish-American War, when we definitely became a world power, we told Great Britain that if she would not agree to abrogate that treaty we would ignore it anyway. We alone must have the right to build and fortify the Canal. Realizing there was nothing else to do, the British promised to let us have our way in the Caribbean if we would not limit her around the Suez Canal.

Does not our own experience suggest that we get together with Russia and arrange the question of the Dardanelles, now that Russia has become a great power, as we had at the opening of the twentieth century? According to our history, what would we do about the Dardanelles if we were in Russia's place?

THE UNITED STATES IN THE NEAR EAST

Following the First World War, the United States was asked to take a mandate over Armenia, which the Turks were about to wipe out of existence. We refused for good reasons. But the reasons given by Senator Brandegee, in opposing the matter in a notable Senate debate was, "Why should we take a mandate over Armenia? She has no coal, she has no oil." Conditions have changed in the Near East.

Recently oil has appeared in quantities in Saudi Arabia. The most juicy gossip at the San Francisco Conference was the competition between the Standard, Dutch Shell, and Sinclair interests as to which one could entertain most lavishly the Arabian delegates. During the last few weeks the Arabian Oil Co. and the Anglo-Iranian Co. have announced plans to build a 1,000-mile pipe line from the Persian Gulf to the Mediterranean.

Bitter debate in the Security Council was caused by the presence of Russian troops in Iran. We denounced their presence. They withdrew. Since then the United States sent a military mission to Tehran, which is today busy organizing an Iranian army and police force, as our experts are aiding in the reorganization of Persia's finances and public-health program.

We can evidently take care of our interests in that section of the world without taking on the responsibility for adjusting all the political problems in that boiling caldrom of human passions.

USE THE UNITED NATIONS

There is just one way to face this terrible dilemma. It is not by challenging our opponent to war. It is by challenging him and all other nations to work out the problem, as all have pledged, through the United Nations.

If the United States bypasses the United Nations in the very first days of its life, we will never live down the accusation that we killed the organization. We are the most powerful nation in the United Nations. We pay around 37 percent of its budget, we have the largest number of people in the secretariat, and we have invited it to make its home in our midst.

If the United Nations has been slow in organizing, now is the time for us to use our great power to speed it up. If we would put our moral passion, our financial power, and our experts to work and appeal to our friends in the organization to help, we could with hope put the whole crisis up to the United Nations. A country that can speed up its processes from making 1,000 airplanes a year to 50,000 to win a war can speed up the work of the United Nations sufficiently to win the peace. What the united group could not possibly do, it could allot to this country. That is a common process in international organizations.

One more step is open to us—a serious one. If Russia is violating its pacts and preparing for war, let us accuse her before the tribunal that we have pledged to use in such cases. She could not veto action regarding such an accusation. Article 27 clearly states the decisions of the Security Council "shall be made by an affirmative vote of seven members, including the concurring votes of the permanent members, providing that * * * a party to a dispute shall abstain from voting." It is important for the public to realize that Russia, according to the Charter, cannot veto an action against her when she is the accused party.

Article I of the Charter, which President Truman so earnestly pleaded for at San Francisco, says that the purpose of the United Nations is "to take effective collective measures for the prevention and removal of threats to the peace [and] settlement of international disputes or situations that might lead to the breach of the peace."

If we do not keep this pledge so soon after making it, we will give to the outside world the proof of their belief that recent appointment of a considerable number of military men in our diplomatic service contrary to former precedents, indicates a fundamental change in the traditional principles of the nations. Students of international problems know that one of the most fruitful causes of war has been loans by big countries to little ones. So when the United Nations was organized, care was taken to get away from this old imperialistic custom. A world bank was set up by the nations in a meeting at Bretton Woods so that loans could be made by a group of nations and not by individual countries. A total capital of $9,000,000,000 was subscribed by more than 40 nations, not including Russia. This bank has been slow in starting. It needs some big challenge to get it going. Greece could be that challenge. And Russia could not stop the loan, because Russia is not a member of the bank. The United States, on the other hand, could put the loan through, because it is the largest stockholder and furnishes the most important officers of the bank.

The Balkans are the powder house of Europe, and the Near East is a stalking caldron of religious, racial, and political passions. All the big European nations have gotten their fingers burned, when they have not actually started a war, by attempts to mix in the affairs of those unhappy lands. Great Britain is the last one to acknowledge defeat. Now, as good friends, they want to turn over the job to us. By recent experience, we learned there was nothing but trouble and expense in such an intervention in China, so we have withdrawn our troops. How can anyone look forward to the long future and expect that this proposed departure from all our past will bring us, unaccustomed to such a task, anything more than a final disillusionment and ruin that it brought Rome, Spain, and other empire builders.

AN APPEAL

Mr. Chairman, I heard you say to a little group of consultants of the State Department at San Francisco that your experience at that Conference had converted you completely to the method of consultation. "I believe there is no problem so great," you declared, "that it cannot find a settlement through conference if the interested parties are honest and intelligent, and will take sufficient time to work the matter through."

I appeal to you, Mr. Chairman, to Senator CONNALLY, your running mate at San Francisco, Lake Success, and other recent meetings of the United Nations, as I appeal to every one of the 79 Senators who voted so heartily for the United States to join the United Nations, as I appeal through this Committee of Foreign Affairs, to President Truman, who stirred us at San Francisco when he exclaimed on the final day, "What a wonderful day this can be in history"—I appeal to all of you that you do not depart from the glorious traditions of our country and rush quickly into this Near East adventure. Rather, let us keep our word with the rest of the world, call their representatives together, and lay before them this overwhelming problem, too big for any one nation to solve.

The Truman Doctrine

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1947

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement written by Fred P. Myers, a prominent attorney of voteless Washington. It expresses a viewpoint worthy of study.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Let us hope that the adoption of the Truman doctrine will be accomplished without any delusion and with a full realization of its commitments and implications. Whatever its apparent purpose, the practical and ultimate effect is gradually to integrate our foreign policy with that of Great Britain

and to underwrite the British Empire, beginning at the point of most imminent danger, at the crossroads of the east. It will be recalled that this matter was first publicly precipitated by the urgent request of Great Britain to assume and take over her commitments in Greece, because of her inability to maintain her position there after March 31. Now the proposition is presented under the harmless guise of a humanitarian appeal for relief of a newly-discovered condition of distress in Greece (to which as such there may be no serious objection), but extended to aid to Turkey, and reinforced by a proposed world-wide crusade against communism. Although in a recent letter to Mr. Earle, President Truman referred to the fear of communism in our country as a "bugaboo," it is now found necessary to brand the opponents of the proposal with the stigma of that dreaded ideology. If there is any doubt as to where the proposed Truman doctrine is expected to lead our Nation, it should become clear from great Winston Churchill, who as Prime Minister of England said several years ago of his Empire, "We mean to hold our own." In an article entitled "If I Were An American" in last week's issue of Life Mr. Churchill said in a flattering challenge:

"Britain has, of course, been grievously weakened. * * *. The British nation will rise again, if not to its former preeminence, at least in solid and lasting strength * * *. But Britain and the British Commonwealth as a whole will welcome the establishment of American power in the Middle East and will give potent aid by every means. Americans should not hesitate to march forward unswervingly upon the path to which destiny has called them."

A study of the map of the eastern countries and waterways, and a familiarity with history clarifies the interest and the plight of Great Britain in connection with the present proposal of the administration. In order to maintain her vitally important imperial life line through the Mediterranean Sea, the Suez Canal, to the Persian Gulf and eastward to her vast possessions and conquests, it is necessary for Great Britain to have pro-British and subservient regimes in the countries adjacent to that life line. It will be recalled that the Crimean War, nearly a century ago against Russia was but an incident of Britain's necessary policy to protect her far-flung empire along the line of the Mediterranean Sea and the region referred to by Kipling as "east of Suez." Now since Great Britain confesses her inability to maintain that position, we are about to step in to hold the line against Russia. In effect, we are thus about to commit our Nation irrevocably to a policy of making our Monroe Doctrine practically coextensive with the British Empire, and to intervene wherever the alarm of communism is sounded. We are thus about to follow the siren voice of manifest destiny apparently heedless of the inevitable complications and historic fate of self-appointed rectors of the destiny of other nations and peoples.

FRED P. MYERS.

Funds To Fight Cancer

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the April 1 issue of the Newark Evening News. The editorial is entitled "Give To Conquer Cancer."

I wish to make the following comment in connection with the editorial: I think it most important that we in the United States recognize again the very important, old American habit of contributing to drives for public benefit. I think there is too great a tendency for those of us in the United States to assume that these great public-benefit problems should be taken care of entirely by the Government. I am perfectly willing to support some Government aid for cancer research, but I also think it is important that we, as individual Americans, make substantial contributions to such great public causes as the cancer drive.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"GIVE TO CONQUER CANCER"

The American Cancer Society today begins a month-long, Nation-wide public appeal for funds to fight cancer, now second to heart disease as a cause of death in the United States. The national goal is $12,000,000, with New Jersey asked to contribute $750,000, although an attempt will be made to raise $1,000,000, of which 60 percent will be spent in the State.

"Give to conquer cancer" is the slogan of the appeal for funds to battle this scourge through research, education, and service. The need is great. An estimated 184,000 persons will die of cancer in the United States this year, an average of one fatality every 3 minutes. The New Jersey toll is estimated at more than 7,000. No respecter of social position or age, cancer kills four times as many children as does infantile paralysis.

While cancer statistics are horrifying, there is a bright side—a side which has grown brighter since the first extensive effort was organized in 1945, and which will grow even brighter if the present appeal has the wide public support it merits.

With funds raised the last 2 years, 94 research projects have been financed and are being conducted by outstanding scientists. Three times as many projects await funds to be started.

In New Jersey, an encouraging battle against the disease is progressing with funds raised the last 2 years. Facilities and expert personnel have been provided to treat patients in 30 hospital clinics which report numerous cures. The field army volunteers have been aided in their year-around education and service program. Knowledge is being spread that cancer is curable if the public can be made sufficiently alert to have regular physical examinations. At last progress is being made by the weapons of research, education, and service, weapons which can be put to full use only if everybody will "give to conquer cancer."

The Proposed Loan to Greece and Turkey

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1947

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD copy of a public letter written to the President by Mrs. Alexander Stewart and others on the proposed action with respect to Greece and Turkey.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTER TO THE PRESIDENT OF THE UNITED STATES

DEAR MR. PRESIDENT: The administration's proposed course with respect to Greece and Turkey accepts the division of the world into American and Russian spheres of influence and proposes to stop the expansion of Russia and the spread of communism by force of arms.

By its failure to deal with the needs of the Russian people and by intensifying their fears of being surrounded by hostile military forces, this policy will actually help to bolster up the Stalin dictatorship in Russia. And since communism thrives on war, civil disturbances, and poverty, American dollars devoted to bolstering the military forces of dubious regimes in Europe and Asia will serve to multiply the grievances which make people outside Russia also a prey to communism. American resources will be drained as the Nation is thus drawn into the conflict against Russia and mounting chaos throughout the world. In the end our own country will be militarized and dragged into an atomic war with no prospect for the survival of democracy anywhere.

We see no hope, on the other hand, in any program of appeasement of Russia, since this does not change the radically evil pattern of international relationships and only postpones the inevitable clash of power against power. Nor is it possible for the United States to isolate itself from the rest of the world.

The only hope is in an integrated program which includes:

1. Rejection of the policy of military intervention.

2. Abandonment of the atomic armaments race which places an intolerable burden on the economy of every nation, including our own. An offer to take immediate steps toward placing strategic points such as the Dardanelles, Suez, and Panama under international control, and toward universal disarmament and establishment of international controls for the development of atomic energy for peaceful purposes.

3. Use of our God-given resources, no longer squandered on armaments competition and military adventures, for immediate relief of the homeless and starving, and for an all-out world-wide reconstruction program for peace, before it is too late.

As things stand now our contributions for relief and toward the restoration of the economic life of the peoples of Europe and Asia are too small to prevent starvation and increasing disintegration. The need for putting an end to the threat of war and to international unrest grows daily more desperate but the good faith of our disarmament proposals is in question and progress toward disarmament is completely blocked so long as we are engaged in an armaments race and a power conflict wtih Russia. Everywhere and every day hunger and fear breed more hunger and fear.

An integrated program such as we have outlined can break the deadlock. It will enable the peoples of Europe and Asia to become rapidly self-supporting. It will create demands for the products of our farms, factories, and mines. It presents a challenge worthy of the inventive and organizing abilities of American scientists, industrialists, farmers, and workers.

The adoption of the course here outlined is also the one way to dissolve the fear and suspicion which grip the Russian people today. It would give the United States the moral leadership of the world, and would create the atmosphere of security, confidence

and hope in which democratic forces all over the world could be revived.

Policies of Americans for Democratic Action

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered on April 8, over the American Broadcasting Co. network, by Mr. Wilson W. Wyatt.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Tonight I speak for a new movement of American liberals. But it is new only in the sense that American liberals have at last established their own organization, free of totalitarian influence and dedicated to the basic American faith in reason, justice and the dignity of the individual. The underlying spirit of our organization is in the oldest tradition of American liberalism. The values to whch we give allegiance have rallied Americans throughout our history in the unending fight for a greater and fuller democracy. Today these same values are rallying free men throughout the world in their struggle against the twin evils of hunger and despotism.

The name of this organization is Americans for Democratic Action. ADA does not pretend to speak for all progressives everywhere. No single organization—no single man—can soberly claim to be the chosen and exclusive representative of American liberalism. But we do believe we speak for the overwhelming majority of American progressives—those whose hearts and minds rebel at the extension of tyranny, whether it takes place in Franco's Spain or Tito's Yugoslavia; those who repudiate the police state, whether imposed by the totalitarians of the right or of the left. We reject intolerance, repression or terrorism under any banner. We believe free men can work out their own destiny without being reduced to the false and desperate choice between fascism, on the one hand, and communism, on the other.

The liberal who believes in the middle way has been too long silent, bewildered and homeless. Now is the time for him to speak and act—if freedom and democracy are indeed to present hope to the people of the world. This is why thousands of us, sharing these convictions, came together to form Americans for Democratic Action.

Tonight I want to speak primarily on the foreign-policy program of the ADA, with special reference to the question of aid to Greece and Turkey. ADA's foreign policy is not the product of back-room intrigue, nor of minority manipulation. It was prepared after months of discussion and adopted at our national conference after two long days and nights of debate. More than 250 leading American progressives took part—such men as Leon Henderson, chairman of our executive committee; Franklin Roosevelt, Jr.; and Mayor Humphrey, of Minneapolis, our vice chairman; Paul Porter, special Ambassador to Greece; and others on our foreign-policy commission including Marquis Childs, Arthur Schlesinger, Jr., Bishop William Scarlett, and Thomas K. Finletter.

ADA rejects the theory that war with Russia is inevitable. It rejects with equal conviction the theory that we must purchase peace through continuous surrender to Soviet pressure. There are some who proclaim that we cannot escape armed conflict with Russia and hence we should abandon all attempts at peaceful settlement of our differences. There are others who contend that our own country is engaged in a program of cynical and ruthless imperialism, and that liberals must therefore oppose the United States at every point where our position collides with that of the USSR. Both views are extreme and dangerous. We believe that it would be a world tragedy if the peoples of Europe were misled into thinking that any substantial group of Americans supports the extremes of war or appeasement.

Americans for Democratic Action rests its foreign policy program on three basic principles.

First, any return to isolationism means disaster for America and for the world. From the extreme right and the extreme left—from the Chicago Tribune and the Daily Worker—come demands that we keep our hands off the crises in Greece and Turkey and stay out of the affairs of Europe and Asia. These same demands came from these same sources with regard to Hitler in 1940. We rejected that alliance of the isolationists and the Communists then, we reject it now. No longer can the United States resign from the world and pull the oceans over its head. To insure peace and our own security, we must assume the responsibilities of greatness. This means that we must pursue positive policies—and we must recognize that doing nothing is itself a policy decision which may undermine our national security.

Second, the United States must exercise its power, wherever possible, through the United Nations. We must work in every way we can to strengthen the United Nations and to support its economic and social agencies—and we ask that other great powers meet us half way. The existence of the United Nations does not, however, eliminate the need for action by individual nations where the United Nations is powerless to act.

Third, the United States must throw its moral, economic, and political support to nations struggling for survival and to the forces of independent democracy within those nations. We must let the world know that our vast resources will be used to create economic and political conditions favorable to the growth of democratic ideals.

The choices we face are not simple. In Greece we are confronted with a reactionary and corrupt government which has shown neither the will nor the capacity to undertake long-overdue economic reforms. Turkey is still far from democracy as we know it. These countries have asked for economic and military aid and the United States proposes to supply it. Let us be clear why this is done, and why, after long and full discussion, Americans for Democratic Action voted to back the proposal.

Our essential purpose is the protection of international security. Greece is sinking into bankruptcy and political chaos. Both Greece and Turkey are faced today by external forces that threaten to annex their territories, subvert their institutions and destroy their national sovereignty. If the integrity of nations can be openly challenged, either by a systematic war of nerves, or through a civil war supported by a foreign country, then all our hopes for the United Nations and for the peace of the world lie in ruins.

There are many men who proclaim themselves the true executors of Franklin Roosevelt's will. No man can say with absolute certainty what Franklin Roosevelt would have done in all the crises confronting the world today. But certainly it was the essence of his position that America must stand for help to the weak against the strong, for the protection of peace-loving nations against aggression.

The world must act today to insure the security of nations in the eastern end of the Mediterranean. The natural center for such action is the United Nations. But the United Nations today simply does not have the troops, the money, or the legal power to deal with the crisis. Americans for Democratic Action favors the immediate strengthening of the UN so that it can take over the Greek and Turkish problems as soon as possible. Pending the full assumption of responsibility by the UN, we see no choice except for the United States to take immediate action to safeguard the independence of Greece and Turkey. We are confident that such action will encourage the hands of those in the Soviet Union who are arguing for friendly relations with the West. We are equally confident that failure on our part to check aggression in the eastern Mediterranean would strengthen the hands of those in the Soviet Union who seek to dominate Greece and Turkey as a step toward the domination of Italy and France and the rest of Europe.

Military security, however, is only a temporary answer. It is an essential part of the solution, but only a small part. The lasting answer to the problem of communism is the removal of the conditions which invite its spread. The only anti-Communist policy which will work in the long run is a policy of

striking boldly at hunger and want wherever they may exist.

American liberals for a long time have been calling for a positive, prodemocratic foreign policy. What can such a positive policy be other than a determined effort at political and economic reconstruction under United States leadership along lines which will favor the growth of freedom? In this sense aid to Greece presents United States policy with its greatest opportunity. It is a challenge. It calls the bluff of all who have been pleading that the United States assume its world responsibilities.

The enactment of the aid-to-Greece bill will be the beginning, not the end, of our Greek policy. The crucial issue is how that aid shall be administered. There has never been a question, as some have charged, of an unconditional subsidy to the present Greek Government. Secretary Marshall's note to the Greek Government in February laid down immediate objectives toward which the United States desires that Government to move. No one knows better than our two Ambassadors, Paul Porter and Lincoln MacVeagh, that aid turned over to that Government unconditionally will be money wasted. We have made it clear that American assistance will not be a blank check for grafters and reactionaries.

The United States must follow through on the use of our aid. We must ensure that all military supplies be used against external aggression and not against the liberties of the people. We must insist on a genuine amnesty—so that all who have fought against reaction and corruption in the interest of a decent and independent Greek Government shall be free to lay down their arms, without fear of reprisal, and begin the rebuilding of their country. We must employ our influence to democratize the civil service, to revise the tax system, to institute effective price and exchange controls—in short, to tighten up the whole Greek economy and set it on a firm and healthy basis. If we do our job well, we will have shown that we can meet the totalitarian challenge on the level of economic reconstruction; that we can fill stomachs, and do it without cutting out tongues.

This will be a tough job. We need time and tranquillity in order to build dams, to plan soil-erosion programs, to revive and expand industries. Our task is to place the Greeks on the road to a reasonable standard of living and at the same time guarantee the free play of political expression.

If we continue to allow the ragged and hungry people of Greece to be exploited, we shall only fan the fires of communism. But if we assume the burdens of guarding national independence and supervising economic reconstruction, we will give the democratic alternative to fascism and communism new strength and vitality throughout the world.

American liberals have a special responsibility today. The alarmist outcries of a hysterical minority have created the impression abroad that all liberals believe that our Government is embarked on a hopeless course and that the only salvation lies in Moscow. This is a false picture. We have many criticisms of United States foreign policy. But if irresponsible liberals succeed in convincing the peoples of the world that the great mass of Americans are indifferent to the fate of independent nations, aggression will be strengthened and the courage to resist will collapse. Our only hope of peace lies in vigorous action in support of the principles in which we deeply believe.

I stress foreign policy tonight, but ADA regards its domestic program as equally important. As the champion of democratic principles in the world, America must eradicate the imperfections and intolerances of its own society. ADA is pledged to make America the world symbol of progressive democracy. We must be strong at home—free from unemployment and inflation—to be strong abroad.

ADA stands for free men everywhere. We have no belief that the values of free men are going to have an easy time in the next few years. But these values have survived bombings, torture, and concentration camps. They remained alive through the nightmare of a World War. They are the universal qualities of goodness and decency on which a united world must one day be built. It is the obligation of Americans to protect and advance them.

Department of Peace

EXTENSION OF REMARKS
OF

HON. MELVIN C. SNYDER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include two essays, one written by Miss Mary Helen Bruffy, of Webster Springs, from the Second Congressional District, and the other being written by Miss Margaret Curry, of St. Albans, of the Fifth Congressional District, the latter I insert at the request of Mr. KEE, Representative from that district, on the subject of creating a Department of Peace within our National Government.

I introduced in the House a bill which would create such a Department, styled, H. R. 503. Mr. R. M. Davis, of Morgantown, one of West Virginia's distinguished citizens, sponsored an essay contest on this subject and the two essays being introduced here were the ones selected as being the best from the First and Fifth Congressional Districts of West Virginia.

The attention of the House is invited to these essays, because they deal with world peace, the major problem facing the world today.

CREATING A DEPARTMENT OF PEACE

(By Mary Helen Bruffy, Webster Springs High School, Second Congressional District)

"*Be it enacted, etc.,* That there is hereby created a Department of Peace." What hopes of happiness might be given life were these words to become a reality instead of a dream. This step would form a nucleus in the United States of a movement that would free us from many of the bonds that tie us to a policy of war as a means of settling differences.

Our Nation is a success only as it leads the world toward a greater endeavor in the field of human relations. Building a road to peace would represent a full measure of such success.

The transition from a policy of war to a policy of peace has been taking place for centuries. At one time war was recognized as a proper and legal method of settling disputes. But from time to time peace-minded people have endeavored to bring to the recognition of nations the possibility of living in harmony with other nations.

The first movement was the making of treaties between families, tribes, and nations. Treaties mean nothing now, and meant nothing then, only as the nations who composed the treaty were favored by its enforcement.

Then nations began calling in a third party to hear a dispute and render decision on the problem. This principle of arbitration was notably championed by the United States in such cases as the Oregon boundary dispute and the Alabama claims.

Nations of the world, at the invitation of the Czar of Russia, met at The Hague, in the Netherlands, and established an International Court of Arbitration. This tribunal had no force behind it except the integrity of nations who abided by its decisions.

President Taft negotiated treaties with several countries, saying that any disputes arising between them would be settled by arbitration. William Jennings Bryan negotiated treaties with certain countries stating that any dispute should be investigated, and that recourse to war would be delayed for at least a year.

With the Treaty of Versailles, Woodrow Wilson introduced a new and revolutionary measure—an organization of nations.

The nearest step to world peace was the Kellogg pact in its official renunciation of was as a national policy. But it lacked the support of a spirit of peace in the people of the signatory nations. It fell into the heap of discarded measures and left the world at the mercy of any new movement toward war.

The greater the war, the greater the lesson which the world must learn from it. Is human intelligence too small to grasp the lesson taught by the last struggle? Humanity must not fail again. It must gather together all lessons learned before and use them to fight the urge to abandon the principle of the League—the principle of the United Nations.

Any movement, any organization, must be backed by the public sentiment of the whole world. We are now striving with another organization for peace. Whether or not this movement succeeds will depend not on individuals—they are too small; not on nations—they are too weak; but it will depend upon the combined will of the peoples of the world. Changes in the attitude of a nation must be preceded by changes in the attitudes of her citizens; just as a change in the attitude of the world must be preceded by changes in the attitudes of the nations that make up that world.

Because of her strength in war, the United States has been accorded the leadership of the world. The greatest demand placed upon her in her new role is that of promoting peace.

One of the sources of the strength of our system of government is the fact that it is adjustable to the changing needs of the people. Its pliability has been notably demonstrated in the development of our Cabinet.

When our Government was first established there were but four Departments in our Cabinet. These were the Department of State, Treasury, Post Office, and War.

As the uselessness of a land defense against the rising magnitude of sea power of other nations was realized there was added a Department of the Navy.

The rapid rate of depletion of our natural resources occasioned the creation of a Department of the Interior to oversee internal affairs.

In order to place the courts of our Nation into a system whereby the same principles of equality might be administered throughout the United States, a Department of Justice was established.

To promote the interests of the farmer, a Department of Agriculture was added; to oversee business relations of our people a Department of Commerce and Labor was

created, and later separated, as labor was recognized as a great voice in Government.

Now another need has arisen, that of peace. Never before in the history of man has that need been more apparent than it is today. Since the need is recognized by all peoples, would not now be the propitious time for the United States to lead a concentrated movement toward world peace?

Transportation and communication have been developed to such a degree that nations of the world are living in the proximity of next-door neighbors; but attempts toward understanding and international education have not kept pace with the mechanical relations of our world.

We believe that a prerequisite to world peace is world understanding. The most satisfactory means of securing a sympathetic, friendly attitude of the world is through an educational system for that purpose.

Mr. R. M. Davis' vision did not end with the creation of a department of peace in our Government structure, but spread to the incorporation of the attempts of nations into one movement to be handled under the Office of Education. This office, in turn, would cooperate with the Economic, Scientific, and Cultural Organization and the Security Council.

The League of Nations failed not because of faulty leaders but because it lacked the support which only public opinion can furnish. This public opinion must be formed upon the only basis fair to factions for and against a measure, and this basis is facts. The United States must develop the principle of "liberty enlightening the world" into a scope that would inform all peoples concerning movements for peace.

An enlightened people is a democratic people, and a democratic people is a peaceful people; thus it behooves the United States as a world leader to begin a concentrated effort toward peace for all mankind.

Would not a purpose behind our democratic principles be the education of our people as to the history of our national policies and upon what facts and incidents that policy is founded? Would not a person who knows what is being done in the United Nations be more able to form unbiased opinions on its functions?

Public opinion, whether it is right or wrong, is a force which cannot be subdued by arguments or by arms, and if not based on facts it is forever changing. Only an educated people are able to separate facts from bias and prejudice and to form a sound opinion.

If a person knows about the customs of his neighbor and the motives behind them, he is more able to adjust his own sentiments, traditions, and customs, abolishing the conflict which might be present.

Suspicion has become such a monster in our modern diplomacy that it is virtually impossible for political representatives to meet and discuss politely, simply, and candidly the problems mutually confronting the nations of the world.

We must learn to trust each other, and trust can only be accomplished by knowledge of our neighbor nations and the history of their policies. We must have faith in peace and strive for that good, establishing principles of Christianity and democracy and practicing them. The basic principle of our Government is the greatest good for the greatest number, but are we, as a Nation, willing to live the principles set forth in our own Government? We must realize that we are a part of a world and have responsibilities as a member of the world. We must learn to practice group solidarity as a world and group loyalty to that world as nations and individuals.

Tolerance is the watchword of the hour, and understanding is the key to the problem of peaceful living. In developing this understanding, we must begin in the mental capacity of the people, developing the mind to its fullest means of grasping a situation and of figuring a solution to the problem presented to us—this is the task of the Department of Peace.

Promoting better understanding of the fundamental principles of international relations is a challenge to be caught only by a structure in the government of a world leader—this is the task of the United States.

The League of Nations had no support within the member-nations to aid in promoting its principles. Let us be sure that the United Nations does not fail for lack of organized support within individual nations. Let us buttress the structure of this world organization by a unit of our National Government, a Department of Peace in our Cabinet.

From the beginning of the movement toward peace there have been treaties, organizations, and movements that have served only as interludes between wars. These interludes have been violated by nations who thought it to their advantage to do so. The Kellogg Pact brought to the minds of the people the renunciation of war as an instrument of national policy. This treaty, for lack of force within individual nations, failed in its signal purpose and became only a denunciation of war.

We must have a combined force of an informed public throughout the world in order to carry the efforts of our forefathers and our contemporaries to success in ridding ourselves of war. The treaties, tribunals, and the League have been steps toward an ultimate victory of peace over war. This victory must be insured by the establishment of a sentiment within individuals; this sentiment would make up the policy of a nation, thus spreading from individual to national and international good will. A sentiment for peace, established in citizens of the world, would carry the principle of the United Nations to a success.

Therefore, we propose the creation of a Department of Peace within the structure of our Government. This would lead a concentrated movement toward world good will and set the example for similar efforts to be begun in other nations throughout the world.

Let this, our last effort, be the combined effort of all peoples, culminating in the final renunciation of war by an enlightened world.

CREATING A DEPARTMENT OF PEACE

(By Margaret Curry, St. Albans High School, Fifth Congressional District)

As we all know, World War II is over. We fought to preserve our democracy, but now that our democracy is safe, many of us have relaxed. However, we have a responsibility to those who died, to those who made possible our victory, and last of all to ourselves. What is this responsibility? Peace—this is our duty.

An important step toward peace would be the creation of a Department of Peace. Many feel that the United Nations organization alone can create peace, but peace is a continuous process of achievement. One of the deeper causes of the failure of the League of Nations was the lack of sufficient machinery for the enforcement of peace.

To begin with, the creation of a Department of Peace would prove to other nations that we are striving for peace, not a third world war. It would also prove that we are behind the United Nations Charter, a charter that is the hope of the world. It would show that we are willing to spend our money for peace, just as we spent billions of dollars for war. This business of peace is really a challenge to us. We hear on all sides that everlasting peace is impossible, but aren't we Americans noted for doing the impossible?

At present we have the War and Navy Departments that have the responsibility and supervision of our military forces. The State Department, which has charge of foreign affairs, tries to see that things do not happen which will result in war, but they do not see that things will happen which will lead to peace. So if there were a Department of Peace, there would be no reason for duplication of any other department.

The Peace Department would function just as any other department does in our Government. The Department of Peace would be headed by a Secretary of Peace appointed by the President, by and with the advice and consent of the Senate, with a salary of $15,000 a year. There would also be an Under Secretary of Peace, appointed by the President, by and with the advice and consent of the Senate, with a salary of $10,000 a year. The Under Secretary would take the place of the Secretary in his absence and perform other duties as prescribed by law. The Secretary should have the duty of formulating educational programs for better understanding, of supervising the interchange of ideas and persons among institutions and groups in the United States, and of assisting educational and religious groups in formulating problems of peace.

This new Peace Department could offer advanced relations in friendship. It should encourage the exchange of students and professors between our country and others, for example, for the last few months South American students have been living and studying in New York, New Jersey, and Connecticut. These students were selected on their ability to speak English, their personality, and intelligence. It is hoped that this practice will be continued and that many United States citizens will be invited to South American countries. However, this practice should not be limited only to South America, nor should it be on such a small scale.

The Department of Peace could handle this problem very easily. Too, this practice leads to a better understanding of the people of other countries, and this better understanding can help to prevent war. In this way we would be practicing peace, not just thinking about it.

We must also realize at this time that we are living in "one world." The Atlantic and Pacific Oceans have been overcome by modern transportation. Telephones, radios, telegraphs, airplanes—these are just a few of the inventions that make it impossible for a nation to be isolated. Such problems as trade and commerce and even unemployment are now international concerns. Even the Jews in Palestine concern not only Great Britain, but also all other nations, who must work together to solve this problem. In such cases the Department of Peace could prepare the facts and make them available to every American.

It can be seen that a tremendous educational program will be needed. The main purpose of the Department of Peace will be to formulate this program and to start it moving. There was a failure after World War I to set up such a program. That failure resulted in perhaps 50,000,000 casualties from the European and Asiatic wars and a property loss of $1,000,000,000,000. A costly failure. Too, the war created problems that were not solved by the mere ending of the war. People were left homeless, without clothing, and starving to death. Such problems cannot be overcome in a night.

Marjorie Van de Water also points out the need for education. There must be a defense against the atomic bomb of today. Probably the only defense is intelligence. She reminds us that our industries, military installations, and the population of our big cities could be wiped out in a sneak attack. So no matter how good the defensive weapons of the future might be, they would be useless. The only assurance we have of protection is not to have enemies who would attack us in that

way. Too, if a small fraction of the $2,000,000,000 used for the atomic research program were used for a program of understanding people, there would be no need of a defensive weapon for the atomic bomb.

The cost to carry out such a program of peace would be less than the cost of one modern battleship. Our war has cost us nearly 1,100,000 lives, and our national debt has reached almost $300,000,000,000. Perhaps these figures could have been avoided if after World War I we had worked for peace. We need a Department of Peace to help us work toward that objective now.

The Department of Peace must work with the churches, schools, civic groups, and business in order to carry out its program successfully.

All these institutions have a responsibility to aid peace, but the church has the greatest. As the church stands for brotherhood, it is instrumental in trying to teach tolerance and understanding among the peoples of the world It is now its duty to see that Christian life extends further than the door of the church.

Courses in international relations must be taught in our colleges and universities. Students must study governmental systems, learning to recognize peaceful political organizations. It is even more imperative that courses in fundamental world politics be taught in high school, as the majority of high-school students fail to go on to college. The Department of Peace could help to develop these courses and provide information on our foreign policies and on the international organizations. It must also be remembered here that tolerance is developed before one becomes an adult, so the schools must try to help to develop tolerance.

Education for adults must also be offered more extensively. Many students fail to finish high school, but later realize their mistake. As adult education has been so sadly neglected, few have had a chance to learn about the affairs of the day. The Department of Peace could remedy this situation by developing an international educational program for adults.

The Department of Peace must also work with civic clubs since often they are influential in a community and could very easily become centers for distributing material for the communities.

Businessmen have a selfish reason for wanting to avoid war. Business profits are either lost during operation in wartime or during reconstruction, so businessmen naturally do not want war. There needs to be a study of business methods used in the world in order to understand why certain economic policies are desirable. Such understanding could easily lead to a better international economic system.

It is also up to industry to provide a better relationship between labor and management. Wages must be kept high enough in order to assure the worker of more than just bare necessities. The worker must also be able to educate his children. Providing such favorable conditions could also aid the capitalistic system as you don't find the demagogue gaining leadership in a happy and prosperous nation. So, the Department of Peace and business could work hand-in-hand.

The Department of Peace must also teach democracy. The best way to teach democracy is by contrasting our form of government with other governments. No other type of government is able to stand such comparison. This practice would lead to a stable form of government and a stable government has no place for revolutions or dictators. Too, it is an aid to peace while an unstable government is a constant threat to peace.

We must remember, however, behind all government action is public opinion. So, if certain policies lead us to war or destruction, we have no one but ourselves to blame. Even in a country with a dictatorship public opinion can be heard. That is why dictators so often must use ceremony and conquest in order to keep the support of their people. Public opinion is either asleep or awake, but always potentially powerful. It will be the job of the Department of Peace to present true facts to the people of the United States in order that they can form unbiased opinions.

Peace has made her challenge to us. I believe that the creation of a Department of Peace is an answer to that challenge. We must accept the challenge as "only a world of peace can be a world of righteousness and justice—and only that nation which is willing to leave no stone unturned in its world leadership toward peace can present to the world an effective and commanding leadership in this field."[1]

Appeal for a United States of Europe

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22 (legislative day of Monday, April 21), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "An Appeal to Citizens of the United States of America for Support of a United States of Europe," with the names of the persons who signed the appeal.

There being no objection, the appeal and the names attached thereto were ordered to be printed in the RECORD, as follows:

AN APPEAL TO CITIZENS OF THE UNITED STATES OF AMERICA FOR SUPPORT OF A UNITED STATES OF EUROPE

Twice within our lifetime the national interest of the United States has demanded that we send the flower of our youth across the Atlantic to fight, to suffer, and to die for the peace and freedom of our mother continent.

Both cruel wars resulted mainly from Europe's disunion. And a third world war, springing from the same causes, lies as a threat to our peace and prosperity as long as Europe remains split up into isolated national units.

Nothing short of a European union, inspired by our American ideals of federalism and of democracy, can break this fatal chain of wars.

European union is possible, in spite of Europe's varied mother tongues and traditions. But it can come only if the European peoples who aspire to its attainment are given the aid and comfort in their aims which America's example and American good will can provide.

A united Europe would break down the trade barriers that cut through Europe's life lines, hampering its recovery and sabotaging its efforts to achieve prosperity. While respecting its member states' various democratic constitutions and traditions, the European union for which we stand would serve to protect all Europeans against the slaughter and torture they have known—against oppression and aggression; against concentration camps and dictatorships. It would release the nations of Europe from the crushing burden of competitive armament by setting up a federal police force.

The United Nations is destined to become the cradle and framework of such a United States of Europe. The League of Nations failed in its purpose because it attempted to organize a peaceful world around a disunited Europe. Warned by this costly experiment, the United Nations Charter recognizes the principle of regionalism, thus paving the way toward a United States of Europe. Such a united Europe, under the Security Council's supreme authority, would give additional force and stability to the World Organization by providing the groundwork for a good-neighbor policy toward the United States and the U. S. S. R.

The alternative to such a United Europe is a continent permanently divided into spheres of influence, and by an artificial and arbitrary line of barbed wire slashing across Scandinavia and Germany, across Austria and the Balkans. The permanent partition of Europe into hostile camps would inevitably draw east and west into the turmoil of conflicting interest and ideology, and, finally, into a world war of atomic horrors.

A divided Europe would also give the chance to a Fourth Reich to regain its lost power by assuming the role of balance-of-power arbiter between east and west. Within a United Europe, a German commonwealth would be no threat to its neighbors, and the German economy would be integrated in the continental system of free trade. The European police force would also release America and Russia from their heavy duties of occupation.

Only by a policy of economic union can Europe hope to repair rapidly the devastations of the war and pave the way to future mass prosperity by mass production. Only by such a policy can it overcome the present state of social unrest with its threat of revolution. A prosperous Europe would become our best market, increasing international trade and American wealth.

Politically and economically a divided Europe would constitute a permanent threat and a heavy burden—a United Europe would be a pillar of peace and a source of world-wide prosperity.

After the untold sufferings of this war, most Europeans favor the idea of a United States of Europe. But the peoples of a prostrate Europe feel too weak to start such a gigantic task without the moral encouragement and support that only the United States of America can provide.

It is up to us to assist the European peoples on this path toward union, peace, and prosperity which our own national interest demands they take.

After the sacrifices we have made to set Europe free, the use that is made of that freedom in seeking peace and prosperity must always be our concern. Technology has brought Europe and America close together; our own well-being is bound up inextricably with the well-being of the nations that border the Atlantic to the east. That ocean has become a bridge rather than a barrier; uniting, and not separating, two continents. Europe's future involves definitely our future. Europe's peace our peace, Europe's prosperity our prosperity, and Europe's freedom our freedom.

Let us, therefore, go ahead boldly and wisely, in the spirit of our forefathers who saw that in union there is strength, so that we may assure our own future by helping our parent nations to create a United States of Europe dedicated to liberty and peace.

Violence at Army Bases in the Philippine Islands

REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. BROOKS. Mr. Speaker, I have just received air mail from the Philippine Islands an Associated Press article written by Spencer Davis and published on the front page of the Manila Times of April 1, 1947. The article is entitled "Organized Gangs Wreak Havoc in United States Army Bases Here." I personally know nothing about these statements, but if they are even half true, the matter justifies prompt and proper action. The article presents a picture of violence, pillage, larceny, and corruption such as not heretofore seen in our generation. If true, it does not argue well for the new Philippine Republic which is having a difficult time. I hope every Member gives this article careful study and attention.

ORGANIZED GANGS WREAK HAVOC IN UNITED STATES ARMY BASES HERE—CONNIVANCE BY INSIDERS SEEN—PHILRYCOM ACTS

(By Spencer Davis)

The United States Army after 2 months of top priority planning, and the Philippine Government are taking forceful coordinated action to halt huge losses at Army supply depots in the Philippines.

Well organized gangs of pilferers and black marketeers in the year and a half since the war's end, according to reliable sources have inflicted staggering losses on supply depots with the connivance and sometimes active participation of some American officers and enlisted men as well as former servicemen working as civilians inside the bases.

Major General Moore, commanding general of Philrycom, for the past 4 months pointed out that shortly after his arrival plans to effectively halt depredations were under preparation and for the last 2 months has had top priority at headquarters. A little more than 2 weeks ago this program was put into action.

This has been the situation according to Army officers and other informants:

Army trucks manned by Filipinos have boldly passed in and out of heavily guarded depots with forged requisitions as their sesame.

In the month of February of this year looters were carrying off from an Army engineer sub-base depot on the outskirts of Manila heavy construction equipment and supplies approximating $50,000 to $100,000 each week.

In the same month security officers estimate the huge Quartermaster depot 17 at Quezon City suffered losses approximating $350,000 per week. When an order was issued holding depot commanders responsible for losses in their command 27 Filipinos were killed by security guards in a single week, 14 of them in a single night of blazing guns.

Last December Quartermaster depot No. 1 at the mouth of the Pasig River on the Manila waterfront lost between 200,000 and 300,000 pounds of prime beef which was described as spoiled by faulty refrigeration. Records show that refrigeration units at that base during December were never over 20 degrees and usually between 10 and 20 degrees Fahrenheit.

Port security officers have reported as high as one-third of their incoming shipments stolen. Innumerable trucks loaded with supplies off Army docks have failed to reach their destination with loads intact.

The Army installation on Engineer Island in Manila harbor has been looted of property conservatively estimated at more than $1,000,000 through the operation of one ring alone.

The Pacific air material area with Air Force supplies has taken a $10,000,000 or more beating.

Army security officers and investigators who made these facts known to me of their own volition, described the situation as a sickening mess.

In words of one colonel who refused to be identified "this would all come out on the floor of Congress one of these days."

The American taxpayer and the financially hard-pressed Philippine Republic are taking these losses on the chin. As one indication of what the Philippine Government has suffered with the knowledge if not direct involvement of some high functionaries there has been a semiofficial revision of the value of surplus property which the United States Government has turned over to the Republic. Property with a book value of $623,000,000 some 18 months ago is now estimated to be worth $100,000,000.

Part of the shrinkage is ascribed to depreciation but another large segment of the loss is due directly to brassy, open-handed embezzlement.

Within the past 2 weeks Maj. Gen. George F. Moore, commanding general of the Philippine Ryukyus command and President Roxas through their representatives have brought civil and military investigating agencies together for a joint offensive. Piecemeal investigations heretofore have proved ineffectual in combatting murder, graft, corruption, petit and grand larceny of buy and sell artists, hijackers, harbor pirates and their pay-off men who brazenly conducted their business over the soiled tablecloths of known Escolta Street coffee houses and in the flossy atmosphere of Manila night clubs.

A spokesman of President Roxas last week told me that the President was anxious for information on these illicit operations to come out "no matter who it involved."

Col. Angel Tuason, former Manila police chief has been the President's representative at coordinating conferences.

General Moore has turned over coordinating work to the new Philrycom operations officer, broadshouldered leather-necked Brig. Gen. George D. Shea, Augusta, Ga., late of the Eighty-sixth Division and former artillery officer of the Nineteenth Corps in the European theater of operations.

Shea has been ordered to close the gates to pilfering and he is convinced that in another 2 week "we will have it stopped."

Soviet and Yugoslav Officers Reported Settling in Italy

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a report by an accurate observer on how the international Communist conspiracy directed from Moscow is following in one more country, Italy, its usual pattern of infiltration, division, confusion, in order to prepare for taking over—all under the fancy names of democracy, agrarian reform, liberalism, concern for the common people, and so forth.

The pattern was established in China beginning just 25 years ago. Chiang Kai-shek learned in 1927 from hard experience what its real nature was and is. Unfortunately most western peoples refused to wake up until about 1947. Some are still slumbering. Perhaps the struggle in Greece and the preparation to have Italy follow Poland, Rumania, Bulgaria, Yugoslavia, Albania, and others into the fold of Russia's imperialism may assist in their belated awakening.

[From the Washington (D. C.) Evening Star of April 18, 1947]

SOVIET AND YUGOSLAV OFFICERS REPORTED SETTLING IN ITALY

(By Constantine Brown)

ROME.—Russian and Yugoslav officers, camouflaged as business representatives, are known to have settled in many northern Italian cities, such as Milan, Turin, Florence and Genoa.

Using import or export businesses as window dressing, they are known to be in close touch with Communist headquarters and are preparing for the day when American troops leave and the signal is given to the Communists to undertake an active campaign for power.

Yugoslavia's Marshal Tito has concentrated a sizable force on Italy's borders. He has no intention of doing anything as long as there is even a thin curtain of American forces in Italy and as long as the Communists in Italy are merely agitating without using direct action. But many prominent Italians and foreigners believe that northern Italy, with its large and modern industries which suffered little damage from the war, is coveted by the Slavic bloc.

Militarily northern Italy is of paramount importance for the U. S. S. R. and her satellites. They want to establish direct contact between Trieste and Genoa and thus reach the French border.

Any military aggression, such as an invasion of Italy, seems to be precluded because the United Nations would react immediately. But if Palmiro Togliatti's party decides that democratic northern Italy must break away from the reactionary and royalist south, the situation might become very serious.

Italy became a united country less than 100 years ago. Before that it was divided into small states which frequently fought each other. Political observers here say it would not be difficult for a well organized group under the orders of a foreign power to divide the Italian Republic again. And it might be in order for a newly organized government in Milan or Turin to ask the Yugoslav Government to come to its aid in breaking away from the reactionary south.

This may seem far-fetched at the present time, but it is a matter which is being seriously discussed in many Italian and foreign quarters. The fact is that the Italian Government has no means at its disposal to deal adequately with any threat to the nation.

The Italian police force is weak and demoralized. So is the army, which is composed at the present time of only seven divisions, strewn the length and breadth of the country. The Italian Army and police combined in northern Italy would make a very poor showing against the well organized and well equipped Communist groups trained in guerrilla strategy.

The tragic economic conditions which prevail in Italy are playing into the hands of the Communists. The fear of what will happen tomorrow results in stagnation of Italy's economic life. People still work hard to obtain a meal a day for themselves and their families. But there is fear everywhere about what will happen when Togliatti inside Italy and Marshal Tito outside decide to show their hands.

Establishing a Peace Department

EXTENSION OF REMARKS
OF
HON. FRANCIS J. LOVE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. LOVE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay on world peace:

ESTABLISHING A PEACE DEPARTMENT

(By Eleanor Crigler, West Fairmont High School, First Congressional District)

The establishment of a Peace Department in the Cabinet would be the greatest achievement for the good of all mankind in the history of the United States. Its value to the world in general would be incalculable. It would start a new trend of thought toward peace throughout the entire world and will be an ideal and challenge to all nations.

Throughout all history humanity has been plagued by the terrible curse of war. As General Sherman once said, "War is hell" and during all time nations have discovered the truth of this statement. The greatest era of peace in the history of man was the Age of Pericles in which learning and culture reached the highest peak ever known. This Golden Age was broken only by the advent of the terrible Peloponnesian War. The civilization of Rome, another great period of advancement, was partly broken by the constant wars with the barbarians. The Aztecs in Mexico had reached another height in learning when they were destroyed by the Spanish. Each new war adds its horrors and terrors until it has been said that "Another war will be the end of modern civilization."

World War II has, of course, been the most terrible of all wars. One generation in Europe has been partially wiped out while the present one, the hope of the world, is stunted in growth and warped in mind. War brings destruction of cities, industry, and human lives. In its wake follows disease, famine, and moral deterioration. The cost to the United States was not as great as that of Europe, but it still was almost unbelievable. Three hundred billion dollars and 1,100,000 men were our contribution to this world catastrophe. Charles Sumner once said, "War is futile, senseless, savage, and is utterly inadequate to decide the question of right or wrong. War crushes with bloody heel all justice, all happiness, all that is godlike in man." With this in mind it seems that the promise of a lasting peace would be a shining light to all mankind.

Could all the money, time, and talent spent on the war be used for peaceful pursuits such as research in disease and industry, social problems, internal improvements, and so forth, another Golden Age would come upon this earth and benefit the people of all classes and creeds.

Since peace, therefore is so desirable, many plans have been formed to obtain it. Peace must, of course, be international as the attempt of the League of Nations showed. This was the idea of Woodrow Wilson, our twenty-eighth President. In his 14 points he set forth the principles which the United States should follow in order to keep peace. The failure of the United States to join the League of Nations, nearly killing the great man of peace, was the reason for the failure of the League. This concisely shows that we have the power to keep peace and should use it.

The United States stands definitely for peace. Since the other countries of the world look to us for leadership and an example, we must show where we stand and that we are not going to lapse into isolationism again. The inclusion of a Peace Department in our Cabinet will be a definite step on the road to a lasting peace.

The Peace Department will, of course, work with our hope for world peace, the United Nations organization. This will be its most important duty. But there are other plans for peace which should be incorporated into this main department: The work of Nelson D. Rockefeller in South America, the UNESCO, United Nations Educational Scientific Cultural Organization, whose aim is "to advance, through the educational and scientific and cultural relations of the peoples of the world the objectives of international peace * * *," and the exchange of students and teachers with other countries. These organizations and many more are planned to help our people understand, tolerate, and comprehend the ideas of other nations. It will be the duty of the Peace Department to coordinate, enlarge, and direct these worth-while activities.

Since thoughts of war begin in the minds of man, it is in the minds of man that the peace must be constructed. The Peace Department must set up a program of teaching, not only in schools, colleges, and so forth, but through adult groups and civic organizations to combat ignorance, mistrust, and suspicion of others. People should study internal affairs, foreign languages, and political science in order to appreciate and understand problems of war and peace. Perhaps a training center for the Peace Department, such as the War Department's West Point or the Navy's Annapolis, could be established in which students could train as diplomats, teachers, and so forth. The work done at George Washington University is the nearest approach to this plan. The peace cannot be founded on a wholly political and economical basis but must also have foundation intellectually and morally.

The United States must have a Peace Department in the Cabinet. We must escape another war and build a lasting peace for generations to come, for as Anthony Eden said, "Another war might mean the end of modern civilization." This Government agency will stand as an example to other nations. It will show our definite decisions and attitudes toward peace. We can only hope that other countries will follow our example and create similar departments in their own government systems. The work done by these departments will be more effective than all treaties and agreements of peace ever written, for the people will be back of every move. The creation of a Peace Department in the Cabinet will be the United States' first constructive step toward another "Golden age."

"Peace hath her victories no less renowned than war."

Former Senator Robert L. Owen

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. RIZLEY. Mr. Speaker, with the advent of statehood in Oklahoma, one of the two United States Senators elected to represent Oklahoma in the United States Senate was the Honorable Robert L. Owen. His long and distinguished career in the United States Senate is well known to everyone and the service he rendered to the new State of Oklahoma and to the Nation as a whole is a source of pride to everyone in Oklahoma, regardless of party affiliation. One of the outstanding measures sponsored by him was the Federal Reserve Act.

Although he has passed his ninetieth birthday, his brilliant mind and intellect are still keen and alert. His latest achievement is the invention of the global alphabet. This alphabet of phonetic nature has been worked out through his genius and was introduced before the Committee on Foreign Relations in the United States Senate about a year ago. It is the dream and prophecy of this great man that with this alphabet the people of any language in the world will be able to write their own language and print it stenographically. Only 1,200 words and their derivatives are necessary for day-to-day conversation.

Senator Owen is firmly of the belief that such a language will afford an opportunity for mutual understanding of various racial groups, and that such understanding will be a major factor in outlawing and abolishing war. As a part of my remarks, I include an article appearing in the Scottish Rite News Bulletin under date of March 20, 1947, likewise, a statement from the Underwood News appearing in the March–April 1947 edition:

[From the Scottish Rite News Bulletin of March 20, 1947]

LAUBACH FOR GLOBAL ALPHABET

In the Scottish Rite News Bulletin of October 21, 1946, there was an account of the

global alphabet invented by the former United States Senator, Robert L. Owen, head of the World Language Foundation, 2400 Sixteenth Street, Washington 9, D. C., a nonprofit, educational institution.

Senator Owen has now brought out his Global Alphabet Guide Book.

Dr. Frank C. Laubach, one of the world's outstanding authorities on languages, states: "If Senator Owen can wield enough influence to get his alphabet started, it has a chance of winning by sheer merit. It is the simplest, best alphabet I have ever seen."

This is indeed strong commendation coming from one of Dr. Laubach's acknowledged standing. For years he was a missionary of the Congregational-Christian Churches. He gave the Moros of the Philippines an alphabet and taught them how to read and write with the technique of "each one teach one." When the war came, he returned to the United States and obtained financial aid to go to South America and a similar technique was used in Mexico, Ecuador, and other Latin-American countries. Dr. Laubach, an alumnus of Princeton and 62, is now in Cairo, Egypt, where he is setting up literacy charts in 20 languages and dialects and is using his "each one teach one" method in the hope of eventually making Africa literate. He has used similar methods in India. He has spent more than 30 years in teaching millions of illiterates to read and write.

Dr. Laubach is also special counselor and representative, committee on world literacy and Christian literature, Foreign Missions Conference of North America, 156 Fifth Avenue, New York, N. Y.

Thus, when Dr. Laubach places the seal of his approval on Senator Owen's global alphabet, he is speaking from first-hand knowledge of the subject.

Senator Owen feels that English is of right the language that should be universally known and used because 200,000,000 people, one-tenth of the world's population, speak it and, furthermore, most of the world's great books are to be found printed in English. Also, another 200,000,000 use English as a secondary language. This does not mean that any race or nation is to give up its native language—far from it. It merely means that this global alphabet will enable other people to learn to read, write, and speak English in from 4 to 6 months. In the same way, the native English-speaking peoples can learn any of a dozen languages in the same length of time by use of the same global alphabet.

The result of such international understanding, made possible by the ability to speak and write a common language, is seen as tremendous in helping abolish war and promoting world peace.

S. W.

WORLD LANGUAGE NOW POSSIBLE—GLOBAL KEYBOARD TYPEWRITER CONSTRUCTED

You may not live to see it, but some fine day in the future your grandchildren may be speaking the same language as our Russian, Chinese, Japanese, Spanish, and French neighbors—and liking it. And to make things stranger yet, they may all be writing alike. That, we would say, is the modern age ahead, but according to former Senator Robert L. Owen, of Oklahoma, not too far in the distance.

It has always been the dream of scholars and diplomats that the world could have one language for the human race. And now Senator Owen has completed a global alphabet which may mean the fulfillment of these dreams The latest is that our engineers have designed an Underwood keyboard for the global alphabet characters.

The global alphabet of phonetic nature was worked out through the genius of Senator Owen and was introduced before the Committee on Foreign Relations in the United States Senate about a year ago. Briefly there is a phonetic stenographic alphabet of 33 letters, using letters having one immutable primary sound of the human voice, with no silent letter, and the forms simplified to the last degree humanly possible for perfect legibility and speed in writing with a pen.

With this alphabet, the people of any language in the world can write their own language and print it stenographically. Only 1,200 words and their derivatives are necessary for day-to-day conversation. It has always been the belief that such a language affords an opportunity for mutual understanding of various racial groups, a big factor in abolishing war. Even ancient history will recall that the conflict of tongues stopped work on the Tower of Babel, and ever since, men have wanted to understand each other. Perhaps the global alphabet will make this possible.

Senator Owen has pointed out that Russia has made the most tremendous advance in overcoming illiteracy since the revolution in 1917. The revolution, he explained, resulted in the adoption of a 33-letter alphabet which any Russian could learn to read in one day, and by which an intensive educational campaign was carried on in Russia, going from the kindergarten to the elementary and high school, thence to the universities and, the technological laboratories and to the factories dealing with technological matters. "What has taken place in Russia," Senator Owen pointed out, "has removed the deadly blight of illiteracy in Russia." From the literacy of 9 percent, they have now developed a literacy of over 90 percent. So, Senator Owen designed his global alphabet with 37 letters as a result of a close study of Russia's situation.

Recently through close work with Senator Owen, the Underwood Type Department in Hartford designed a complete global keyboard, and the Senator now has three new Rhythm Touch Underwoods equipped with global type. Phonetically, the global typewriter can write with high speed any language in the world with 37 symbols.

The National Education Association Journal, January 1947 issue, in a communication from Frank Laubach, declares the global alphabet the best ever devised. Dr. Laubach represents 123 foreign mission societies of the United States and has taught 88 different nationalities how to read and write their own language with short phonetic alphabets which can be learned in 1 day. According to Senator Owen, he is the greatest man in the world in a war to abolish illiteracy.

It seems this new modern age is upon us, and if left to Senator Owen will be coming along faster and faster. He unhesitatingly says, "The world needs a million of these typewriters."

Moral Aspects of Use of the Atomic Bomb

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22 (legislative day of Monday, April 21), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article prepared by me, dealing with the moral aspects of the use of the atomic bomb. This article appeared in the magazine Air Affairs, which is an international quarterly journal, in their March 1947 edition.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MORALS

(By United States Senator ELBERT D. THOMAS)

Probably no one would dispute that war and threats of force are illogical and therefore immoral ways of settling disputes among nations. After the din of battle has cleared away and the two exhausted combat teams have withdrawn from the field, no one can say without fear of being at least half wrong that anything was proved except, perhaps, that one side won and the other lost. And yet, while we recognize the lack of logic in war, the battle and the planning for battle are as much a part of our culture as the Bible, and accepted as hard facts to be reckoned with by any so-called civilized nation. Rationalized nationalism has lulled us to sleep with the familiar notion that, while we would not, of course, make war, we must nevertheless watch out for the other fellow. The other fellow meanwhile is getting ready for us, and suspicion spirals to bloodshed. Killing to redeem the honor of the state is tacitly accepted as right conduct, the question of which side is being justified for fighting amounting to simply which side we are on.

Once war itself is accepted as proper conduct, what we have come to know as total war is inevitable. And atomic war is total war carried to its illogical extreme. There is no escape from this conclusion. Indeed, the self-styled realist may scoff at the very idea of injecting into the mass of material that has been written upon the morality of the use of poison gas, and other chemicals and biologicals, a discussion of any ethical guide for the use or nonuse of atom bombs. The bomb itself, it might be said, proves the futility of moral standards. Does not this most terrible weapon prove that if a nation would preserve its conception of right, it must be physically strong? Is not self-preservation the first law of nature? After all, says the man from the front, war is war, and there is no use being prissy about it. Shall we kill or be killed—it's as simple as that.

Though warfare has always been of the last-ditch variety—a fight to the finish—probably no one has believed that rational intelligent humankind would act so illogically, so immorally, so stupidly, as to prove this hypothesis. The universal acceptance of man's inherent intelligence has precluded adoption of the idea that such a course would be practically conceivable. What happened at Hiroshima, however, made what has been a fine-spun theory a ghastly, terrible possibility. In a few hours, with relatively little advance planning, a nation using atom bombs could wipe another nation off the earth. This is no longer built on suppositions; it is actually as grim as life itself.

We need not delude ourselves into looking for possible defenses. We are assured by competent scientists, and there has been no contradition, that no adequate defense exists. Even so, the bomb itself is final proof that the creations of man have become superior to the very matter from which the brain itself is constructed. Undoubtedly even more terrifying tools of death can and will be conceived and perfected. The answer to physical force ends with more force, we had better give up because there are no limitations to the means of destruction. Nor can we hide behind the fact that no other nation has, at the present time, the formula. We are assured by the very men who perfected the weapon that it is only a matter of time before others will find the secret. The basic materials are common knowledge in the scientific world.

What has been made physically possible by the atom bomb will have our implied

ethical sanction if the conscience of mankind continues on its downstream trend. We have developed in the last generation in geometric proportions our callousness to human values and human suffering. In 1904, in the Russo-Japanese War, General Nogi of the Japanese Army performed one of the most notable acts in all the history of warfare when, in a battle to capture Port Arthur, he sacrificed several brigades of men and his own sons in order to capture a certain strongly defended hill. He wanted the hill so that he could direct his artillery fire against the Russian naval base. He could have fired over the hill without taking it, but refused because blind fire would have endangered innocent noncombatants. Less than 30 years later, it was the Japanese who first practiced wanton deliberate killing of massed civilians by the bombing of Chapei, a suburb of Shanghai. Then there followed the rape of Nanking, and Pearl Harbor. What happened to the conscience of the Japanese people during those years was also happening to our own. During the First World War, we were horror stricken by the first accounts of such new weapons as the bomb dropped from an airplane, the machine-gun, the poison gas. Indiscriminate submarine attacks so provoked our sense of dignity that they became a real factor toward our entering the conflict. We were even then told that war would be impossible in the future because it had been made so deadly and effective. How many of us stop to realize that we, once the defenders of humanity, and the foremost advocates of international law, have unleashed a weapon which actually wipes out whole cities at a time? Something, indeed, has happened to us, and who is there to say that it is not worse, even, than military defeat. Has there been a terrible weapon invented that has not brutalized its users? Surely what is happening in the physical realm cannot compare in significance with what is happening in men's minds. We are certainly approaching the point where the bomb's use would find justification of some kind, though it would lead eventually to our own destruction. That there can be moral sanction for such completely illogical acts, among thoughtful men, is unthinkable.

A moral principle is not an ethereal concept having no relation to life or living. It is instead founded on human relationships and exists to promote human betterment. It is generally accepted, for example, that telling a deliberate falsehood to deceive is ethically wrong. Not because a mysterious power from afar has enjoined us from lying is it wrong, but because society could not exist based upon falsehood. The lie is based upon the major premise that men usually tell the truth. If men did not usually tell the truth there could be no lie, because the wrong statement would not mislead, and if men could not rely on representations as truth, intercourse between men would necessarily cease. The major premise, it is wrong to lie, is based upon social necessity. The principle finds its roots in the fact that a lying society would be chaos. Equally clear is the same reasoning applied to atom bombs. The real ethical prohibition against their use and the weapons to which their use will inevitably lead, finds its basis in that such conduct will end in annihilation. We may shrug our shoulders, but we cannot escape reality. The position is of our own making.

In many ways, the world we have today is like the world implied in Cicero's great orations against Catiline. Catiline, a choice heir among the youths of Rome, had all the opportunities available to anyone, yet he deliberately chose wrong. Is the world, too, deliberately to choose evil? We can either live blindly, nonchalantly, dangerously, in a world which threatens at any moment to destroy us—or driven by necessity, we can rise to a new level of social responsibility and mark the beginning of a new period of human relationships. The nations of the earth will make a choice based upon reason and ethical principles—or they will perish.

Funeral Sermon for the Late John J. Cochran

EXTENSION OF REMARKS
OF

HON. FRANK M. KARSTEN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. KARSTEN of Missouri. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the funeral sermon for the late John J. Cochran, a former Member of this body, delivered by the Right Reverend John J. Butler at St. Leo's Church in St. Louis, Mo., on March 10, 1947:

"I have fought a good fight, I have finished my course, I have kept the faith. As to the rest, there is laid up for me a crown of justice, which the just judge will render to me in that day: and not only to me, but to them also that love His coming." (II Timothy 7: 8.)

This second letter to Timothy was probably written by St. Paul, the great apostle to the Gentiles, during the time of his last imprisonment at Rome, and not long before his martyrdom. In this epistle he instructs and admonishes Timothy in what belonged to his office and also warns him to shun the conversation of those who erred from the truth, describing at the same time their character. He tells him of his approaching death and desires him to come to him speedily. It was in a way a farewell message to Timothy and his other disciples and the members of the church for which St. Paul had suffered so many hardships and for which he was soon to follow in the footsteps of Jesus Christ and give up his life.

In the few words which I have quoted, St. Paul refers to his life as a fight—yes, a battle for God, for truth, for the doctrine of his Master, Jesus Christ. A fight which started on the road to Damascus when he was struck blind and heard the voice say to him, "Saul, Saul, why persecutest thou me?" It came to an end only when he gave up his life as a martyr defending truth.

St. Paul was anxious to impress on Timothy, his disciples, and those entrusted to their spiritual care, as well as to all others who were to follow in their footsteps in future ages the meaning of the sacrifices that they would be called upon to make in order that they might spread truth. He wanted them to realize that no sacrifice made in the cause of truth would be in vain, and that all who fought the good fight and kept the faith would be rewarded when their course has been finished by the just judge with the crown of life, which means happiness with God in heaven for all eternity.

Today, we bow our heads in reverent tribute to the memory of Jack Cochran, for whose soul we have just offered the holy sacrifice of the mass, and whose mortal remains will receive in a few minutes the last blessing of mother church before being carried to Calvary, there to be laid to rest under the cross of Christ. With heavy hearts, sorrowful souls, and eyes dimmed with tears we meet here today. Had I the eloquence of Cicero or the ability of the greatest poet who ever lived, I could not add one star to the crown that Jack richly deserves. I believe truthfully that he could repeat with pride as he was nearing the brink of eternity after a life so well spent, a life so useful and effective in the interest of his fellow neighbor, his country, and above all—his God—"I have fought the good fight, I have finished my course, I have kept the faith"—and I also believe that the just judge will bestow upon him the crown of life which he has so justly earned.

He was one of us. He loved St. Leo's where he spent a great part of his childhood—his family having moved to this neighborhood a few weeks after his birth in Webster Groves. He often recalled for me some events in his childhood, especially his attendance at holy mass here with his dear mother, who taught him to lisp for the first time the sweet name of Jesus, and the day he received in this church for the first time our dear Lord in the most holy eucharist with a thrill of joy which no other experience can ever surpass.

I am convinced that he had a true appreciation of the virtue of charity, upon which all virtues are based—faith, hope, and charity, but the greatest of these is charity—and in his own humble busy life that virtue was very active, for he made an honest effort to follow the words of St. Luke: "Thou shalt love the Lord thy God with thy whole heart and with thy whole soul, and thy neighbor as thyself." (Luke 10: 27.)

At an early age he started to work, and as idleness was not in his vocabulary he forged forward with marvelous success, which was the reward of industry and attention to duty. These characteristics became the rule of his life and had much to do with his success in the Halls of Congress. Somebody has well said, "He began hustling for the little people when he first viewed the Potomac back in 1913. He's been hustling ever since." He fought for the truth in season and out of season, in the Halls of Congress, and any other place where he could secure an audience.

With the courage of a soldier and the patience of a saint he overcame physical handicaps that other men would consider insurmountable. Several major operations did not deter him. In the hospital he was cheerful and busy. When his friends urged him to take it easy and thought their arguments were convincing, they learned later that he was back on the firing line busy as ever. His interest in the afflicted and his zeal to help, forgetful of his personal suffering, are so well described in his own words in a three-page letter written by his own hand just before Christmas 1943, when he was making preparations to go to an institution in New York to be instructed in the use of his artificial limbs—I quote: "If I can get so I can walk with crutches, in time it will turn to canes. How I would like to do it, and then I would have plenty of time encouraging those disabled like I am. I have met some who have learned to walk, but it took them years. How I would like to have money that I could spend to help the afflicted. I know some rich men in this country, and I am going to try to sell them the idea. They cannot take it with them, so why not do something for those unfortunates who need help? In the last analysis, they became disabled fighting to protect them and their money. Why not reward them by setting up a dozen or more institutions like the one in New York? Endow them—thus helping those to whom they are obligated. Thank God I have a disposition that enables me to refrain from worry. In the hospital I would go around and cheer up the afflicted. In the end the doctors told me I had assisted several men. When they looked at me with no legs, they had nothing to complain about. The nurses used to tell me to call on some fellow and cheer him up. I would do it. I

figure the good Lord let me stick around for a purpose."

Jack Cochran loved God, he loved his Catholic faith. He loved his neighbor, he loved his city and State. He loved his country—but above all he loved his God. He had a deep appreciation of the holy sacrifice of the mass and prayer. His letters to me always ended with a request for a prayer. A request for masses for his friends who had passed away came as soon as he learned of their deaths—frequently with a request that I go to the wake and console in his name the bereaved.

St. Louis has lost a great leader. In his sight all were children of God and neighbors. Though his body is dead, his soul still lives.

To the relatives of Jack, may I extend in the name of the clergy, religious, and laity our heartfelt sympathy in your sad hours and may God grant you strength and courage to bear up under your grief.

It is our earnest prayer that God has already accepted his unselfish deeds performed during his busy active worth-while life and welcomed him with the words, "Well done, good and faithful servant, because thou hast been faithful over a few things, I will place thee over many things: enter thou into the joy of the Lord." (Matthew xxv: 21).

So, dear Jack, with you dear brothers and sisters, your fond relatives, your friends and pals I bid you farewell, but not forever. We pledge to keep your memory ever green. For all you have done for us, your district, your city, your State, and your Nation, we in return will try in our own way to repay you in our masses, our holy communions, and our prayers as long as God blesses us with our faculties.

May God grant you eternal rest, and may a perpetual light shine upon you.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Tuesday, April 22 (legislative day of Monday, April 21), 1947

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated April 16, 1947, from Capt. Nishan der Hagopian, on the subject of aid to Greece and Turkey. Captain der Hagopian is a reputable and popular lecturer on Near East questions.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LOS ANGELES, CALIF., *April 16, 1947.*
THE UNITED STATES SENATE,
Washington, D. C.

GENTLEMEN: I speak with these words to the United States Senators of America, the greatest lawmakers of democracy. Our forefathers who have pledged justice to all humanity, and brotherhood of man.

In the first place, it is wrong to compare the Turks with the Greeks. The Grecians for thousands of years have stood for democracy and cherish justice to all fellowmen. Since when have the Turks had the love for democracy? They have been international gangsters for centuries among the European nations. When they conquered the Dardanelles the middle of the fourteenth century they have caused jealousy, hatred, and war. This is a historical monument in the civilized world.

Today we wish to repeat the history by giving our aid to gracious Turkey. This will cause or strengthen the Turkish position to further their ambitious as a buffer state as it has been in the past. Therefore how can we trust them?

The climax is this: Our helping the Turks at this time will destroy the Armenian cause. I believe you are aware of the fact this martyr nation is preparing now their just cause to lay on the altar of the UNO.

For the last 50 years our great men like Theodore Roosevelt, Woodrow Wilson, Senator King, of Utah, thousands of laymen, and other great Americans stood fast for the justice of Armenia.

It was not so long ago that we Americans witnessed the horror of the Turkish massacre during the First World War. In 1915 deportations into the desert totaled 1,500,000 Armenians slaughtered. This is the undeniable truth you have witnessed in your own time.

Here is another true fact. One hundred thousand young girls were left in the harems of the Turks and in addition to that 100,000 orphans from 2 to 7 were snagged into Turkish homes. Perhaps we are asking these unfortunate orphans to defend our democracy by giving $150,000,000. Gentlemen, do you think God will be pleased with this kind of an act? Since then our American educational institutions, missionary churches, Armenian monasteries, churches, and the homes, property, wealth was all confiscated by the unreasonable Turks. These are the facts, gentlemen, that will remain down through the history of mankind. Therefore, I would like to have the opportunity and pleasure to be among you to challenge the Turks.

I ask you, why did President Coolidge in 1924 make a trade pact with the Turks that doomed the Armenian cause a few years after the Izmirna horrible massacre had shattered the imagination of civilized man in 1921. Furthermore, the only remnant of the nation left throughout Turkey is approximately 200,000. This sealed the minority freedom throughout the Turkish empire.

The last 25 years we have not heard a decent communication from Turkey to their relation outside the world. We do not know whether they are free or they are worshipping something else. Also, it has been prohibited for outside visitors to enter the homeland. This has been the rigid policy of the Turks for the last 25 years. Is this democracy of Turkey?

Gentlemen, do you believe and approve of this dictatorial act imposed upon these Christian people. Now you are offering the gracious aid as if the honorable Turks deserve this wonderful gift from America. Remember, if there is a justice in heaven, there should be one on earth.

This might be food for thought, but let us analyze racial differences between the Turks and the Armenians. For instance, the last 60 years, approximately a quarter of a million Armenian immigrants came to the United States of America. Every one of these refugees had seen massacre at least three times in their lives. They have made marvelous progress with adapting themselves to the American way of life and received the highest education. Some of them became professors of universities, scientists, writers, businessmen, artists, and many of them became millionaires, but the beautiful part is they all became loyal citizens of the United States of America. Their younger generation in the First World War served the country that they loved. They have built several hundred churches throughout the country for their own belief. In this last global war their sons and daughters served the Stars and Stripes, and many have received citations and the highest honors. Now, gentlemen, how many Turks have you in this country that have accomplished anything to compare with this?

These are the outstanding facts. I leave it to your imagination. What makes the American love for the Turks?

Quotation from Matthew, chapter 7, verse 6: "Give not that which is holy unto the dogs, neither cast ye your pearls before swine, lest they trample them under their feet and turn again and rend you."

Another quotation from the Holy Bible, Hebrews 10: 30, 31: "For we know Him that hath said vengeance belongeth unto Me, I will recompense, saith the Lord. And again, the Lord shall judge his people. But call to remembrance the former days, in which, after ye were illuminated, ye endured a great fight of afflictions."

Now, gentlemen, you must not forget this martyr nation. Also the tears and blood they have shed for centuries. Remember the judgment of God.

Very truly yours,

NISHAN DER HAGOPIAN.

"The Federal Excise Taxes on Freight Shipments, Passenger Tickets, Long-Distance Telephone Calls, and Telegraphed Messages Are Grossly Inequitable, Utterly Unjust, and Discriminatory in Their Unequal Application to Various Sections of the Country, Especially to the Far West—and They Must Be Changed" —*Justus F. Craemer*

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. GEARHART. Mr. Speaker, of all of the wartime excise taxes, the levy upon freight shipments, passenger tickets, long-distance telephone calls, and telegraphed messages are the most unfair, unjust, and least defensible of all of the revenue-raising measures that are upon our statute books. Yet the Congress does nothing to relieve the situation. It is high time that something be done.

In the hope that the country may be aroused to a consciousness of the utterly unfair character of these particular excise taxes, I offer for inclusion in the RECORD of this day's proceedings a very able article on this subject from the capable pen of the Honorable Justus F. Craemer, an article which first appeared in the January issue of California, the magazine of the Pacific, as it is known throughout the West.

The author of this most timely article is, as you will recall, Mr. Speaker, an outstanding citizen of California, one who is now serving his State with distinction as a member of the California Utilities Commission. A life-long student of government, he is especially well qualified to write on the highly technical subject of taxation, the subject to which he addresses himself.

The article to which I have just referred, Mr. Speaker, is the following:

IT'S TIME TO ELIMINATE TAX INEQUALITIES

(By Justus F. Craemer, member, California Public Utilities Commission)

Our Boston forefathers held a celebrated tea party to protest against unjust taxation.

Thousand of shippers in the West today feel that it's about time a western barbecue was held to protest against the unfair and discriminatory tax burden carried by the Western States just because they happen to be farther away from the great consuming markets than other Commonwealths.

A part of our tax burden is grossly inequitable and punitive, speaking mildly—so unfair, indeed, that it is amazing to understand why the voices of western citizens have not already raised a tremendous roar of protest reaching the ears of Congress.

I refer specifically to the Federal tax levy on freight shipments and the heavy Federal taxes imposed upon rail tickets to and from the West as well as the Federal levy on our long-distance telephone calls and telegraph messages.

Perhaps the reason why the welkin has not been shattered by such protests is because the seller's market predominated during the war and immediately thereafter; but today we are in a transition period and the sands of a seller's market are steadily running out. Today the motto is "Start using sales technique," because buyers are becoming coy. Thus, tax discrimination against the West forces consideration of taxes upon us more compellingly. It is beginning to hit the westerner in the worst of all possible places—his pocketbook. The buyer's market adds to the impact of tax inequities.

In no other fields of taxation is a western citizen so discriminated against as those enumerated. Presumably, Federal taxes are levied upon each citizen of each State with a bland impartiality which he pays, more or less gracefully, on the ground that his Uncle Sam is a square shooter. He believes that while taxes may be high he shouldn't grumble too much since Joe Doakes, of Tuscaloosa, pays the same rate on the same basis, and Nellie Brown, of Oshkosh, does the same.

But this is not true, and the fact that it is not true is what causes a westerner to grow red around the gills and tugs at his collar to relieve his blood pressure.

Let's take a look at the record to see exactly how adversely we are affected.

DISCRIMINATION PLUS

Since commodity transportation taxes are assessed at the rate of 3 percent of the transportation charges, an orange grower shipping a carload of oranges from Lake Wales, Fla., to New York would pay $371 in shipping charges as against a shipping charge of $701 by a Pomona grower shipping the same carload. No one will quibble over the difference in transportation cost based upon the length of haul, since a service is involved here, but the Lake Wales shipper would pay only $11.73 for taxes upon his carload, while the Pomona man would pay a tax of $21.03. This is where the discrimination comes in.

The question immediately arises as to what extra services the Nation performs for the Californian as compared with the Floridian, which would account for the fact that the westerner pays almost twice the tax that the Floridian pays on an identical carload of oranges. Let's take another one:

Maine produces good potatoes and so does California. New Yorkers enjoy eating the spuds from either section. The Caribou, Maine, grower can ship his carload of potatoes to New York, paying a transportation tax of $7.50, but when a Shafter, Calif., grower sends his identical carload to New York he pays an $18 tax—a little more than twice as much as his Maine competitor, and so it goes all down the line.

A Harrisonburg, Va., shipper sends lettuce to New York and so does the lettuce-bowl grower of Salinas Valley, but the Harrisonburg grower, shipping his product to New York, pays a tax of $6.42 on a carload as against $14.58 taken from the pockets of the Salinas man.

New Orleans ships sugar and so does Crockett, Calif. The New Orleans sugar refiner can ship his sugar to Chicago and pay a tax of $11.52, but when the Crockett refiner ships a similar carload of sugar to the same destination the tax is $19.20.

NO REASON

No sound reason can be advanced by anyone why this should be true, but the tragedy for the Western shipper, as well as every Westerner, is that it is true.

And it is true in reverse also. The Western farmer who purchases a tractor, a truck, an automobile, or piece of farm machinery has to pay a greater tax bill on his freight charge for the manufactured product shipped to him from the eastern production center than the farmers of, for example, Ohio, Minnesota, or any other State geographically nearer the factory.

Example after example of discrimination can be offered. The Alexandria, La., lumberman ships his carload of lumber to New York and pays a tax of $9, but to the Eureka, Calif., lumberman pays $13.80 in taxes on a comparable carload to the same market.

Now, of course, there are only two ways in which such taxes on products can be recovered—one, from the ultimate consumer; the other, straight from the pockets of the shipper. If the tax is to be paid by the ultimate consumer it simply means that the western producer cannot compete on the basis of parity with producers from other sections of the Nation which, fortuitously, happen to lie closer to the large consumer markets. If the second happens, and the taxes are recovered from the shipper, then it simply means that the cost of goods produced by a westerner is greater because of the differential in tax than for the Louisianan, or the Missourian, or the Kentuckian, or the residents of more than 3 dozen other States—simply because our Uncle Sam, who is supposed to dispense evenhanded justice in tax matters, has stubbed his toe on this one.

This is only part of the story.

TOUGH ON TOURISTS

Assume you are a New Yorker, with winter approaching, and you feel you would like to bask in the sunshine, either in Miami, Fla., or sunny California. You visit the rail ticket station and find that to travel round trip, New York to Los Angeles, with a Pullman lower, it will cost you $174.90 in fare; and to make the same type of trip, New York to Miami, would cost you $89.40 in fare. The fare is based upon the haul and service, and there is no complaint on this ground, but on your trip to Los Angeles and back your tax is $26.23, while on the Miami trip it is $13.42, or just about half as much as far as taxes are concerned, and there is no reason under the sun why this should be so.

The same situation applies with equal force to the communications picture. A flat 25-percent tax on long-distance telephone calls penalizes the western shipper and businessman in competing for markets with the citizens of other States closer to the East. For every $100 spent on telephone tolls, the westerner pays $25, but the tax is decreased proportionately as the telephone user is closer to the point called.

The discrimination goes on down the line and applies to the type of taxes based upon services whose cost is predicated upon length of haul, as in shipping, communications, rail and Pullman fares.

The end result of this entire sorry situation is that the westerner is penalized when he endeavors to market his commodities to the people farther away, or to attract tourist business from outside his own section of the country, or even when buying the products of the eastern manufacturer.

The problem is one for western delegates in Congress. Their effort to remove or minimize the continued overcharge of western service should receive the strong support of every citizen of the Western States.

It may be true that, because of the heavy national debt, the Government should seek heavy tax revenue, and no one can object to the present need for taxes, but certainly we can object to a tax situation which places our Western States on an unfair competitive level.

I have been fighting this discrimination for several years, and shall continue to fight it vigorously.

A tax that completely disregards all sound theories for equitable distribution of tax burden is a bad tax.

It must be changed.

* * * * * *

HERE'S HOW THE TAX WORKS

A glance at the following table shows how the Federal tax on transportation charges operates to the definite financial detriment of the westerner. Figures utilize California shipments for comparison, but the inequality of tax impact is proportionally applicable to any other Western State in the use of long-haul transportation:

Destinations	Commodity (single car iced except*)	Transportation taxes
To New York from—		
Lake Wales, Fla.	Oranges	$11.73
Edinburg, Tex.	do	18.03
Pomona, Calif.	do	21.03
Caribou, Maine	Potatoes	7.50
Harlingen, Tex.	do	16.83
Shafter, Calif.	do	18.00
Fort Valley, Ga.	Peaches	12.27
Benton Harbor, Mich.	do	12.57
Yuba City, Calif.	do	19.89
Webster, N. Y.	Pears	6.06
Benton Harbor, Mich.	do	8.67
Santa Clara, Calif.	do	20.01
Shelby, Mich.	Plums	13.26
Newcastle, Calif.	do	20.19
Penn Yan, N. Y.	Grapes	8.40
Sandusky, Ohio	do	10.35
Lodi, Calif.	do	19.89
Harrisonburg, Va.	Lettuce	6.42
Salinas, Calif.	do	14.58
Alexandria, La.	Lumber*	9.00
Eureka, Calif.	do	13.80
Le Sueur, Minn.	Canned foods*	14.04
Oconomowoc, Wis.	do	11.16
Stockton, Calif.	do	20.70
To Chicago from—		
New Orleans, La.	Sugar*	11.52
Crockett, Calif.	do	19.20
To Denver from—		
Chicago, Ill.	Structural iron* and steel	18.18
Torrance, Calif.		22.86
To Lawrence, Mass., from—		
Columbus, Ohio	Wool in grease*	6.84
Willows, Calif.	do	18.21

AND HERE'S WHAT IT COSTS

Estimated transportation taxes paid on California fruits and vegetables shipped to markets, Denver and East, in 1946, and prospective taxes on same number of cars in 1947 based on average charged to all destinations. The table does not show the taxes paid on other abundant California products such as lumber, canned goods, rice, wool, nuts, dried fruits, etc.

Commodity	Number of cars	Estimated average per car transportation tax		Total tax	
		In 1946	In 1947 [1]	In 1946	In 1947 [1]
Fruits:					
Apples	1,800	$15.00	$16.50	$27,000	$29,700
Grapefruit, lemons, and oranges	56,000	17.00	19.00	952,000	1,064,000
Grapes	17,000	16.50	18.20	280,500	309,400
Pears	2,600	16.50	18.20	42,900	47,320
Other fruits	10,600	16.50	18.20	174,900	192,920
Total	87,000			1,477,300	1,643,340
Vegetables:					
Carrots	9,000	13.50	14.80	121,500	133,200
Cantaloups and white melons	14,000	14.00	16.30	196,000	214,200
Celery	6,800	13.80	15.20	93,840	103,360
Lettuce	31,000	13.00	14.20	403,000	440,200
Potatoes	24,000	13.00	14.20	312,000	340,800
Other vegetables	22,200	13.00	14.20	288,600	315,240
Total	107,000			1,414,940	1,547,000
Grand total tax				2,892,240	3,190,340
Increase in tax					298,100

[1] Increase due to raise in freight rates and charges.

Kidding the People

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the following article is from the Washington Daily News of April 16, 1947:

Pressure from Government agencies may raise the cost of living still further. But if President Truman talks often enough about bringing prices down he may shift the blame.

If Congress really wanted to lower the cost of living, and had the political courage, it could pull enough of the Government's supports out from under the prices of farm products to bring about a noticeable decline.

Such action would do more to lower the consumer's outlay for necessities than any number of press-conference challenges to business and free enterprise.

Another thing that keeps the cost of living up is Government buying of grains and other commodities to ship to needy countries abroad. This aid ought to be continued. But business is not to blame for its effect on prices.

Mr. Truman may not be trying to conceal either of these Government pressures for higher prices, but sooner or later, if he goes on talking about lower prices, he will have to admit that the largest single share of responsibility for the higher cost of living lies with the Government.

Many concerns are making large profits and could cut prices. The cuts, though, would be mainly in a list of manufactured articles which don't figure as largely in the cost of living as those commodities whose prices the Government supports or influences through its export buying.

Take wool, for example. Men's clothing prices have increased more sharply than those of women's clothing, because men wear more wool. There's a great surplus of wool, but the Government has been supporting the price of wool so long it has accumulated nearly a year's supply. It has kept prices so high that nearly 3 pounds of foreign wool go into cloth for every pound of domestic wool, and these 3 pounds pay a duty.

Agriculture Secretary Anderson said he would discontinue price support for wool, but the Senate has passed a bill to continue it at the 1946 level, though with a provision by which the Government would be allowed to sell at a loss.

The Government has been supporting the butter and egg market, but a good many producers are convinced the policy will lead to overproduction in the end, with losses to everybody in the business.

Supports for dairy products are most complex. In this field the Government aids the operation of cartels in the metropolitan milk markets. The Government is opposed to cartels only in industries not connected with farming.

Support of the potato market involved the destruction of large quantities of potatoes.

Price increases have been greatest in farm products. These bulk largest in the cost of living. And the Government supports many of the prices there, either by Commodity Credit machinery or by buying for export.

Grains, livestock, and poultry increased most of all, over 200 percent from 1939. Lumber and foods come next, around 150 percent. Get down to manufactured goods like autos, and the increases have been on the order of 50 percent.

The Government has made a heavy commitment to the farmers in the form of parity, but Mr. Truman at least would appear better informed, if he recognized what the Government itself is doing to keep the cost of living high.

Not so many people would think they were being kidded.

In analyzing this article, I call your attention to: First. "If Congress really wanted to lower the cost of living and had the political courage, it could pull enough of the Government's supports out from under the prices of farm products to bring about a noticeable decline."

Surely Congress could repudiate its promises and commitments but it most assuredly should not.

Second. The fact that "Government buying of grains and other commodities to ship to needy countries abroad. This aid ought to be continued. But business is not to blame for its effect on prices" presents a viewpoint that is most assuredly true. When one-third of any crop is purchased and taken off the domestic market for export one can expect a strengthening of prices.

Third. The reference to wool will be clarified when the wool bill is up for consideration. The support price on wool happens to be below the cost of production and the main reason the American wool producer is in distress is because the world wool monopoly operated by John Bull is breaking the American market. So long as there is only $3 worth of wool in a $100 suit other factors than price support must be considered.

Fourth. Price supports of farm products does not mean high food or agricultural prices. Supports of farm prices means a guarantee of so much per hour for producing these foods. Price supports can and should mean adequate supply of food at reasonable prices.

Fifth. There is not any doubt but what there has been a nonpartisan commitment to the farmers, so the articles state. There is no doubt but what President Truman has the power and the funds to control most any commodity market. His administration has put the American fur-farming industry on the rocks. If President Truman put the fur farmer formula into operation, he can also ruin other groups of producers of farm products and put them in the same position that they have the fur farmers of America today.

There are only 8,000 fur farmers and only a few people are included, so it would not be so politically expedient to extend this formula to crops and products where thousands and millions are involved.

Sixth. The American farmer has never asked for any legislative advantage over any group. He expects his Government to fulfill its legislative commitment. In 1943–44 this administration did not fulfill the commitments made under the Steagall amendment. The result was that the LaFollette-Taft amendment was adopted that compelled the administrative leaders to follow the provisions of law that had already been enacted.

No, and many no's. No one should try to influence the administration leaders to go back on the commitments and provisions of the Steagall amendment. There is no floor price on butter. There is no announced floor price on milk. It appears it is a secret because the Secretary has not announced it. There is a cellar instead of a floor price on dried skim of 10 cents per pound on a product with 35.6 percent protein, even though the OPA in its magnanimity did allow it to sell for 45 percent more, or 14.5 cents per pound. Milk in the Midwest has already had a reduction in price of $1 to $1.25 per hundredweight. Those producers did not get any publicity for taking this reduction in price. They also now pay 20 percent more for what they buy than they did when they received 20 to 25 percent more for what they produced. This shows that the dairymen of America have absorbed more than their share of the readjustment and, this being the fact, they should not now be asked to have the rug jerked out from under their economic feet, the same as has been done to the fur farmers by the present administration.

Is the United States, the Last Stronghold of Free Enterprise, Going To Benefit From Participation in the International Trade Organization, a Plan Which Proposes That World Trade Shall Be Controlled by an International Commission?—The Agricultural Council of California Believes That No Benefit Will Accrue to the Nations of the World From an International Share-the-Wealth Program Which Denies the American People the Right To Make Through Their Congress the Basic Decisions Affecting Their Own Economic Welfare. The Idea Is Revolutionary

---

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. GEARHART. Mr. Speaker, as the views of the Agricultural Council of California and the 70,000 California farmers and their families who compose it, in respect to the proposed International Trade Organization, are of most timely importance, I ask unanimous consent that the documents in which their position is revealed, each one on the official stationery of this highly influential western agricultural organization, may be spread upon the pages of the CONGRESSIONAL RECORD as a part of my instant remarks.

And in so doing, Mr. Speaker, I should point out that Mr. Ralph H. Taylor, whose name appears frequently in the correspondence, is, perhaps, the foremost spokesman for western agriculture in these troublous times. There is no one in his field who is held in higher respect or warmer affection—and justly so.

Mr. Speaker, the documents to which I have just referred—two letters and an official statement—are the following:

AGRICULTURAL COUNCIL OF CALIFORNIA,
Sacramento, Calif., April 5, 1947.

Hon. BERTRAND W. GEARHART,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. GEARHART: We believe the enclosed "statement by the Agricultural Council of California, presented March 10, 1947, at hearing in connection with the proposed charter of an international trade organization," will be of interest to you as indicating the policy of the council, which represents about 70,000 California farmers and their families.

The accompanying letter, addressed to Mr. Clair Wilcox, of the Department of State, is to follow up the earlier inferences at the hearing in San Francisco that the statement did not represent the official view of the council.

This is very important to us, and we hope you can find time to familiarize yourself with this statement and assist our growers in the important matter of preserving for our California farmers an even break in our own domestic markets.

Very sincerely yours,

R. H. TAYLOR,
Executive Secretary.

AGRICULTURAL COUNCIL OF CALIFORNIA,
Sacramento, Calif., March 24, 1947.

Mr. CLAIR WILCOX,
Director, Office of International Trade Policy, Department of State, Washington, D. C.

DEAR MR. WILCOX: Yours of March 18 is before me. I appreciate your kindness in including my wire of March 12 in the record of the San Francisco hearings.

With reference to the second paragraph of your letter, may I say that I am sorry that Mr. Knight was not in a position to answer some of the questions which might have been put to him by your panel. If I had been there, there would have been no question about it, but preparation for a meeting of the council on March 13 and 14 and important legislative conferences here, which could not be changed, prevented my personal appearance in support of the statement. Mr. Knight has only recently joined the Council's staff and his statement at the hearing that he was unprepared to answer questions was not any indication of unwillingness at all but was due to his lack of knowledge of the earlier policy actions of the Council which were involved in the statement which he read.

Had the legislature not been in session, the writer would have been present and happy to answer any questions you had in mind; in fact, if you have any such, we shall be more than glad to answer them by mail, should you care to submit them that way.

Reports from some of those present at the hearing indicated that the question was raised—indirectly, if not directly—as to whether the statement Mr. Knight read on behalf of the Council represented the official view of the Council. My wire to you was in response to it. At the Council's meeting held in San Francisco on March 13, the entire statement was presented to the Council members. After reading it, on motion duly made and seconded, the Council unanimously endorsed the statement as presented by Mr. Knight, specifically confirming it as representing the previously adopted policy of the Council.

Since this letter indicates the specific action taken by the Council in confirming its previous position as stated in the presentation made at your hearing, we would appreciate it if you would also make this letter a portion of the record.

Thanking you for your courtesy and hoping this makes it clear, I am.

Very sincerely yours,

R. H. TAYLOR,
Executive Secretary.

STATEMENT BY THE AGRICULTURAL COUNCIL OF CALIFORNIA PRESENTED MARCH 10, 1947, AT HEARING IN CONNECTION WITH THE PROPOSED CHARTER OF AN INTERNATIONAL TRADE ORGANIZATION

This statement is presented by the Agricultural Council of California on behalf of 34 California farm organizations, whose $450,000,000 volume represented a major portion of the total value of this State's 1946 agricultural production.

For many years the Agricultural Council of California has been on record in favor of the preservation of a tariff system which would serve to equalize the differences in production costs here and abroad. For this reason, the council is vitally interested in certain provisions of the proposed charter for an international trade organization.

The council is in full agreement with the principle that unnecessary tariffs, cartels, embargoes, trade restrictions, and discriminatory treatment in international commerce should be eliminated. It is our feeling, however, that an international trade organization should be in the nature of an advisory body, leaving trade controls in the hands of individual nations whose governments can then consider the special problems of their own economies and the needs of their citizens.

Provisions in this proposed charter appear to place the control of world trade, including our own, completely in the hands of an international organization. Penalties are provided for the express purpose of enforcing the decisions of this body. It is the belief of the agricultural council that these provisions may well jeopardize the welfare of American agricultural producers and that carte blanche authority over our prices, production, and marketing methods should not be granted. In article 24 of the proposed charter, we find a clear-cut commitment involving the surrender of the tariff protection on which many of our national farm groups depend. We do not propose here to discuss the case for and against tariffs. The operation of the so-called reciprocal trade-agreements program has been the subject of violent controversy in and out of the Congress, and recent negotiations have drawn protests from more than 1,000 organizations representing American industry and agriculture. For this reason, we believe that the charter provisions dealing with tariff may well become the subject of such future controversy as to endanger the operation of any international trade organization and to limit its chances of becoming a useful and effective instrument.

There is evidence that we are not alone in our misgivings.

It has been reported that one of the conditions on which Great Britain got a loan of three and three-fourths billions from the American Government was that she should support the American proposals for an international trade organization. However, the opinion has been advanced in England that she has signed away her economic freedom by this action and that the loan was a poor bargain. We believe that there is danger that America's overwhelming financial and industrial power may be used to coerce other nations into an organization such as the proposed ITO under such conditions as to make cooperation on an international level impossible, or at best unfruitful. Coercion can hardly lead to peace, harmony, and mutual trust.

Mr. Walter Lippmann, noted American commentator on international affairs, quoted last week a statement from the British Government's white paper entitled "Economic Survey for 1947," which said: "We have not enough resources to do all that we want to do. We have barely enough to do all that we must do."

Mr. Lippmann went on to comment as follows:

"The question is how much economic freedom—as we understand it—can a country in this position afford? It is evident at once that it cannot afford to allow the people freedom to buy abroad. It has to control and ration its imports; otherwise Britons will buy more than the nation has American and Canadian money to pay with, and individuals will buy goods which they would like to have rather than those goods which the whole Nation most needs. The people of Britain cannot afford the freedom to import."

This very accurate analysis of Britain's plight must bring to mind some obvious questions. Our Government has told us that one of the objectives of the ITO is to promote American prosperity through increased exports of American goods. Yet we see from Mr. Lippmann's analysis that Britain, and

obviously many other nations, have problems of their own which make it impossible for them to buy our exports.

The paradox in the objectives of this proposed international organization appears in the claim that it will benefit both the United States and Great Britain, and all other nations, despite the fact that their interests and needs appear to be diametrically opposed to our own.

We believe we will be forgiven if we question whether the ITO can be all things to all people. Pending further analysis and discussion, we would suggest that considerable further study should be made before the proposed charter can be accepted as a workable instrument.

Its advantages to the people of the United States have already been widely questioned. One of its basic principles; namely, the general reduction or elimination of tariffs, has been criticized by American business and agriculture alike. The United States Chamber of Commerce has gone on record with the statement that "all branches of agriculture must be continuously alert to the effects of both imports and exports, and to determine the point at which the general benefits from foreign trade are offset by an impairment of the standard of living of individuals and groups. Obviously, the outlets for the products of other industries could not be maintained if the income of agriculture declines."

Even in our Southern States, which historically have advocated low tariffs, we find today general recognition of the need for cost-equalizing tariffs which will enable us to compete with foreign producers using cheap labor and operating without minimum wage laws or social-security taxes.

"Let us not swap our automobiles and tractors with foreign nations, who can only make payment with agricultural products of which we have an excess." The statement comes from Mr. C. C. Hanson, secretary of the Association of Southern Commissioners of Agriculture.

Another leading farm organization which has gone on record in favor of a realistic tariff policy is the National Council of Farmer Cooperatives, representing farm organizations whose members throughout the United States include more than 2,400,000 farm families. This organization has gone on record as favoring the review and approval of trade agreements by an agency beyond the State Department, and a ban against "inclusion in a so-called negotiating or bargaining list of any agricultural commodity, the actual or potential domestic production of which is certified by the Secretary of Agriculture to be equal to domestic consumption or to a substantial portion thereof." Other organizations which have taken a similar stand include the California State Grange, the California Farm Bureau Federation, the National Grange, and scores of other organizations.

The reasons for the concern of these and all American farm organizations are aptly expressed in the remarks of Congressman BERTRAND W. GEARHART, of California, entered in the CONGRESSIONAL RECORD on February 4, 1947.

Speaking on the theme Who Double-Crossed Whom, Mr. GEARHART quotes the late President Roosevelt when he gave this assurance to the American people in a campaign address in 1932:

"Of course, it is absurd to talk of lowering tariff rates on farm products. I know of no excessively high-tariff duties on farm products. I do not intend that such duties shall be lowered. To do so would be inconsistent with my entire farm program, and every farmer knows it and will not be deceived."

Mr. GEARHART'S statement continues:

"Shortly after the enactment of the so-called Trade Agreements Act of 1934, redubbed by the State Department for political effect 'the reciprocal trade agreement program,' the then President, to allay the fears of the agriculturists of the country, wrote, on June 15, 1934, the following letter to the then Congressman Frank Buck, of the Third District of California, as follows:

" 'MY DEAR CONGRESSMAN BUCK: I am somewhat surprised and a little amused at the fears you say have been aroused in California because of the enactment and the possible administration of the Reciprocal Trade Agreement Act.

" 'Certainly it is not the purpose of the administration to "sacrifice the farmers and fruit growers of California in pursuit of the will-o'-the-wisp of foreign markets," as published reports would make believe.' "

Mr. GEARHART continues further:

"But in spite of these Presidential assurances, sincerely made, no doubt, the international New Dealers down at the State Department, those who had been entrusted with the administration of this measure, continue to throw agriculture to the wolves, to cut and slash agricultural tariff rates with a gay indifference of this to the following result:

"First, the protective tariff schedules on 449 agricultural products have been cut, slashed, as the record reveals, to an average of 45 percent of the tariff schedules established by the Smoot-Hawley Tariff Act.

"Second, absolutely no tariffs on agricultural products have been raised, though the Trade Agreements Act authorizes it in appropriate cases.

"Third, on 95 crop and livestock products the Smoot-Hawley tariff rates have been frozen, that is, they cannot be raised by Congress during the period of the agreements, without resorting to the drastic but short-of-war action of denouncing the agreement or by the exercise of an escape clause which has been inserted in a few of the more recent trade treaties.

"Fourth, 77 agricultural items that were on the free list of the Smoot-Hawley tariff law have been frozen in that status; that is, the State Department, in its 29 trade agreements, has effectively and morally tied the hands of Congress, and by the same device, has rendered itself utterly impotent to protect the people from the consequences of their own folly.

"And now, Mr. Speaker, with this shocking record of repeated defiances of their late chief of state, the former President of the United States, the boys down at the State Department now announce, with a gay nonchalance that is indeed intriguing, a new list of several hundred agricultural items, all crop and livestock products, which it intends to slash an additional 50 percent in trade agreements now under negotiation, many of which have already been cut to the limit previously allowed by the Trade Agreements Act as originally enacted."

It is our belief that American participation in an International Trade Organization should be withheld until the American public more fully understands the complex provisions of this proposed charter, and until responsible authorities in other nations have reached full agreement as to the changes which must be made to protect their own special interests. Obviously, no international organization can promote harmony and cooperation if the United States uses its power of persuasion through gifts and loans abroad to secure adherence by countries which may, as the American Tariff League has put it, become members "less through conviction than through gratitude or fear of giving offense to a benefactor."

Many of the organizations appearing at these hearings will favor or oppose this plan for an international trade organization because of its apparent effect on their own special interests. It is our belief that the Nation as a whole should consider a far more vital question: Is the United States, the last stronghold of free enterprise, going to benefit from participation in a plan which proposes that world trade shall be controlled by an international commission? This is a revolutionary step. Sentiment in this country is now overwhelmingly against a continuation of Government controls over business. Will the American public sanction international controls even more stringent which supersede even the authority of our own Congress?

All the arguments and statements of organizations represented at these hearings should not be allowed to obscure this vital question.

The Agricultural Council of California believes that the answer to this question can only be negative. We believe that no benefit will accrue to the nations of the world from an international share-the-wealth program which denies the American people the right to make through their Congress the basic decisions affecting their own economic welfare. The Council can only urge that the Nation be given time for public discussion and analysis, so that the step, if taken, will be taken with the full knowledge and support of the American people.

Mr. Wallace's Charges

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following open letter by Edgar Ansel Mowrer:

DEAR KIM AND MERETE: I am addressing this letter to you because as Danes, you seem to me more completely to incorporate the European spirit at its best.

For the first time in history, the United States is deliberately intervening in the peacetime development of Europe. It is essential that Europeans should understand what the United States is trying to do.

In our judgment, the facts speak for themselves. President Truman aims solely at defending basic liberties where they still exist. Political intervention outside the Western Hemisphere is foreign to American thought. Yet three-fourth of the American people are supporting the President. Their only motive is the belief that without our action, a still larger part of the world will fall victim to Soviet tyranny.

Unhappily, not only are the usual Communist and pro-Russian voices rising to denounce the American initiative as defense of "reaction" and "fascism."

These voices are soon going to be reinforced by that of a former American Vice President. At home, Mr. Wallace has lost most of his former following. Though an able farm expert, he is without deep understanding of those world affairs he insists on talking about.

It is essential that Europeans should know these facts when considering the case of a once eminent American who is now going abroad to seek support against the Government of his own country.

As for the charges themselves, well, here are my answers.

1. Imperialism: Bunk. Unless with Lenin you believe that capitalist nations are inevitably imperialistic. The United States is definitely not trying to build up an overseas empire. Contemporary Americans are not imperially minded. The danger now is, not that they may use their unsought power to prevent aggression but that they may refrain from doing so—as in 1939.

2. Mingling in European affairs: Twice in one generation Americans have died in Europe to preserve their freedom—and yours.

It is solely in order to forestall a third European campaign that we are intervening in Greece and Turkey at the present time. No Americans enjoy bivouacking on the Danube or at the Dardanelles.

3. Provoking the Soviet Union to war: Since 1939 the Soviet Union has annexed nearly 20,000,000 human beings and subjugated 100,000,000 more. None of them, with the possible exception of the Czechs, have welcomed Soviet rule. Such expansion is a danger to all non-Communist countries. After 3 years of patient protests the United States of America has finally decided to stop further Russian aggression.

Would you really have preferred to see us wait until the Red Army reached the Atlantic shores? Was it frank opposition to Hitler that brought on the last war—or was it uncertainty and appeasement?

4. Dollar diplomacy: During the war we put our wealth as well as our lives behind defeating the Axis. Now we are putting some of the same wealth behind the preservation of peace and of the kind of free world we want to live in. Can free peoples regret this?

5. Promoting fascism: Rubbish. In no country have we even helped introduce fascism except—unconsciously—in Spain. In Argentina we have reluctantly refrained from eliminating it by force. In Greece and China, we have supported old-fashioned conservatism against Communists who, if successful, would side with Soviet power against democracy.

6. Opposing socialism: Not guilty. As beneficiaries of capitalism, most Americans feel that state socialism is not the key to a better life. But where—as in Britain—socialism is accompanied by the maintenance of basic freedoms, the majority of Americans sincerely trust that socialism will succeed. This applies to the rest of the world as well. In Austria, the United States of America has defended socialism against the Russians.

7. Opposing communism: Yes and no. We find communism objectionable particularly because, unlike former despotisms, it disguises serfdom as liberation. We shall try to prevent its imposition by force.

Yet, if any people decide freely to embrace communism, we shall, however reluctantly, acquiesce in their choice.

8. Bypassing the United Nations: Correct—and necessary. Unhappily, at San Francisco the United States joined with the Soviet Union in creating an international organization that can function only when the five largest countries find themselves in agreement.

In less than 2 years, the Soviets have invoked their veto 10 times. The United States and the Soviet Union have been in general disagreement, notably over atomic control and Soviet expansion.

Both these questions will be settled outside the present United Nations or not at all.

A large number of Americans believe that, along with an expressed willingness to stop aggression everywhere, the American President should have taken the lead in offering to strengthen the United Nations to where it could compel obedience from all governments. The President was not yet willing or ready. Here—and not in proclaiming the Truman doctrine—he deserves criticism.

So much, dear Kim and Merete, for my answers to what Henry Wallace is likely to tell you. I hope you will find them convincing. In any case, I am sure that you will respect the disinterested views of an American friend who has spent half his life abroad, who is certainly neither nationalist nor imperialist, and who holds the defense of human liberty first among civic virtues.

Always affectionately yours,

E. A. M.

Agriculture's Stake in the Reciprocal Trade Agreements Program

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. GEARHART. Mr. Speaker, because of the timely importance of the subject, I offer for inclusion in the CONGRESSIONAL RECORD in which this day's proceedings will be recorded, the text of a very able address which was delivered at Phoenix, Ariz., on January 9, 1947, by the Honorable Richard Laban Adams, professor of farm management of the University of California, an address which has been appropriately captioned "Agriculture's stake in the reciprocal trade agreements program."

Mr. Speaker, the very able address of Professor Adams, to which I have just referred, is the following:

AGRICULTURE'S STAKE IN RECIPROCAL TRADE AGREEMENTS PROGRAM

Mr. Chairman and ladies and gentlemen and friends of the National Cattlemen's Association, two pictures hang on the wall of my office. One is a placid scene of a couple of cowboys herding a small bunch of whitefaces. They are in a stretch of country remindful of a part of Arizona's desert. The other is a rough and tumble fight outside a saloon of pioneer days. These pictures typify what is ahead in my talk. We want the cattle industry to continue to be safe, conservative, and peaceful. Yet it is a continual fight to reach that objective. And it well may be that reciprocal trade agreements will be a part of that fight.

Since I have been assigned this beautiful, controversial subject, perhaps I had better give you a bit of personal background.

Since 1914 I have been a member of the staff of the California College of Agriculture, as professor of farm management and agricultural economist. Before that I was employed by the Spreckels Sugar Co. (5 years) and the old cattle empire of Miller and Lux (2 years). And were those the good old days. More fun to talk about that than tariffs. I have raised and sold feeder cattle and purebred Herefords on my own account on a small scale. I spent 1929 in Washington working on tariffs in the interest of California growers. Since then I have written briefs and appeared before various Washington committees on reciprocal trade agreements. I do not admit that I am one of those dry-as-dust academic guys who are notorious for telling you what should have been done when it is too late to do anything about it. (One of those funny woofus birds, who fly backward to keep the dust out of their eyes and who know where they have been but not where they are going.) Or to those economists, who—it is claimed—if laid end to end would reach no conclusion. Or that unkindest cut of all: Maybe it would be a good thing if they were just laid end to end. I couldn't be a "long hair" if I wanted to. There is a good reason—bald. Agricultural economists, however, do some good work. They are in the same position as a dentist. One doesn't go to a dentist for entertainment and relaxation. (One sits in a barber chair for that.) Instead one visits a dentist to find out if he can fill a cavity before it is so late that the tooth has to be pulled. So the agricultural economist hunts for economic cavities with the thought of filling them before more radical treatment is required.

Times certainly do change! When I went to California 40 years ago, individualism was about 100 percent to the front. Farmers and stockmen produced what they wished. If they wanted to take a chance, to speculate, they did. And some of them did. If they couldn't find a market within the State they went outside. The pioneers built a State. They used brains and brawn. They used their imaginations. They did some other things such as getting land under the swamp and overflow act by swearing they went over the land in a boat. Did, but boat was on a wagon hauled by a team of horses.

Personally I believe that the past 50 years will go down in history as the 50 golden years of western agriculture. It has been half a century of opportunity, for full display of initiative. Just a fortunate matter of birth for us who are 50 and past.

Today we have to think not only in terms of economics, but of social betterment. We are facing a changing order. Now it is less a case of individual initiative and more a matter of the greatest good to the greatest number. We now deal not only with statistics but with far-reaching social planning. It is with us whether we like it or not.

Eventually a down-turn may be expected, and when we do go into changing economic conditions, tariffs will be an important factor affecting farmers, livestock men, and in fact all who are connected with agriculture.

All of which is a prelude to a consideration of what reciprocal trade agreements can or may do to agriculture and its various segments.

AGRICULTURE'S STAKE IN RECIPROCAL TRADE AGREEMENTS

This subject was chosen because tariffs can and frequently do help or hamper, depending on what rates are set and how the administration performs. It is well, therefore, to know something about them.

At the request of your officers I intend to discuss briefly the present philosophy of tariff making including reciprocal-trade agreements, how tariffs are made, and what a group of farmers or stockmen face when seeking protection. I hope to be fair-minded and judicial, but I doubt if I succeed. Few of us can talk judicially about tariffs—and this includes that phase known as reciprocal-trade agreements. Few can because most of us (I am one) are individually biased. The reform economist seeks a better way of life: the protectionist thinks in terms of his particular business. The protectionist claims the economist is at heart a free trader. The economists claim the protectionists are selling the country "down the river." No one can stand before a great audience such as this and conclude his talk with a feeling that his hearers are satisfied with what he has said. I know. I have tried it before. Yet, like the night-blooming cereus, I periodically blossom out again.

So at the start here are some of my convictions—or perhaps I should say premises:

1. The home market is the best market for the great majority of United States producers—and this includes the cattle industry.

2. The interests of industry and agriculture are somewhat opposed. Industry is definitely more interested in the export business than is agriculture, so industry feels a greater

need for imports in order to export than does agriculture.

3. That agriculture must strengthen itself in order to insure adequate protection.

4. Some officials in Washington lend a sympathetic ear to the requests of agriculture but are outvoted by others who think in terms of modified free trade, outright Santa Claus gifts, loans, and subsidies to other countries, including—as one vehicle of approach—a lowering of tariffs.

5. Tariffs are needed to iron out inequalities in the economic conditions as between the United States and other countries.

6. The interests of all farmers and stockmen are not identical.

7. Tariffs do not necessarily increase prices. Rather they comprise one means of insuring the American market to American producers by regulating supplies.

8. Protection of some products of American agriculture would cost more (and I am now thinking of the consumers) than would be fair and reasonable.

The other side of the shield

In all fairness and to complete the picture, let us probe into the thinking of those who do not subscribe to the premises I have just listed.

Many heavy volumes (heavy in weight of paper and in reading) have been written setting forth a new foreign policy. All include tariff considerations. The basic thought is that international trade far transcends domestic industry interests, especially if these interests are of minority groups with small voting power. Starting from the premise that huge international trade and prosperity are synonymous these suggestions follow.

The No. 1 suggestion calls for general lowering of tariff rates—perhaps on a graduated scale; use of subsidies to offset losses to certain industries (including agriculture); possible use of quotas on imports; tariffs on a graduated scale for seasonal products when domestic production is small or nonexistent (namely, certain winter fruits and vegetables from West Indies and Mexico); selecting items for reducton not liable to create widespread unemployment; discouraging reprisals by foreign countries; discouraging smuggling and bootlegging; discouraging use of quarantines primarily as trade barriers.

Those who favor lowering of tariffs include not only reform-minded economists but also those whose business is dealing in imported goods, users of imported goods (such as the candy manufacturers using various kinds of nuts, chocolate, etc.), and, in addition those whose primary interest is in the exporting of various goods—largely manufacturers of automotive equipment, farm implements, machines, etc.

Today it would be difficult to find advocates of over-all free trade. Even the most rabid attackers of tariffs recognize the need of some restrictions.

Leaders seeking tariff reforms point out what to them are several inconsistencies and inaccuracies in the thinking of the protectionists. For example: (1) Evidence is presented to show rightly that high tariffs and low imports do not necessarily bring prosperity: That a high tariff does not assure a high price. (In this connection attention is called to the 1914 price of wheat at 97 cents when on the free list, 92 cents in 1923 with a tariff of 30 cents, and 38 cents in 1932 when the tariff was 42 cents. Another example is flaxseed: $1.31 in 1914 and $4.42 in 1919 with a tariff of 20 cents versus $1.94 in 1928 with a tariff of 40 cents and 88 cents in 1932, tariff 65 cents.) (2) Trading with countries of low standards of living may be a factor worthy of consideration, especially with countries producing at a high level of efficiency and with low wages. (Our greatest competition comes from high-wage countries—Canada, Australia, and New Zealand, for example—and especially when their currencies are depreciated in relation to ours.) (3) A proper basis of comparison is wage costs, not rates. Cheap-rate labor may prove expensive if incompetent and inefficient. Think of the Italian turning his soil with a spade, the Japanese planting rice by hand, the Chinese irrigating by lifting water by foot power. Contrast this with our tractors, airplane seeding, and powerful pumps.

In presenting data of lessened imports those critics fail to show to what extent low exports to us from other countries might have been due to lack of things to ship. Moreover, they do not take into account the extent that internal upsets occur not related to international trade, and which of themselves can cause depressed conditions. In other words, imports can drop off because of reduced buying power on the part of our consumers.

It is my contention that prosperity starts here at home. Here is our most important market. We have many raw materials here; we have ample and trained workers; we have inventive genius; we have ample financing. If we are prosperous we will buy from other countries and they can share in our prosperity. If we are in a depression some other country must be prosperous so we can sell to them and, in turn, share in their prosperity. Enlargement of an export (or import) trade depends on the degree of prosperity throughout the world. In other words, I believe that prosperity creates world trade, not that world trade creates prosperity. And prosperity is the result of employment and buying power. As one speaker aptly stated: "Foreign trade is the fruit, not the seed of prosperity."

Let us not forget, too, that during 1925–29 when exports rose—i. e., 56-percent cotton, 21-percent wheat, 40-percent tobacco, 10-percent lard was artificially stimulated by loans, most of which proved worthless. I guess anyone can build up a tremendous business if he gives his goods away.

I take issue with the thinking of some international-minded Washington officials, that the tariff is a failure. Maybe it has developed by the trial-and-error method but I will take that rather than the thinking of certain internationalists who (I quote and paraphrase) "simply know what they know and do not want to know why or what it is they know. These people worship their convictions as a Chinaman does his ancestors and regard any questioning of their creed as sacrilegious and not debatable."

These differing schools of thought boil down to one question: Shall we abandon the American way for internationalism? And by the American way I mean preservation of the domestic market for our own producers, with attendant greater opportunity for employment of American workers. If we do take the down-grade road, then what? As one writer puts it, "Shall we dilute our strength with the world's weakness?"

Let us now turn our attention specifically to reciprocal trade agreements.

What is a reciprocal trade agreement?

I could—but I will not—quote the first sentence of the Enabling Act. This consists of 22 lines or about 250 words—longest sentence I have ever read so far as I can remember. Very lofty and laudable objectives are set forth. In substance, however, a reciprocal trade agreement is a mutual contract between the United States and a foreign country setting forth concessions in tariff rates or lessening of quotas or removal of embargoes in order to stimulate trade between contracting countries.

This provision comprises title III (added 1934) of the Tariff Act of 1930.

It empowers the President (and through him the State Department) to negotiate with foreign countries and permits changing the tariff rate on items not on the free list by an amount not in excess of 50 percent. In addition to reducing (or increasing) the existing rate, the agreements may also bind (viz, freeze) an existing rate against an increase, and may bind an existing duty-free status.

We have had 12 years of experience with reciprocal trade agreements. Originally set for 3 years as an emergency measure, periodic renewals have retained this plan of rewriting the tariff act. For whether Congress knew it or not, the Reciprocal Trade Agreements Act of 1934 delegated to the President the power of changing tariff rates by 50 percent. Thus tariff legislation was to this extent removed from the Congress.

Once made it cannot be modified or withdrawn during the effective life of the agreement, and usually this life is 3 years.

To last May 29 trade agreements had been effected with 25 countries.

In these 29 agreements the United States reduced duties or tax on 342 agricultural tariff classifications; bound 95 more against an increase and bound 77 more on the free list. None were increased. Of particular interest to this audience are the trade agreements with Canada and Mexico. You will recall that agreements with Canada were changed January 1, 1939, and with Mexico January 30, 1943, reducing the tariff from 2.5 cents to 1.5 cents on light-weight cattle, and 3 cents to 2.5 cents on heavy cattle.

Other cuts of interest to agriculture generally include:

January 5, 1942: Fresh, chilled, and frozen meat from Cuba, 3 cents (from 6 cents)—50-percent cut.

January 1, 1939: Fresh pork from Canada, 1¼ cents (from 2½ cents)—50-percent cut.

January 1, 1939: Venison from United Kingdom, 3 cents (from 6 cents)—50-percent cut.

November 15, 1941: Flaxseed from Argentina, 32½ cents (from 65 cents)—50-percent cut.

January 1, 1943: Flaxseed from Uruguay 32½ cents (from 65 cents)—50-percent cut.

February 1, 1936: Pearl barley from Netherlands, 1 cent (from 2 cents)—50-percent cut.

January 1, 1939: Hay from Canada, $2.50 (from $5)—cut 50 percent.

Note the recurring 50-percent cut—the maximum permitted under the act.

On the whole, past history of concessions affecting agriculture does not cause needless alarm. Some portions of our agricultural economy have been hit, but generally the items are not of great importance, except to the individuals concerned. For instance, cutting the tariff on Canadian blueberries and buckwheat is not liable to cripple us; nor concessions to Cuba on cane and meat is not liable to result in much of a disjointing of our over-all economy. To properly weigh the facts one must compare not only rates but the real effect on imports.

The real fear is that a rash of internationalism may break out and cause wholesale reductions sufficient to upset seriously—perhaps irretrievably—agriculture's apple cart. This could certainly happen under the present terms of the Reciprocal Trade Agreements Act.

Basic philosophy

The basic philosophy, or reasoning, which created legislation permitting negotiations leading to these reciprocal trade agreements is neither profound nor involved. It is based on a premise that world prosperity cannot be attained until the present race by different nations to build up tariff barriers for their individual protection is not only stopped but reversed until these barriers are materially reduced. I talked with many people in order to determine the reasoning beyond this theorem, what evidence there is to show that such reductions will accomplish the desired ends, to what extent those in authority are prepared to accept the consequences if future developments prove them wrong, what industries are to be called upon to pay a price. I found a rather wide

divergence of opinion as to how tariff barriers are to be reduced and to what extent such reductions will help. In fact, much of the reasoning is based on personal opinion rather than on definite evidence. I was struck with "the wish being father of the thought" as constituting a not inconsiderable basis for the trial.

To sum up, the basic philosophy contemplates a program of reestablished foreign trade as a means of stimulating business, reducing unemployment, and starting industry full speed ahead; a program that considers the welfare of the Nation as a primary requisite even though it demands sacrifices of groups of industries in order to further the national weal: a program built around tariff reductions; such tariff reductions to be the work of a small, secretly appointed group, working in the dark, rather than patterned after the swapping and logrolling of congressional action.

Variations in farmer's interest

Agriculture is not a single homogeneous industry. Hence interests in tariffs vary with individuals. One group of producers may seek tariff protection to insure as much of the home market as possible, with the added hope that a higher level of prices may be forthcoming. The same group can, however, develop an adverse attitude to the things they have to buy. For instance, importations of cheap sources of protein feeds at as low a cost as possible concerns the cattleman. Yet protection against Mexico, Canada, Australia, and Argentina strikes a distinctively different note. So, too, the orchardist prefers as low a price in fertilizers, spray materials, fruit boxes, etc., but wants as little competition as may be had against importations of foreign-grown fruits—fresh, dried, and processed.

Specifically this means that producers of some fruits, nuts, dairy products, eggs, cattle, and other farm commodities sold primarily—and almost exclusively—in the home market feel a need for tariff protection; producers of farm products for export favor low tariffs in order to insure foreign trade. The latter group includes producers of corn, cotton, tobacco, and—in normal times—pork and lard, for we normally export 45 to 50 percent of our cotton; 30 percent tobacco; 40 percent prunes; 12 to 15 percent of our deciduous fruits; 15 percent rice; 10 percent lard; 8 percent wheat, and citrus fruits.

On the other hand, as buyers, agricultural people want to buy to their best advantage lumber, steel, clothing, foodstuffs, etc. So most everyone views tariff with mixed thoughts.

Individuals, therefore, tend to be interested in agreements that may help or harm their specific commodities. It is at this point that I note confliction between the ideas of the State Department and those of private business, including agriculture. The State Department, in planning a program designed to reestablish and restimulate foreign trade, is making adjustments in tariff rates downward. Their thinking appears to consider that, in the national interest, what is good on the whole will eventually be good for all, even though certain industries (including parts of agriculture) may be temporarily or permanently harmed or even completely demoralized. Many members of Government are undoubtedly motivated by genuine impulses of a truly patriotic nature. But, in addition, there is a group of economic theorists, lacking in business experience, at heart very close to being free traders, who in their positions of advisers are able to counsel moves which in effect will serve as a testing ground for their personal beliefs. This can be an expensive experiment.

Mechanics of reciprocal trade agreements

When a given group of producers—growers of almonds, walnuts, figs, and a host of other commodities decides it is time to take off its coat and jump into the tariff whirlpool, then some ideas are needed of the mechanics of reciprocal-trade agreements.

The procedure involved in negotiating reciprocal-trade agreements is rather intricate and with various ramifications, and by the time one gets at the bottom of the whole arrangement he sees a parallel case to that of getting to the heart of an artichoke.

The first of the machinery is set in motion when, following sounding out, a favorable response to negotiating a reciprocal-trade agreement is forthcoming. Then begins feverish collection of statistical and other matter to permit formulating a statement of what concessions are to be requested and what are to be granted by the United States. This initial movement begins long before public announcement is made of the pending negotiations. When the Department of State thinks the time is ripe, then notices of the pending agreement are published and dates set for (1) final submission of briefs by interested persons, firms, or representatives of industry; and (2) for a public hearing to which interested parties may go or send representatives. Usually only 4 to 6 weeks elapse between the dates of the first notices and the closing of all avenues for presenting views, data, recommendations, or counterproposals.

The internal machinery is complicated by a multiplicity of committees. The basic theory of the number, character, and personnel was evidently conceived along lines designed to bring together in a common committee representatives from the major governmental departments who might possess information or be sufficiently concerned to justify places on the committee. Thus the major committee is designated as the Executive Commercial Policy Committee sometimes called the Import-Export Committee or the Central Inter-Departmental Committee. This committee is composed of representatives, with alternates, from the Departments of State, Commerce, Treasury, Agriculture, Tariff Commission, Agricultural Adjustment Administration, RFC, and others.

This Executive Committee—the fountainhead for policy decisions, and made up of seven members—is flanked by a committee answerable to it known as the Committee for Reciprocity Information. This committee is the only connecting link between the Executive Committee and interested members or representatives of private business and agriculture throughout the country. It is this committee which receives briefs and holds hearings in connection with each proposed international pact. This committee is made up of members from the Tariff Commission, departments of State, Agriculture, Commerce and others.

Under the Executive Commercial Policy Committee are other committees, their personnel and duties not receiving much publicity, such as the Trade Agreements Section, and "Country Committees." The make-up and personnel of these country committees is held confidential in order not to embarrass or harass, or slow down their work by onslaught of lobbyists, strategists, private representatives or possible pressure (from industry, members of Congress, and others). A similar alinement of different interested departments is continued in designating men to serve on these committees, so that the Departments of State, Agriculture, Commerce, etc., is full represented in all the deliberations. The country committees are designated as soon as a chance of negotiating trade agreements has been determined, there being a committee for each country—Belgium, Brazil, Spain, etc. Under them are so-called commodity committees, conceived as clearing-houses for commodities likely to be of significance in connection with several pacts. It is a veritable spider web—but just try and find the spider in all this planned confusion.

Once the accumulated material is ready, including pertinent material submitted in briefs or presented at hearings, summaries or digests are made for the various country committees, which in turn draw a first draft of possible concessions to be requested or granted, these going to the Executive Commercial Policy Committee for determination of policy.

Out of this mass of data finally evolves two lists—one of products upon which concessions may be granted to the interested countries, and another listing concessions desired from that country.

In the meantime the interested foreign country works upon what it desires and is willing to concede.

After all the preliminary work is done by both interested countries, on a prearranged date each conveys to the other through diplomatic channels the concessions that it desires. The United States consul or other designated diplomat in the foreign country concerned receives that country's statement of position and immediately cables the State Department the essential features, while promptly mailing the entire statement. At the same time the United States desires are handed to the duly authorized foreign diplomat resident in Washington. Then the Executive Commercial Policy Committee compares the lists, suggests a basis for training, and advises the State Department of its decision.

In the meantime the Department of State, jealous of its prerogatives, appoints one or more negotiators to conduct the actual bargaining. These men are secretly appointed and their identity is concealed so far as anything in Washington can be hidden.

After both countries have had a chance to study each of the other's proposals, there then comes the actual negotiations. Representatives of both countries then sit around a table, hear, weigh, consider, offer, reoffer, compromise, and barter, until finally all are agreed (or find they cannot agree) upon a common acceptance of concessions one to the other. This constitutes the basis for wording the reciprocal trade agreement to be actually put into practice.

It is a long drawn-out affair, consuming months rather than weeks, between the time that a proposed pact is first suggested until the finally accepted agreement is actually signed.

Let us now turn to

The position of the cattleman

Cattle, fresh, frozen, and chilled beef; hides and leather are of particular interest to this group. These at present carry tariff rates. For example:

Present tariffs on items of specific interest to this group are:

Cattle weighing less than 200 pounds, 2½ cents per pound.

(NOTE.—By trade agreement cut to 1½ cents for Canada and Mexico.)

Two hundred to seven hundred pounds, 2½ cents per pound.

(NOTE.—Mexico 1½ cents.)[1]

Seven hundred pounds and over not specifically provided for, 3 cents per pound.

(NOTE.—Canada and Mexico, 1½ cents.)

Meat: Fresh, chilled, or frozen beef and veal, 6 cents a pound.

(NOTE.—Canada, 3 cents.)

Hides: Cattle hides, dry or salted, 10 percent.

(NOTE.—Argentine and Uruguay, 5 percent.)

Leather (made from cattle hides), 12½ percent.

(NOTE.—10 percent United Kingdom and Mexico.)

[1] All notes by trade agreements.

On Free List

Cattle (for breeding purposes), free—can't cut that!—but can be "bound." (Is for Canada and Mexico.)

"Hoofs, horns, and bones," free.

(NOTE.—Where concessions granted, full 50-percent cuts in case of cattle 700 pounds and over; fresh, chilled, and frozen meats; and cattle hides.)

Tariffs Over the Years

Beef cattle less than—

1909: One year old or over, valued at not more than $14 per head, $3.75 each; at more, 27½ percent.

1913: Free.

1921: (Emergency Tariff Act), 30 percent.

1922: Less 1,050 pounds, 1½ cents; 1,050 and over, 2 cents.

1930: 175 to 700, 2.5 cents; 700 and over, 3.0 cents.

One disturbing thought is that a stable industry cannot be fully realized if every few years the cattlemen must face fluctuations in protection tariff rates.

Out of a welter of words, statistics, and facts, one concludes that the cattle industry is in a fairly neutral position with respect to the tariff in that the domestic market constitutes the primary outlets for cattle, and production about balances with market requirements. Moreover, reduced food supplies prevailing in many countries means that any surplus for export from foreign countries should have a variety of outlets to choose from, provided that the purchasing power is present or can be created. Probably shipments from Canada and Mexico will continue, as for several years past, to be our principal source of imports.

If you think all is quiet on the trade-agreements front, then note this: On November 9, 1946, the Department of State signified its intention to conduct trade-agreement negotiations with Australia, Belgium, Brazil, Canada, Chile, China, Cuba, Czechoslovakia, France, India, Lebanon, Luxemburg, Netherlands, New Zealand, Norway, Union of South Africa, Union of Soviet Socialist Republics, the United Kingdom, and areas for which these countries have authority to negotiate. There you have 18 countries specifically named. Of these you as cattlemen are particularly interested in Australia, Canada, New Zealand, and perhaps Chile.

A list of products to be considered for possible granting of tariff concessions by the United States includes several of particular interest to this group, viz, edible cattle (except those weighing from 200 to 700 pounds); meat—fresh, chilled, and frozen; hides, leathers; cattle for breeding "hoofs, horns, and bones."

It is too late to do anything more than has been done about tariffs. These had to be in by December 21. So, too, December 21 was the last day for filing applications to be heard by the Committee for Reciprocity Information. Old in experience with tariff matters, I suspect your officers have safeguarded both these avenues. If not, there still are other ways. One, for example, is via some interested Congressman or Senator. The stop watch doesn't run against them. By the way, public hearings start at 10 a. m. January 13, 1947. I hope that "13" is not prophetic.

What it means to cattlemen

Internationalists contend—and often ruthlessly—that the only industries fit to survive are those so efficient that they can compete in world markets irrespective of the varying standards of living. If the less efficient "go to the wall" why that is just too bad. What about your industry? Is it efficient? Could it compete in a free or low-tariff market with Argentina, Australia, New Zealand and Mexico? What can you do to cut costs and raise efficiency? What special advantages have you other than shorter hauls that cattlemen of these countries do not—or cannot possess? Better breeds? (But others can breed up.) Lower real wages? (I doubt this.) Cheaper feeds? More skill?

Does the cattle industry need tariff protection? Will the cost of such protection cost more in indirect ways than its worth?

These are the questions an industry may best answer for itself. Perhaps we need to assemble what we know about the cattle business of foreign countries in the exporting of beef and cattle. Perhaps we need to send someone to various cattle and meat exporting countries to make a first-hand up-to-the-minute appraisal of what the American industry is, could be, or may be up against, not only today, but in the years to come. Personally, I cannot answer the questions raised above with too much assurance. I admit, were I to make such a study, I think I would be likely to start with the premise. We do need protection—then I would need an answer to the question: "How much and how soon?" I imagine your officials face a similar situation. The billboards used to say "there's no substitute for butter."—Similarly, "there's no substitute for facts."

A few suggestions:

1. Both as individuals and as an organization make up your minds as to what protection you deem to be both fair and necessary—then go after it "hammer and tongs."

2. By resolution or other appropriate means express your convictions firmly and courageously.

3. Arrange to appear at all hearings scheduled on tariff matters affecting your industry.

4. Precede appearances with well-considered and well-prepared briefs. See that these presentations cover a full statement of needs, backed by ample evidence and adequate facts, and specific recommendations.

5. Insure suitable representation in Washington.

6. See that Congressmen and Senators are fully appraised concerning your problems and solutions.

7. Likewise see that the proper people in the Tariff Commission, State Department, and Department of Agriculture are given full information of what is going on.

8. Put pressure where it will do the most good.

During the past dozen years advocates of protection were either ignored or else feared or liked. Maybe the ignoring will be out of the window for the next few years. As to whether fear or liking should prevail, I point out that sentiment leaves more room to shunt one aside than does fear. Fear in Washington generates respect and one can do more if he is respected than if he is merely liked.

9. Remember there are two sides to tariff matters. Learn the other fellow's thinking, and at all times be prepared for arguments, counter-arguments, backed by the image of your convictions.

Mr. Mollin, your esteemed secretary, has ably represented you in Washington. He knows his way around. I met him in Washington in 1929 when he appeared in your behalf, along with C. E. Collins, of Colorado, and Victor Culberson, of New Mexico, before the Ways and Means Committee to advocate proper tariff protection. Mr. Mollin also testified (this time single-handed) before the Senate Finance Committee—submitting a prepared brief to supplement his oral presentation. In 1934 I note that he addressed the Senate Finance Committee on Reciprocal Trade Agreements. He could make this talk as well—perhaps better than I. But I suppose you are intrigued, perhaps intimidated when the speaker is called "professor," "doctor," "economist." However, I hasten to add that most people call me by my initials—"R. L." And I like it!

Finally, don't let me ever inflict another tariff speech upon you!

Lewis' Memorial? to Labor?

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, a constituent of mine has just given expression of his views to the "Lewis' memorial? to labor?" It gives a new slant, as it were, to the idea of what could have been a great memorial, one of tremendous benefit to the widows, orphans, and other dependents of the victims of the recent Centralia, Ill., mine disaster. Would that more emphasis was placed upon the continuation of service and production in order to obtain more money with which to benefit our loved ones.

It might be interesting to contemplate that much constructive good could have been accomplished, not only for the dependents of those victims but by the use of a portion of this money that would have been earned if the holiday—a disguised strike—had not been declared, to proceed in an orderly manner to insure safe working conditions in the other mines. Vigilance and aggressive and constructive action and programs insuring safety for the miners might be assumed as part of the responsibility of the miners. This does not mean that they should pay out of their salaries for installations, but if they are to be protected by safety devices, measures, and methods, it does seem that their leadership should be interested in checking inspections and reports and in taking the necessary steps to protect the individual miners in their work. Certainly if, instead of losing time and production, a portion of what they lose every time they go out on strike, by whatever name called, if spent under proper supervision for their own protection and safety, it would be a wise investment. No one knows better than the man who does the work where the danger lurks, and he should be encouraged to be interested enough to help correct bad situations and prevent the loss of life and promote the efficiency of the workers.

The following is the reactions of one of my constituents, Mr. Hiram Preston White, an attorney of Pawhuska, Okla., which I quote:

LEWIS' MEMORIAL? TO LABOR?

Estimating that coal miners earn $10 per day, 400,000 of them would earn $4,000,000 per day, or $24,000,000, collectively, in 6 days.

By laying off for 6 days they lost $24,000,000 in wages, contributed nothing to the dependents of departed brothers, but did contribute to nonproduction and depression in all lines. What a memorial!

Had the 400,000 miners worked the 6 days and contributed their combined wage to create a trust fund to care for the bereaved of the late disaster, and future disasters as well, $24,000,000, what a memorial that would have been.

If the 400,000 miners would create a befitting memorial it is not too late. If each miner will work overtime each day a sufficient time to earn an extra $2 each day for 30 days

and contribute that extra earnings, amounting to $24,000,000, to the creation of such a trust fund, what a memorial that would be. But apparently Lewis would not have it so. Who suffers? Who are the losers under the Lewis memorial?

ODE TO A JACKASS

Yes, you can put a bulldog's head
On an old jackass, but gee whizz
That old jackass will just remain,
The same old jackass that he is.

—*H. P. White.*

The Test Relative to Monopoly

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. KEFAUVER. Mr. Speaker, for many years we have heard a lot of people talking against economic concentration and monopoly. Most organizations go on record against monopoly. The test of the genuineness of such statements is determined by the attitude taken in connection with specific measures before Congress. An editorial in the Nashville Tennesseean of April 10, 1947, states well the proposition. Under leave to extend my remarks, I include this editorial:

PUT TO TEST

Judging by words, there is not a corporation or a man in America who favors economic concentration or monopoly. They are all on record against it—the Republican Party, the National Association of Manufacturers, the United States Chamber of Commerce, and so on down through the list. The real test of their attitude is what they will do when a bill is presented in Congress to block the monopoly movement.

Consider the case of the Kefauver bill.

Congressman KEFAUVER has introduced a bill to correct the hole torn in the Clayton Act of 1914 by a Hughes-dominated Supreme Court in 1926. The object of the Clayton Act was to prevent consolidation in any instance in which competition would be materially lessened. The Court held that the Clayton law prohibited the acquisition of controlling stock in a competing company but did not bar the acquisition of the physical assets of the company. This narrow, legalistic interpretation was contrary to the purpose and intent of the 1914 law. Nevertheless, the Court opened the door to the wildest concentration spree in our history prior to 1941, and Congress has remained amazingly indifferent to the imperative need to patch up this hole, which is big enough to allow consolidation at any level.

Mr. KEFAUVER's bill would simply close the hole by prohibiting the acquisition of the physical assets of another corporation where the result would be restraint of commerce.

And what happens among these defenders of free enterprise? The United States Chamber of Commerce promptly announces its opposition to the bill. And nobody will dare strain their imagination so far as to try to picture the NAM throwing its propaganda machinery back of the measure.

In the face of the most gigantic merger movement in our history, the chamber proclaims that "present provisions of law are quite adequate to deal with monopolistic and unfair competitive practices * * * (and there is) no need for further remedies."

Mr. KEFAUVER has produced a sound and urgently needed measure. It ought to be passed at once. But he will not be disappointed by the announced opposition of the chamber and the unannounced opposition of other interests. Every reform bill looking toward the preservation of a genuinely free enterprise system has had to be pushed against the opposition of the very elements that subscribe in words to antimonopoly sentiment.

H. R. 3100

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mrs. DOUGLAS. Mr. Speaker, on April 17, 1947, I introduced a bill to continue rent control until June 30, 1948.

If such positive action is not taken by Congress, rent control will be done to death within the next few weeks. Rent increases and eviction notices will follow.

The rising living costs confronting everyone can no longer be denied. Every newspaper tells the grim story, but the housewife does not need to read the newspapers to keep up with the facts of life.

She is told that she should be happy because the counters are now filled with choice, juicy steaks. There are plenty of shirts on the shelves; shoes, too, to be had. But she is not told where to get the money to pay for them.

The answer to that, to date, is punitive labor legislation.

Let us never forget that more than half of the American families are living on an annual income of less than $2,000 a year—$500 less than the expense account for a Congressman. And let us not forget the fact that the Bureau of Labor Statistics, which Congress has just voted to emasculate, reports that the average family spends 40 percent of its income for food.

In my speech on the floor of the House on March 13, I showed that food costs had risen 30 to 35 percent. I said then that the lifting of rent controls coming on top of the high and rising cost of food would be too much for the American housewife and her family to bear.

Recognizing the political factors involved, I waited for a member of the majority party to introduce a bill to renew effective rent control. No such bill having been offered, I introduced H. R. 3100, which I hope will be considered on its merits at an early date.

Under permission to revise and extend my remarks in the RECORD, I include a copy of my bill, H. R. 3100:

H. R. 3100

A bill to continue rent control until June 30, 1948

Be it enacted, etc., That the provisions of the Emergency Price Control Act of 1942, as amended, and all regulations, orders, and requirements thereunder, insofar as rents are concerned, shall be continued until June 30, 1948.

No general increase in rents shall be granted under authority of that act except as may be required under the provisions of section 2 (b) thereof.

Oklahoma's Lieutenant Governor Blames Wagner Act for All Our Troubles and Wants It Repealed

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am just in receipt of a letter from the Honorable James E. Berry, who has been for many years the Lieutenant Governor of the State of Oklahoma, and is one of our outstanding and most respected citizens, and who always has the interests of our people at heart. Lieutenant Governor Berry is very much perturbed about the management and labor-relations conflicts, the strikes, and other disruptions to our economy, just as thousands of others from our part of the country who have written me, clamoring for Congress to take some definite action to correct these ills.

Governor Berry insists that the Members of Congress can do something about it and he insists that we enact laws which will make it impossible for these strikes to continue. He emphasizes that it has become apparent to many, and that it is his belief that the Wagner Act, which is sometimes referred to as the Wagner Labor Relations Act, has "caused all of the trouble which our country has had to endure," and he expresses the hope that we in Congress "will vote to repeal the Wagner Act." It will be remembered that when our subcommittee in charge of the appropriations for the Labor Department recently reported its bill to the House, and the House approved it by a substantial vote, the bill contained a drastic cut in the appropriation item for the National Labor Relations Board. This is the Board that was created by and set up pursuant to the Wagner Act. While the bill was being considered on the floor, I offered an amendment striking the entire appropriation item for this agency on the ground that the appropriation was premature and pointed to the fact that the House Committee on Labor and Education, after many weeks of hearings and after taking the testimony of hundreds of people from both management and labor, was soon to bring a bill to the floor of the House, and that until such bill was acted upon by Congress, no appropriation should be made for the National Labor Relations Board and its activities for the 1948 fiscal year, beginning July 1, 1947.

The House Committee on Labor and Education last week reported out their bill, H. R. 3020, the Hartley bill, and I believe it is a fair deduction to say that if this law is passed, the appropriation which was carried in our bill is far in excess of the amount of money that will be needed for that agency to function pursuant to the Hartley bill. Be it known that the Hartley bill was one of the most controversial measures that will come before this Congress and one in which the public is perhaps most vitally concerned.

Four hundred and fifteen of the 435 Members in the House were present and voted on this measure. Three hundred and eight voted in the affirmative and 107 in the negative. Only 22 Republicans voted in the negative and more Democrats voted in the affirmative than voted in the negative. Hence, it was in many respects a nonpartisan measure in which the people of this country, through their Representatives, expressed themselves as thoroughly disgusted with the conditions that prevail. The bill is proof that conditions are not right as was admitted by nearly all speakers pro and con, and that Congress must enact legislation which will remedy the ills which now so banefully beset our economy.

It is heartening to have the reactions of people like Lieutenant Governor Berry and I am pleased to quote his letter in full for the benefit of my colleagues and the public, as follows:

[Official seal of the State of Oklahoma]

JAMES E. BERRY,
LIEUTENANT GOVERNOR OF OKLAHOMA,
Stillwater, Okla., April 14, 1947.

Hon. GEORGE B. SCHWABE,
Member of Congress,
First District, Oklahoma,
Washington, D. C.

DEAR CONGRESSMAN SCHWABE: At last Oklahoma, and especially Stillwater, is going through the inconvenience and hardships caused by the strike of the telephone operators. I don't know what has caused the difference of opinion between the management and the employees, but I do know that all of the citizens are being penalized by reason of this condition.

You and other Members of our Congress can do something about it, and I sincerely hope that you will enact laws which will make it impossible for these strikes to continue.

I am told and I believe that the Wagner Act has caused all of the trouble which our country has had to endure, and I hope that you will vote to repeal the Wagner Act.

With best wishes for your continued success, I am

Sincerely,

JAMES E. BERRY.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Tuesday, April 22 (legislative day of Monday, April 21), 1947

Mr. JOHNSON of Colorado. Mr. President, during the past 2 weeks I have participated in several radio programs on the subject of aid to Greece and Turkey. I ask unanimous consent to have the addresses printed in the Appendix of the RECORD.

There being no objection the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. EDWIN C. JOHNSON, UNITED STATES SENATOR FROM COLORADO, ON MUTUAL BROADCASTING SYSTEM, APRIL 9, 1947

SHOULD WE USE OUR FUNDS TO HALT COMMUNISM ABROAD?

Well, today, an epidemic of communism is said to be sweeping over Europe and Asia. Should we attempt to stop this irresistible tide or would it prove better strategy and better judgment to let it run its course? In my opinion, the best cure for communism is a good dose of communism. If it is as bad as I think, its most enthusiastic sponsors will turn against it if given a little time. Anyway, long experience has proven that ideas cannot be halted by anything except better ideas.

Former Secretary of War Pat Hurley says, "A mule driver must know more than his mule." I feel the same way about halting communism. Before we try to cure this political fanaticism, either at home or abroad, we should know what makes it tick.

Communism's primary causes are empty stomachs and political persecution. When capitalism disintegrates ruinous inflation takes over and communism follows, just as night follows day, and it can happen here!

So before we embark on a wild-goose chase of halting communism all over the world, it would be prudent to estimate the probable total costs of such a venture. Our economy, already badly warped and extremely shaken, cannot stand much more global spending.

We start out to rid the world of communism and wind up by destroying the last remaining citadel of capitalism. What an ironical and hideous result?

The other twin cause of communism is political persecution. We drove the Jap Fascists out of Formosa and invited Chiang Kai-shek to move in. The other day his man, Chen Yi, brutally murdered 5,000 Formosans. During the past 20 years it is estimated that the lives of 7,000,000 noncombatant Chinese have been snuffed out by civil war. Formosa and China today are fertile fields for communism. In Greece, a Fascist Government has been supported in large part through the sale of UNRRA relief supplies. A worker in Greece, due to inflation, cannot earn enough to purchase one-tenth of his family requirements, and while his family starves he must witness the privileged classes living in luxury. Yesterday the Greek Parliament voted a dowry of $40,000 for Princess Catherine, the sister of King Paul, who will be married April 21 to a British officer. That almost makes a Communist out of me.

Sure money borrowed from American taxpayers and poured into Greece by the millions will not halt the cruel barbarism of foreign-born rulers who have been imposed arbitrarily on Greece by Great Britain.

ADDRESS OF SENATOR EDWIN C. JOHNSON, OF COLORADO, OVER THE AMERICAN BROADCASTING CO. COAST-TO-COAST NETWORK, APRIL 12, 1947

SHALL THE UNITED STATES GIVE AID TO GREECE AND TURKEY?

Many Senators who are rabidly opposed to the Greco-Turkish military grant and loan say they shall not vote against it, since they do not want Stalin and the world to know there is division in the United States on our foreign policy.

American unity is most desirable but the State Department ought to think of that before they launch a program so controversial and so filled with dangerous military implications. The Congress was given no advance information nor was it previously consulted. Suddenly the President canceled his Caribbean vacation and presented it as a pressing world crisis which must be met with no delay.

That is not proper procedure in a democracy. The United States of America is not a dictatorship. I have long advocated a united front, nonpartisan foreign policy, but since the proposal had no preliminary exploration or public examination, all of its phases must be studied and discussed thoroughly now. I shall do my best to bring before the people and the Congress its many far-reaching implications as I view them. That I conceive to be my duty.

It is no light matter to bypass the United Nations organization as it was bypassed by the President. Upon the urgent demand of Warren Austin, our representative to the Assembly, who made a special trip to Washington for the purpose, the President, 16 days after his address to Congress, officially assured UN that he was still friendly to it and backing it.

We must choose either the high road of collective security or the low road of unilateral action. We cannot travel both roads if we would fulfill our destiny to lead the world to peace. No one, eloquent though he may be, can deny successfully that the prestige of UN has been dealt a body-blow by the Truman proposal. It has been branded officially as an impotent instrument. It has been subordinated to an inferior position, and in an inferior position it cannot function. I doubt that it will ever recover its lost standing.

Thus the United States, preaching collective security, stabs collective security in the back and adopts the discredited system of power politics and unilateral action in its stead.

It is no idle passing matter to form what amounts to a military alliance with Turkey. Russia dares not ignore such a threat to her security and to world peace. If you will glance at the map, you will see that Turkey and the Black Sea reach far into the vitals of the Soviet Union. Turkey, by herself and on her own, is no threat to Russia, but when she makes a military alliance with the leading power—the United States—it is a horse of another color. Russia must deem this an act of aggression on our part just as we would be compelled to view a like move by Russia in one of our neighboring states.

Always and traditionally we have refused to intervene in a civil war raging in another state. Under the new Truman doctrine we depart from that wise policy and place the world on notice that henceforth, if it suits our mood, we shall pick one side or the other in every civil war and wade in. Reduced to a few words, it means that henceforth we take it upon ourselves to police the world.

Russia has proven exasperatingly uncooperative. Her obstinate spirit of stubborn and sullen negation would try the patience of a saint. But we, with world peace our most cherished objective, must not fly the track. I earnestly hope that the United Nations rises to its full stature and puts both Russia and the United States in their place. Otherwise Turkey will become an armed camp and throw the whole world into an armament race which must quickly lead to World War III.

STATEMENT BY SENATOR EDWIN C. JOHNSON, OF COLORADO, ON BLAIR MOODY'S RADIO FORUM APRIL 13, 1947

Close by the Persian Gulf, the very area which envelops the earth's most extensive deposits of petroleum, is said by historians to be the Biblical site of the Garden of Eden. The drama of Adam's original sin is about to be reenacted by modern man. The apple, the ancient symbol of temptation, is replaced by the modern "black gold" altar of petroleum. Otherwise, the setting is the same. Today men fight and die for oil. As certain as we live and breathe World War III is going to be fought in the Middle East over this tempting fruit. The battle lines for an unspeakable war are about to be drawn in the deserts of Turkey. It promises much in blood, death, and destruction.

A military alliance between Turkey and the United States is now pending in the Congress. They do not call it a Turkish military alliance; they call it Turkish aid, but in reality it is a military alliance—pure and simple.

Turkey stands on guard between Russia and the richest oil domain on earth and in

my opinion that is the basis for our hideous proposal to form a military alliance with her. Russia and her satellites must be cut out of this tremendous natural resource. Five of our largest domestic oil companies and certain British oil companies in which the Crown owns a sizable slice, hold joint concessions to all of this vast oil empire. To make their holdings secure the American flag must fly from the highest derrick. So the American people pledge their lives, their fortunes, and their sacred honor to defend to the death the modern Adam's apple.

The Atlantic Charter specifically provides for all nations and peoples on the earth to share alike in the world's natural resources, but we are about to reduce the Atlantic Charter to a scrap of paper and turn this priceless bonanza over to private American and British oil interests to have and to hold and to exploit.

INTERVIEW WITH SENATOR JOHNSON OF COLORADO ON BEALL HEADLINE EDITION, STATION WMAL, APRIL 10, 1947

Mr. BEALL. Senator JOHNSON, what are some of your main reasons for opposing the President's bill?

Senator JOHNSON. Well, in the first place, it's a program which eventually must lead to war.

Then, it inevitably destroys the United Nations organization, which has been so carefully built up as a bulwark for peace.

It is a radical departure from our long-established and traditional foreign policies.

It effects a military alliance with Turkey.

And it wastes the taxpayers' money in a futile effort to stop communism all over the world.

Mr. BEALL. Speaking of the United Nations, Senator JOHNSON, the Soviet Delegate, Andrei Gromyko, has urged on the United Nations Council at Lake Success that the Council create a special United Nations Commission to oversee any economic aid to Greece. He also opposed any aid at all to Turkey. Would that strike you favorably?

Senator JOHNSON. Strange as it seems to me, I am in complete agreement with Gromyko on both points. Certainly UN should superviser aid to Greece, since a civil war has been raging there for many months. We propose nothing but military aid to Turkey, which can be considered little short of an American-Turkish military alliance. As such it ought not be permitted by UN.

Mr. BEALL. How do you think the country feels about the President's program, Senator?

Senator JOHNSON. My mails indicate overwhelming opposition. All polls which I have noticed shows the same thing.

Mr. BEALL. Well, how do you predict the Senate will vote?

Senator JOHNSON. I have heard many Senators say they do not like it, but they will vote for it in order to prove to the world that there is no division in America's foreign policy.

In my opinion, not five Senators are really for it; yet there will not be two dozen votes against it on the floor. Almost every Senator has deep reservations in his heart.

Mr. BEALL. How do you account for this discrepancy—what has happened, Senator?

Senator JOHNSON. What has happened is this: The freedom of the Senate to vote as it would like to vote has been foreclosed by the executive branch. That is a traditional thing in our foreign relations. Too often there is nothing left for the Senate to do but follow the President. When the President is wrong, it is just too bad.

STATEMENT OF HON. EDWIN C. JOHNSON, UNITED STATES SENATOR FROM COLORADO, ON UNIVERSITY OF CHICAGO ROUND TABLE FROM WASHINGTON, D. C., STATION WRC, APRIL 20, 1947

SHOULD TRUMAN'S GREEK AND TURKISH POLICY BE ADOPTED?

Question. What kind of policy is the President proposing?

Senator JOHNSON. In the Ides of March, 1947, President Truman appeared before a joint session of Congress and, in a tense atmosphere, solemnly pronounced a new and dynamic foreign policy. Senators and Congressmen received it in gloomy silence. They sensed in it a declaration of a future war with Russia. The President suggested his right and duty to intervene in any country anywhere in which there was civil strife or outside pressure. In the Monroe Doctrine, we denied such a right in the Western Hemisphere to all European powers.

In other words we assert that the United States is a privileged power. If intervention everywhere becomes our foreign policy, the comity of nations which is based on equal justice must insist that other powers exercise the identical rights and privileges we claim for ourselves. The Monroe Doctrine obviously is inconsistent with this new policy of American aggression and should fall, but the State Department pledges to strengthen it instead.

The inconsistency of such a position is pointedly significant. The Truman doctrine is a demand on our part for freedom from all international restraints. It is a policy of international anarchy. Under this preposterous theory we assume the responsibility of policing the world all by ourselves and denying such a right to all other powers.

Question. Is our only alternative either a do-nothing policy or the adoption of the Truman proposal?

Senator JOHNSON. Either a do-nothing policy or the Truman policy are equally bad. Fortunately, there is a middle-of-the-road course which is not a contradiction to all of our vaunted ideals and postwar objectives of world peace. My suggestion is that we follow such a course and not become international anarchists.

Admittedly, unrest and discord prevail over much of Europe and Asia. Hunger and misery, the aftermath of war, is widespread and severe. Communism, the symptom of distress, is spreading. Prompt and effective action is imperative. Some say radical departure from our traditional policy of nonintervention, say that if we do not back the President we will give the green light to Russian expansionistic tendencies, and thereby dash to earth all hope of independence of the peoples who are resisting Russia.

Greece must have food, and we should provide it, but at a price, and that price should be a restoration of democracy, immediate amnesty should be declared, and a free and popular election held to select a representative government. A constructive program of restoration and manufacturing and transportation should follow. No guns, no soldiers, just economic aid wisely administered which will help the Greeks help themselves, is all that is required. The Truman policy of military intervention in the civil war raging in Greece must fail just as Britain's policy of violence failed.

Question. Will Truman's program succeed in checking communism in Greece?

Senator JOHNSON. The answer is a very positive no. Greece is torn by civil war and revolution. Her production is far below consumptive needs, her Government is despotic and unacceptable to the rank and file of her people. Her transportation system has collapsed. Disease and malnutrition take their daily toll. Wild and uncontrolled inflation make it impossible for a worker to support his family. British troops, despised—and humiliated by their failure to put down a people's rebellion—are getting out. German collaborators hold high office and serve in the King's army. Political prisoners are starved and tortured. The Truman policy advocates the status quo for Greece. Britain tried to do that. We will fail also.

Question. In your view, what is the connection between Truman's proposal and the interests of the British Empire in the Dardanelles?

Senator JOHNSON. The United Nations should undertake at once the solution of the Dardanelles dispute. Britain does not want Turkey to make any concessions to Russia and now we underwrite that Britain's vicious, narrow, selfish policy of negation on the Dardanelles is in a century-old quarrel with Russia over the Dardanelles, and so Mr. Truman would pay her tribute to encourage her to carry out Britain's obsolete and insane scheme to stop Russia at the Turkish border. Purchasing our way into this ancient British-Turkish-Russian controversy is not statesmanship. It is international suicide. I have every reason to believe that Turkey and Russia would find a fair and friendly basis of cooperation if we and Britain maintained a hands-off policy. Winston Churchill gleefully boasts about the bill of goods he sold us at Fulton, Mo., last year.

Question. What about the relation between the United States and the United Nations?

Senator JOHNSON. The sickening proposal before Congress to sidestep the UN makes both the United States and the United Nations ridiculous. If we ignore her with impunity and go off on a tangent of our own, seeking our military security in Russia's backyard, Russia should be able to do the same thing in the Western Hemisphere. How can the UN keep her from moving into Cuba for instance? Cuba contributes as much to Russian security as Turkey contributes to our security. What a furore it would be if Russia moved into Cuba for Russian security. No, Americans, the United Nations is either our first line of defense or it is nothing.

We marched up the hill on the high road of security for all with high hopes and devout prayers and we created the United Nations; there we pledged our enthusiastic support for collective security. Today we march back down the hill to travel the mud-deep, wreckage-strewn, low road of power politics and unilateral action. It is a wicked thing to destroy humanity's hope. We must not stab UN in the back.

Question. Will our intervention in Turkey lead to war with Russia?

Senator JOHNSON. Our vulgar display of the American flag in Turkey and our provocative threat to send a token army there must lead to war with Russia. It is a bold brazen attempt to bolster Turkish resistance, not to communistic infiltration, pressure, or coercion, but to cause her to repulse all effort to resolve the Dardanelles controversy. How Russia will deal with our unfriendly challenge, I do not know. She will know that $100,000,000 can accomplish very little, but she will also know that our intervention in Turkey constitutes a military alliance between the United States and Turkey.

Reduction of Prices

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

OLYMPIC LUGGAGE CORP.,
KANE, PA., *April 21, 1947.*

Mr. ROBERT F. RICH,
House of Representatives,
Washington, D. C.

DEAR MR. RICH: Conforming with the request of President Truman we are sending out a letter, per attached copy, to our trade reducing our prices 10 percent. This reduction in prices is not warranted from a standpoint of labor costs or material costs. Our

labor costs are continually increasing and not one of the raw materials we use has been reduced at all, while some of them are increasing. However, as stated in our letter we hope this reduction will stimulate sales resulting in greater volume which will help to reduce our cost per unit. Whether or not the sales will be stimulated by this reduction remains to be seen.

The 20-percent Federal excise tax which now has to be paid by the consumer on every piece of luggage bought drastically reduces luggage sales, and, of course, seriously affects our business. We do not think that moderately priced luggage is a luxury nor should it be placed in the same category as jewelry. We, therefore, strongly urge Congress to abolish this tax completely.

In the matter of taxation we do believe that if the Government would follow the same procedure recommended by Mr. Truman for manufacturers, that individuals as well as business of all kinds would be materially helped. Many nations starting with Egypt have fallen because of oppressive taxation. The latest example before our eyes is the British Empire. When taxes reach the point where incentive for capital investment is gone, business dries up and as a result the amount of taxes collected by the Government as excess rates is less, rather than more. As you well know our Nation has reached its high standard of living as a result of capital invested in tools and equipment and the higher the amount of investment per worker the higher the standard of living for all.

We are sure there is no need for us to elaborate on this matter further, but we are writing this letter to you urging that unnecessary expenses of Government and Government bureaus be reduced or eliminated, and urging Congress to reduce income taxes which at the present rates have already largely nullified any incentive for individuals to risk their money or put any effort into productive enterprises.

We believe that only by the drastic reduction of Government extravagance and progressive reduction of income taxes can this Nation return to the way of life which we want and avoid following in the footsteps of other nations whose downfall was caused by oppressive taxation.

Yours very truly,

H. D. MACEWEN.

OLYMPIC LUGGAGE CORP.,
Kane, Pa., April 16, 1947.

To Our Customers:

In line with President Truman's appeal for lower prices, we have cut the prices of our entire line 10 percent. This we are doing as our contribution toward stabilization of the economy, in spite of the fact that labor cost and the prices of many materials we use are increasing.

The success of this program will, therefore, naturally depend upon increased volume, which should result from the proportionate retail prices this reduction will make possible.

Your orders will have our most careful attention.

OLYMPIC LUGGAGE CORP.

Some Apparent Inconsistencies

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the following news article by Mr. John W. Ball, of the Washington Post, indicates that someone should be acting to prevent waste of funds, fertilizer, and effort:

HOOVER HITS WRECKING OF GERMAN PLANTS

(By John W. Ball)

Former President Herbert Hoover yesterday angrily attacked Army occupation forces for destroying German fertilizer plants urgently needed to restore Europe's food production.

Hoover's denunciation of Allied policy in Europe took place just after he had testified before a closed session of the Senate Foreign Relations Committee in support of the $350,000,000 general foreign relief bill.

The former President's attack was not reserved for American forces alone. He spread his criticism over all occupying forces, the United States, British, and Russian armies jointly.

All, he said, had been busy as bees destroying fertilizer plants when all Europe is gasping for fertilizers for food production.

Most important, he said, is to get the productive capacity of Europe built up again.

The Army policy of destroying phosphorus and nitrogen plants in Germany, Hoover said, was carried out while United States taxpayers were being asked to pay the food bill for Europe's starving.

Many of the plants in Germany that were dismantled, Hoover admitted, during the war were producers of war materials for Germany. But the prime need, he added, is to restore production in Europe instead of tearing down industries.

Hoover was emphatic on still another point—that of food relief for nations now within Russian Communist control.

He replied with a positive "no," when asked if such relief should be withheld.

"You've got to keep charity separate from politics," he declared.

From the Capitol, Mr. Hoover went to the White House, where, he told reporters, he had a pleasant, social gossip with President Truman.

"We settled no international problem," he laughed; and then added that he did not find it necessary to discuss with Mr. Truman the subject of foreign food needs.

"I didn't have to go into that," he said with a smile. "He knows all about that."

Hoover told reporters that if this country was going to take the line the Army is following in Germany, "we might as well conclude that the American taxpayer is going to pay the food bill of Europe from now on."

The former President was obviously upset by what he had seen during his recent food survey in occupied areas abroad, and by the recent disastrous explosion at Texas City. The Texas disaster resulted when a ship loading American fertilizer for France exploded in the harbor.

Following the former President's appearance, the Senate committee arranged to act Tuesday on the European relief bill.

Mr. Speaker, why in the name of common sense should we allow the destruction of German fertilizer plants at the very hour that an inadequate United States supply of fertilizer is being shipped to Germany?

In a previous report by former President Hoover, it was explained that the Germans could not fish because of a fishing-boat shortage.

The American people complain about high food prices at the very time that our domestically produced foods are being transferred to areas in need, although the means of producing in those areas are being impaired. People who have any respect for the American taxpayer, the American consumer, and the United States Treasury, can well inject common sense into these programs.

Atomic Energy

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of David E. Lilienthal, Chairman of the Atomic Energy Commission, before the American Society of Newspaper Editors, Hotel Statler, Washington, D. C., April 19, 1947; also an article from the Washington Sunday Star of April 20, 1947:

ADDRESS OF DAVID E. LILIENTHAL

It is a great honor and one I highly prize to have this opportunity to speak to this gathering of newspaper editors from all parts of this broad land. I am especially appreciative of your invitation because of certain recent events of a rather tumultuous character in which I played a not-too-happy participant. I am told by more experienced criminal defendants than I am that it is not considered the best form to thank the jury after they have brought in a verdict of "not guilty," the idea being, apparently, that they only did their duty and thanks are, therefore, not good form. Nevertheless, I cannot refrain from commenting that had it not been that the press of the United States is overwhelmingly fair, decent, independent, and above narrow partisanship, your present speaker would almost certainly not be talking to you tonight as Chairman of the Atomic Energy Commission. Now this result may or may not be a good thing, but as a statement of fact about the press of this country, it is something I felt I should like to say to you directly.

This black object that I hold in my hand is a cylinder of pure uranium. The amount I hold here is small, as you can see. It is harmless. Five years ago no man had ever seen even this much pure uranium. Not that it was rare, but it was simply of little importance. Tonight this black metal, this inanimate substance, is the central figure in the councils of the peoples of the world.

Why this should be so is not difficult to understand. Look at this small cylinder for a moment. It weighs about 2½ pounds. That much coal or oil, burned under the boilers of industry, would provide a trifling amount of useful energy. Compare the technical opportunities of the controlled release of nuclear forces. The energy resulting from the fission of the 3 million billion billion atoms in this small cylinder, converted into electricity, would equal about the total daily use of electricity in the city of Washington, which now requires about 2,500 tons of coal.

This amount of TNT would produce only a small explosion. But the destructive power of the energy in the nuclei of this handful of material is very great, is catastrophic, the equivalent of many, many tons of TNT. As you know, one bomb derived from this stuff destroyed an entire city in a single blast. This material is so dense, so heavy, that 60 tons—about the capacity of a railroad coal gondola—could be piled up here in a block about 8 feet long by 3 feet high by 4 feet thick. Yet the energy in that material, if only 25 percent of its heat were converted to electricity, would provide an amount of electricity as great as the entire country uses in a year.

Now, these are opportunities that lie in the future and I cite them only to show how great are the economic stakes of further development to bring these opportunities into living reality.

But there are even more important reasons why the recently acquired knowledge about this black cylinder is so vital. Uranium and certain other substances can be put into a kind of furnace called a reactor, or pile, in a particular way so that a terrific radiation is created, a fantastically intense and powerful bombardment by infinitesimal particles that makes the beam from X-ray machine or a piece of radium seem faint. This violent barrage of particles and the resulting radioactivity can perform scientific miracles. Materials, familiar materials like iron or carbon or gold are thrust in that furnace. They go into that bombardment one substance, they frequently come out another. Transmutation of the very elements, the dream of the ancient alchemists, is realized at last, in the day when you and I are living. The characteristics of familiar substance can be changed—made more or less brittle, more or less electrically conductive, and so on. Even more important in terms of human benefit, this intense radiation is a means whereby we can expand our knowledge of nature, push back the frontiers of darkness in a hundred fields—in medicine and the knowledge of how to conquer disease, in industry, in nutrition, in agriculture. It uncovers new concepts of the nature of the universe, brings new skills, new professions, new ideas into being, as basic knowledge always does.

Now, the present discoveries of the controlled release of nuclear energy are the barest beginning. Almost nothing yet is known of the nucleus of the atom; almost everything lies ahead. In our own day the knowledge thus far acquired can be used to unfold vast new understanding of the world, bringing human benefits in its wake.

Our knowledge of the nucleus, of the development of nuclear heat and energy, of neutron bombardment, of the secrets of all physical matter—these are in their earliest stages. The atomic bombs thus far used are also only a beginning, perhaps but a crude beginning, when compared with what further research and development may produce. This may seem rather grim. But what I am talking to you about are the facts and possibilities in the world, regardless of whether they appear grim or pleasant. And the fact is that only a beginning has been made in the destructive potentialities of nuclear weapons. As to the military uses of nuclear energy this must always be remembered—atomic energy research and development, whether for the uses of war and destruction or for beneficent and creative purposes, is virtually an identical process—two sides of the same coin. It is only in the very final stages that a difference arises between destructive and peaceful uses, a difference between what you need to know to make the forces within the nucleus serve the interest of human kind and what you need to know to make them destroy it. Up to that final point the road is the same.

The United States has a head start on the rest of the world. Are we to maintain that preeminence, maintain and increase it, or are we to fall behind? Will we fool along or politic along, or are we to press forward in the vigorous tradition of a pioneer nation?

The answers to such questions depend largely upon you. This is the theme of what I have to say to you of the American press. What our course shall be in the development of this portentous discovery will depend upon how important forward strides in atomic development appear to the American people, depend upon how well the whole American people understand the essential facts, understand the human implications of this discovery.

How well the people understand depends largely upon our institutions of education and communication, the schools and universities, the churches and religious organizations, the radio, and most of all the press.

This great venture into new fields of knowledge can progress no more rapidly than the public's understanding. The American people must know in broad terms what is at stake for themselves and their children.

Our problem is first to understand. This is not easy. It is not easy for any of us—it is not easy to sense that a profound change has taken place in the world. And it is not enough that a few people understand, a few grasp the facts. This comprehension must become widespread. And in the process we must come to grips with reality but without hysteria.

This is not only a large order for the press and for educational forces. This my friends is a large order for humankind.

What are the essential facts that must be known? Let me illustrate with a few. And may I say that none of these facts are highly technical. None of them are secret scientific data. At the threshold of progress in public understanding we must overcome the prevalent feeling that all this atomic energy business is over my head. That is simply not true.

First, take the present condition of our atomic energy development as of this 19th of April 1947. This is a vital fact for the American public to know and to understand in broad outline.

We all know that when the first atomic bomb was dropped on Hiroshima August 6, 1945, the United States had a very considerable head start on the rest of the world. It was estimated that we had a start of between 5 to 15 years. What is the situation today? It is this painful fact, that since Hiroshima, the United States has lost momentum in atomic energy development. For from the level of VJ-day we have actually gone downhill, measured in such vital factors as scientific personnel, depreciation of plants, intensity of effort, and in other important ways.

This is wholly understandable, for a relaxation in a transition period was inevitable. But it certainly presents a state of affairs that is not compatible with our conception of the responsibilities that the country has now laid upon this new commission. Accordingly the Atomic Energy Commission has appraised the situation and initiated steps to change these conditions. Nothing less than a major effort is called for, a program under full head of steam, carried forward jointly by American science, industry, the armed forces and Government.

We have lost time and momentum. It is clear that much of this lost time was quite unavoidable. But to face the facts of lost drive, the dribbling away of time, this is the beginning point of any understanding by realistic men of what America's course should be from here on out.

What other facts must become widely understood? I would say high on the list is an understanding of this country's official proposal to the world for international atomic control, the Baruch plan, now being carried forward by Senator Warren Austin and Mr. Frederick Osborne. This must become known to all of us. The physical facts that make the safeguards in that proposal, if agreed to and put into effect, a protection to the American people, must be understood. These are scientific and technical facts that make anything less than those controls and safeguards no protection to us at all. These, too, must also be widely known.

The alternatives to no international atomic agreement are grim. You know what they are as well as I do. You know, too, that statements are made, and they will continue to be made, abroad and at home, that tend to confuse the American people on these issues. Therefore we must all know the facts that make our proposal a fair, a decent basis for other peoples—as well as a protection to us. For in view of these alternatives to no agreement it is essential that the American people should be in no doubt as to the solid moral ground on which the American proposals rest.

Then there is a somewhat different kind of knowledge that must become widespread.

Bear in mind that the decision to develop atomic energy as a weapon was made in utmost secrecy. The American people knew nothing of it and measures were taken to see that they did not know. Over $2,000,000,000 were spent without public participation or a chance to criticize the manner of spending. This was a war necessity. But it is no precedent nor example of the working of peacetime democracy. The fact is—and we might as well face it—that it has yet to be demonstrated that in peacetime the necessarily cumbersome and time-consuming processes of our Federal Government can make a success of such a scientific and technical undertaking as this. It has yet to be demonstrated that in peacetime the United States Government can retain in its service and attract to its service the top creative brains of science and of industry and of management that we simply must have if we are to maintain our preeminence. It has yet to be demonstrated how much secrecy the American people and its representatives will accept in peacetime, since it is their money that is being expended and their destiny that is at stake. And yet it is perfectly clear—no one has suggested an alternative—that atomic energy is an undertaking that under present world conditions must remain in Government hands. It is clear too that under present conditions a large area must be kept secret at all costs.

We of the Atomic Energy Commission—which happily includes your fellow editor Bill Waymack—firmly believes all these things can be demonstrated. We realize fully that it will be an accomplishment without precedent, but it can be done if the American people are constantly aware of how vital it is to our country that it shall not fail. Here is your great function.

There are other situations that the public should understand. Thus, it must be recognized, for it is true, that this is an ever-changing field, that what we have today in the way of plants, of research and developments, may be obsolete tomorrow—indeed it should be a measure of our success that we strive to acquire new and better ways that will make today's plants and processes obsolete. There should also be the fullest understanding of the identity, or virtual identity, of research and production for peaceful uses and for military uses, an identity that reaches a parting of the ways only at the very end of the course. There should be a clear understanding of the possible ways in which in the future nuclear science can contribute to the everyday life, health, and prosperity of our people—a fascinating story. These things lie ahead. The country should know that they can be brought to fruition by good, solid, imaginative work.

A final illustration of the kind of knowledge that must become general is this: That the scientific basis of nuclear-energy release is not an American monopoly; that this scientific knowledge about atomic energy is part of a basic store of knowledge that is world-wide, and that other nations, including Russia, will inevitably in time have learned on their own what we know today. The truth of this comment is not new to you, but anyone who reads public statements these days will agree with me that it needs to be better understood. There are still those who think that what we have is the kind of scientific secret that can be put in an envelope and locked in a vault, and thereby kept as our sole possession for all time. It is not that kind of secret.

These then are some of the facts that the American people must know. For the vitality of our democracy rests upon the widest public participation in those majestic decisions

of policy which determine the course of the Republic.

Probably among the most important decisions in our history as a nation will be those made concerning the course and direction of atomic energy development, and the uses to which this new force is put. These decisions will affect our most cherished institutions. They will have a deep and all-important effect upon our relations with other nations and peoples of the world and upon the very preservation of civilized life. These are not scientific nor industrial decisions. They are human decisions, decisions about human organizations, about our way of life, about the relations of science to well-being, about the issues of peace, or of war, war of a destructiveness beyond our imagination.

Those decisions will be made with wide understanding by the people of the facts, of the consequences of the decisions, that is to say, in accordance with the democratic process, or these decisions will be made without understanding, made in the dark, made under the compulsions of hysteria and fear, not of reason and judgment.

The first decision to be made may be the most important of all. It is an answer to this question: "How important is it to the security and well-being of this country that atomic energy development be pressed forward urgently and vigorously?" For the country to answer this question will require knowledge on the part of the people of what is at stake. If they do not know what is at stake, then the chances are great that this development will slow down, even more, that it will be exposed to all kinds of petty frustrations. Top scientists will adjure it; a good administrator will have nothing to do with it. It will become a fine nestng place for industrious mediocrity.

It is true that the American people on their own, without the agreement of other nations cannot develop international action which will remove the threat of atomic warfare. But, if we as a people thoroughly understand the implications, both destructive and creative, of this new force, if we keep way in the forefront in its development, it is not fantastic to hope that the time will come when in spite of all political obstacles to the free flow of news, the peoples of the whole world will also come to realize that there is no security for anyone unless international agreement safeguards the whole world against the misuse of atomic energy. And this decision will come about among our people and among the peoples of the world through the educational forces of which a free press is the most vital.

It is because of the American people's faith in public knowledge that alone of all our private business institutions the freedom of the press has been enshrined in the very Bill of Rights itself. We as a people have a faith in knowledge, have a belief in the beneficent consequences of an expanding area of reason based upon knowledge. Never in our long history has it been more important that we live that faith, that faith in the principles of self-education.

What I am proposing is a great and sustained program of education at the grass roots of every community in the land. And this leads at once to the question: Who shall be responsible for the dissemination of the facts concerning atomic energy? Clearly, it should not be the Atomic Energy Commission. The Commission does not plan and we are opposed to the idea of a large information staff. Clearly, it should not be any branch, executive or legislative, of the Government of the United States. This is a high function of the people's institutions of education and communication. It is a heavy, and I may say, a sacred responsibility of a free press. It will be your job in my opinion, not only to disseminate the facts, within the limits of security, but to interpret and give meaning to those facts. It will be your job to see that your public servants, legislative and executive, are held to the highest standards of performance, to see to it that atomic energy shall never become the victim of petty politics or narrow partisanship. It will be your job not simply to increase public knowledge but to make it effective. It is for such a historic and fateful function as this that through 150 years this Nation has never wavered in its determination that the schools, the churches, and the press shall remain vigorous, independent, and free.

[From the Washington Sunday Star]

UNITED STATES IS LOSING ITS LEAD ON ATOM, LILIENTHAL TELLS ASNE MEETING

Warning the United States is losing rapidly its preeminence in atomic research, Chairman David Lilienthal of the Atomic Energy Commission call on the Nation's newspaper editors last night to lead an educational campaign to acquaint the public with what is at stake.

"From the level of VJ-day, we have actually gone downhill, measured in such vital factors as scientific personnel, depreciation of plants' intensity of effort and in other important ways," he declared. "Nothing less than a major effort is called for, a program under full head of steam, carried forward jointly by American science, industry, the armed forces and the Government."

Mr. Lilienthal spoke at a banquet concluding the 3-day convention of the American Society of Newspaper Editors in the Hotel Statler.

WARNS OF DECLINE

If the people do not realize the importance of persistent atomic research to national security, he said, the program "will be exposed to all kinds of petty frustrations.

"Top scientists will adjure it; good administrators will have nothing to do with it. It will become a fine meeting place for industrious mediocrity."

Mr. Lilienthal said it had yet to be shown in peacetime that the Government could attract and hold first-rank scientific talent. "Further," he continued, "American people and their representatives will accept in peacetime, since it is their money that is being expended and their destiny that is at stake.

SECRECY IS REQUIRED

"And yet, it is perfectly clear—no one has suggested an alternative—that atomic energy is an undertaking that under present world conditions must remain in Government hands. It is clear, too, that under present conditions a large area must be kept secret at all costs."

Mr. Lilienthal said many people still had the false impression "What we have is the kind of scientific secret that can be put in an envelope and locked in a vault, and thereby kept as our sole possession for all time."

He said the Commission was opposed to creation of a large Government information staff to disseminate atomic data.

REFERS TO CONFIRMATION

"If the public became informed generally as to the implications of atomic energy and if this country maintained leadership in research," he declared, it would not be "fantastic to hope that the time will come when, in spit of all political obstacles to the free flow of news, the peoples of the whole world will also come to realize that there is no security for anyone unless international agreement safeguards the whole world against the misuse of atomic energy."

In beginning his address, Mr. Lilienthal recalled the controversy concerning his confirmation in the chairmanship. He said:

"I cannot refrain from commenting that had it not been that the press of the United States is overwhelmingly fair, decent, independent and above narrow partisanship, your present speaker would almost certainly not be talking to you tonight as Chairman of the Atomic Energy Commission."

BUSH ASKS MORE RESEARCH

In another address at the banquet, Dr. Vannevar Bush, director of the Office of Scientific Research and Development, said the United States must move promptly to restore its reservoir of scientific learning through increased basic research.

"During the past decade, our scientific advances have been noteworthy, but they have been primarily in applied science, and have drained very nearly dry our resources of fundamental knowledge," he said.

"The Nation must share in the investment," since the work needed is beyond the financial capacity of private institutions, he declared.

INDUSTRY SEEN CARRYING LOAD

Industry will carry the major load in applied science, Dr. Bush said, if it is given a situation in which new businesses "can pioneer with courage, courage enough to make mistakes and start over again."

"We have made the way unnecessarily hard here," he commented, "partly because in the effect to regulate big business we have gone too far, overshooting the mark and virtually prohibiting the venturesomeness essential to the launching of pioneer undertakings."

He praised legislation which would create a national science foundation to seek out and train new scientific talent and emphasized the necessity for "judicious governmental support" of science.

He warned, however, that if Government support means Government control and dictation by the nonscientific, we face failure.

HOWARD ELECTED PRESIDENT

The convention elected N. R. Howard, editor of the Cleveland News, as its president to succeed Wilbur Forrest, assistant editor of the New York Herald Tribune. Mr. Forrest remains on the board of directors until 1950.

Others elected are Erwin D. Canham, editor of the Christian Science Monitor, first vice president; B. M. McKelway, editor of the Star, second vice president; Dwight Young, editor of the Dayton Journal and Herald, secretary; and Alexander F. Jones, managing editor, who on May 1 will become assistant to the publisher of the Washington Post, treasurer. Mr. Young also was secretary last year.

Later the editors adopted four resolutions, including endorsement of the proposal that the United States negotiate separate treaties with other nations to promote world-wide freedom of the press.

INFORMED CRITICISM WELCOMED

Introduced by Mr. Forrest, the resolution asserted that "if the United Nations or other means of multilateral action fails to produce results in reasonable time, this society urges that the United States Government make a beginning through the negotiation of bilateral treaties with individual nations."

After a long discussion, members adopted a resolution by a 37-to-35 vote declaring that ASNE welcomes informed criticism of the press. Discussion centered around a paragraph which was deleted. It stated that the recent report of the Commission on Freedom of the Press, issued through the University of Chicago and proposing several press reforms, had been analyzed by many newspapers and found to contain inaccuracies and omissions.

The resolution as adopted stated that the society "constantly recognizes the need for

self-improvement of newspapers, but believes our press is performing with increasing effectiveness and fairness the duty of keeping the American people the best-informed people in the world."

PRESS INSTITUTE PRAISED

A third resolution declared the society "heartily endorses the work of the American Press Institute, established through the leadership of Sevellon Brown of this society at the Graduate School of Journalism of Columbia University. We believe American Press Institute is already helping measurably to raise the practical standards of operative journalism in the United States."

The final proposal submitted by the ASNE resolutions committee and adopted by the members voted "unanimous thanks to its officers who have managed its affairs during the past year and expresses especial appreciation of the services of President Wilbur Forrest and convention program chairman Alexander F. Jones."

Earlier in the day, the board of directors adopted a motion which has the effect of excluding from memberships those who are publishers exclusively. The test of eligibility shall be "50 percent of hours spent as editor, managing editor, editorial editor, or supervising executive editor."

EDITORS HEAR EISENHOWER

Members rose in silent tribute to Joseph Pulitzer, whose centenary is being observed this year by the St. Louis Post-Dispatch.

General Eisenhower, Army Chief of Staff, told the editors at an afternoon session that "our job is to try to make of every nation a friend, regardless of how hard the problem might be." Failing this, he added, the United States must make as many friends among nations as possible.

The wartime chief of Allied forces received a standing ovation from the group at the beginning and end of his address. He pointed out that this country must set an example in demonstrating that democracy—which he defined as "cooperation"—works at home. Thus other countries would be influenced, he said.

NEWSPAPER ROLE IMPORTANT

In this task, newspapers will have to play an important role, General Eisenhower indicated.

He warned that American occupation forces had reached the very lowest possible level in personnel and added that "when you get below that level, you are asking for trouble."

General Eisenhower said that "come what may, we will keep a strong and effective air force." Asserting that while the superblitz is not yet here, he said this country would have to retaliate quickly to a surprise attack.

Warren R. Austin, United States representative on the United Nations, declared at a luncheon meeting that "we must never give up trying to secure unanimous agreement on world issues, but in the meantime we must maintain our own military strength."

DEFENSE BUDGET SUPPORTED

"Few acts could be more damaging at this stage in history to the cause of collective security and of ultimate disarmament than ill-considered reductions in our budget for national defense or failure to establish a universal military-training system," the former Senator from Vermont declared.

Milton Murray, president of the American Newspaper Guild, disclosed that the union's international executive board was meeting in Chicago to consider a proposal giving the board veto power over local guild strikes.

He said this was being done because of "our strike experiences, particularly in Philadelphia and Los Angeles." The proposal will be submitted to the membership meeting in its annual convention in Sioux City in June.

Amendment of Natural Gas Act

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. RIZLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made before the Interstate and Foreign Commerce Committee of the House, on April 14, 1947, in support of H. R. 2185, a bill introduced by me and now pending, having for its purpose to amend the Natural Gas Act:

Mr. Chairman and gentlemen of the committee, the Natural Gas Act became a law June 21, 1938. Since then the Federal Power Commission, and the courts which have reviewed the Commission's action, have interpreted and applied the act differently from what the Congress intended in several important respects.

In the face of the clear provisions of section 1 (b) that the act shall not apply to the production and gathering of gas, the Commission has adopted, and the courts have sustained—always by a divided court—certain regulations which have had both a direct and indirect effect upon the production and gathering of gas. Highly technical and unconvincing reasoning has been employed to circumvent the congressional intent.

The Commission has at times even asserted the power under this act to say for what purpose natural gas may or may not be used. It has formulated a distinction between what it terms "inferior" and "superior" uses of gas. It has undertaken to weigh the economic interest of the Nation in the use of one class of fuel as against another and, thus, to envisage dictation by a Federal administrative agency of who may use natural gas as fuel and for what purpose it may be used in the national economy.

The Commission has attempted to extend its authority over local distribution companies already subject to State regulation, contrary to the real intent of Congress, and merely because those companies take gas from an interstate pipe line.

The slow and cumbersome regulations adhered to by the Commission in administering the certificate provisions of the act have resulted in great delays, confusion, and public inconvenience.

The Commission has prescribed no definite or satisfactory standard for segregating property and business over which it has jurisdiction from that over which it does not have jurisdiction in cases where a concern engages in both jurisdictional and nonjurisdictional operations.

The uncertainties, doubts, vacillations, and delays that have arisen in the administration of this act make it imperative that it be amended. It should be amended so that the Commission's jurisdiction, powers, and functions may be readily determined with precision and definiteness, and to the end that the Commission, the persons who are subject to its provisions and the courts may know what the act covers and what it means in all of its material aspects.

H. R. 2185 will amend the act so that there can be no doubt in any quarter that production and gathering of gas and sales incident thereto are not subject to regulation thereunder. The point where the Commission's jurisdiction begins and where it ends will be clearly defined.

It will simplify the certificate provisions of the act so that the unnecessary and cumbersome procedure now employed may be eliminated and essential public service expedited.

H. R. 2185 will make it clear that the commission shall not have the power to control the purposes for which the public may use natural gas. Manifestly, if the commission were possessed of the power to specify by whom and for what purpose natural gas may be used, then through the exercise of such stupendous power it could say to the consuming public what fuel they must use, and by such indirection control the energy resources of this great industrial nation.

In order to accomplish the primary objectives to which I have just referred, the proposed amendments supply the appropriate definitions and standards which are not now in the act.

At the outset let it be understood that I endorse fully Federal regulation of the transportation of natural gas between the States and the sale for resale of gas so transported. I would neither sponsor not support any measure which would nullify regulation of those activities. But I believe that Federal regulation should go no farther, and that the Congress intended that it should go no farther when it enacted the present statute. The amendment which I propose leaves intact all authority and power necessary to effectively regulate those activities and transactions of the natural gas business over which it is desirable to assert the Federal regulatory power.

The Natural Gas Act has been so administered and interpreted that practically every oil- and gas-producing State of any consequence has, through its public officials, vigorously urged its amendment. Practically all of the oil and gas associations of the Nation have done likewise. The Federal Power Commission itself has been urged by these parties to recommend to the Congress the appropriate and needful remedial legislation. The Commission has admitted the existence of doubts, fears, and confusion regarding the meaning and application of the act. It has recognized that in the past both it and the courts have given the act meaning and application which the Congress did not intend. But the Commission proposes that it alone should be allowed to prescribe, and if you please, proscribe, the remedies which are necessary for elimination of the evils.

In September of 1945 the Federal Power Commission commenced a series of hearings in a Nation-wide investigation of the natural-gas business under its Docket No. G-580. Hearings were held in the States of Missouri, Oklahoma, Texas, Louisiana, Mississippi, Illinois, and West Virginia and the investigation was concluded after a lengthy hearing in Washington last summer.

Preceding these hearings, the Commission declared its intention to inquire into, among other things, "the extent and probable life of natural-gas reserves; present and prospective measures for preventing waste and prolonging the life of such reserves; the present and probable future utilization of natural gas for domestic, commercial, and industrial purposes; the extent, character, and results of the competition of natural gas with other fuels; and such related matters as may be helpful in the administration of the Natural Gas Act or in determining what additional legislation, if any, should be recommended." But the Commission has not recommended any amendments to the act. What it proposes is the employment of administrative fiat to meet the widespread appeals for the needed reforms. I believe that the Congress and not the Commission should respond to these appeals.

After I introduced H. R. 2185, and by letter of transmittal dated March 6, 1947, the Federal Power Commission released four staff reports. The first of these reports

deals with section 1 (b) of the act and relates to the Commission's jurisdiction over the production and gathering of gas. Another one relates to the natural-gas reserves of the United States. Another one relates to practices and problems in producing, gathering, and processing natural gas; and still another one relates to State conservation laws and activities. You will readily note that some of these subjects are not even the proper concern of the Federal Power Commission.

PRODUCTION AND GATHERING AND SALES INCIDENT THERETO

In the report dealing with production and gathering the Commission admits that, "No subject relating to the administration of the Natural Gas Act has received greater attention throughout the course of the natural-gas investigation than the meaning and implications of section 1 (b) with reference to the exemption of the production and gathering of natural gas from jurisdiction under that section."

The report says, "It is evident from the testimony, indicating a widespread atmosphere of anxiety and uncertainty among State officials and the industries concerned, that this matter is in need for further clarification. A continuance of the existing disturbed situation is certain to interfere with the effective performance in the public interest of the duties of both the Federal and State regulatory agencies in their respective spheres, and it will also affect adversely the interests and actions of oil and gas producers, land and royalty owners, and the transmission companies which purchase gas in the field. It may be expected, also, that unless this issue is clarified, the results will be detrimental to those who consume natural gas and to the efforts of conservation authorities to prevent its waste."

Thus, it is clearly admitted that a disturbed situation exists and that public interest demands "further clarification."

Who is to provide this clarification of a congressional act? The Commission, which for 9 years has construed and applied the act in such manner as to arouse the fears, doubts, and uncertainties just noted?

At this late date, after almost 9 years of administering the act, the Commission professes a willingness to yield partially to the plain congressional intent that the act shall not apply to the production and gathering of gas or to the sales made by producers and gatherers to pipe-line companies for transportation in interstate commerce.

But even now the Commission apparently proposes to qualify this exclusion of production and gathering. It says that production and gathering, and sales incident thereto, are excluded from the act if there is no affiliation between the producer and gatherer and purchasing pipe-line company itself. In other words, the Commission would continue to exercise jurisdiction over production and gathering if John Doe owned the gas instead of Richard Roe.

I submit that no such sectionalizing of the Commission's jurisdiction and of the act's application can be fairly read into or out of section 1 (b) as it now stands. This proposal by the Commission illustrates the great danger of leaving to administrative agencies the right to determine their own self-serving powers and jurisdiction.

The language of the Supreme Court in the recent Packard Motor Car Co. case is pertinent. In referring to the vacillations of the National Labor Relations Board, the Supreme Court said:

"If we were obliged to depend upon administrative interpretation for light in finding the meaning of the statute, the inconsistency of the Board's decisions would leave us in the dark. But there are difficult questions of policy involved in these cases which, together with changes in Board membership, account for the contradictory views that characterize their history in the Board" (Mar. 10, 1947, 15 LW 4311).

With reference to these problems arising under the Natural Gas Act, the issue which the Congress must determine is clear. Will it assume and discharge its rightful function by amending the act? Or will it acquiesce in the administrative agency's suggestion that it be permitted to exercise the legislative function? I propose that the Congress shall discharge its full responsibility in this important matter.

The scope which the Congress intended that the act should have is set forth in section 1 (b), as follows:

"The provisions of this act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas."

The shall-not provisions contain no exceptions. Their application does not depend upon who owns or gathers or transports or sells the gas. But the Commission, even now, is unwilling to give full effect to this plain language. It proposes a partial exclusion of production and gathering although the act expresses a total exclusion thereof. It would make the exclusion hinge on ownership of the property used in the production and gathering although the act expresses no such distinction. The Commission's proposal evidences an unwillingness to abide by the language of section 1 (b) in its full meaning or to follow the well-settled rule that,

"Where a Federal agency is authorized to invoke an overriding Federal power except in certain prescribed situations and then to leave the problem to traditional State control, the existence of Federal authority to act should appear affirmatively and not rest on inference alone." (*Connecticut Light & Power Co.* v. *Federal Power Commission*, 324 U. S. 532.)

An examination of the legislative history of the act reveals beyond doubt that what the Congress intended to regulate was the interstate trunk line transportation of natural gas and the sales for resale after such transportation. When the act was passed the States had already successfully asserted the power to regulate all important aspects of the natural-gas business, except where the gas was transported and sold in interstate commerce for resale to nonaffiliated concerns. It had been finally determined that the States could fix burner tip rates, even though the gas was transported in interstate commerce and distributed to the ultimate consumer by the same concern. It had also been finally determined that the States could regulate the conservation, production and gathering of gas. Therefore, in keeping with its traditional policy the Congress did not undertake to assert its power over all of the incidents of the natural gas business to which, conceivably, the Federal power extends.

The Supreme Court has appropriately observed, in construing the Federal Power Act, that the Congress is aware of the fact that complete centralization of the control of an industry may overtax the administrative capacity of a Federal commission, and that "the insulated chambers of the States" are still laboratories where many lessons in regulation may be learned" (*Connecticut Light and Power Co.* v. *Federal Power Commission* (324 U. S. 515, 530)). Delay, misunderstanding of local law and needless Federal conflict with the State policy are the inevitable products of any different policy.

With reference to the Natural Gas Act, the Supreme Court in *Public Utilities* v. *United Fuel Gas Co.* (317 U. S. 456), correctly said:

"It is clear, as the legislative history of the act amply demonstrates, that Congress meant to create a comprehensive scheme of regulation which would be complementary in its operation to that of the States, without any confusion of functions. The Federal Power Commission would exercise jurisdiction over matters in interstate and foreign commerce, to the extent defined in the act, and local matters would be left to the State regulatory bodies."

Notwithstanding what appears to me to be an emphatic and clear exclusion of production and gathering from the operations of the act, there has been much misunderstanding, confusion, doubt and actual disregard of the congressional intent with respect to the lack of jurisdiction in the Federal commission to regulate production and gathering and sales incident thereto.

Let me point out that in construing these "shall not" provisions of the act, administrators and judges have given practical meaning to the utterance of a Supreme Court Justice that, "The notion that because the words of a statute are plain its meaning is also plain, is merely pernicious oversimplification." (Mr. Justice Frankfurter dissenting in *United States* v. *Monia* (317 U. S. 424, 431).)

Shortly after the act was passed the Federal Power Commission asserted the right to regulate the price which a producer and gatherer of gas received from an interstate pipe-line company (*The Columbian Corporation* (October 31, 1939, 2 F. P. C. 200)).

This assertion of jurisdiction over a mere producer and gatherer of gas was vigorously contested by the States of Kentucky and West Virginia, the N. A. R. U. C., the Mid-Continent Oil & Gas Association and the Independent Petroleum Association of America. After almost 8 months of deliberation on the question, a majority of the Commission reached the correct conclusion that it did not have the asserted jurisdiction. It is noteworthy that this conclusion was reached after a consideration of the language of the act as a whole, the reports of the Congressional committee recommending the legislation and the expressions of individual Congressmen in the course of the debates on the bill.

But there was an ominous dissent by one of the Commissioners in the Columbian case. This dissent is important because the reasoning which it employed was used later by the United States Circuit Court of Appeals in the *Peoples Natural Gas Company* case (127 Fed. 2d 153) and by the Commission itself in the *Interstate Natural Gas Company* case (3 F. P. C. 416). The dissenting Commissioner contended that the producer and gatherer was a natural-gas company. By splitting hairs he reasoned that even though producing and gathering were not interstate activities subject to regulation under the act, still the sale of the gas by the producer was a sale for resale in interstate commerce subject to regulation under the act.

In the Peoples case, to which I have just referred, the Commission sought to regulate the rate charged by the Peoples Gas Co. for gas sold to an affiliated pipe-line company at a compressor station. Although the facts were not fully developed in this case and it is difficult to determine just what the factual situation was, the language of the court is very significant. The Court said that, "Sales of gas which has just moved interstate and sales of gas which is about to move interstate have like practical effects."

In the Peoples case the court brushed aside the Columbian case and the congressional history of the act with this statement: "We cannot disregard the plain language of the statute because the Commission at one time

interpreted it narrowly, or because the reports of congressional committees show an intention not to 'disturb' State regulation, or because appellants fear duplicate regulation."

Regardless of the particular facts in the Peoples case, it is certain that the reasoning which the court employed in reaching its decision could be easily employed to bring under the act every producer and gatherer of gas who sells it to an interstate pipe-line company. Every sale to an interstate pipe line at the well or from the gathering lines is "about to move interstate." It is a sale for interstate shipment and a sale for shipment across State lines. And let me emphasize that in its language and reasoning the court affirmed what the Commission advocated.

In the *Interstate Natural Gas Company* case (3 F. P. C. 416, 1943) the Commission sought to regulate certain sales of natural gas which the Interstate Co. made to other pipe line companies in the State where the gas was produced and before transportation across State lines. The Interstate Co. contended that such sales constituted sales in the production and gathering of gas and fell within the exemption stated in section 1 (b) of the act. In overruling this contention, the Commission said:

"The negative language in section 1 (b) upon which the Interstate Co. relies for its claimed exemption involving these sales provides that the Commission shall not have jurisdiction over 'the production or gathering of natural gas.' When the distinction between production and gathering of natural gas and the sale of such gas in interstate commerce is kept in mind, effect is given to the congressional objective. The Commission is bound to obey the command of Congress to regulate these sales in interstate commerce for resale to the three pipe-line companies. Such is clearly the implication of the decision of the Circuit Court of Appeals in *Peoples Natural Gas Co.* v. *Federal Power Commission* (127 F. (2d) 153, cert. den. 316 U. S. 700)."

It is important to note that here the Commission adopted the views expressed by its dissenting member in the Columbian case, to the effect that the exemption of production and gathering does not exempt the sales of gas by the producer and gatherer. The Commission grounded its acceptance of this theory on "the implication of the decision" in the Peoples case.

The Circuit Court of Appeals affirmed the Commission's decision in the Interstate case (156 Fed. (2d) 949 (August 1946)), and the Supreme Court has issued a writ of certiorari. One of the circuit court judges dissented. The majority of the court reasoned that the exclusion of production and gathering, as contained in the act, related only to the properties used in production and gathering and not to the sales made by the producer and gatherer to an interstate pipe-line company. It cited with approval the Peoples Natural Gas Company case, to which I have already referred. And it concluded that the exemption of production and gathering as now contained in the act merely precludes the Commission from any control over the activity of producing and gathering, as distinguished from the sale of gas for resale by the producer and gatherer.

The dissenting opinion said that the majority opinion nullified the plain intent of Congress to except from the act the production and gathering of gas.

From what has been said, it must be clear to the gentlemen of the committee that the act has been construed to mean that only the properties and physical functions of producing and gathering are excluded therefrom, and that the sales of gas made by producers and gatherers to interstate pipe line companies are sales for resale in interstate commerce subject to the jurisdiction of the Federal Power Commission.

This means that all producers and gatherers of gas who sell it to pipe-line companies for transportation and sale for resale in interstate commerce are threatened with regulation under the act. There are thousands of such producers. Many of them produce gas as an incident to the production of oil. These producers and gatherers are fearful that they will be given a public-utility status under the act and subjected to the limitations and burdensome regulations which have been applied to natural-gas companies by the Federal Power Commission. They are unwilling to risk regulation which would limit them to a 6½-percent return on the prediscovery cost of their leases and on the original cost, less depreciation, of their well equipment, gathering lines and other similar property.

The report of the Federal Power Commission to which I have previously referred notes that—

"The crux of all this disturbed feeling traces to language used in certain of the cases on this subject which seems to distinguish between price control over production and gathering and the regulation of the physical facilities used in performing these functions."

"It is contended with much force that there is no basis in the act for any such distinction, for the reason that the exemption as to production or gathering is unqualified and plenary and cannot, therefore, be narrowly construed so as to assert authority to regulate the sale price received by producers or gatherers who do not engage in operations making them natural-gas companies."

"As a result of this feeling of uncertainty regarding the status of sales by producers and gatherers, there have been indications that producers of gas and associated oil may be unwilling in the present situation to contract for the sale of gas intended for interstate movement, for fear that they may thereby become subject to regulation as natural-gas companies under the act. The oil industry, which produces large amounts of natural gas, has been particularly apprehensive of this possibility.

"Most important of all are the indicated effects of this situation on efforts to prevent gas wastage. State officials and others have warned that the reluctance of some gas producers to sell their gas for interstate marketing is interfering with the progress of conservation measures and is a contributing factor in the continued flaring of large volumes of casinghead (oil-well) gas. Col. E. O. Thompson, of the Texas Railroad Commission, testified that greater success in preventing waste would have been realized 'had it not been for the fear of the producers of gas, this casinghead, that if they hooked onto a pipe line they would be declared a public utility and limited to 6½ percent of the total earnings.' He stated that certain desirable conservation projects had been held up, among other possible reasons, because of this fear of producers that by selling their gas they might become subject to Federal regulation under the Natural Gas Act.

"All those who have manifested concern with respect to this matter strongly urge the need for clarifying the situation and setting definitely at rest the doubts and uncertainty which now prevail. In view of the importance of this issue, it is said, the determination of this question should not be permitted to depend upon the outcome of closely contested administrative and legal proceedings which are concerned with the special circumstances of particular cases. In their view, the only satisfactory solution is considered to be specific amendatory legislation which would establish beyond doubt that producers and gatherers who sell their gas to interstate pipe-line companies are not subject to regulation under the Natural Gas Act by virtue of such sales."

PROVISIONS OF H. R. 2185 RELATING TO JURISDICTION OVER PRODUCTION AND GATHERING AND SALES INCIDENT THERETO

H. R. 2185 would make the act apply to:

1. The transportation of natural gas in interstate commerce;
2. The sale, after such transportation, in interstate commerce of natural gas for resale; and
3. Natural-gas companies engaged in such transportation or sale.

H. R. 2185 makes it clear that the act shall not apply to:

1. Any other transportation or sale;
2. The transportation between the well or wells where produced and the point of delivery to or reception in the interstate trunk transmission facilities of a natural-gas company;
3. Any sale at or prior to such point of delivery or reception;
4. The production or gathering of natural gas;
5. The producing, gathering, treating, or processing facilities utilized or operations conducted in handling or preparing the gas for delivery or reception into the interstate trunk transmission lines; and
6. Local distribution of natural gas or local distribution facilities.

These provisions are contained in the proposed subsection (b).

In subparagraph (c) of section 1 it is made clear that the jurisdiction of the Federal Power Commission will be coextensive with the jurisdictional provisions contained in subparagraph (b).

In section 2 of the amendments the definition of "natural gas" contained in subdivision (5) of section 2 of the Natural Gas Act is amended. The present act defines natural gas as being "either natural gas unmixed, or any mixture of natural and artificial gas."

This definition is wholly inaccurate when applied to most of the gas now transported to interstate markets. As already pointed out, the greater portion of such gas is residue gas from which the liquid hydrocarbons, consisting of gasoline and LPG, have been extracted. Much of that which is transported from the Gulf coast and other fields is residue from gas which has been recovered in recycling operations or residue from casinghead gas. In order that the act may classify as natural gas the product actually being transported, it has been thought advisable to define "natural gas" as meaning either gas in its natural state as produced from the well, or residue gas from gas in its natural state, from casinghead gas, or from other gaseous substances after extraction of hydrocarbon liquids, or any mixture of natural and artificial gas.

The definition of "natural-gas company" in section 3 conforms such definition to the jurisdictional provisions of the act by providing that " 'natural-gas company' means a person engaged in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission as in this act defined, or the sale in interstate commerce after the commencement of such transportation of natural gas for resale subject to the jurisdiction of the Commission, as in this act defined, but to the extent only that such person is engaged in such transportation and sale."

Production and gathering are not defined in the existing act. It is important that these terms be defined so that the regulatory body, the producers and gatherers, and the natural-gas companies may know definitely what activities and sales are under the act and what activities and sales are not under it. H. R. 2185 contains these necessary definitions in section 4. These definitions have been framed with regard to the usual and normal practices in the oil and gas industry. When taken in connection with the jurisdictional provisions in section 1 (b), they have

the effect of excluding from the act operations incident to the recovery of natural gas from the reservoirs, the recovery of residue gas from natural gas, casinghead gas, or other gaseous substance, by treating or processing, and the delivery and sale of natural gas from production facilities. "Production facilities" are defined as the land, leaseholds, wells, separators, extraction plants, and other facilities used for, or incident to, such production.

Under the definition of "gathering" there would be excluded from regulation under the act the facilities used for moving natural gas produced or purchased in the producing and gathering area to the point of delivery into inlets of the trunk transmission facilities used for the transportation of natural gas in interstate commerce, and the sales and deliveries of gas from such gathering facilities would be excluded.

The term, "transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission," is also defined so that the interstate transportation which is subject to regulation under the act may be definitely determined. In this respect the definition of "transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission" is an aid and auxiliary to the definition of "production" and "gathering." By this definition the interstate transportation which is subject to regulation under the act commences at the trunk pipe line compressor station or main receiving point of a natural-gas company. It extends therefrom to the point in the State of local distribution, or on the boundary of such State, at which the gas moves from the trunk transmission facilities of the interstate carrier into the local distribution or trunk transmission facilities of the person who sells such natural gas in local distribution. If the gas is transported across a State line in the trunk transmission facilities of the person who sells it to consumers in local distribution, then the terminus of the interstate transportation is at the point where the gas enters the pressure reducing or measuring station or local distribution facilities for local distribution.

The term, "sale in interstate commerce of natural gas for resale subject to the jurisdiction of the Commission," is defined as the sale which is made after the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission.

"Local distribution" is defined as the operation of local distribution facilities and the delivery or sale of gas therefrom. "Local distribution facilities," means the pipe lines and other facilities used for, or incident to, the distribution of natural gas to the general public within a community or distribution area for ultimate public consumption, for domestic, commercial, industrial, or any other purpose.

All of these definitions have been framed with regard to the limits of jurisdiction embraced in sections 1 (b) and 1 (c), and I consider them essential if the confusions and misunderstandings of the past are to be avoided in the future.

In its report on production and gathering in Docket G–580, to which I have previously referred, the staff of the Federal Power Commission pointed out that "With particular reference to the present problem, it would not be practicable for the Federal Government to attempt to regulate sales of natural gas by the producers and gatherers thereof, unless it also took over from the States essential functions now performed by them relative to oil and gas conservation and the protection of correlative property rights in these resources." This report also says that, "In view of the widespread uncertainty which has been manifested regarding the Commission's view of its jurisdiction over production and gathering sales, it is important that the Commission take appropriate action to relieve the doubts and fears now prevailing in this regard." It suggests that this action may be accomplished through Commission rules or by an amendment to the act. The report recommends, however, the administrative rule method instead of amending the act.

In addition to the reasons I have previously given, the Congress should be unwilling to leave this important matter to be settled by administrative rules because such rules can be changed from time to time and at any time. There is another cogent reason which is revealed by the report to which I have made reference. The Commission's staff does not propose to define production or gathering in the administrative rule which it recommends. After referring to the "significant distinction * * * between the functions of production and gathering, * * * and the functions of interstate transportation and sale" the Commission's staff proposes to leave these definitions open for determination in each case by the Commission itself. The staff of the Commission says that "it must be granted that there will be some situations where the determination as to jurisdiction under the act can be made only after examining into the facts and circumstances with respect to the particular functions actually performed." It further says that "there can be no single test or formula which will afford an appropriate and ready answer, applicable to all of many different situations, in determining when production and gathering have been completed and transportation in interstate commerce within the purview of the act has begun."

I very definitely disagree with this conclusion. The definitions which are in H. R. 2185 can always be applied by a producer or gatherer or by the Commission itself under any factual situation for the purpose of determining the question of jurisdiction.

If the Congress does not write some standard into the law to govern the Commission in its determination of when production and gathering end and interstate commerce subject to its jurisdiction commences, then the producers and gatherers will still be at the mercy of the Commission in each case. Whether or not a producer or gatherer is under the act will depend not upon what the Congress has said in the act itself, but rather upon what the Commission may determine in each individual case is production and gathering.

Under such a policy a producer and gatherer could never be sure of his status until after a trial before the Commission and the rendition of a judgment by it. And the Commission's judgment would be rendered only after the producer had made his investment and contractual commitments.

In the staff report this rather amazing statement is made: "Since the conditions of gathering operations are varied and sometimes complex, determinations as to what marks the beginning of transportation for jurisdictional purposes may properly be somewhat flexible in accordance with the circumstances" (p. 44). I submit that this flexibility regarding the Commission's jurisdiction—jurisdiction which may be bent the one way or the other in accordance with the circumstances—is what has given rise to the evils that the Commission recognizes now exist. The Congress can and should provide definite standards by which the industry, as well as the Commission, can be governed in determining the all-important question of jurisdiction.

PRODUCTION AND GATHERING IN RATE CASES

Results reached in rate cases arising under the act afford glaring examples of why oil- and gas-producing properties should not be subjected to the conventional principles of public utility regulation. The Commission has treated the producing properties of natural gas companies just as it has treated pipe lines and similar types of property. One Justice of the Supreme Court has said that the results were "capricious," "delirious," and "fantastic." The Commission has put the producing leases and proven gas reserves of natural gas companies in the rate base at their cost before development and allowed 6½ percent return thereon. In some instances the original cost of wildcat leases was zero. Hence, the company was allowed no return on them, nothing whatever for the gas itself, although the leases were admittedly very valuable due to the discovery of gas after their acquisition.

In the *Hope Natural Gas Co.* case (320 U. S. 591), in reference to the adoption of the field price method in fixing rates for natural gas companies, the Court said: "Such theories of rate-making for this industry may or may not be desirable. The difficulty is that section 4 (a) and section 5 (a) contain only the conventional standards of rate-making for natural gas companies" (p. 616).

H. R. 2185 will, as I shall later point out, remedy the difficulty thus referred to by the Court, by providing for the application of realistic and appropriate stands.

In the Hope case the Court sustained what the Commission did solely because it felt bound by the terms of the statute to do so. It emphasized that difficulty arose because the statute prescribed only the "conventional standards" of rate-making for natural gas companies.

Referring later to the Hope decision, Mr. Justice Jackson said that it introduced into judicial review of administrative action the philosophy that the end justifies the means (*Colorado Interstate Co.* case, 324 U. S. 581, 609).

Justices Reed, Frankfurter and Jackson dissented in the Hope case. Mr. Justice Jackson took sharp issue with the way in which the commission had dealt with the producing and gathering properties. He said that, "The case before us demonstrates the lack of rational relationship between conventional rate-base formulas and natural gas production and the extremities to which regulating bodies are brought by the effort to rationalize them" (320 U. S., 645).

And he pointed out that the business of a natural gas company has two components of quite divergent character. The transportation phases of its business he classed with the conventional common carrier undertaking—"a relatively routine operation not differing substantially from many other utility operations." The other part of the business, "to reduce to possession an adequate supply of natural gas—is of opposite character, being more erratic and irregular and unpredictable in relation to investment than any phase of any other utility business." The former—the public utility phase of the business—he recognized as being susceptible to the conventional rate-base calculated on the prudent investment formula. The latter—the nonutility aspects of the business—he thought wholly unadaptable to such concepts and formulae. He recognized that: "The service one renders to society in the gas business is measured by what he gets out of the ground, not by what he puts into it, and there is little more relation between the investment and the results than in a game of poker" and that, "To regulate such an enterprise by undiscriminatingly transplanting any body of rate doctrine conceived and adapted to the ordinary utility business can serve the 'public interest' as the Natural Gas Act requires, if at all, only by accident" (320 U. S. 647, 649, 650).

I agree fully with these statements and the further statement by Mr. Justice Jackson in the Hope case that, "If natural gas rates are intelligently to be regulated we must fit our legal principles to the economy of the industry and not try to fit the industry to our books" (320 U. S. 650).

Mr. Justic Frankfurter agreed fully with Mr. Justice Jackson's analysis of the natural-gas business. Addressing himself thereto, he said:

"The Natural Gas Act of 1938 should receive application in the light of this analysis, and Mr. Justice Jackson has, I believe, drawn relevant inferences regarding the duty of the Federal Power Commission in fixing natural gas rates. His exposition seems to me unanswered, * * *" (320 U. S. 625).

"Either the fixing of natural gas rates must be left to the unguided discretion of the Commission so long as the rates it fixes do not reveal a glaringly bad prophecy of the ability of a regulated utility to continue its service in the future. Or the Commission's rate orders must be founded on due consideration of all the elements of the public interest which the production and distribution of natural gas involve just because it is natural gas" (320 U. S. 626).

The "relevant inferences" and "unanswered" logic of Mr. Justice Jackson in the Hope case found no response in the Commission. In later cases the Commission again applied to the producing and gathering properties of the companies the same unworkable public utility concepts that it applied in the Hope case.

In *Colorado Interstate Gas Co. v. Federal Power Commission et al.* (324 U. S. 581), the question of the Commission's jurisdiction over producing and gathering properties was pinpointed. By a bare majority the Court again affirmed the Commission.

Chief Justice Stone wrote a vigorous dissenting opinion in which four other Justices concurred.

In describing what the Commission had done the learned Chief Justice said:

"In fixing rates for petitioner's interstate business of transporting and selling natural gas for resale, the Commission included petitioner's gas wells and gas gathering facilities together with all its transportation and distribution facilities in a single rate base. It valued the wells and gathering facilities at their prudent investment cost of many years ago, a valuation drastically less than their present market value. It then restricted petitioner's return to 6½ percent of the rate base, including the wells and production facilities, constituting approximately two-thirds of the total rate base. It thus subjected petitioner's production and gathering property to the same regulation as that which the statute imposes upon petitioner's property used and useful in the interstate transportation and sale of gas for resale. This, we think, the Natural Gas Act in plain terms prohibits." (324 U. S. 616).

The Chief Justice thought that the majority of the Court had overridden the plain language of the statute excluding production and gathering from the other activities of transporting and selling. He thought that the langauge of the present act was well chosen to accomplish this exclusion and differentiation; and that the House committee reports showed "beyond doubt that the purpose of the legislation was to bring under Federal regulatory control the interstate transportation and sale of natural gas which had been held not to be subject to State regulations, * * * but to leave undisturbed all other matters which were then subject to State regulation, which included rate-making for production and gathering." (324 U. S. 620–621).

Although expressing disagreement with the views of the majority and referring to his dissent in the Hope case, Mr. Justice Jackson felt bound to follow the precedent established by the Hope case. But he was unwilling to leave unchallenged the ridiculous results reached by the Commission in its treatment of the production and gathering properties. The following quotation from the separate opinion of Mr. Justice Jackson gives a vivid description of what was done and of the infirmities of the Commission's processes under the present act:

"To let rate-base figures, compiled on any of the conventional theories of rate making, govern a rate for natural gas seems to me little better than to draw figures out of a hat. These cases confirm and strengthen me in the view I stated in the Hope case that the entire rate-base method should be rejected in pricing natural gas, though it might be used to determine transportation costs. These cases vividly demonstrate the delirious results produced by the rate-base method. These orders in some instances result in three different prices for gas from the same well. The regulated company is a part owner, an unregulated company is a part owner, and the land owner has a royalty share of the production from certain wells. The regulated company buys all of the gas for its interstate business. It is allowed to pay as operating expenses an unregulated contract price for its coowner's share and a different unregulated contract price for the royalty owner's share, but for its own share it is allowed substantially less than either. Any method of rate making by which an identical product from a single well, going to the same consumers, has three prices depending on who owns it does not make sense to me.

"These cases furnish another example of the capricious results of the rate-base method in this kind of case. The Commission has put five of the most important leaseholds, containing approximately 47,000 acres, in the rate base at $4,244.24, something under 10 cents per acre. Three such leases are put in the rate base at zero. This is because original cost was used, and these were bought before discovery of gas thereon. The company which took the high risk of wildcat exploration is thus allowed a return of 6½ percent on nothing for the three leases and a return of less than $300 a year on the others. Their present market value is shown by testimony to be over $3,000,000" (324 U. S. 610–611).

In the more recent *Cities Service* case (155 Fed. 2d 694, certiorari denied), a majority of the United States Circuit Court of Appeals considered themselves bound by the decision of the Supreme Court in the Colorado Interstate case to affirm the Commission's assertion of jurisdiction over the production and gathering properties and the application thereto of the Commission's public utility rate formula of cost-plus-6½-percent return. The dissenting opinion of Circuit Judge Phillips in that case is enlightening. I hope that every member of the committee will have an opportunity to read that opinion in its entirety.

In that case the Commission again included in the rate-base what it found to be the legitimate cost to the regulated company or its predecessors of the leases, administrative cost of acquisition, and the cost of physical structures. Where no bonus or consideration was paid for a developed lease the Commission allowed no cost in the rate-base for the lease itself. For example, 68,086 acres of leases in the Panhandle field, constituting one of the most valuable proven gas reserves in the world, were put in the rate-base at zero, because no bonus consideration was paid for such leases. The results reached by such a system of regulation were thus described by the dissenting judge: "Thus, the allowances in the Oklahoma and Kansas fields were approximately 11.4 cents per thousand cubic feet of gas reserves, whereas the allowances in the Panhandle field and the Hugoton field were a nominal fraction of a mill per thousand cubic feet of gas reserves" (155 Fed. (2d) 707).

From what has been said it should be apparent that the fears of thousands of producers of oil and gas, the oil and gas producing States of the Southwest, as vigorously expressed in the Federal Power Commission's general investigation under its Docket No. G–580, are well founded. It is also apparent to me, as it was apparent to Mr. Chief Justice Stone and Justices Reed, Frankfurter, and Jackson, that the Congress never intended to authorize or sanction such a system of regulation over natural gas production and activities as the one employed by the Federal Power Commission.

H. R. 2185 PROVIDES APPROPRIATE STANDARDS FOR DEALING WITH PRODUCTION AND GATHERING IN RATE CASES

H. R. 2185 not only excludes from the act the production and gathering business, but it provides standards by which the Commission can effectively regulate the public utility phases of interstate transportation and sales for resale without exercising jurisdiction over the excluded business, and without applying the unrealistic and impracticable formulas which it has applied in the past.

In section 5 of H. R. 2185 appropriate standards have been prescribed. In fixing the rates of a natural gas company the Commission is directed to allow as an operating expense the actual price paid for gas purchased from nonaffiliates and nonsubsidiaries. If the gas is produced by a natural gas company or purchased from a subsidiary or affiliate, the Commission is directed to allow as an expense of operation the prevailing current market price in the field or fields where produced for natural gas of comparable quality, volume and pressure, delivered under similar conditions. If no prevailing current market price exists in the field, then the Commission must allow the fair and reasonable value of the gas, taking into consideration the prevailing current market prices paid for gas of comparable quality, volume and pressure, delivered under similar conditions in the general vicinity, and other pertinent factors. The Commission is expressly prohibited from using "a calculated value for such gas based upon the producer's investment in and cost of the properties from which such gas is produced." The Commission is also authorized to allow reasonable compensation for gathering and delivering the gas to the inlet of the transmission facilities of the natural gas company.

In its recent report the Commission's staff recommends that field price be accepted only when there is no affiliation between the producer and the purchasing pipe line company. If this recommendation were followed the existing chaotic condition would be given unwarranted affirmance.

There is no sound reason for making a distinction based on ownership as suggested by the Commission. Where the transaction is not at arm's length the Commission can ascertain the fair unregulated value of the natural gas produced in an unregulated field, in order to regulate appropriately the rates of the natural gas companies which are subject to its jurisdiction. But, as was observed by Chief Justice Stone, "This does not mean that in fixing rates for a regulated business which derives its distributed product from an unregulated business that the property of the latter is not to be segregated from the regulated property, or that there can rightly be applied to it standards of valuation and rate of return which are applicable only to a regulated business." (324 U. S. 622).

On this point the Chief Justice expressed the following additional sound reasoning:

"The standards to be applied in order to make certain that the regulated business is not paying too much for the product are those which currently apply in the unregulated business. This, as we have pointed out, was recognized by the Solicitor of the Commission in the hearings on proposed legislation culminating in the present act. He said that the unregulated field price was controlling upon the Commission 'if the transaction is at arm's length. If the transaction is not at arm's length, of course, its reasonableness may be inquired into, under the decisions of the Supreme Court.'" (324 U. S. 622–623).

In conclusion the Chief Justice recognized that the appropriate way to meet the problem "is by treating the property unregulable in law as unregulable in fact, and applying to it those standards of value and return which currently prevail in an unregulated business when it is conducted at arm's length." (324 U. S. 623-624).

If one principle were applied to arm's length purchases and another wholly unrelated principle were applied to gas owned by the natural gas company or purchased from affiliates, then throughout the producing areas there would be an inevitable turmoil and confusion in prices. The royalty owner would receive royalty based on market price in the one instance and 6½-percent return upon prediscovery value in other instances. The States which derive substantial revenues from taxes on natural gas would receive one tax if the gas were sold under an arm's length transaction and another tax if it were not. The question of ownership should not determine the price or the value of the gas. And the gas should be worth the same price in the same field when produced under similar conditions regardless of ownership. I agree with and paraphrase what I have already quoted from Mr. Justice Jackson on this point, namely, that—

Any method of rate making by which an identical product from a single field or producing area, going to the same consumers, has three prices depending on who owns it does not make sense to me. We should not exclude production and gathering from the act in part and include it in part. We should not include production and gathering if it is owned by one person and exclude it if it is owned by another. We should not apply one rule to one owner and a different rule to another owner. Oftentime the ownership of the producing lands is multiple, even in the same lease. The complexities that would arise from the application of artificial distinctions based on ownership would be insurmountable. The value of gas in the field has no relation to its ownership. The value should be the same, other conditions being the same, whether the gas is owned by an independent producer, a natural-gas company, or the affiliate of a natural-gas company. The major oil- and gas-producing States have elaborate laws for regulating the producing, gathering, and conservation of gas. These laws are not framed to apply with reference to who the owner may be. Uniformity and equality of treatment under the Natural Gas Act is essential.

Section 5 of H. R. 2185, insofar as it makes the field price the governing criterion, conforms with the principles sanctioned and advocated by the States of Texas, Kansas, Oklahoma, West Virginia, and others. In addition to this, practically all of the oil and gas associations have advocated the same principles.

There is a provision in section 5 of H. R. 2185 which would permit a natural-gas company to include its production and gathering properties in the rate-base. This provision is intended to cover the particular circumstances under which gas is produced in the Appalachian area. Under the provision, a natural-gas company is given the right to elect within 90 days after the amendment becomes effective, to have its production and gathering properties included in the rate-base. Such election when made would be final. The special conditions existing in the Appalachian area which this provision is intended to cover will be explained in detail by a witness who will follow me.

THE LOCAL DISTRIBUTION OF GAS

The Natural Gas Act in section 1 (b) provides that the provisions of the act shall not apply "to the local distribution of natural gas or to the facilities used for such distribution." That same prohibition is contained in the proposed amendments. The act does not, however, contain a definition of "local distribution" or "distribution facilities." Nor, as has been pointed out, is there any definition in the present act of "transportation." There is, as a result, no statutory standard by which to determine where transportation (subject to regulation under the act) ends and local distribution (not subject to regulation under the act) commences. This lack of authoritative definition has resulted in much confusion and in the assertion by the Commission of jurisdiction over facilities which are a part of and employed in local distribution and subject to regulation by local regulatory bodies. Distribution companies have been held to be natural-gas companies under the act merely because they own lines connecting with those of an interstate transporter, and some distributing companies have refrained from changing over to natural gas because of their fear that if they should construct a line to connect their facilities with those of an interstate transporter, they might be classified as a natural-gas company under the act and subjected to regulation thereunder.

With the proposed definitions, there should be no controversy as to where the Federal regulatory jurisdiction ends and that of local regulatory authorities begins, and local distribution companies will feel free to connect their lines with those of an interstate wholesaler of gas without incurring the hazard of being subject to double and conflicting regulation, both by the Federal Power Commission, and by State regulatory bodies. And the States' jurisdiction will not be interfered with by Federal regulation.

SEGREGATION OF THE JURISDICTIONAL FROM THE NONJURISDICTIONAL

The present act does not contain any standards requiring the Commission to segregate the property and business of a natural-gas company over which it exercises jurisdiction from that over which it does not exercise jurisdiction. Due to the absence of any such statutory standards the Commission has employed various and conflicting formulas. In fixing rates it has not segregated the jurisdictional property and business from the nonjurisdictional according to any definite standard.

Referring to the allocations made by the Commission in the Colorado Interstate case, the Court said:

"The findings of the Commission in this regard leave much to be desired since they are quite summary and incorporate by reference the Commission's staff's exhibits on allocation of cost" (324 U. S. 595).

In *Colorado-Wyoming Gas Co.* v. *Federal Power Commission et al.* (324 U. S. 626) the Supreme Court remanded the cause to the Commission because of defects in the allocation formulas applied by the Commission. The Court said:

"Here as in the cases of Canadian and Colorado Interstate the findings of the Commission leave much to be desired. The findings are general and incorporate by reference the staff exhibits, on which reliance is put for the subsidiary findings. But in this case there are added difficulties. The staff used one system, the Commission another. * * * When we read that finding against the record there are ambiguities which we are unable to resolve were it our province to do so" (324 U. S. 631-632).

In a separate memorandum Chief Justice Stone and Justices Roberts, Reed, and Frankfurter were of the opinion that the case should be remanded to the Commission for separate allocation of investment and operating cost between the regulable and nonregulable properties (324 U. S. 635).

In the *Panhandle Eastern* case (324 U. S. 635) the principal argument hinged on the failure of the Commission to make proper segregations between the regulated and unregulated business of the company. The Court observed that the Commission made no segregation or separation of the properties used in these two classes of business. Nor did it make an allocation of costs between the regulated and unregulated phases of the business (324 U. S. 639).

The Court, although affirming the Commission's order under the particular facts of that case, nevertheless agreed that the Commission must make a separation of the regulated and unregulated business when it fixes rates. "Otherwise the profits or losses, as the case may be, of the unregulated business would be assigned to the regulated business and the Commission would transgress the jurisdictional lines which Congress wrote into the Act." (324 U. S. 641-642.)

An example of how the Commission—absent statutory standards—may utilize the unregulated business of a natural gas company to the advantage of the regulated business in the fixation of rates is found in the Cities Service case, to which I have previously referred. There the Federal income taxes of the entire concern were allocated to the unregulated business and the regulated business was given a free ride so far as these taxes were concerned. Referring to the formula of allocation used by the Commission in that case, the majority of the court said: "If some of the specific allocations appear to be illogical and unfair, they necessarily pose techonlogical problems of accounting and finance upon which the administrative judgment has been declared virtually supreme. We shall not criticize that which we are powerless to correct." (155 Fed. 2d 705.) And the dissenting judge observed that, "* * * the nonjurisdictional earnings in excess of 6½ percent are saddled with all Federal income taxes. It seems to me, therefore, that there should have been a reasonable allocation of Federal income taxes between jurisdictional and nonjurisdictional earnings" (155 Fed. 2d 710).

This Cities Service case affords another glaring example of the assertion of jurisdiction by the Commission over nonjurisdictional properties and activities through the utilization of unapt allocation formulas. The natural gas company involved in that case permitted an affiliated oil company to extract gasoline, butane, and propane from a part of the natural gas which it produced, transported, and sold. The oil company paid 7 cents per thousand cubic feet for the gas which it so utilized. Instead of crediting the natural-gas company's operating income with the 7 cents per thousand cubic feet of gas which it received from the oil company, the Commission proceeded to evaluate the oil company's extracting plant and to allow it a 6½ percent return thereon after operating expenses, depreciation, and taxes.

The Commission thus in effect regulated the rate of return received by the natural gas company from direct sales of gasoline, butane, and other products extracted from the natural gas produced by it, and, also, regulated the earnings of an oil company over which it had no jurisdiction whatever.

Section 5 of H. R. 2185 provides that the Commission shall segregate the properties and business of a natural-gas company over which it has jurisdiction from those over which it does not have jurisdiction, according to the use made of the properties. In other words, if a pipe line is used in interstate commerce it will be allocated to the jurisdictional business. If it is used in intrastate commerce it will be allocated to the nonjurisdictional business. There is nothing new in requiring segregations between jurisdictional and nonjurisdictional properties and business on the basis of "use." That is the standard employed for many years in fixing the rates of railroads and telephone utilities. It has been sanctioned by repeated decisions of the Supreme Court of

the United States. *Smith* v. *Illinois Bell Telephone Co.* (282 U. S. 133, 150–151); *Simpson* v. *Shepard* (Minnesota rate cases) (230 U. S. 352); and *Missouri Rate Cases* (230 U. S. 474), are illustrative.

CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

Section 6 of H. R. 2185 amends subsection (c) of section 7, relating to the granting of certificates of public convenience and necessity. The purpose of this amendment is twofold.

First, it would permit the Commission to issue certificates after notice but without the necessity of formal hearing if no protest is filed.

Second, it would permit a natural-gas company to maintain, extend, or enlarge its facilities, for which a certificate had already been issued, for the purpose of maintaining continuity of service or of supplying increased demands in existing markets without the necessity of obtaining a certificate.

Under the present act, as it is construed and applied by the Commission, a natural-gas company is required to apply for and obtain a certificate for every addition to its existing facilities, even though the additional facilities are necessary in order to continue an existing service.

Recently the Commission has released a staff report which reviews the administration of the certificate provisions of the act. In that report recognition is given to the fact that great and costly delays have resulted from the procedures of the past and that both the public and the natural-gas companies have suffered as a consequence.

Certificate applications (other than "grandfather") received by the Commission in the period from February 7, 1942, to October 15, 1946, numbered 319 and the estimated cost of the facilities involved was $1,300,363,773. Of these, action had been taken on 227 as of October 15, 1946. At that date the number of applications pending was 92, involving facilities having an estimated cost of $444,-614,972.

Commissioner Olds, in addressing a subcommittee of the Senate of the Seventy-ninth Congress, second session, said: "The Commission realizes, I think, as much as you do and as much as the natural-gas companies do, that there are a great many certificates today required for minor additions and changes, etc., in natural-gas facilities that it would be desirable to enable the companies to take care of without having to come to the Commission for certificates." The staff report, to which I have already referred, contains a similar recognition.

Writing to the Commission on this subject, one natural-gas company has said: "We have had to have the officials of the company in Washington for prolonged periods of time, and in most cases the Commission has not issued certificates until long after the hearings were closed which delay, in the natural-gas business, frequently is critical as at times construction cannot be carried out after the certificates are issued due to weather conditions."

Another company wrote that: "For one reason or another the certificate hearings are now a major legal proceeding, involving the making of a tremendous record, oral arguments, briefs, formal opinions, and orders of the Commission * * * the delay in securing a certificate has resulted in higher construction cost because of the time lapse during which costs increase materially."

And still another company wrote: "Since the passage of the amendment, certificate applications have been filed in such numbers and the procedure established for the consideration of such applications has been so exacting that delays and expenses at times all out of proportion to the issues involved have been encountered."

These are examples of the prevailing views and conditions. Under the act as it now stands it is not clear that the Commission is authorized to issue certificates without hearings, even when no protest is filed, except in the case of grandfather certificates and temporary certificates to meet emergency conditions. Under the existing procedures natural gas companies are unable to improve and enlarge their existing facilities in order to maintain continuity of service or to supply increased demands in existing markets without first applying for a certificate in each instance.

In an effort to alleviate this situation in part the Commission by order No. 130, dated March 29, 1946, instituted a shortened procedure which expedites the determination in uncontested cases. This new procedure is helpful but it is not a complete remedy. It should not be necessary for a company to file an application at all in order to meet the demands for gas in existing markets.

The Natural Gas Act in many respects was patterned after the Motor Carriers' Act. It provides that:

"No terms, conditions, or limitations shall restrict the right of the carrier to add to his or its equipment and facilities over the routes, between the termini, or within the territory specified in the certificate, as the development of the business and the demands of the public shall require" (49 U. S. C. 308).

In the 1942 amendment to the Natural Gas Act, the Congress sought to give this same authorization to natural gas companies. In section 7 (f) it authorized the Commission, after a hearing, to determine the service area of a natural gas company, and then provided that:

"Within such service area as determined by the Commission a natural-gas company may enlarge or extend its facilities for the purpose of supplying increased market demands in such service area without further authorization."

Not one service area has yet been determined by the Commission. The Commission has expressed doubt about the meaning of the service-area provision and how it can be administered.

The difficulty encountered by the Commission in interpreting and applying the act should not deprive a natural-gas company of the ability promptly to carry on such construction as its existing markets may require.

It is proposed, therefore, in section 6 of H. R. 2185 that prompt settlings be made of all applications for certificates; and that, without obtaining an additional certificate, a natural-gas company may maintain, extend, or enlarge its facilities for any transportation or sale of natural gas for which a certificate has been issued, for the purpose of maintaining continuity of service, or of supplying increased demands in its existing markets.

END USE

I have referred to the provisions in H. R. 2185 which would prevent the Commission from controlling the use for which natural gas may be sold. This provision is found in subsection (b) of section 1 of the amendment (H. R. 2185).

The Commission has asserted the power to condition certificates of public convenience and necessity according to the purpose for which the gas is to be used. In one case it specified that gas could not be used as boiler fuel in the generation of electricity. It modified its order in this case so that the power plant could use gas during the coal strike of last summer but recently revoked the right of the company to continue this service (Northern Natural-Boone Iowa case).

In its report to the chairman of the House Committee on Interstate and Foreign Commerce in January 1944, the Commission disclaimed any intention to deal with the end uses of natural gas until the Congress amended the act to confer on it such specific powers as the Congress desired it to exercise in such matters. But in a later certificate case (Apr. 26, 1944, FPC Opinion No. 114) the Commission stated that considerations of conservation were material to the issuance of certificates; and that it gave consideration to the contentions of the intervening coal and railroad interests who contended that natural gas should not be dissipated in large industrial plants where coal is available and can be readily and economically substituted.

Still later, in June 1944, in the Memphis Natural Gas Co. case, the Commission concluded that the natural gas resources should be conserved insofar as possible for domestic, commercial, and superior industrial uses. The Commission later reversed its decision in this case and granted the certificate applied for. Upon the appeal of the State of Louisiana from this last order, the Commission was sustained by the circuit court of appeals (148 Fed. 2d 746). The court pointed out that the Commission "gave sympathetic consideration to the facts of inferior use along with all the other facts in the case." The court agreed that the Commission may consider as one of the factors entering into the granting or denying of certificates the purpose for which the gas is to be used.

In outlining the principal topics intended to be covered in its general investigation of the natural gas industry in Docket G–580, one of the topics for consideration and investigation was:

"The question of controlling end uses, including: (1) History and objectives; and (2) concepts of superior and inferior uses, as to (a) the technical aspects, efficiency of utilization of energy potential, and (b) the economic aspects dealing with (i) comparative essentiality of use, (ii) availability of a feasible alternative, (iii) the extent to which price can be relied upon in prorating supply and in providing an incentive to efficient use, (iv) the significance of incremental-cost prices and price disparities as affecting utilization of gas, (v) effect of rate policies on end uses, (vi) the view that gas lawfully produced may be sold anywhere for any purpose at any price which the market will afford, and (vii) administrative problems of end-use control."

In an article appearing in Public Utilities Fortnightly (35 PUF No. 7, 410–414), under the title "The New End-Use Doctrine of Gas Regulation," the following statement is made:

"State regulatory bodies and conservation and utility commissions are presently viewing with many gradations of opinion the excursion of the Federal Power Commission into jurisdiction over the end use to which natural gas may be put. It has been pointed out that if the Commission can establish its right to grant or withhold certificates of convenience and necessity to natural-gas projects on the basis of its approval or disapproval of the purposes for which the gas is to be used, then it would be but a simple step for it or some other Federal body to establish that authority over all fuels and over electric power as well.

"Members of many of the State utility commissions, companies in the natural gas industry, and petroleum producers have all expressed their fear that this objective is precisely what the FPC now has in mind."

It must be clear to all men that if the Federal Power Commission can regulate the use which can be made of gas, it can, by the same power, regulate the purposes for which gas can be produced. Gas cannot be produced and transported except for consumption. Thus, under the guise of end-use control the Commission could effectively control the economics of natural gas and of the other energy resources as well.

It has been suggested that this abortive attempt at end-use control is but an element of a national plan to federalize all of the energy resources of the Nation to the end that the entire national economy may be controlled through Federal administrative decrees. In January 1939 the Energy Resources Committee made a report to the National Resources Committee. As stated in President Roosevelt's letter transmitting the report to the Congress, "it suggests policies, investigations, and legislation necessary to carry forward a broad national program for the prudent utilization and conservation of the Nation's energy resources." In this letter of transmittal the President referred to "the widening interest and responsibility on the part of the Federal Government for the conservation and wise use of the Nation's energy resources." In its recommendations the National Resources Committee, among other things, said: "We propose that a Federal oil conservation board or commission should be created within the appropriate Government department to administer the Federal interest in the oil and gas industry and to make necessary rules and regulations concerning the production of, and commerce in, oil and gas. It should have the authority to require that oil and gas be extracted by such methods as are adequate to avoid waste and to protect the interest of all producers drawing from a common reservoir."

Under the heading, "Public policy toward the oil and gas industries," the report says that "perhaps the strongest basis for Federal regulation of production and distribution of oil and gas lies in the Federal Government's power to regulate interstate commerce." Reference is then made to recent extensions of the Federal powers under the commerce clause and to a decision of the Supreme Court. With respect to the latter it is said "this decision would seem to furnish a basis for Federal regulation of production of oil and gas and of conservation measures looking to the protection of the public against the waste of an irreplaceable resource."

Summarizing its conclusions the committee, inter alia, states: "* * * The energy-resources industries are thoroughly interstate, in production as well as in the use of their products. Thus the chief recommendations of this study contemplate a continuing or a broadening of the Federal interest * * * The production and transportation of oil and gas make up a stream of interstate commerce so continuous, so widespread, and so essential that the legal basis for protection of the Federal interest is scarcely subject to debate."

The petroleum industry and some of the oil- and gas-producing States have recently expressed alarm over and opposition to the current trend. The National Conference of Petroleum Regulatory Authorities, composed of State conservation officers, on September 15, 1945, stated that the regulation of the production, conservation, and utilization of natural gas was the inherent right and vested duty of the producing States; that they are intelligently performing these functions; and that the proposed investigation of the Federal Power Commission and the additional legislation contemplated thereby would constitute Federal encroachment on State sovereignty. The United States Chamber of Commerce, the Petroleum Industry War Council, the Independent Natural Gas Association of America, the American Gas Association, the Independent Petroleum Association of America, and the American Petroleum Institute have adopted resolutions and policies of similar tenor. The Governor's committee of the State of Texas recommended "that the Natural Gas Act should be amended so as to definitely inhibit Federal regulation over the production, conservation, processing, gathering, compressing, and sale before transportation in interstate commerce; that the end-use of natural gas should not be regulated, because competition is the best arbiter.

I am opposed to the nationalization of our energy resources. I am opposed to any board of men undertaking to pass judgment upon what fuel the public of this Nation shall or shall not use. I am opposed to the creation of governmental spheres of monopoly as applied to our basic fuels and energy resources. For these reasons and many others, which time will not permit to be presented, I believe that this Congress should definitely express its opposition to regulation by the Federal Government of the end use of natural gas, and for that matter, any other of the fuels commonly available to the general public.

The staff reports of the Federal Power Commission and other reports show that there is not likely to be a shortage of natural gas within the foreseeable future. With this plentiful supply of a desirable fuel we should not place restrictions on its utilization as fuel by our citizens.

CONCLUSION

Subsequent witnesses will bring facts and arguments on gas reserves, the producers' viewpoint, the States' viewpoint, the consumers' viewpoint and related topics. I urge this committee, after the deliberation to which it is accustomed in a matter of this importance, to report favorably on H. R. 2185.

1946 Primary Election Returns in Congress Race, Third Congressional District of Texas

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. BECKWORTH. Mr. Speaker, I quote, as an example, a totally false statement which was printed in one of the papers in the Third Congressional District, January 10, 1946:

Typical of comments and letters received by the Times is a letter from a resident of BECKWORTH'S former home county, Upshur, before he built a beautiful home near Tyler.

Anybody can find and see or feel a thing as big as house. I repeat, the statement is 100-percent untrue.

For persons running for office to base hope of gain on a 100-percent untrue statement like the example above quoted or any other total falsehood is a mistake.

The same paper a short time thereafter—March 21, 1946—printed on the first page an article which contained the following paragraph:

First reports were that one or more candidates from Longview and possibly one from Tyler would feel out the situation. What they learned apparently was sufficient to cause District Judge ——, of Longview, and former District Judge ——, also of Gregg County, to challenge the present incumbent, BECKWORTH. The same article has in it these words, "citing an article which mentions a '10-man team'."

The result of the 1946 race was that BECKWORTH received a clear majority over both judges in the first primary; he carried 7 of the 8 third district counties; he carried exactly one-half, or 50 percent of the voting boxes in the eighth county, which was and is the home county of both judges who ran against him. There are 209 voting boxes in the Third Congressional District; BECKWORTH carried 191, one of his opponents carried 9 boxes, the other opponent carried 9 boxes. One of the opponents carried no box in 4 counties, the other opponent carried no box in 5 counties. BECKWORTH carried every box in 3 counties, including all of the 27 boxes in his home county, Upshur.

Foreign Policy and United Nations

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Blaine County Citizen, printed at Hailey, Idaho, April 10, 1947:

SOUNDINGS FOR SANBORN

Representative SANBORN has taken up the general sounding of opinion among the newspapers of his State as has been the custom with so many representatives of late. We received a query of sounding from the Representative this week and reply openly to his questions.

Do you favor President Truman's proposal for aid to Greece and Turkey? Our reply is emphatically no. We do not believe in bluff diplomacy nor do we believe in force diplomacy. Hitler tried it and succeeded grandly. We do not believe that a page from Hitler's international relationship will guide our Nation as a free and democratic government. What can be settled by sword can be settled by wise men before the sword becomes necessary. We have no business furnishing Greece or Turkey with arms. We do have a humanitarian responsibility of furnishing devastated and starving nations with food, clothing, and shelter. But the good Lord did not put us on this earth to manufacture implements of war with which to threaten our neighbors with. As for Turkey she deserves nothing. Throughout our relationship with that nation we have gained nothing but disharmony. She has sheltered our most vicious enemies: during World War I she took up arms against our Nation and against democratic governments. The great Dardanelles which she holds a protective hand over is rightfully no more her's alone than the Atlantic Ocean is ours alone. What would the people of our great Nation think if a foreign power were to encroach upon the waters of the Mississippi River? Russia has as much right to the Dardanelles as we have to the Mississippi. The waters of the Dardanelles wash the coastline of Russia. One lesson should be enough. We gave our enemy, Turkey, after World War I the mandated powers over the Dardanelles. We knew at the time it was an error. But we did it. Let us make no mistake by giving arms to Turkey, indirectly threaten Russia, and start the brewing of another war. Ask the man who has seen the blood of battle and the diplomats in Washington will think twice of this indirect act of hostility against another nation. Let us keep peace by peaceful actions.

Do you believe it should be put up to the United Nations first? Our reply to this is definitely yes. For what purpose, may we ask, was the United Nations Security Council

formed? For the purpose of settling differences among nations. All the nations of the world are represented in the chambers of the United Nations. If they see fit and find that international law endorses such actions to furnish Greece and Turkey with arms, then they will do it and Russia must submit to the majority rule, which she will. Give the United Nations Security Council a chance.

If it were put up to the United Nations and the United Nations was not able to handle it, do you believe the present form of United Nations worth further support?

No; we don't believe the United Nations worthy of any further support if it cannot handle this problem. What better place is there to discuss such problems of international concern? The millions we are pouring into the armaments of war to furnish Greece and Turkey should be poured into the settlement of problems peacefully. There should be no ceiling on the price of peace. A million Americans lost their lives so that we could have peace. Now let us have it, and let the immortal patriots rest in peace.

Do you favor further straight relief to Greece without the military feature?

Our reply to this is definitely yes. We believe that we owe all we have so that human sufferings can be diminished. Babies are still dying in the streets of Greece, and our diplomats have the gall to furnish that nation with bullets. If there be a Lord above, and we believe there is, then let Him see to it that we abide by the laws of humanity and God's will by feeding the starving, ravished peoples of other nations. Yes; give the people of Greece food, clothing, and shelter at our cost.

Do you feel that President Truman's proposal is necessary to stop the spread of communism?

Our reply to this question is definitely no. If he be the guiding hand of 140,000,000 people, then let him guide us in peace and not in fear. We fought for peace and now have it. The President can propose peaceful methods of halting the march of communism. We know that communism is the enemy of constitutional government. But we have had enough bloodshed. Among 140,000,000 people there must be some wise men the President can choose to peacefully find ways of helping our neighbor and stopping the spread of communism. We do not think that our present Secretary of State is the right man for the job. Didn't he put his blessings upon the Nationalist Government of China? Didn't he think for a minute when he did this that he was supporting one of the greatest forms of Fascist tyranny blessed to man? When the Chinese National Government democratizes their own nation they are deserving of our support. Never in the course of history has this Nation been blackmailed into a deeper rut than the conception that the Chinese Nationalist Government is a democratic form of government. We suggest, Mr. Representative, that you study any of the reports given by that great American journalist, Edgar Snow.

Do you believe that the Truman proposal has war possiblities with Russia?

Our reply to this question is yes!

If we furnish the two mentioned countries with the armaments of war then we are the criminals. We happen to be veterans. We were in the last war and know just how terrible a slaughter war is. We cannot hope to achieve international peace and harmony among nations unless we act in a peaceful manner. By waving the "big stick" at Russia we will be inciting war. The foolish folly of furnishing armaments of war to two nations to scare another nation can hardly be taken as anything else but a direct insult and a challenge of war. We might win a war with Russia. But remember Mr. SANBORN, the blood of Idaho and 47 other States will be running in the streets of Europe. Our Nation asks for help when we are at war. Everyone pitches in to do his or her share. But we do it to protect our democratic government and our sacred ground. But when it is over we want peace. Never in the history of our Nation has so many of our statesmen made so many blunders and brought us so close to the brink of war. The Monroe Doctrine is flouted around as so much piece of paper by the present administration. The words of Washington have done nothing but gather dust in the halls of the immortal. Let us be American by acting American. A threat to another nation is the asking for bloodshed. We believe it is about time that the Capitol at Washington resound with some brainwork. If some Congressmen and Senators are so keen on furnishing arms to another nation, then put them in the front lines as a infantry soldier with the rank of private if we do have war over it. There are still people back home that can run our Government as a democracy. Yes, Mr. SANBORN, we are against the furnishing of arms to any nation; but are for the feeding of all nations.

The Tax Bill

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. FORAND. Mr. Speaker, there appeared in the Washington Post of April 21, 1947, a very timely article by Randolph Paul, formerly general counsel for the Treasury Department, on the important subject of tax reduction which is now before the Congress and under leave already given me, I include it in my remarks. The article follows:

1947 TAX CUTS

(By Randolph Paul)

REVISED DISTRIBUTION NEEDED

Within the next few weeks the Senate will be faced with the troublesome problem of tax reduction in 1947. The House has already voted a tax cut practically as large as total Government receipts in the boom year 1929. Many arguments can be made against cutting taxes in a period of budget uncertainty and high national income. This, if ever, should be the time for a budget surplus and debt reduction, if we hope to attain the highly desirable objective of budget balance over a period of years.

Prevailing economic climate is a paramount consideration in the timing of tax rate changes. It is hard to imagine a less opportune moment than the present for increasing spending power via tax reduction, except in the income brackets which are feeling the tightest pinch of high prices. It is true that the actual increment of spending power which would be released under the House bill might not be too large, considering its allocation to the different income groups. But it is equally true that if nearly $4,000,000,000 of tax reduction is given out now, the chances for further tax legislation in the near future are exceedingly slim. Consequently, if any margin for tax reduction is prematurely used, it will not be available to bolster purchasing power when it may be needed.

Under the reduction formula in the House bill almost 40 percent of the tax cut would go to less than 2,000,000 individuals with incomes over $5,000 a year, who normally save a substantial part of their incomes. About 60 percent of the aggregate cut would be divided among about 45,000,000 individuals with incomes under $5,000 a year who, at present price levels, spend all of their incomes and, in many cases find it necessary to dip into their savings.

Currently, signs of a downturn in markets for consumer goods are developing. Indications are also strong that a substantial decline in investment activities is imminent, due not to any lack of investment funds but rather to a lack of confidence in substantial consumer markets. Plainly, the reduction formula in the House bill which, in terms of additional spending power, does much more for high-income taxpayers in the low brackets, would contribute little toward forestalling an incipient depression.

In considering the important question of tax-cut distribution, we must remember that Congress is cutting wartime, not peacetime, taxes. It is pertinent then to inquire how the distribution of the tax burden contemplated in the House bill compares in the several income brackets with the distribution in 1939. If our Federal taxes were wisely placed in 1939, a proportionate return to prewar levels would be the logical solution of the present problem.

The House bill would leave taxes substantially above 1939 levels for low income taxpayers; it would leave a proportionately heavier burden on the middle brackets; and it would bring taxes for persons in the highest brackets back nearly to 1939 levels.

For example, in 1939, a man and wife with a net income of $1,500 paid no tax. Under the House bill, they would pay $67. At $10,000 the 1939 tax for a married couple was $415, as compared with $1,748 under the House bill—a 321-percent increase. At $100,000 a man and wife paid a tax of $32,469 in 1939. Under the House plan, they would pay $50,502—an increase of 55.5 percent. At $500,000 the 1939 tax for a married couple was $304,144. Under the House bill, it would be $342,074—only 12.5 percent more than in 1939.

From this standpoint the House bill fails to recognize that war taxes were placed principally in the low and middle income brackets; increases had to be limited in the higher brackets. In its failure proportionately to reduce war increases, the House bill inaugurates a new distribution of our tax burden.

The distribution of the tax burden is a matter of natural concern to all taxpayers. Existing rates in the upper brackets are doubtless too high, but in this area the remedy lies in the context of over-all tax revision rather than in any variation of a crude across-the-board individual income tax cut.

In the lower income brackets the distribution of the tax burden is a grim matter of existence. In this area the amount of the personal exemption is of utmost importance. When the existing $500 per capita exemption was enacted, it barely covered minimum living expenses. At present price levels the value of the exemption has fallen to about $300, much less than the minimum living costs. Taxes now imposed on the lower income groups therefore take funds that ought to be spent for food, clothing, and housing. Many of those who favor a broad base because it develops widespread tax consciousness will recognize the conflict between the obligation to pay taxes and the right to subsistence.

The problem of the distribution of the tax burden goes even beyond equity. If we are to use the vast production potential we developed during the war, we must distribute our tax burden in a way that will permit mass consumption. A stabilized market for mass consumption is a prime requisite for productive activity. We can have neither mass consumption nor an expansion of productive activity if our taxes drain off too much purchasing power from the low incomes.

It is generally admitted that our whole Federal tax system—in spite of much constructive legislation in 1942—badly needs overhauling. Some changes are certainly a

first order of business. For instance, the citizens of 39 States justly resent the undeserved tax advantage enjoyed by married couples in the 9 community-property States who may divide their income equally for tax purpose. To correct this inequity, as has been suggested, by permitting the citizens of all States to divide the combined income of husband and wife in the same way, would cost a billion dollars in revenue. A revision of this would be a tax cut fairly distributed among taxpayers.

A number of other improvements would likewise have the effect of fairly distributed tax cuts. This is true of accelerated depreciation and the revision of the net loss carry-back and carry-forward provisions, which would help small business. The coordination of personnel and corporation taxes is overdue. Improvements of this kind should have priority over indiscriminate rate reduction. If the House bill will become law, the opportunity to obtain these revisions within any reasonable length of time will be fatally lost.

A 1947 tax bill which took all these items into account could not be dashed off in a few days of superficial consideration. Members of congressional tax committees would have to sacrifice vacations and endure the heat of a Washington summer. Taxpayers would have to resign themselves to a period of uncertainty. But the time required would be well spent if in the end everyone benefited, with the initial advantage going to those who are now most unjustly treated.

Tax reduction has irresistible charm. The question a 1947 tax bill puts squarely up to all of us is whether we have the maturity to shift our sights from the prospect of immediate gain to the development of the tax system we imperatively need for the future. A sound tax system will mean greater gain even for those who would at once profit most from the House bill, if as citizens they have the statesmanship to recognize their ultimate welfare.

Congratulations, Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the Lynn Item, Lynn, Mass.:

CONGRATULATIONS, LAWRENCE

Our neighboring city of Lawrence this week is observing, with appropriate pomp and ceremony, the one hundredth anniversary of its incorporation as a town.

In the past century the Merrimack River community has developed from what was chiefly a farming area to one of the great textile manufacturing centers of the Nation. Today its vast mills dominate the city and provide the lion's share of employment to its more than 85,000 population. In 1920 the city proper had 94,270 inhabitants, and the decline is due to no recession in the city's prosperity or activity, but to a trend toward housing developments in the nearby suburbs. Thousands of these suburbanites still work and spend in Lawrence and contribute to the maintenance of its many excellent civic, educational, and philanthropic institutions.

As the Evening Tribune, Lawrence's excellent newspaper, says, Lawrence still has the vigor and optimism of youth, confident that the greatest era of the city and its people still lies ahead.

One Road to Labor Peace

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks, I hereby wish to submit an editorial from the Chicago Sun, entitled "One Road to Labor Peace."

The thoughts set out therein are timely and practical especially at this time when an intense frenzy has been artificially built up against organized labor in our country. It follows:

ONE ROAD TO LABOR PEACE

Everybody knows that the House labor bill will not become a law. Its passage by a 3 to 1 vote is significant rather as an index of the reactionary swing and a token of the shortsighted leadership of those business interests which sought to take advantage of it.

One might have thought that the NAM type of business leadership, even though riding high at the moment, would have understood from history that it is riding for a fall. Smart industrialists know that they cannot turn back the clock to the days of disorganized labor. Smart industrialists know that the business excesses of the twenties produced a sharp reaction of public sentiment against them in the thirties, and that pushing their luck now means a peck of future trouble for the free-enterprise system they profess to cherish.

But such counsel did not prevail. It is on the record now that management seized upon the temporary condition of a reactionary coalition in Congress to push through a measure intended to cripple the labor movement.

If the bill is bad tactics from the business point of view, it is also bad policy from the national point of view, for its underlying assumption—that industrial peace can be promoted by weakening labor and inordinately strengthening an already powerful management—simply does not accord with reality. Granted that labor has been guilty of its own excesses, granted even that legislation is needed to protect the public interest in industrial peace, the fact remains that this cause is not advanced by denaturing the Wagner Act, banning the closed shop, localizing negotiations in essentially national industries, and otherwise imposing on labor unrealistic and purely punitive restrictions.

There are three major labor problems that deserve national attention. One is the establishment of improved machinery for conciliation and mediation in labor disputes. One is the carefully considered development of processes of collective bargaining which provide a just alternative to strangling tie-ups in essential utility services. One is the elimination of restrictive practices by unions which restrain trade and promote monopoly for purposes other than the legitimate concern of collective bargaining with wages and working conditions.

The House bill makes no serious attempt to grapple with these problems. Instead it frankly and boldly sets out to strengthen the hand of irresponsible management in every labor dispute that may occur. The Senate bill, though milder, is not much better.

Some day, perhaps, business and its servants in Congress will learn that there is only one road to industrial peace—a steadily rising standard of living, complete acceptance of genuine collective bargaining in letter and spirit, the conscientious development of peaceful methods of settling disputes.

Filipino Veterans of United States Army

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. DEVITT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include an article entitled "The Filipino Veteran of the United States Army" by Francisco Ortigas, Jr. This is an expression by a Filipino of the outstanding contribution made by the Filipino veteran and the Filipino citizen toward our great victory in the Pacific. I know of the valor of the Filipino soldier, and especially of the Filipino guerrilla, and I have asked permission to cause this to be printed in the CONGRESSIONAL RECORD so that the contribution of our Filipino brethren may be more generally known.

The article follows:

THE FILIPINO VETERAN OF THE UNITED STATES ARMY

(By Francisco Ortigas, Jr.)

I

USAFFE stands for United States Armed Forces in the Far East. It was the command created by President Roosevelt in the Orient when he sensed the tense situation some months before Pearl Harbor. To be its commanding general, Douglas MacArthur, then military adviser to the Philippine Commonwealth, was named. Into it were incorporated all active elements of the Philippine Army.

When war actually broke out, the United States forces in the Philippines were composed, by a big majority, of Filipino soldiers. They were not very well equipped. Few had steel helmets, many had no gas masks, and their rifles were not as modern as could be desired; yet they fought the Battle of Bataan as fiercely as their American comrades-at-arms. They surrendered only when General King gave the word.

To the American soldier in the Philippines, the word USAFFE has lost its meaning. It belongs to the same category as AFWESPAC, AFPAC, PACUSA, and the many others that have been created and discarded with the march of events. But to the Filipino soldier, USAFFE is still a symbol. To him, the USAFFE veteran is he who fought the Japanese in order that those democratic principles for which the United States stands might not be eradicated from the Philippines.

The delaying action at Bataan, and its part in the early strategy of the war, now belong to history. Both Americans and Filipinos, in the making of that history, shed blood and gave up life and limb. The United States has honored the American dead and has taken creditable care of the American wounded and the dependents of those who had made the supreme sacrifice, but up to now has not done anything substantial for the Filipino soldiers of her Army of that memorable siege. A bill to extend hospitalization and other benefits to those Filipino veterans was killed in the Congress of the United States by the objection of one Member of the House. Has the role played by the Filipino veteran of the United States Army in the last war been so insignificant or so lacking in merit as to be taken for granted and so soon forgotten?

II

The Filipinos are essentially a free and independent people. They had a history of greatness in pre-Spanish times. Then came the Spaniards who ruled the country for about 300 years. We all have read of the

Aguinaldo Revolution of the '90's. The end of Spanish rule had dawned, but by one of those curious twists of fate, the Spanish-American War broke out and the Philippines was ceded to the United States by the Treaty of Paris of 1899. General Aguinaldo fought a losing battle against the Americans. When the fight became hopeless, the Filipinos surrendered. Some die-hards, like General Ricarte who went to Japan, were never reconciled to the new regime, but the bulk of the people decided to cooperate with the Americans. The Government of the United States proclaimed a policy of "the Philippines for the Filipinos", and promised to grant the Philippines eventual independence as soon as a stable government could be established. America has kept that promise. The Commonwealth regime was established on November 15, 1935, and on July 4, 1946, the Republic of the Philippines was born.

The foregoing is a brief background to the Filipino soldier who fought under the USAFFE in Bataan. He was by nature free. He was not a colonial fighting the mother country's battles. Had he hated the United States, he would have fought her. Had he been indifferent, he would have fought half-heartedly. That he died and suffered a hero's fate in Bataan showed clearly that he was fighting in earnest for the Philippines and for a mother America.

Senator TYDINGS, in a report submitted to the United States Senate, said this of him: "The Filipinos have been loyal to us during these trying years. They have died by our side. Almost to the man and woman they have carried on the long battle without complaint, and with valor and determination. Through their cooperation and assistance the length of the war has been greatly shortened. This has meant the saving to us, not only of countless treasure that otherwise would have been expended in a long war, but it has been a means of saving the lives of countless thousands of Americans and the saving of other thousands from serious and permanent wounds and incapacities which would otherwise have been received on the battlefield."

Gen. Dwight D. Eisenhower, in his Philippines visit on May 4, 1946, said of the Filipino soldiers of the last war that they showed loyalty and determination to the common cause, and their contribution to the allied war efforts was of incalculable value.

And President Truman, in his message to Congress on May 21, 1946, when he sent the bill providing hospitalization, pensions, and burial allowances for Philippine war veterans, said: "The record of the Philippine soldiers for bravery and loyalty is second to none. Their assignment was as bloody and difficult as any in which our American soldiers engaged. Under desperate circumstances they acquitted themselves nobly."

And that epic fight for American ideals was fought in spite of the fact expressed by Ambassador McNutt in a statement made on January 21, 1946, that we (Americans) involved them (Filipinos) in the war.

III

Members of the Philippine armed forces before the war had to take an oath of allegiance to both the Commonwealth Government and the United States of America. They were not citizens of the United States, but they were American nationals. If they committed acts inimical to the interests of America, they were liable to prosecution for treason against the United States. Upon their induction into the USAFFE, they had to specially renew their allegiance to the Stars and Stripes. Except for their color, it was impossible to distinguish them from American soldiers insofar as their duties were concerned. Is it therefore fair to consider that for purposes of treason the Filipino veteran of the United States Army was an American, but for veteran's benefits an alien?

The Philippines are independent now. In spite of that fact, the United States Army has recruited 50,000 Filipinos for use as an occupation force in Japan. Other countries are now also independent again. But the War Department has not attempted to recruit soldiers of these other nations for purposes of the occupation of Japan. There is one explanation for this. The United States Army has confidence in the Filipinos' ability and loyalty, and know that the Filipinos do not view the American flag and Nation as being really alien to them.

IV

Nor did the help and support given the United States come solely from the Filipino veterans in the United States Army. Consider the following poem written by American internees in Manila during the occupation:

A MESSAGE TO MARIE VICTORIA ORTIGAS AND HER PARENTS—MARIE'S FIRST BIRTHDAY

TO MARIE VICTORIA

You're a year old today, Marie, 1 year old
And there's one or two things you should be told
Before they are forgotten.
We, my lassie, are prisoners, we are interned
Within four walls, and we've just learned
About your celebration.
Congratulations today, Marie, many congratulations!
And let us include your near relations
For reasons we'll explain.
Do you know, little Marie, what it means
To be interned for 18 months, until it seems
The end is never coming?
To lose your friends, all your money, home,
Possessions, comforts, the right to roam
Whenever you may choose?
Please God you never will know, Marie, what
It really means—degredation—mental rot,
But not
The loss of everything.
No, Marie, we still have friends. We haven't lost
Our Friends. And when we count the final cost
Perhaps we've even gained.
It seems this way: that if a friend stands by
When you're in trouble, would rather die
Than help your enemies.
Then you've gained something, Marie, gained an end,
If it was only to find he was really a friend,
A friend in rainy weather.
You may not understand, lassie, at your age
Why we prisoners wish to fill a page
With sentiments like this.
But keep it, Marie, and cherish it; never mind the bother
Some day you'll know the friend we meant—
Your Father.

SANTO TOMAS, *July 12, 1943.*

Shortly after the Americans raised their flag in the Philippines, they set up a public-school system where the study of democratic principles and the brotherhood of man was emphasized. As a result of kindly treatment received from American administrators, the Filipinos learned to love the Americans as their own brothers. The regard which the Filipinos had for the Americans clearly manifested itself during the occupation. At great risk to their personal security, they smuggled whatever they could to the American internees at Santo Tomas and to the prisoners of war in Cabanatuan.

Under rules of international law, the Japanese had the obligation of caring for internees and prisoners of war. This they did very badly in the Philippines, and a number died in their hands. The civilian population of Manila had no duty to extend help to the jailed Americans—on the contrary, the extension of aid to them was a punishable act. Yet the Filipinos exhausted their ingenuity to send that help because they knew of the plight of the Americans. The Mencarinis, the Scarellas, Jose Miranda Sampedro, Juan Miguel Elixalde, Elsa O'Farrell, and Liling Roces, to name only a few, were apprehended in their attempts to aid the internees and prisoners of war. They were charged with treason, and with rare exceptions, executed.

Take the specific case of Mr. and Mrs. Antonio Escoda. They were among the most active aiders of the Americans. Caught and accused of treason, they were killed by the Japanese. Some grateful American internees of Santo Tomas have formed a fund, and the fund is now being used for the education of the Escoda children. It is difficult to realize that while a group of American civilians can recognize a moral obligation in favor of Filipino citizens, the United States Government itself cannot immediately concede veterans' benefits to Filipino soldiers who fought so gallantly for and under America during the war.

V

It is to be regretted that there are no standing rules in the United States regulating the benefits which should be extended to war veterans. After every war the United States has engaged itself in, victory has been assumed by the American public at home to have been a matter of course, and the role of the soldier in achieving that victory quickly forgotten. After every war, the veterans have found the need of organized efforts to receive their due. This attitude necessarily affects the patriotism of the individual adversely, for the average man is made to prefer to fight the war in a non-combat capacity in view of the disadvantages accruing to one who becomes a combat soldier.

In a recent magazine article, Brig. Gen. Leon W. Johnson, Chief of Personnel Services Division, AAF, had this to say: "Will those who survive the fighting come back to find indifference and another standard of values, in which the dollar counts for more than courage and integrity and unselfishness? Will these magnificent American boys be forgotten and kicked about by those who moved up while they were away?" Verily, then, if even his American brother must plead his case to get recognition of his right, the Filipino veteran must do the same. But I believe that the root cause of this indifference to the veterans is not ingratitude but lack of understanding. If the American public could be made to comprehend the situation the veterans find themselves in, be they Americans or Filipinos, they would not refuse to do the proper thing by them.

These times are real days of need and stress for the Filipino veteran. The Philippines has been ravaged by war both from Japanese looting and incendiarism, and from American shelling and bombing. The sugar centrals were the backbone of industry in the Islands. They were used by the Japanese for the manufacture of alcohol and were therefore destroyed by American planes. Philippine roads were worn away by heavy American military vehicles after the liberation. The Philippines has really become impoverished. To be able to provide a certain measure of effective government, taxes have been raised fifty to a hundred percent and over. Under these circumstances, the struggle for a decent living has become problematical even to the able-bodied. What chance, then, has a maimed Bataan veteran to make both ends meet? What chance have the widow and the minor children of the soldier who has given up his life? I am sure that if only the average American could realize the handicaps under which the Filipino veterans and their widows and children must struggle to

survive, he would not hesitate to urge the extension of benefits to them.

VI

There is an angle to the question of payment of benefits to Filipinos which may be deemed a delicate matter, and which we would not care to discuss about with Americans lest we be misunderstood. The world is now divided into two parts: one influenced by the democratic principles of the Anglo-Saxon nations, the other dominated by Soviet Russia. The Philippines has already taken the side of the Americans in this division. The Americans have decided to maintain bases in the Philippines, for the initial battleground of a possible clash between the United States and Russia can very well be the Far East. The Philippines again may receive the brunt of enemy attack. If this should happen, it will in all probability again be destroyed. In such a conflict, the Filipinos will once more fight by the side of the United States. Their blood will redrench their own soil. They will again be veterans.

If the Filipino veterans of today are denied disability and other humanitarian benefits by the United States, what will the Filipino youths of 10 years hence believe in respect of Filipino-American relations? Will they fight again for America with that same tenacity and fierceness with which they fought in Bataan and Corregidor? That is a question which the United States Army authorities may well pause to consider. There are Filipinos who, lack of benefits to Filipino veterans notwithstanding, will eagerly fight in any war with Russia or their ally, the United States. But doubts regarding the wisdom of aiding the American war effort, if and when that time comes, may assail the minds of many. There will be individuals who will reason out this way: The Philippines is small and poor. Win whichever side, she will be an underdog. So why take sides? Let the Americans and Russians fight it out, and let us make the most of it.

Will such reasoning be to the advantage of the United States or of the Philippines, or for the good of Philippine-American relations? Certainly not.

VII

Before the war ended, responsible Americans had promised the extension of veteran benefits to Filipino soldiers fighting under the United States Army. Those promises, even if not legally binding on the Government of the United States, should be kept because they were made in good faith by American officials and were likewise accepted in good faith by the Filipino people.

I am positive that the average American will readily recognize the injustice of the present situation. If all Americans would only try to understand sympathetically the position which the Filipino people have held and still hold with respect to the United States, they would clearly see the justice of extending benefits to the Filipino veterans of the United States Army of the last war.

Community Property Laws and the Federal Income Tax

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial from the General Assembly of Colorado:

Senate Joint Memorial 9

Joint memorial memorializing the Congress of the United States to approve pending legislation concerning Federal Income Tax returns

Whereas several States now have community property laws by virtue of which certain citizens of such States receive Federal income tax advantages over the citizens, similarly situated, of other States, including the State of Colorado, which do not have community property laws; and

Whereas it is the opinion of the General Assembly of the State of Colorado that the citizens of each State should be permitted to file Federal income tax returns on the same basis, whether such State is a community property State or not; and

Whereas the General Assembly of the State of Colorado is advised that there is now pending before the Congress of the United States certain proposed legislation which is designed to eliminate Federal income tax discrimination between the citizens of community property States and the citizens of noncommunity property States: Now, therefore, be it

Resolved by the Senate of the Thirty-sixth General Assembly of the State of Colorado (the house of representatives concurring herein), That the Congress of the United States be and it is hereby memorialized to approve said proposed legislation or so much thereof as is necessary to eliminate the Federal income tax discrimination between the citizens of community property States and the citizens of noncommunity property States; and be it further

Resolved, That copies of this memorial be forwarded to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, and to the Senators and Congressmen representing the State of Colorado in the Congress of the United States.

Benefits of Wagner Act

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks, I wish to incorporate the following editorial, which sets out the viewpoint of an employer regarding the Wagner Act. Thousands of employers throughout America possess the same thoughts on this legislation:

EMPLOYER SPEAKS UP FOR WAGNER ACT

Occasionally, out of the confusion which seems to encompass us these days, there comes a voice that speaks with authority to reveal the real motives behind what is going on.

Enlightenment on the movement for restrictive labor legislation comes from an expert witness, an employer for 30 years—Roscoe H. Cannaday, past president of the New York Kiwanis Club and member of the international business standards committee.

Cannaday spoke for the negative in a recent debate on whether the Wagner Act should be repealed. He said:

"We employers have always felt that our businesses were our own and that we should have full and complete control of them without interference by Government or by our employees.

"We knew that in order to be successful, a business must make a profit and the more profit it makes the more successful it is; that in order to make a profit we must keep costs down, and, as wages are a major part of costs, we must keep wages as low as possible.

"We, by more or less agreement or concerted action, usually kept our wage rates about the same as those of our competitors. We said, in effect, that the function of management was to make money for the owners of the business, not to solve social problems.

"For many years we had predominant control of the economy and, in all honesty, we must admit that some of us were quite ruthless in use of our power. The idea of our employees organizing and of having, as we said, 'Our hired hands or a union racketeer tell us how to run our business' was most repugnant to us and we fought it by fair means and foul.

"But, in spite of everything we could do, unions grew and grew. They first organized in the smaller industries. As they moved into the bigger industries, the strife became more and more violent and disruptive.

"In 1935 Congress decided something must be done about it, and the Wagner Act was passed.

"Of course, the only reason for wanting to repeal the act is the hope that by so doing we would be able to prevent the formation of additional labor unions, and that we would be able to destroy or at least cripple unions already formed.

"I am convinced that it is absolutely impossible to prevent our employees from joining labor unions if they wish to do so. I am convinced that it is absolutely impossible, by strong-arm methods or by any law, to destroy labor unions already in existence in most of our major industries.

"I am convinced that more thought about the general welfare and a more generous attitude on the part of employers and the use of more intelligent and more cooperative, democratic methods either directly with employees or with their chosen representatives in the long run not only will be the most economical and most profitable for business but, indeed, may be the only way we can save ourselves from some form of socialistic government."

That makes sense and is a refreshing contrast to some of the things we hear around here.

Cause of High Prices

EXTENSION OF REMARKS

OF

HON. DAVID M. POTTS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947
